But despite the difficulties, warned Professor Dilmus D. James of the University of Texas (El Paso) and Professor John S. Evans of the University of Alabama, an immediate start is imperative. James and Evans made it clear that U.S. financial support and trade policies would be vital to Mexico's development.

"There is a pressing need to begin to forge a flexible, workable and humane policy dealing with Mexican migration to the U.S.," their study concluded. "It should be done soon before a crisis situation forces policy makers to do so within a context of mutual hostility and uncertainty . . ."

While the knowledgeable along the Mexican border agree the eventual solution must be economic, the Carter administration has shown no evidence that it is considering any initiatives to help Mexico create jobs at home.

After six months of grappling with the problem, the White House is about to go public with its initial proposals. It has been under heavy pressure from organized labor which sees the invasion of aliens without legal entry papers as a threat to jobs for Americans.

At the same time, employers, particularly in areas close to the Mexican border, fear the loss of vitally needed cheap labor if stringent controls are placed on immigration.

The deliberations have taken place amid a growing mood of hostility toward Mexican migrants as Americans associated such problems as unemployment, taxation and crime with their presence in the United States.

Many of the proposed solutions pose nearly as many problems as they would cure.

Amnesty for long-time aliens who have lived within the United States without being discovered has already encouraged thousands of Mexicans to go north in order to be there when it is granted. Unions and many Mexican-Americans oppose amnesty.

Plans to fine employers who hire undocumented aliens produced an outcry among U.S. citizens of Mexican descent. They fear employers would refuse to hire anyone who looked or sounded like a Mexican rather than shoulder responsibility for determining who is and is not a U.S. citizen.

Proposals to bolster the Border Patrol also met heavy criticism on grounds of an estimated $200 million annual cost and because pushing Mexican migrants back across the 2,000-mile long border could cause social chaos in the border towns.

A favorite proposal in Congress, fostered by Rep. Peter Rodino, chairman of the House Judiciary Committee, would subject American employers to heavy fines if they employ undocumented aliens. The Administration also considered issuing identity cards to help employers determine who was legal and illegal.

THE ONLY THING SLOWER THAN MOLASSES IS MOPAC

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. PICKLE. Mr. Speaker, when Amtrak began operating the Inter-American passenger route between Chicago and Laredo, I joined with my constituents in central Texas in celebrating the event. The city of Austin, which is one of the stops on the Inter-American route, hailed the return of rail passenger service as a very important development for the area.

After 6 years of operation, however, the Inter-American has failed in almost every respect to live up to the potential that the citizens of Austin envisioned. Many of the problems with the route have been resolved by the administrators at Amtrak. But most of the problems with the Inter-American have been created by the Missouri Pacific Railroad and the problems remain unresolved.

The most serious complaint about the Inter-American route and the reason that it has always had such low ridership is that the trains do not run on time.

A good example is an experience I had recently in Austin. After several years of urging by myself and the city of Aus-

tin, Amtrak finally agreed to establish daily service between Fort Worth and Laredo. On June 17, the second day of daily service, I was in Austin and intended to greet the southbound Inter-American when it arrived. When I called the station to find out when the train would arrive, I was told that it would be at least 3 hours and 10 minutes late.

After this, I requested and received a listing of the train's performance record from June 16 through July 4. On July 4, perhaps out of patriotic spirit, the southbound Inter-American arrived in Austin on schedule for the first time since October 31, 1976. Perhaps that was to make up for the July 3 train which never even arrived in Austin.

During this period of June and July, the train averaged 3 hours and 5 minutes late every day.

As the following article from the front page of the Washington Star explains, many of the delays on the Inter-American have been caused by the manner in which Missouri Pacific operates its system. It appears to me that the law is very clear that passenger trains will have priority over freight trains. Just the opposite is the practice of Mopac.

I have nearly lost my patience with this railroad company and their operation and I hope the officials at Amtrak will take whatever action is necessary against Missouri Pacific to finally resolve this problem:

MISSOURI PACIFIC AND AMTRAK ON A COLLISION COURSE

(By Stephen M. Aug)

The way William B. Strong, a Memphis machinery salesman, tells it, all is not well between the Missouri Pacific Railroad and Amtrak.

The problems on this trip from Little Rock, Ark., to Laredo, Tex., began at the Little Rock station when Amtrak's "Inter-American" was about 30 minutes late arriving.

"That wasn't very unusual," Strong recalled the other day, "but when we didn't leave more or less immediately I asked what was going on." A trainman, he says, told him the delay was to give the engineer time to repair the headlight.

After what seemed like a long time, Strong saw what he thought was the engineer strolling back through the sleeping car. "He spoke to the porter and a man I believe was an ununiformed flagman from the rear and asked what was holding up the train. The flagman said, 'we're waiting on you to fix the headlight.' And the engineer said, 'that's been fixed for 30 minutes' and he was waiting for a highball" (a signal from the conductor to start the train).

Within minutes the train started—after a full hour at Little Rock and an hour and a half behind schedule.

The apparent lack of communication between the engineer and the conductor was still on Strong's mind a few minutes later when he saw the conductor and noticed he wasn't carrying a radio as train crewmen usually do. It turned out that on the Missouri Pacific, radio communications between engine and crew members are for freight trains only.

Then there was the "phantom" freight train. About a mile from Devine, Tex., south of San Antonio, the Inter-American came to a milepost in a sparsely settled area and stopped. The conductor, Strong recalled, said "'our train orders tell us to wait here at this point' until a certain time. He said it was just poor dispatching, there really wasn't any problem."

But Strong later learned that the Inter-American is often ordered to stop at the milepost near Devine even though there is no passing freight train in sight. Chasing a phantom freight across Texas, he called it.

By the time the train arrived in Laredo it was more than two hours late, resulting in Strong missing a connection to Mexico City.

Strong's experience with the Inter-American—or, more to the point his experience with the Missouri Pacific which operates part of the Inter-American—is turning out to be fairly typical.

Amtrak officials contend that, of the 18 railroads that operate its trains, Mopac is by far the most difficult to deal with. The litany of Amtrak complaints includes:

One of the worst on-time records in the system despite the fact that Mopac is generally considered a profitable, well-maintained rail system. Statistically, when Amtrak trains are late, the systemwide average is 51 minutes late. On Mopac, when they are late, Amtrak trains are averaging 144 minutes behind schedule time.

Mopac is moving Amtrak trains too slowly. Mopac has a 60-mile-an-hour limit for both passenger and freight trains. Most railroads allow higher speeds for passenger trains and, until about five years ago, so did Mopac. So, while Santa Fe operates Amtrak trains at 90 miles an hour, and most other railroads run them 79 miles an hour, on Mopac they're limited to 60.

Despite the fact that the law prohibits railroads from sidetracking Amtrak trains so freights can go by—except in emergencies—Mopac does it routinely. Freight train interference is the biggest cause of Amtrak delays on Mopac: 45 percent of all time lost is due to freight train interference and 40 percent of all instances of delay are due to freight trains.

Amtrak trains on Mopac are late so frequently that on 29 instances between March 2 and July 2—roughly one out of every four trips on the Inter-American—Amtrak had to provide buses for passengers from St. Louis to Chicago. Buses cost Amtrak $484 for each such trip.

There have been other problems involving the Mopac as well. A couple of years ago the Missouri Pacific refused to allow a Federal Railroad Administration track inspection car onto its tracks because of a squabble over who would pay for liability insurance.

Then there was the time this past June when a dispatcher in a tower near the Dallas railroad station refused to allow Amtrak's Inter-American to back into an unoccupied track—others were occupied by freight or mail trains—because he wanted to put another freight train on the track. According to one observer, he told an Amtrak representative at the station that his salary was paid by freight revenues and not by "damn" Amtrak passenger trains.

When an ambulance was required to evacuate a sick dining-car cook, the same day, it was delayed because the train was too far out into the yards. The train finally left Dallas about four hours late.

But what really infuriated Amtrak's management was the trip the Inter-American made on June 19. The train—which runs between Chicago and Laredo—arrived at Laredo eight hours late.

So late was the train, in fact, that when it arrived at Corning, Ark., the crew's time on duty reached the maximum of 12 hours allowed under federal law. Crew members simply walked off the train and the Inter-American sat for two hours and 43 minutes waiting for a new crew.

The same day the train had to be refueled at Little Rock—not a normal fueling stop. The reason: Delays were so long that the engine ran out of fuel. The long delays also ran down batteries in the passenger cars and air conditioning failed.

There was, it is true, a wreck at Neelyville, Mo., but the Inter-American was kept behind five freight trains before it could clear the wreck.

Nor is the poor service to Amtrak—and the resulting poor relationships between Amtrak and Missouri Pacific—a particularly new matter. There have been disputes between them for years. It was one of the first problems Amtrak President Paul E. Reistrup tried to solve when he arrived at the company 2½ years ago.

During a round of meetings with chief executives of railroads operating Amtrak trains, Reistrup met with John H. Lloyd, president of the Mopac. "I must say that at that session I found out that there were very many things that Amtrak was doing wrong and we immediately took steps to correct those," Reistrup recalled in an interview the other day.

"An awful lot of billing and accounting squabbling was going on. Some of it bordered on being ludicrous. For instance, we asked them to re-rail a locomotive and the bill was . . . what you might be charged for towing your automobile, and we refused to pay it . . . It just caused all sorts of misunderstandings," he said.

But operating problems continued—as did a Mopac law suit against Amtrak involving rental payments for Union Station in St. Louis (which Mopac won).

Operations became so bad this past winter, that Reistrup met again with Lloyd on Jan. 12. It was, he says, "an effort to see if we really could solve some of these operating problems and encourage the . . . (Mopac) to negotiate with us a new contract . . . to bring about improvements in the operation and also better compensation for them."

Such a new contract—adopted by most of the railroads that operate Amtrak trains—pays railroads more money for better on-time performance and improvements in other services. Amtrak currently pays Mopac about $285,000 a month to run sections of three trains, Inter-American, Lone Star and National Limited. The Inter-American alone costs $210,000, said one Amtrack official.

Reistrup said he made Lloyd aware of his complaints. The impression he got, Reistrup recalls, was one of, "their organization is a highly efficient, very profitable and very hard-nosed one. And, really, I think, feels that our passenger operation gets in their way."

Lloyd's view is slightly different: "In the first place . . . they haven't paid their charges in accordance with their contract. I wouldn't say they're far behind, they just nit-pick everything we assess them. We finally had to take them to court to get rental charges."

Although he concedes Amtrak and Mopac have had problems, "otherwise we wouldn't have taken them to court . . . there's no question I would love to run their passenger trains on time, because then it's easy to schedule a train. Nobody likes to receive criticism when they think they're running a good railroad, and we think we have the best railroad in the country."

Nevertheless, he does concede that Mopac freight trains interfere with Amtrak's passenger trains: "I'm sure that there are delays due to freight train interference, but when the original schedules are established it's most difficult to delay . . . our freight trains waiting for a delayed passenger train . . . I just can't stop the whole railroad waiting for a delayed passenger train." Lloyd said there are delays in terminals for which Mopac is not responsible.

Further, he said in an interview, the line south from St. Louis is a densely used freight line, apparently one reason there are more frequent delays there than on the Kansas City-St. Louis line where Mopac operates the National Limited for Amtrak.

Lloyd said, too, he is aware of the laws requiring passenger trains to be given pref-

erence over freights: "We comply with it to the best of our ability."

Quite obviously, with a performance record as poor as that of the Inter-American, it is far from the most heavily used train in the Amtrak system. During the first five months of this year, it averaged about 50 passengers per trip. On June 19 when it was delayed eight hours, only about 10 passengers were no board when the five-car train left St. Louis.

"The passenger load on that train has varied quite a lot," says Dr. Dan Monaghan, a Garland, Tex., optometrist who is also a director of the National Association of Railroad Passengers, a nationwide consumer organization. "They'll get the thing straightened out . . . Last summer they got it straightened out . . . the business built up, then they had that wreck at Hawkins, Tex., in the fall of last year."

Unable to convince Mopac to come to its terms, Amtrak officials have approached the Justice Department as a first step in suing Mopac in federal court over violations of the federal law under which Amtrak operates. Amtrak is not allowed to sue the railroads and must convince the Justice Department to do so.

The suit would charge freight-train interference. The law prohibits operating railroads from sidetracking Amtrak trains so freights can go by. This had been a principal complaint of rail passengers before the creation of Amtrak, some contending it was the railroads way of discouraging passengers and finally getting out of a money-losing business.

Reistrup said Amtrak also may seek the aid of the Secretary of Transportation Brock Adams to force Mopac to increase its speed limit on passenger trains. Reistrup said he was unsuccessful in trying to convince the last secretary, William T. Coleman Jr., to have Mopac increase its speed, but he may have better luck with the current administration.

Under the law, the secretary may order a speed increase, but he can also decide whether the railroad is to receive extra pay for higher speeds.

Amtrak, however, may have yet another lawsuit against Mopac. The federal law governing Amtrak also requires railroads to provide at least the same level of service they were delivering when Amtrak began operations May 1, 1971. Mopac lowered its speed limits for passenger trains on its Kansas City-St. Louis line to 60 from 65 miles an hour in December 1972.

PUBLIC HOUSING SECURITY ACT OF 1977

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. MOAKLEY. Mr. Speaker, today on behalf of my 24 colleagues, who have joined me in sponsoring the Public Housing Security Act of 1977, I wish to address the present crisis of security in housing projects across the Nation.

During the sixties, the fashionable mode of social change was the tearing down of older buildings and replacement with quick, prefabricated low cost units. These programs were termed urban renewal, and later coined urban removal. They set a precedent for the renovation of our economically depressed and suggested that our crime and poverty problems could be solved in much the same way as our overnight technology seemed to dictate.

Within the decade we have witnessed a large-scale failure of low and moderate income developments. Statistics show that these projects are experiencing the Nation's highest crime rate. The rising crime and vandalism has created a situation where the neighborhood is no longer a community experience, but rather a center of fear and violence.

The complete lack of security is best exemplified in the numerous attacks on our elderly. Indeed the elderly are the most vulnerable to crime. Their fear of being robbed or assaulted has prevented such routine activities as buying groceries or cashing social security checks.

Vandalism has exposed another threat to those who live in urban housing projects. If a vandal destroys the projects' elevator, the elderly person is further imprisoned in his apartment. The "rip-off" then becomes merely an object of choice in these high rise, high-density buildings. With more than 500 people sharing a common entry, anonymity and accessibility lends itself to maximum advantage.

The Public Housing Security Act would take the necessary steps to control the environmental factors surrounding a project which relates so strongly to the crime patterns. Under the provisions of the bill, the concept of residential security would be addressed in the initial planning and design stages of federally financed public housing. This would apply to new construction, renovation, and rehabilitation of existing housing stock. A local public housing authority would be required by HUD to insure that overall security concepts be detailed in all phases of project management planning including site selection, design, and construction. The plan would then be elevated in every aspect or risk a new bid determination.

A second provision of the bill would establish an assistance fund for local public housing agencies which demonstrate an urgent need for security. A January 1977, study conducted by the National Institute for Law Enforcement and Criminal Justice, suggests that many security measures are not adequately funded and consequently could fall by the wayside even though they enjoy local law enforcement and resident support.

This legislation must be complemented by the education of all those who work within the project; planners, developers, architects, and housing authorities. We can develop proper design guidelines to reduce vulnerability and they can be instituted at a low marginal cost. Most certainly the lower long-range cost—both physically and socially—would prevent the steady abandonment of these million dollar Government financed housing projects. The following HUD/LEAA study points out the comparative costs of different building types and the possible achievement of medium-density housing which is safe to all that inhabit it.

[Source: Design Guidelines for Creating Defensible Space National Institute of Law Enforcement (LEAA) and the U.S. Dept. of Housing and Urban Development (c1975) Oscar Newman]

THE COMPARATIVE COSTS OF DIFFERENT BUILDING TYPES

For a good many years it was accepted as general wisdom in the building profession that high-rise buildings cost less to build and maintain than walk-ups. This view is often the result of inappropriate comparisons between the over-all "development costs" of a housing development and its "construction costs" and between the maintenance costs of buildings occupied by different family types. Development costs include the cost of the land; construction costs are exclusive of land costs. The higher the cost of a piece of land, the less will be the development costs per unit if more units can be put on the same piece of land. For example, the construction costs per unit may be higher in an elevator building than in a row-house building, but still result in lower development costs per unit in the high-rise as a result of lower land costs per unit. In a high-density scheme the savings on land costs per unit may produce a lower over-all development cost per unit than a low-density scheme, even when construction costs per unit are higher.

A true comparison of the construction and development costs of various building types should only be made when the density of the high-rise scheme and the walk-up scheme are identical. In that instance the land costs per unit would be the same and could be cancelled out of the equation. Comparable densities in walk-ups and high-rises occur at the upper limits of the walk-up prototypes and the lower limits of the high-rise prototypes. Such a comparison therefore may serve little more than to satisfy academic curiosity.

Comparison of construction and development costs of different building types is still further complicated by the different mortgage financing arrangements provided under different housing programs, each producing different sets of financial benefits. There are also significant variations both in the quality of construction and the quality of materials used in different developments. These variations will, in two identically planned developments, produce different costs ad life expectancies. Finally, building codes throughout the country require that buildings above three stories in height be of fireproof construction; this normally entails the use of higher fire-rated materials, more stairs, heavier walls and supporting structures. Higher buildings also require, as intrinsic to their construction, the use of heavier foundations, the provision of elevators, additional emergency fire stairs, and the provision of incinerators.

From all of the above it should be clear that within the scope of this handbook it is impossible to undertake an exhaustive comparison of construction costs for different building types. However, a few recent studies have appeared on the subject and their conclusions are quoted here for general information.

The National Commission on Urban Problems prepared and exhaustive comparison of the cost of different housing types across the nation built under various government assistance programs.[1] Two of their concluding tables are presented here (Tables A.1 and A.2).

Footnotes at end of article.

TABLE A.1.—*Development cost by type of building*[2]

FHA 207–231 Multi-Unit Programs	Development cost per unit		
	High	Median	Low
1966 HUD study, 196 projects	$36,001	$16,524	$7,702
1962–66 medians, 87 projects	41,269	15,110	8,102
Elevator	41,269	20,826	12,464
Walk-up	20,954	13,388	8,102
Row	19,767	13,227	8,111

TABLE A.2.—*Construction cost per square foot by type of building*[3]

FHA 207–231 Multi-Unit Programs	Dollars per square foot		
	High	Median	Low
1966 HUD study, 196 projects	$20.88	$12.49	$7.74
1962–66 medians, 87 projects	21.66	10.16	6.70
Elevator	21.66	14.35	10.16
Walk-up	12.90	9.61	6.70
Row	13.63	9.66	8.25

Both tables show, first, that the range in costs within any building type, including elevator buildings, walkups, and row houses, is sufficiently large as to make a low-priced elevator building less expensive than a high-priced row house or walk-up. Nevertheless, Table A.1 shows that a comparison of over-all development costs per unit, row houses cost slightly less than walk-ups, and walk-ups, in turn, cost significantly less than elevator buildings. Table A.2, comparing construction costs per square foot, shows that walk-up units are less costly than row-house units, and row-house units less costly than elevator buildings.

The Housing Development Administration of the City of New York recently undertook a comparative study of both the development and maintenance costs of different housing types.[4] The study, based on 1973 construction experience, does not appear to be either so comprehensive or so rigorous as the study by the National Commission on Urban Problems. Their conclusions are quoted here for information purposes only.

The HDA study compared three-story, three-family homes with Mitchell-Lama (state subsidized) high-rise buildings, and determined that the three-story buildings, selling at approximately $100,000, were "among the best housing buys available." Development costs for the walk-ups and the highrises were calculated on the basis of land costs at 20 percent to 25 percent of the total development costs. Furthermore,

1. Development costs for a conventionally built three-family home are approximately $6,900 per room as compared with current estimates of $11,900 per room in a high-rise Mitchell-Lama building.

2. Maintenance and operation costs of three-family homes are approximately $135 per room per year, compared with high-rise Mitchell-Lama, which costs substantially in excess of $200 per room per year. The saving to three-family homes is the result of several factors, among them: the willingness and ability of homeowners to make small repairs; the absence of common spaces that require maintenance; the absence of elevators and other complex systems; and the small-scale nature of the housing, which encourages individual concern for proper maintenance.

Both of the above studies appear to share similar conclusions: that the three-story, multifamily walk-ups are the least costly means of providing medium-density housing. Walk-ups are less expensive to build and to maintain than both row houses and high-rises. Costwise, the three-story walk-up manages to achieve an excellent compromise between the two-story row house and the high-rise apartment, in that it does not require the elevators or elaborate fireproofing of the high-rise, nor the extensive foundations, roofing, and exterior walls of the row house.

GRADUATION THOUGHTS

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. WOLFF. Mr. Speaker, I am happy to insert at this point in the RECORD the text of a most interesting and thoughtful commencement address recently deliverted by the distinguished founding director of the Washington Workshops Foundation, Mr. Leo S. Tonkin.

The address was delivered at the 18th annual commencement of Herricks Senior High School in New Hyde Park, N.Y.

The following is the text of the address:

GRADUATION THOUGHTS

Dr. Haweeli, Mr. Lasala, Mr. Guglielmone, faculty, parents, friends, and graduates of Herricks Senior High School, please let me say, at first instance, how delighted and honored I am to be here this afternoon. It's a rare privilege indeed to be asked to address the graduating class of any school or college, and I especially join with everyone in this room in congratulating the young men and women gathered here as the 1977 graduates of Herricks High School.

As I sat preparing my remarks for this ceremony, I must confess to some mixed emotions—for I am convinced that a commencement address is oftentimes the most perplexing and exasperating thing known to man. Amidst the Ephoria of graduation, the evening parties ahead, and the genuine family pride and happiness, some erstwhile soul agrees to stand before you and say, in effect, listen to my words of sage advice, fall not asleep, Heed well my message for your future.

Usually, a commencement address must be all things to all people—young people, mature people, parents, students—the whole ballgame in a sense. In today's world, it's no easy task to say something that occasions itself to parents and offspring alike. Thus, the commencement address usually falls into the category of stressing jokes to keep all smiling, or on the other hand, an impassioned charge to those assembled a la the Duke of Wellington. The whole business reminds me of the poor preacher who was asked to give a few remarks on "the world the war, and the church." He said he would be delighted to do so, provided he could add a few comments on "The Sun, the Moon, and the Stars!"

As far as charging this splendid class to future action and in a sense telling you what to do and how to go about it, I am soberly reminded of the old story that said, "Socrates was a Greek—he lived 2,000 years ago—he told people what to do—he was poisoned!" And then there is one other caveat for any speaker that I enjoy remembering, "he that talketh by the yard, but moveth by the inch, deserves to be kicketh by the foot."

Perhaps the irony and vacuity of many graduation speeches was really driven home to me a few weeks ago when I picked up a newspaper and read excerpts of two graduation talks in the same city, on the same day, at virtually the same time. Both speeches were given by two of the most noted and gifted educators in the country today. As one gentleman remarked, the younger generation is far better qualified for the world of business and government than ever before. The other fine gentlemen was heard to say that never before have Americans been as poorly educated as now. Well, I can't very well improve upon this confusing contradiction—nor shall I try. For my words this afternoon are quite simple. All I have to share are some feelings and emotions of my own, and they seem to be shared by many hundreds of young people that I have met in Washington and in my frequent travels to high school and college campuses across the United States.

I don't have to tell you tonight of the "values crisis" that has premeated our Government and life in Washington these past few years. But as I noted in a commencement address I delivered in 1973, and I now quote myself, "a resolution and adjudication of the convoluted happenings of recent months will be accomplished in timely and orderly fashion, transforming this current national difficulty into one of the strongest winds for constructive change to sweep across Government in many years.

"As a result of the witless malfeasance of a few, the collective energies of many have been brought to bear in an objective search for truth, the results of which will be the promulgation of new laws and individual liberties in the context of revitalized national leadership. We will see a strengthened Government and political system with reestablishment of the values of credibility and integrity at every level of government."

Indeed, much of what I spoke about in 1973 in the future tense has come to pass. But just as our Government and leadership's system of values have been called to task, may we not use this occasion to call our own system of individual, human values to an accounting. And what better time to start such positive introspection than this hour—your graduation from high school into your life of maturity and responsibility ahead.

There is not one of us whose values are inviolate and secure, free from some form of hypocrisy and illogic. We are all creatures of human nature—but you, my young friends, while your parents and families have given the best of their values and love through the years, you now set out on your own, testing those values to your own heart

and individual frame of reference—retaining those that make sense in this world of today, and discarding those that lend small credence to your own search for goodness and human compassion. In every measure, you will now have to fashion a set of values that is uniquely your own, capable and worthy of imparting to the people you meet and whose lives you touch.

This entire process will be the most important job that will ever come your way. For if you fashion now a system of nonplastic values, imbued with goodness, affection and conviction, then indeed your life—and everything in it—will be full of those same positive qualities of sustenance. As the poet Shelley once wrote, "those who inspire love most are fortunate, but those who feel it most are happier still."

Now granted, it's not always an easy task to live a positive and vibrant life, day by day, in today's human maelstrom—filled with the passions and turmoils of our time. But let me suggest a few attitudes that might help to put it together, in the context of your expectations and approach to the day to day happenings of this world.

First: Understand that progress is a reality, and that constructive change and human advancement are the rules—not the exceptions. Make a conscious effort to seek out the things around you that are good, and acknowledge them to yourselves and to others. Then go on and discover where new progress is needed and new solutions are to be found. In the process, make a sincere and conscious effort to look for the goodness in people. In a real sense, look at each friend and individual as you might hope that he would look at you—seeking not reasons to hate, but reasons to love, and to understand, and to forgive.

You might remember as you set about the tasks of life, and enter a world with no small amount of despair and disappointment, that the traveler who enters the forest in order to reach the other side goes a long way while the forest continues to become darker and darker. And yet each step the traveler takes, if it be true and well intentioned, is a step closer to the goal and the brightness of the other side.

Secondly, as you live your lives and take positions on things and try to influence others around you, remember the words of the great philosopher, Goethe, as he said a century and a half ago, "There is nothing more frightful than ignorance in action." This is the motto of our own student seminars in Washington, and it suggests that each time you are confronted by a question or an issue, think it through as thoroughly as possible, seek out the facts and the reasoning of other people, juxtaposing this information in turn to your own judgment and commonsense. Then my friends, you will be no one's pawns, but on the contrary your own formidable selves, as you act and move about the work of your lives.

Thirdly, learn to laugh at yourselves, and to understand the sagacity and beauty of a sense of humor. I don't mean to suggest that the problems you encounter are frivolous and specious, but, since all of us are only human, we are fallible and make mistakes and if we are going to avoid the lethal error of locking ourselves into those mistakes out of pride or ignorance, then we must be able to say time and again—how foolish of me, how ridiculous could I be. Laughter can heal: A smile can unite—and when turned inward it can help to nurture that beautiful and much needed quality of humility.

This brings me to the fourth and final observation I should like to share, one that concerns your interrelationships with people all about you. Indeed the most simple and yet most profound quality that all of us have within ourselves is the gift of love, and I can only plead with you this evening to feel the vibrance and fire of love throughout your lives—and give of it unstintingly to others. For love is perhaps the only thing you will ever lose by not giving it away. Love is one of those eternal words that often defies explanation and even understanding; forever remaining an emotion or a feeling of the heart. But love has its roots and its causes, and all of us know the wonderous beauty that springs forth from a heart touched by love. Perhaps there is no better place in all the world to feel the beauty of love than right here in this room, where many a father and mother now sit, with the trace of tears in their eyes, tears of love and affection for their children, who today are growing up, and away, a bit more.

A great philosopher said many centuries ago that "Goodness in the object, when perceived, is the fundamental cause of all love."

What a true and noble course this suggests for each of our lives. For it leads onto the grandest road—a road in search of love, and in turn a life full of meaning and hope. It suggests that we might well be consumed by our search for goodness in others, as well as in ourselves. For all around us there is the capacity to love and the natural and wonderful desire to be loved. Within the very nature of this ethic of love lies the future hope of man and his destiny as he meets his God.

In a world filled with stress and toil—as well as the simple miracle of a bird's morning song—the essence of human affection and tenderness can change our lives and our world as no other force in existence.

So let your lives be a search for such real treasure—sincere, honest, and ennobling friendship—and along your way, share the most meaningful thing you have to give—your love as a human being. From this very commingling of friendship, goodness, and love—your lives will touch the very reasons for your creation.

There then, you have few of my own feelings and thoughts to accompany your journeys ahead. Actually, the searchings of youth are in all of us, but it is you, my young friends, as yet unencumbered by many of the commitments of older years, and unfettered by the conventions of yesterday, who seek new answers, and new compassions from each other and the world at large.

Sadly, there will always be those amongst us who follow a crooked path of demogogic sermonizing and moralizing, all in the distorted guise of righteousness. This must not be your quest. Rather your lives, and every action in them, must be imbued with the highest personal ideals of knowledge, integrity, honesty, and compassion, all in the spirit of a humble recognition of the greatness and the humanity of your heritage. These are the personal values, that in great measure, are the moral imperatives of your existence.

As you travel your unknown roads to unimagined lands afar, some of you will become leaders of your community, your State, and perhaps your Nation.

Others will simply and beautifully become leaders of your family; some of you will become involved in the great issues of our society,

Others will face the sheer madness of balancing a checkbook; some of you will hear the sounds of applause in your honor,

I hope all of you will marvel at the sound of a baby's cry to you as a young parent.

Now, in closing, and in the spirit of these moments, I am reminded once again of those vibrant and glimmering words of Ernest Hemingway, who said:

"We are living in the morning of an epoch, and in the fog of the early dawn, men walk confused and see strange sights, but the fog will melt under the rays of the sun which has created it, and the world of truth will be seen to be solid and lovely again. All the glory of life, all the romance of living, all the deep and true joys of the world, all the splendor and all the mystery are within our reach."

Thank you, and God speed to each and everyone.

PEACEFUL PUERTO RICANS FIRMLY COMMITTED TO PRINCIPLES OF DEMOCRACY

HON. BALTASAR CORRADA

OF PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. CORRADA. Mr. Speaker, I wish to express my extreme anguish at the acts of violence in New York attributed to a group called "Armed Front for National Liberation" (FALN), who allegedly support independence for Puerto Rico.

I doubt very much the individuals involved are actually Puerto Ricans even though they may be using independence for Puerto Rico as a pretext for their violence. The people of Puerto Rico are peaceful and firmly committed to the principles of democracy and we reject the use of violence as a method for political change.

I believe that those responsible for these acts of terrorism are most likely Marxist-Leninists or Communists who denigrate the word "independence" when they use violence and cause pain and suffering to the innocent.

The people of Puerto Rico have overwhelmingly rejected independence at the polls. In our last general elections in November the two parties on our island advocating independence together did not poll more than 6 percent of the vote. On the contrary, the two major political parties advocating close ties with the United States together polled more than 90 percent of the vote.

I would not be surprised that the persons involved in these acts are agents of international communism directly or indirectly associated with certain Communist nations, such as Fidel Castro's Cuba, who wish to bring attention to the case of Puerto Rico which is now pending before the Committee of Decolonization of the United Nations. That committee will soon meet again to discuss whether or not Puerto Rico should be declared a colony. Opponents of the United States hope to use this issue as a way to embarrass the United States before the world public opinion.

The political status of Puerto Rico is an internal matter between Puerto Rico and the United States and we Puerto Ricans will not allow strange elements to interfere in our affairs. In Puerto Rico we are used to discussing the alternatives of statehood, Commonwealth and independence in a climate of tolerance and mutual respect and we firmly reject terrorism and violence.

These acts of terrorism have no popular support whatsoever in our island and as Puerto Rico's Resident Commissioner in the United States I trust that the public opinion of this Nation will reject the efforts of those who do not represent our people and attempt to distort political to democracy as this Nation is committed to democracy and we condemn terrorism

realities of our island. We are committed just as most other Americans do.

RETIREMENT ISSUE

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. WAXMAN. Mr. Speaker, on July 26, 1977, our colleague, Representative TED WEISS, of New York, testified before the Senate Subcommittee on Labor concerning S. 1773 and related bills dealing with the mandatory retirement issue. As you are aware, the House Education and Labor Committee, on which Mr. WEISS serves, recently approved by a unanimous vote, H.R. 5383, the 1977 amendments to the Age Discrimination in Employment Act. H.R. 5383 raises coverage under the Age Discrimination in Employment Act from the current level of 65 to 70 years, and eliminates all retirement provisions on the Federal sector. This legislation and the Senate versions of the 1977 amendments also contain a provision similar to one included in legislation which Mr. WEISS and I have introduced prohibiting employers from mandating the early retirement of their employees through the provisions of pension plans and other benefit systems.

Mr. WEISS' testimony provides a clear account of the legislative history surrounding the pension plan provision and a succinct explanation of this issue which the House will consider during the month of September. I would like to share Mr. WEISS' remarks with my colleagues:

Mr. Chairman, I greatly appreciate this opportunity to appear before the Senate Subcommittee on Labor concerning S. 1773, the 1977 amendments to the Age Discrimination in Employment Act (ADEA).

While I understand that there are differences between the House and Senate versions of this legislation, as introduced, concerning the age limits at which the private sector is uncapped, I would like to direct my comments to the provision clarifying section 4(f)(2) of the act.

As the Senators may know, S. 1773 incorporates a provision similar to that included in legislation introduced by Representative Henry Waxman of California and myself closing an unintended loophole in section 4(f)(2).

Section 4(f)(2) was originally designed to increase the employment opportunities of older workers by making their hiring relatively easy; under section 4(f)(2) employers could hire older workers and benefit from their employment experience without having to include them fully in company benefit plans or seniority systems.

Some employers, however, have interpreted this section as a license to permit mandated early retirement—prior to the upper age limit in the ADEA—as long as such a provision is written into the terms of a benefit plan or retirment system. A reading of the original Senate debate on the ADEA in 1967, makes very clear that such an interpretation was not the intent of the original authors.

The distinguished Senator from New York and member of this subcommittee, Senator Jacob Javits, alluded in his introductory remarks to accompany S. 1773, to his colloquy with Senator Ralph Yarborough during Senate consideration of the original ADEA. In the words of Senator Javits, the purpose of section 4(f)(2) was "to facilitate the hiring of older workers by permitting their employment without necessarily providing equal benefits under employee benefit plans." In further explanation of this provision, the Senator stated the following:

"The meaning of this provision is as follows: An employer will not be compelled under this section to afford to older workers exactly the same pension, retirement, or insurance benefits which he affords to younger workers." Senator Yarborough agreed with Senator Javits' interpretation of this provision.

In hearings held on March 15, 1967, Senator Javits made a statement similar to the one I have just quoted setting forth his intention "that a fairly broad exception be provided for bona fide retirement and seniority systems that will facilitate hiring rather than deter it and make it possible for older workers to be employed without the necessity of disrupting those systems."

While this legislative history should eliminate any doubt concerning the intent of the original authors, I have sought to insure that the provision, section 4(f)(2), which is designed to encourage the employment of older workers cannot be used to force them to retire early by incorporating in H.R. 5383 language similar to that in S. 1773. The Senate language follows:

(Insert after "individual") "and no such seniority system or employee benefit plan shall require or permit the involuntary retirement of any individual specified by section 12 of this act because of the age of such employee."

I am convinced that, without clarification, the potential for future abuse of this section is widespread. Figures from the Bureau of Labor Statistics indicate that some 2 million Americans are covered by pension plans which permit employers to retire workers before age 65. This I am afraid is only the beginning.

If we were to find a provision in the Civil Rights Act of 1964 which was intended to advance the opportunities of those covered by the law but which, in fact, was used against their advancement, we would act without haste to correct the provision. Likewise, it is our legislative responsibility to move expeditiously when the rights of older workers are jeopardized by misapplication of the law. We cannot allow the very law which exists to protect the rights of older workers and the very provision which was written to expand their employment opportunities to be ctied as the vehicle for mandated early retirement. Once we are aware of such a contradiction, our position as Members of Congress leaves us no option but to clarify the law without delay.

THE VOTE AGAINST DECONTROL OF NATURAL GAS WAS A VOTE AGAINST THE NORTHEAST

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. KEMP. Mr. Speaker, I regret very much that the Congress today voted against the consumers of America by further regulating the price of natural gas at artificial prices which encourages a reliance on more expensive fuels such as imported LNG and synthetic gas. This outstanding article discusses the impact on northeast consumers.

WHY NEW NATURAL GAS DEREGULATION MAKES SENSE FOR N.E. CONSUMERS

(By Warren T. Brookes)

You have no doubt noticed that fear is a very bad basis for doing anything in life. It usually makes us do just the opposite of what we should do.

It is fear that makes us jam on the brakes on ice, thus causing us to skid even more dangerously. It is fear that makes us lean into the hill while skiing downhill, and this just makes us fall harder.

As it is with everyday decisions, so it is with economic policy. When fear is in command, policymakers invariably do just the opposite of what should be done.

This is especially true of our government's present approach to the deregulation of natural gas. Reason tells us that the very best way to stimulate the search for new gas is to deregulate its price.

But fear is telling our politicians that such a move would be disastrously costly, and enable the companies to make too much money. So we clutch our price controls to our bosom—and thereby promote even worse shortages, and curiously even higher prices, as the nation makes less and less economic use of its costly pipelines, and even greater use of hugely expensive imported and synthetic natural gas.

Thus, when Congressman Robert Drinan warned us that deregulation of newly discovered natural gas (already voted by a House subcommittee) could cause "massive inflation and unemployment," he was speaking more from fear than reason.

The fact is that continued failure to deregulate new gas will almost assuredly cau: even more unemployment (remember last winter?) and even more inflation, as we are forced to use even most costly sources of fuel.

Nowhere is this more true than in New England.

Any careful analysis of our present natural gas situation shows that deregulation of newly discovered gas would undoubtedly cost New England consumers less, both in the short and long run, than continuing with present controls.

That is not just our opinion, it is the opinion of responsible economists at both of our leading universities, MIT and Harvard. It is also shared by many of the utilities who will have to purchase the gas for us from whatever source they can find.

The reason for this is that, as Prof. Thomas Stauffer of Harvard points out in a brilliant paper in 1976, natural gas regulation has only forced the country, and particularly Massachusetts, to "choose the expensive solutions," namely LNG and SNG.

His detailed analysis, appearing in a book called "Regulating the Product," shows graphically how the failure of the FPC to lift controls on natural gas directly curtailed discovery and production, and gradually forced the nation to buy more and more expensive liquefied natural gas (LNG), synthetic gas (SNG) and propane at prices several times the natural gas controlled price.

This partially explains why, even with price regulation, the cost of natural gas to Massachusetts consumers has continued to spiral.

Because local gas utilities are unable to get all the contract natural gas they need through interstate pipelines, they have had to go out and supplement their supplies with costly imports and substitutes.

During this past winter, for example, more than 12 percent of the natural gas used in New England came from SNG and propane at prices of from $4.50 to $9 per MCF (compared with interstate natural gas at an average of about 46 cents). Another 6 percent of our natural gas came from LNG tankers from Algeria, Alaska and so forth at prices of from $1.60 to $4.

As a result, about 16 percent of our present natural gas needs are now being supplied at prices that average close to $4 per MCF, almost ten times the price of price-controlled interstate gas, and twice as much as uncontrolled intrastate gas.

And, during the next three years, this figure is expected to climb to as much as 25–30 percent of our total usage, unless there is substantial new gas discovered out west.

So, even if new natural gas were deregulated, and rose to the $2.25 figure (which Dr. Schlessinger suggests), this new gas could be used to cut our present use of SNG and LNG, and New England would automatically pay less for its natural gas than it will without deregulation.

More important, the major share of our present retail gas prices (about 80–85 percent) is not for the gas but for pipeline costs. Unfortunately, total pipeline costs are fixed. As their usage declines, consumer pipeline charges rise.

The best proof of this is what happened in the case of Brooklyn Gas where the total price of gas to the consumers rose in two years from $1.72 to $3.38, while the price of the raw fuel went up only 20 cents. Of the $1.66 increase, $1.44 was in the rising cost of the pipeline services.

The main reason for this rise in pipeline costs was the decline in the flow of natural gas through the nation's major pipelines. When pipeline flow drops (as it has over the past three years) by as much as 20 percent, the cost of pipeline charges to the consumer will increase by about 23 percent. Conversely, a 20 percent increase in pipeline flow, will cut pipeline costs to the consumers by 15–18 percent.

This is why a study done for Brooklyn Union Gas Company in 1975 showed that if new natural gas were deregulated, and the pipelines were kept full by new gas costing $2.50, Brooklyn Union's cost to the consumer would be $3.98—but, if regulation remained and the downward trend in natural gas production from the west continued, the consumer price would be $4.45 or about 12 percent higher.

In other words, the better utilization of the pipeline would more than offset the immense rise in the price of new gas if it were deregulated.

To show you how this might work in New England, we have done a little analysis using rough average prices and costs. In the following table we show what would happen to the present cost of the gas (not the pipeline) under two different situations—continued regulation (CR) and unregulated new gas (URNG).

	Present	1980 CR	1980 URNG
LNG percent used	6	12	6
Average price	$2	$3	$3
Net cost	$.12	$.36	$.18
SNG and propane			
Percent used	10	15	5
Average price	5.40	$6	$6
Net cost	$.54	$.90	$.30
Regular			
Percent used	84	73	85
Average price	$.46	$.83	$1.03
Net cost	$.38	$.61	$.92
Net composite	---	---	---
Price (MCF)	$1.04	$1.87	$1.40

What this table tells you is that under continued regulation our use of the more expensive LNG and SNG would grow to 27 percent of total usage, and the composite price of our gas would rise from $1.04 to about $1.87 in the next three years.

But, if new natural gas were deregulated and much of the present gas being "shut-in" for intrastate use were turned loose at a price of $2.25 per MCF, our use of expensive synthetic gases would drop to 5 percent, and our total composite price would rise to $1.40, or about 47 cents per MCF less than it's going to rise anyway, under continued regulation.

But, this isn't all. You have to add in the costs of the pipeline itself, which will rise if we have to use more local propane. SNG and LNG, but fall if we use more gas from Texas and Louisiana.

The following table then tells the whole story:

Cost per Mcf

	Present	1980	1980 CR URNG
Pipeline cost	$3.20	$3.84	$2.85
Gas cost	1.04	1.87	1.40
Total	4.24	5.71	4.25

What this table shows is that not only will deregulation of new natural gas wind up saving the N.E. consumer about $1.46 over the cost of continued regulation, but it would in fact probably cost no more than the present price of natural gas. This is based on comparatively high usage (15 percent) of new natural gas at unregulated prices of $2.25 to $2.50.

Indeed, many local utilities feel that this estimate is pessimistic—that, in fact, the immediate effect in the next two or three years of deregulation would be to lower net gas prices to residential consumers.

One thing, however, is plain. The present policy of hanging fearfully on to price regulation of natural gas is going to be the very worst possible situation for New England, because it will only drive up our use of LNG and SNG, and raise our pipeline costs.

But that's the way it is with any policy dictated by fear not reason.

DOUBLE STANDARD ON LANCE

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. DRINAN. Mr. Speaker, an editorial in the Christian Science Monitor of August 3 continues to escalate the torrent of questions about the propriety of Bert Lance's position as the head of OMB.

The time has come for Mr. Lance to explain fully all of the circumstances that prompted the Teamsters' opening a trust account in his Atlanta bank, the reported quashing by the U.S. attorney of an investigation of Lance's banking operations just before he took up his present post, and all of the other ethical questions that have been raised in the press.

The pointed editorial from the Monitor follows:

DOUBLE STANDARD ON LANCE

A strange thing happened the day after a Senate committee last week accepted budget director Bert Lance's assurances that he had done nothing improper in his personal financial dealings. The country's top financial officer appeared before Congress Joint Economic Committee but would not talk freely about simple financial matters. He sparred with Senator Humphrey on a question about banking capital. When asked about the trend of interest rates, he said: "I've been told I shouldn't talk about interest rates." He said that not to be able to respond was an "unusual position" to be in.

It certainly is an unusual position for the head of the Office of Management and Budget to be in. A congressional economist was astonished by the performance, which he said rendered the Lance testimony worthless. The reluctance to talk about banking and interest rates, of course, was due to the conflict-of-interest allegations about Mr. Lance's banking and borrowing activities despite his clearance by the Senate panel. Will he feel free to testify on these matters once he pays off his $3.4 million loan at a rate of interest tied to the prime rate?

Such questions arise whether or not an investigation by the Comptroller of the Currency finds any illegality in the Lance transactions. They are compounded now by reports that a buyer has been found to buy Mr. Lance's Atlanta bank stuck at about the price he paid for it rather than the lower market price offered to other stockholders. Such a sale would take care of the $3.4 million loan. Whatever the legalities, can it be seriously argued that Mr. Lance's governmental position had nothing to do with the prospect of such a rescue? And did his relationship with Mr. Carter have nothing to do with the Teamsters opening a trust account in his Atlanta bank? Or with the reported quashing of a U.S. attorney's investigation of Lance banking operations just before his appointment to his present post?

To bring up such points is not to deny Mr. Lance's protests of innocence on his own part but to seek to avoid a double standard in the scrutiny of public officials. Suppose the present circumstances had surrounded the budget director of the Ford administration. Is there much doubt that the Senate panel would have demanded more specific answers than it received from Mr. Lance? Or that there would have been at least one question on the topic during the President's subsequent news conference last week? Remember how President Ford's own alleged conflicts of interest were pursued to the last golf tee?

The Carter administration came in with unusually stern attitude against conflict of interest. Yet now its budget director feels he cannot answer questions of the Joint Economic Committee because of conflict-of-interest charges. Surely the press, public, and government should be no less concerned about clearing everything up than they were in the all too recent past.

PLIGHT OF A SOVIET REFUSENIK

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. ROSENTHAL. Mr. Speaker, once again the Soviet Union has exhibited its disregard for human rights by prohibiting Dr. Veniamin G. Levich and his wife from leaving the country. It is tragic that a man of Dr. Levich's stature—a world-renowned physical chemist—was prevented from attending a recent international conference in his honor.

The Soviets' action is just one more step in an escalation of that country's massive pogrom against its Jewish citizens who wish to emigrate. Dr. Levich's situation is a case in point.

He applied for an exit visa in 1972 and was told that he could not leave because of his supposed knowledge of state secrets. As with so many other Jewish professionals, this excuse has been offered time and time again as a valid reason for refusal. Anatoly Scharansky, the renowned Jewish dissident was refused on such grounds, as were Iosef Begun, Naum Salenski, and Vladimir Slepak.

Beginning with the application and perfunctory refusal of emigration visas,

Levich's experience coincides with the pattern often followed by other "refuseniks"—Jews who have been refused exit visas.

He was subsequently dismissed from his job—again a common occurrence with refuseniks—and his chair at Moscow University was immediately abolished. He was denied access to his laboratory, but perhaps worse, he was cut off from associations with fellow colleagues. In what Dr. Levich terms moral torture, former colleagues were either instructed or frightened into treating him as a nonperson.

"As I walk in, my former colleagues or students pretend they do not see me, stand up, and leave me completely alone . . . One of our Soviet colleagues visited Israel and saw my son, who gave him a picture of my granddaughter to bring me. But the photograph never reached me. I suppose my colleague was afraid that visiting me could jeopardize his own job," Levich wrote recently.

Once a Jew makes an application for an exit visa, he essentially sets himself up for continuous harassment. Whether the applicant is a world famous chemist or an ordinary citizen, the Soviets devise a systematic smear campaign to discredit him. Many who merely wish to unite with their families are linked to the revolutionary movement and are looked upon as enemies of the state. They are accused of being subversives and are subject to arrest at any moment on a variety of trumped-up charges.

Life suddenly becomes a maze of catch-22's where the simplest movement is seen as a crime, such as accidentally bumping into a KGB agent. Phones are disconnected, mail is confiscated, and even conscription into the army is not uncommon.

The detention of Dr. Levich is by no means an isolated incident. It is symptomatic of a carefully arranged, methodical plan to discredit the Jewish movement. And the trend is ominous because the seriousness and frequency of the repressive acts increases daily.

The Soviets' continued disregard for human rights is a clear violation of the Helsinki accords, an agreement which was signed and endorsed by Secretary Brezhnev. In no uncertain terms, the third basket of the agreement protests every individual's basic right to freedom of thought, conscience, religion or belief. It also encourages movement among persons of different nationalities, for personal or professional reasons.

Mr. Speaker, the case of Dr. Veniamin Levich now stands as another example of the Soviet Union's continued violation of the Helsinki agreement. We must pay close attention to the plight of Dr. Levich and his appeal for action.

I am taking the liberty of including excerpts of his articulate address to the Oxford University Conference, which he, unfortunately, could not attend:

EXCERPTS FROM STATEMENT OF DR. LEVICH

I am addressing you on a most solemn and at the same time most grievous day of my life. A high honor is conferred on me which I appreciate very much—an international scientific conference held on the occasion of my 60th birthday.

As I see it, this is a high appraisal not only of a modest contribution I have made to science, but also of my struggle against the transformation of scientists into property of the state—the latter being a threatening precedent for scientists all over the world.

Meanwhile, as authorities of this country have willed it, the Oxford conference will pass in conditions approximating those of a memorial to me.

Twenty-seven years have passed since I altogether left my investigations in nuclear physics. Five and a half years have passed since I made up my mind to put moral principles above the well-being I had been provided as the result of my high standing in the scientific hierarchy of this country.

I felt I had fulfilled my duty in regard to the country of my birth. I had every right to choose another country to live and work in.

DEPRIVED OF ELEMENTARY RIGHTS

Since I applied to emigrate I have been deprived of elementary rights granted to scientists in any civilized society.

Since then I have been totally isolated and completely cut off from scientific life in this country. Under the circumstances, it would be most absurd to refer again to the alleged secrecy of my previous work, even as a plausible excuse for denying me my natural human rights.

During all these past years I have been offered appointments by 24 western universities as a visiting professor, besides a number of invitations to international conferences. Each time I applied to the authorities of the Academy of Sciences, but never have I received any reply.

All this, and especially my absence from the Oxford conference, shows that scientific cooperation on one hand is dictated by the authorities. Meanwhile, some Soviet scientists, particularly those who frequently travel abroad, continue to misinform the world scientific community about the situation of scientist refuseniks, for the purpose of reducing the concern and activity of Western colleagues.

Article 5 of the Universal Declaration of Human Rights prohibits torture, brutal treatment, treatment which humiliates human dignity.

Is the deliberate transformation of a scientist who devoted 40 years of his life to science into a pariah cut off from his professional activity anything but severe humiliation of his human dignity—actually, a kind of moral torture?

Moreover, apart from the right of separated families to be reunited, the right to emigrate is the most modest of all universally accepted human freedoms. Nevertheless, my wife and I have been indefinitely separated from our children, despite assurances given us three years ago.

Is this anything but a form of moral torture? It is evident that after long, agonizing years, freedom for me to emigrate his come to be even more than that. It is now a question of life and death. In my case, one cannot but see a direct and flagrant violation of several basic humanitarian points in the Final Act of the Helsinki agreement.

I am aware of the fate evil forces have in store for us.

I would like to emphasize, however, no matter what happens, I do not repent of the decision I have made.

I, as well as others like me, are encouraged by your genuine concern, by your unstinting support.

I appeal to you. Do not lessen your noble efforts. While contacting Soviet representatives, you Western intellectuals can and ought to openly raise the question of Soviet scientist-refuseniks and their fate, to clearly show your profound concern with this humanitarian problem. Again and again, persistence and persistence.

TOAST BY MENACHEM BEGIN

HON. STEPHEN J. SOLARZ

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. SOLARZ. Mr. Speaker, I recently had the great honor of attending a state dinner at the White House in honor of the new Prime Minister of Israel, Menachem Begin.

At a time when we too often forget about the moral greatness of our country, when we are criticized by friends and foes alike, it was refreshing to hear the Prime Minister's poignant words of gratitude to America and its people.

This remarkable man, whose whole life has been devoted to the struggle for Jewish survival and security, also spoke movingly about the travails of the people he has been freely chosen to lead, and of their passionate desire, above all else, for a just and lasting peace in the Middle East.

Mr. Speaker, I take great pleasure in bringing Menachem Begin's toast to the President to the attention of my colleagues in the Congress:

Mr. President, after having met you, I can say it was a great day in my life to be here to speak to you, to listen to you. We have had very few good days in our lives in our generation. Most of the days were spent in struggle, in persecution; at times in being hunted, in dreams, in suffering. And the days of solace are not many.

This is one of the best days in my life, having met the President of the United States, having learned that this is a man, a great friend of humanity, a man of great understanding and feeling. And therefore, I can say now wholeheartedly a great friend of Israel.

Therefore, tonight, Mr. President, with your permission, I will say something about what I believed to be, perhaps since my childhood, the moral greatness of America.

In 60 years, America has saved mankind from three very grave dangers. The first was Prussian militarism, which during the First World War almost trampled under foot all of Europe and ultimately the world.

1917 was a crucial year. There were mutinies in the French Army. The great question was whom? Who is going to break whom? And then the outcry was heard throughout Europe: "The Yankees are coming." The Army of General Pershing fought valiantly. Mainly, the spirit of the European armies, of the allies rose, and then victory came.

The second time America saved mankind came during the period when, as Churchill said, all the embodiment of evil mankind turned a great nation—a nation of poets and philosophers—into a bloodthirsty mob, thirsty first of all for Jewish blood. And in that hour, perhaps the darkest in our time, we lost a third of our people. That would mean 80 million Americans wiped out. Those are phantasmagoric figures which scientists make up in connection with the megatons. But megatons are produced never to be used. As we believe, all free men and all those who believe in Divine Providence, we have to live with those phantasmagoric figures to the last day on earth.

A dark age started in Europe and throughout the world. We should always tell the truth. There was a time when England stood alone resisting that barbarous tyranny. And there was a time when the Soviet armies fought heroically against the onslaught by the Nazi hordes.

However, whoever studied history does

know and should admit that were it not for America—for America's might and America's spirit and faith in justice and liberty—even England would have succumbed, Russia would have fallen, and then a dark age would have started perhaps for many, many years, perhaps for centuries, mankind never knew since the days of Nero and Caligula.

Ultimately, the United States won the day for all mankind, and so we were saved from the dark age under the Nazi tyranny.

After the Second World War, Mr. President, there is no doubt whatsoever were it not for America, the Soviet armies long ago would have reached the shores of the Atlantic Ocean. There wasn't enough strength in Europe left to withstand such a possible onslaught. It was only because of America that part of mankind was saved from Soviet slavery, from communist subjugation. This struggle still goes on, as we can see a tendency to take over country-by-country by proxy.

This is the moral greatness of America. It saved three times in two generations, in 60 years, all the nations, all mankind. We free men bow to that greatness of America.

America knew crisis as well—economic and moral crisis. But as we follow those 200 years of American history, as we read Jefferson and the story of Lee and Hamilton, and Citizen Tom Payne, and the marvelous life story of Abraham Lincoln, who actually renewed all the great precepts taken from the Bible—when we follow this wonderful story, we see that after each crisis America becomes more democratic, more just, more free and more devoted to our human tasks.

Now, with your permission, Mr. President, a few words about little Israel. And I do not say so for the sake of artificial modesty—we are a very little country. We shall always be. And in comparison with America's might, we are a very small, very small, country and people in the Middle East. However, we rose in suffering and in heroism.

Sometimes, as I heard today as well, journalists have an undertone when they ask me about the Bible. I am not ashamed to say that I do believe with all my heart in Divine Providence. Were it not for Divine Providence, where would we be today or tonight? We were sentenced to death, all of us, and the life of every one of us is a present. We could have been dead in the trains and in the camps, as the wife of my friend and secretary, a young lady, was, having spent three years in Auschwitz, having looked every day upon that smoke coming in from the chimneys and knowing what happened.

So we suffered. And when people ask me about the Bible, then I can say our generation, my generation, is almost a Biblical generation.

Of course, we don't dare compare ourselves with our ancestors. But what was the Biblical generation? They achieved everything by suffering and with heroism. They suffered very much until they reached the Promised Land. And Moses, the great Liberator, wasn't even allowed to come into the Promised Land.

In great heroism, Joshua was told, "Be strong spiritually, have courage and faith against overwhelming odds and forces."

That is our generation. Everything we achieved was through great suffering, almost inhuman suffering, having lost a mother, a father, a brother, a little nephew, everything dear and near to you being bereaved and orphaned; asking the question, "Wherefore will come my salvation?" And then saying to ourselves, "Rise for a just cause. Endanger your life; it is a present given to you. And create conditions in which never again will an enemy raise his hand on a Jewish child and escape with impunity."

So we did fight and we suffered and there was great heroism and singing of the Hatikvah with the last breath in one's lungs. But ultimately, with God's help—indeed, only with God's help—we won the day; we have a country, a parliament, a government, a land to till, cities to build, the field to make green, to take in our persecuted people from scores of countries, from the Arab lands. We took in 800,000 of our brethren from the Arab countries. The others came from Europe, what we call in Hebrew "Sharei Pleyta"—the term is absolutely unknown to other nations—the remnants of our people from generation to generation; we are the remnants of the remnants.

And now we want to have peace; more than anything in the world to have peace. We didn't have in our time one day of real peace there with all the tragic events, and in our own land, terror and bloodshed, always living on the hinge, always threatened with extinction and standing on God for our people and for human liberty and for human dignity. This is the story of our generation.

Therefore, Mr. President, I have come to you, as the democratically elected Prime Minister of Israel, with a deep sense of responsibility. May I inform you, sir, that our spiritual leadership, the rabbinate, the day before yesterday asked the people to pray every day for the success of my mission. And they recited a special song to say every day, people praying for the success of one's mission.

This is some phenomenon because they know we have a great friend, the United States of America. And we, Israel, are a faithful ally of the United States. We do whatever we can to serve the free world. We contribute to the national security—as tonight I will show you, Mr. President—to the national security of the United States.

We are a guardian of human liberty and democracy in the Middle East. We look around; I don't see any country in our neighborhood which can, through a free vote of proud citizens, say one leadership should take a vacation and there should be another leadership, and then the transfer of power is being carried out in so orderly a way—my predecessor waiting for me in his office, I coming in and shaking hands, expressing the best feelings for each other, and then the predecessor saying, "Now, take over," and I going into my office and then indeed giving the first order to bring in the Vietnamese refugees into our country.

Democracy is beautiful. When you look at what is happening under tyranny or whatever comes, and you compare democracy, as Churchill used to say, it also has its faults, but basically how beautiful is democracy.

We are proud that we are a democracy, as the United States carries the banner of democracy.

This is our contribution to freedom, national security of the free world. We shall continue to do so to the best of our ability.

Our talks, Mr. President, I do hope, first of all, will result in the deepening of friendship between our countries. One day, one day—I pray for it—perhaps I will be able to say in pride I will call you my friend, in pride. And then our talks may result in progress towards that goal called peace.

We must have the sense of urgency, but we also must have some patience. May I respectfully submit that I prove to have patience. Some patience it was. (Laughter.)

You, too, Mr. President, showed that you have patience. So some patience must be guarded, because it is an historical conflict; it is not a territorial problem. For 19 years, there was no peace; for 19 years we didn't have the second part of Jerusalem, the Golan Heights, not one day of peace.

The question arises: Why not? Were it a territorial conflict, there was no reason not to make peace with Israel. These are historical conflicts. We came there. We have come there by right to the land of our ancestors. But it was not recognized and time again attempts were made to destroy us.

Sometimes you have a defeated aggressor claiming he is the wronged victim. But we know what happened. We only defended ourselves against attempts, repeated, to destroy our people, our dreams, our independence and ultimately our lives.

With a sense of urgency on one hand and some patience on the other, I think we can build a foundation of peace in the Middle East and the recognition of justice for all and fairness for all, as we believe.

We don't hate our neighbors. We don't want to humiliate them at all. We never wanted to defeat them. We never wanted to wrong them. But we had to defend ourselves. This is the whole story, as they used to say in those ancient days, on one foot. I can only speak very shortly standing on one foot, the whole story.

We are hopeful; we are optimistic. We have to be. Our people have always been optimistic.

So, Mr. President, the day after tomorrow I will be leaving Washington with a staunch heart, grateful for your gracious hospitality, for your friendship, for the encouragement you gave all of us, for your leadership.

At the time, ladies and gentlemen, the British used to say, because of their own reasons, thank God for the French Army.

Now, paraphrasing that saying, I will raise my glass and say with all my heart, thank God for America.

To the President of the United States, the leader and defender of the free world: L'chaim.

GO GET IT, FELLOWS

HON. ANDREW MAGUIRE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. MAGUIRE. Mr. Speaker, the following article from the June 1, 1977, issue of Forbes magazine "Capitated Tool" describes clearly why the Jones-Schroeder plowback amendment should be soundly defeated.

The article describes the hefty and powerful incentives the Carter pricing proposal grants for oil exploration. It tells how oilmen privately concede these incentives.

It reveals that "there is more drilling going on in the United States today than at any time in almost 20 years."

It shows that "the industry's capital exploration budget for this year runs to $30 billion" compared to only $9 billion in 1973.

It quotes expert industry analysts that greater proportions of rising oil company revenues will be plowed back into drilling not just this year, or next, but on to 1990.

It describes the attractiveness of drilling in the United States as geologically second only to the Persian Gulf, and politically there is no place as attractive.

It quotes Energy Secretary Schlesinger: "The oil companies can make more money in the United States than anywhere else in the world."

In short, the companies are and will be plowing back so much under current pricing that they do not need any additional plowback.

The text of the article follows:

GO GET IT, FELLOWS!

There's a lot more oil and gas waiting to be found in the U.S. For all the moaning

and groaning you've heard, President Carter's energy program does give oilmen powerful incentives to find it.

Many businessmen were disappointed that President Carter's energy program did not permit the price of domestic oil to rise to world levels. But it is wrong to conclude, therefore, that the program does not contain any worthwhile incentives for finding oil and gas. The program does contain a very major incentive: The price of newly discovered oil would be allowed to float up toward world prices. This is a hefty incentive indeed. The world price at present is $13.50 a barrel, while under present laws and regulations "new" U.S. oil brings only $11.28. The extra $2.22 ought to make a great deal of difference toward producing the new oil and gas the Administration privately concedes the U.S. needs for the rest of the century.

Natural gas? There are incentives here, too. "New" new gas would be price controlled at $1.75 per thousand cubic feet. This is less than new gas produced in Texas sells for in Texas these days (intrastate gas would be brought under the same ceilings as interstate gas under the Carter program). But it is considerably more than gas sells for elsewhere in the nation today. The new price makes the interstate market attractive and assures drillers—who have to see $1 per mcf before they'll even think about drilling these days—that the price trend for gas is up in the U.S.

You would never realize all this from reading most accounts of the energy program, which tend to put a gloomy interpretation on the program's incentive aspects. You would never realize it, either, from reading the public pronouncements of most oilmen. But don't be deceived. Privately, many oilmen will concede that—for new oil at least—the program contains strong incentives. Why, then, is the industry crying poor mouth? In large part, because it knows too well that its open approval would amount to a kiss of death.

The world market price for oil, which would be adjusted continually for domestic inflation, is the kind of money and policy that is likely to bring about an increase in new-field exploratory drilling. This kind of drilling has been declining since 1974, according to Petroleum Information, Houston's influential statistical service. PI points out that while 25,794 oil and gas wells were drilled last year, the number of them that were in new fields—attempting to establish new reserves—fell 3 percent, to 6,289.

There is more drilling going on in the U.S. today than at any time in almost 20 years, but the trend has been toward reworking old territory, pumping more from reservoirs that were not payworthy when oil was much cheaper. This kind of drilling does not add to proven reserves.

The Carter program means to shift the emphasis to true exploration. If the program—or the pricing part of it—gets through Congress, the way is clear economically for drillers to go deeper into the Gulf of Mexico and to the frontier areas on the U.S. outer continental shelf.

It costs between $6 and $8—from lease purchase through production—to bring in a barrel of new oil in the U.S. today. At $11.28, the more difficult parts of the game may not be worth the risk; at $13.50, indexed to inflation, they may well be. Oilmen privately concede the price is an incentive. Energy Secretary James Schlesinger is certain: "The oil companies can make more money in the U.S. than anywhere else in the world," he says. After all, the Georges Bank off Massachusetts is no tougher or riskier than Britain's North Sea.

Is the oil there for the finding? A good deal certainly is. The U.S. Geological Survey estimates that, at a statistical mean, there are 82 billion barrels of undiscovered recoverable reserves of oil in the U.S. That dwarfs the current 39 billion barrels of *proven* reserves. The Geological Survey also estimates that 484 trillion cubic feet of natural gas remain to be discovered—roughly equal to the total U.S. gas production to date. Exxon is a little more conservative in its estimates of attainable new reserves, preferring 63 billion barrels of oil and about 287 trillion cubic feet of gas. Shell Oil, on the other hand, is a bit more optimistic than the Geological Survey. It is a choice of riches.

And the oil companies have the cash flow ready and waiting to plunge into a new round of exploration. Exxon alone is running a cash flow of more than $4 billion a year; Mobil, Texaco and Standard of Indiana are each at $1.5 billion. The North Sea and North Slope are producing, beginning to return the investments made in them by the oil companies since the mid- to late-sixties. The costly Alaska pipeline will begin throwing off cash rather than swallowing it. The industry's capital and exploration budget for this year runs to $30 billion, estimates Dallas' authoritative Energy Management Report. In 1973, before the oil price rise, it stood at $9 billion. The oil companies want to put it into exploration in the U.S. because geologically its attractiveness is second only to the Persian Gulf, and politically there is no place as attractive.

Frederick Z. Mills, the respected oil services and equipment analyst of Rotan Mosle Inc., has just taken a look backward and forward. He notes that 1956 was the last time the major oil companies plowed back as great a percentage of their wellhead revenues for drilling in the U.S. as did the independent producers. That was also the year when U.S. oil and gas prices began a long decline in real terms and the majors began in a big way to shift their exploration overseas and to put their investments into refining, transport and marketing and into diversification, importantly in chemicals. But now wellhead revenues in the U.S. are rising again, and Mills sees the majors putting more of their rising revenues into U.S. drilling, not just this year, or next, but out to 1990.

Last year the oil industry pumped up $1.1 billion for leases in the Baltimore Canyon off New Jersey. That nothing has happened off the New Jersey coast to date is not the industry's fault, but is due to a court battle in which environmental groups and the Long Island counties of Nassau and Suffolk are trying to prevent development, preferring to get their oil and gas from offshore Galveston if not offshore Saudi Arabia.

About the only thing, then, that could prevent a vast new drilling and exploration boom is environmental politics. But Interior Secretary Cecil Andrus, himself a noted environmentalist, has just committed the nation to about the fullest possible development of the areas offshore, where our potential reserves lie. There will be a lease sale in the Gulf of Mexico this month, in Alaska's Cook Inlet in October and off Massachusetts in November. Next year will see three additional sales in the Gulf of Mexico and two more in Atlantic waters. Besides these, Andrus promises more to come in Alaska and offshore before 1980.

Andrus noted the "critical need" to develop U.S. oil and gas resources in announcing his lease schedule May 17. He is under no illusions about how long it will take to shift the U.S. energy base. Like Carter, Andrus sees conservation and conversion to coal alleviating U.S. dependence on foreign oil in the long run. "But we have to produce more oil and gas in the short range—or we have to buy more foreign crude, and I'm not in favor of that." That is why Andrus is opposing the environmentalists in the Baltimore Canyon case: He wants to get U.S. exploration off the dime.

Some complications may be added by the pending amendments to the Outer Continental Shelf Act of 1953, which the Congress takes up this summer. The worst effect of the amendments proposed for the OCS Act is that they would lengthen the time between lease sale and production of oil by two years—to nine years from seven. Under some clauses supported by Senator Henry M. Jackson of Washington, the government itself would hire a drilling contractor to go out on the shelf and drill a few to see what is there. The oil industry sees in this the shadow of the national oil company they suspect the Washington bureaucracy dreams about.

Don't be surprised, therefore, if the oil industry continues to meet roadblocks. But the problem is not lack of incentive. At $13.50 a barrel, there is all the incentive any oilman would want to go out and search for oil in the hard and risky places.

AN AMERICAN FAMILY: THE DUFFYS OF AUGUSTA, ARK.

HON. BILL ALEXANDER

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. ALEXANDER. Mr. Speaker, I would like to share with my colleagues an article from the July edition of the Reader's Digest spotlighting the O. C. Duffy family of Augusta, Ark., in my district. This courageous family is evidence that the American dream is alive and well:

AN AMERICAN FAMILY

(By Joseph P. Blank)

"My life is a dream come true," Leona Duffy said softly, as she stood among her 12 children on a hot Saturday evening last August.

This 66-year-old woman, her shoulders bowed from lifelong labor, now works as a cook for a family in Augusta, a small Arkansas farming town. Her husband, O. (Octavris) C., 72, is a cemetery caretaker. But for most of their lives the Duffys were sharecroppers. They never earned more than a couple of thousand dollars in cash a year and, when bad weather caused a sparse cotton crop on their rented 25 acres, they counted far less of an income.

On the eve of her wedding in 1934, Leona asked God to help her make Duffy a name to be proud of. After the ceremony she packed her belongings in a cardboard carton and a shoe box, and the couple walked to O. C.'s home—an uninsulated, tin-roofed ramshackle house. Soon after the wedding O. C. told his wife: "If the Lord blesses us with children, we must educate them. They must not grow up the way we did."

The Duffys had seven daughters and five sons, born over the span of 20 years: Spencer, Eliza, Marie, Cora, Edna, Henry, Leona, Bernice, O. C. Junior, Edward, Nancy, Mary and James. They are the "dream come true." Eleven have graduated from college, and five have master's degrees. The 12th, Henry, is a shipping foreman and attends college at night. The children obtained their education with almost no money from their parents. But they could not have done it without the attitudes toward life instilled in them by their parents.

Poverty was so much a part of the Duffys' experience that it was almost considered normal. Edward, now a guidance counselor and academic adviser at the University of Maryland: "One late spring, I had to wear high rubber boots to school because I had no shoes. When the teacher asked me why I was wearing boots in such warm weather, I told her, without feeling embarrassed. Being without things was just a part of life."

None of the children ever had much clothing. (The girls wore slips that Leona made from flour sacks.) But the children believed

their mother when she told them: "What counts is what's on the inside, not what you're wearing on the outside. Have faith—in God, in yourself, in your fellow men."

Though the boys, possibly because of their larger appetites, were sometimes bothered by repeated skimpy meals, the girls accepted whatever was available. Edna, now a French and Spanish teacher in Shaker Heights, Ohio: "If supper was just a piece of bread with bacon grease smeared on it, we knew that's all there was. If there had been more, we would have gotten it."

Leona and O.C. at times had terrible anxieties, but they hid them from the children. Young Leona, now a branch specialist for a California bank: "It was a big family. We all shared. Maybe hardship puts fears into many people, but not me. The matter-of-fact way that my folks handled it taught me that one can survive on very little."

Those end-of-winter days—when the butchered-and-smoked hogs were gone, and the canned vegetables and fruits were dwindling—stick in the boys' minds. James, now a county health official in Arkansas: "No man ever worked harder than my father, and yet, with all his hard work, there were some very rough times. But how could I mind when I never saw my father lower his head in defeat or express despair? 'When there is a problem, you never sit down on it,' he told me. 'You keep going and use your next stride to make things better.' "

The cruelest test of the family's ability to survive came in 1953, when their house burned to the ground, and all their possessions and cash went up in smoke. There was no time to be immobilized by shock and sadness. The family had to keep going. One man offered O. C. the use of a small, empty house. Another said he'd go into town for a bed, a mattress and some cooking utensils. Friends and neighbors offered to house the children until the Duffys got settled.

Edward: "The fire was just another crisis. Everything was a crisis—food, shelter, wood to keep us warm in the winter. At the time, though, we didn't see them as crises. They were a part of living, things that had to be dealt with. We children were fast to learn what was important and what was not important. We learned to put a high value on things that weren't material. Like love. And concern for others."

Where Leona was the gentle, understanding mother, O. C. was the unyielding disciplinarian. He told the children what was right and wrong, what they could do and what they could not do. If they knowingly committed a wrong or disobeyed, he walloped them. He would not let the girls attend school dances, take the school bus to basketball games or wear shorts on the streets. Even well into their teens they had to be in the yard by sundown.

Bernice, now a high-school teacher in Indianapolis: "I resented my father's strictness. But I questioned that resentment. It occurred to me that he might be trying to protect me until I was old enough to protect myself."

The boys disliked the discipline and confinement more than the girls. Henry: "It was hard, but I can see now there must have been something to it. Sure, I hated staying home at night when the other kids were messing around, but some of those other kids are in jail or out of jobs right now. The discipline has served me well."

Although neither Leona nor O. C. went in for displays of affection, the children knew that their parents cared tremendously. Edward: "I never heard my father use the word 'love' with any of us. But we knew that he did love us. What we had went far beyond hugs and kisses. Hardship gave us unity. We shared the conviction that none of us would fail the others."

Eliza Marie, now a supervisor in a large Los Angeles bank: "Father did show affection in the most meaningful way. He spent as much time with us as he could. When the night grew particularly cold, he was at our bedsides, covering us with extra quilts. He told us stories in the evening, and led us in singing from the hymn book."

All the children put a high value on belief in God, for they could see in their parents that it was an inner resource of strength. While on the farm, the family trekked four miles to church each Sunday. In very bad weather, O. C. held Sunday school and services at home.

The children, of course, went to black schools. They saw the differences between black and white living conditions. Leona told them that racism was a reality in their lives. It should not, however, make them feel inferior. "It's what you are inside that counts. You don't have to reconcile yourself to the racial conditions here. If you don't like them, then leave when you have the opportunity and seek something better."

While living at home all the children, except Henry, were able to adopt Leona's equanimity. "How many times I heard whites call blacks 'boy,' " Henry recalls, "and each time it made me cry inside." At the time of his graduation from high school he walked into a luncheonette for a pack of cigarettes. The owner scowled at him and said, "Boy, I want to talk to you about using that front door. . ."

That did it. If he remained he knew he would lose his temper and cause problems for himself and his family. As an honor student, he could have obtained the necessary scholarships and jobs to see him through an Arkansas college, but he decided to shake himself loose from the deep South. He now lives in Southern California.

Every child worked. If the Duffy crop was poor and couldn't keep all hands busy, the children labored in other fields, picking cotton and strawberries.

In a good picking season, the parents periodically declared "a day," usually for a girl in college. "Friday is Cora's day," O. C. would announce. And the $20 earned by the family that day was set aside for Cora's books, clothing or bus travel. Cora is now a director of leadership training in the Arkansas Education Association.

Working in the fields was backbreaking. Nancy, now a high-school language teacher in Arkansas: "I must have started to chop cotton in 1954, when I was five years old. Work was what we had to do in order to eat and have clothes. It was hard, chopping from sunup to sundown for $2 a day (later $5 to $6). Sometimes, I'd stand in the fields with that hot sun beating down and think, 'There must be a better way to make a living.' "

At various times, each child said yearningly to Leona that "There must be a better way." She told them that there was. It would take hard work, but they could have a better life. The answer was education.

SPENCER, the oldest and now a plant physiologist with the Environmental Protection Agency, was the first to leave home to attend college, supporting himself with jobs and scholarships. He set the pattern for the family, although the parents never established him as an example. They never compared one child to another, never prodded one with the achievements of another.

But each child did know that Spencer had found the way out of the cotton fields. And for most of them, college was the natural sequence to high school. Young Leona: "Neither Mother nor Daddy ever urged me to go to college. They couldn't. Since I had to work my way through, I had to want it very much. But it was an easy decision. I had seen what promises it held for the three older children. And I had seen how it made my parents feel that their lives had been worthwhile."

O. C. Junior: "No more picking cotton and berries for me. I also never wanted to say, 'I could have been somebody if I had the chance.' The chance was there."

Although most of the children encountered difficult financial periods in college, none of them was ever overwhelmed. They had been raised to beat off the vicissitudes of life. Once, when O. C. Junior was down to his last dollar, he learned that his work-scholarship check would be delayed about a week. He bought eight cans of beans and lived for eight days on them.

In 1960, the Duffys concluded that they could not survive on their rented land. It produced less cotton each year, and good farmland could not be rented. They moved into town, the parents hired out as seasonal field workers and O. C. also found odd carpentry jobs. During the summers, the children worked the fields; in the school year, they worked at part-time jobs in town.

Two years later, a series of ailments began for O. C. that kept him from doing manual labor for the next 12 years. Leona quickly faced the fact that she would have to be the primary support of the family and landed a steady job as a domestic—at $18 a week.

Leona had always wanted to be a student—she could read at the age of five. But she had dropped out of school after the eighth grade because her father could not afford to buy books. She yearned for knowledge and one afternoon, when she answered the doorbell to an encyclopedia salesman, she asked to examine a sample volume. Her children had frequently asked her questions about their schoolwork that she couldn't answer. She signed a contract, agreeing to pay $10 a month for the $240 set.

O. C. was dismayed. How could she pay it off? "I'll manage," she said, and did, never missing a payment. Her children used the books out of necessity, but she pored over the pages out of desire and was thrilled. Spencer: "If there's one member of the family capable of earning a Ph.D., it's Momma."

Over the years, she occasionally mentioned, "One of these days I'm going to get my high-school diploma." The opportunity came in 1968, when the Augusta school system announced evening courses for adults. Leona, then 57, promptly enrolled. She arose each weekday morning at five o'clock, did her homework, prepared breakfast, cleaned the kitchen and was at her job by eight o'clock. On some evenings, she did not reach home till seven, which barely gave her time to get to her first class at 7:30. She completed high school in two years with straight A's.

Last August, the Duffy children, scattered from Maryland to California, gathered in Augusta to honor their parents. "We came from near and far to say that we love you," said Eliza Marie. "You are parents beyond parents. You gave us the means to test the American democratic system. The results were good, and now your 12 children are making a contribution to American society. It is because of you, because you taught us how to live."

O. C., in acknowledging the praises of his children, concluded "We have tried our best and you have told us that we did well. Such things are usually said about a person at his funeral. Having heard them while alive, I can go to my glory in peace."

Leona's glowing eyes announced that this was the happiest day of her life. When the children gathered around her, she could only repeat, "My life is a dream come true."

But she had yet one unfulfilled dream, and the reunion was the perfect occasion to consult with her children about it. Her idea, long nurtured, was to help youngsters outside the family get an education and build worthwhile lives. If her children agreed, the family would set up the "Duffy Scholarship." Each member would contribute regularly to the scholarship fund, and the money would be awarded annually to a student at the University of Arkansas at Pine Bluff, which several of the Duffy children had attended. The

first award would be made in September 1977. The children heartily and unanimously approved.

"I don't want to live just for myself," Leona reflected. "I want to help people. The scholarship is one way that I'll be helping after I'm gone. There must be other ways, and by the time my eyes close I'll think of something."

FOOT-DRAGGING ON SAFETY BY THE FRA

HON. PAUL SIMON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. SIMON. Mr. Speaker, I hope that a few of my colleagues will read a letter I have written in response to a letter by the new administrator of the Federal Railroad Administration on the need for greater safety for unguarded crossings.

This is a classic example of administrative inaction and foot-dragging. I hear that the new administrator, John M. Sullivan, is a good man. But good administrators must be more than simply good people. I trust that after receiving this letter the new administrator will do more than have some staff person prepare another letter for me which calls for more foot-dragging.

What has happened is that the Federal Railroad Administration has studied the possibility of requiring strobe lights on locomotives. Those studies have been unanimous in concluding that strobe lights can be both safety effective and cost effective for the railroads. The studies have done nothing more than gather dust. There has been no action taken. And when I and some of my colleagues asked for action, we received a reply from the administrator saying that the matter should be studied.

The day for more studies is past. The day for action is here. And if the Federal Railroad Administration cannot act on such an obvious need, then we ought to fold their tent and do away with them.

I am attaching my letter to the administrator of the Federal Railroad Administration for the enlightment of my colleagues:

AUGUST 3, 1977.

Mr. JOHN M. SULLIVAN,
Administrator, Federal Railroad Administration, Department of Transportation, Washington, D.C.

DEAR MR. SULLIVAN: I must admit that I was angered by the response to my letter regarding an FRA regulation to require strobe lights.

FRA does not seem to recognize the urgency of this issue. Last year there were 1126 deaths at grade crossings. This is literally a life and death matter. Yet six years after the FRA first issued a report favoring strobe lights, FRA is still studying the issue. Since that first study came out, several thousand lives have been lost.

I have yet to see *anybody* say that strobe lights should not be used. All of the studies dealing with this subject have encouraged the use of strobes.

You said that "no substantive data have heretofore been produced which link increased locomotive conspicuity with reduced rail/highway grade crossing accidents. It is possible that even a dramatic increase in conspicuity might have a relatively small impact in terms of safety benefits." Common sense alone should be enough to tell us that increased visibility will prevent grade crossing accidents. A May 1975 report of your agency said that "since it is reasonable to assume that very few motorists deliberately drive into a train or in front of a locomotive, one must conclude that a key element in most accidents is a failure either to see the train or accurately to judge its arrival time. Indeed, in seven of the 13 grade crossing accidents investigated under the NHTSA Multidisciplinary Accident Investigation program, the driver reported failure to see the locomotive."

We know intuitively, and from the three studies you have had, if not on the basis of masses of data, that strobe lights will save lives, yet the FRA wants to know the exact number of lives that will be saved. The tests that FRA is currently running will produce data that will merely give "scientific" backing to a fact that we already know.

You make a point in your letter of noting the decline in fatalities in 1975 as compared to 1974. You fail, however, to mention the subsequent marked increase in fatalities for the year 1976.

My last lettter told you that your studies were costing lives by wasting time. Your response says, in effect: "We don't know how many lives are being wasted by the lack of strobe lights, so we want to study the matter some more. We must measure the lives that we are wasting." If seeking "substantive data," as you claim to be doing, consists of waiting for collisions at grade crossings so that we can count the bodies, I am unwilling to wait for such data.

You seem also to have stretched the costs of strobe lights in order to cast doubt on the FRA study's conclusion that these lights are cost effective. You chose to figure the cost according to Amtrak's system, one of the most expensive systems available. One of FRA's May 1975 reports estimated the total cost for both strobes and outline lights to be about $500 per locomotive (including installation). I think that you will agree that $400 per locomotive is a reasonable figure if outline lights are not included and we allow for two years of inflation. Since there are about 34,339 locomotives not yet equipped with strobes, according to my figures, it would be possible to install lights on all locomotives for less than $14 million rather than the $30 million that you suggest.

You indicate that even after your studies are complete, you do not plan to require strobe lights but will leave the choice up to the railroads. When dealing with hundreds of lives per year, you ought to *require* safety, rather than make it optional—or else close your doors for lack of a reason to justify your existence. As one of FRA's reports points out, if compliance is less than 100%, it might be preferable not to equip any trains with strobes, due to the fact that people accustomed to seeing strobe lights on trains might not even look for a train if they did not see a strobe.

The nice thing about research—for the researcher—is that it always leads to further areas for investigation. Those of us who believe that the goal of research should be results, experience disappointment and a growing sense of frustration. In 1974 the FRA reported to Congress: "High intensity strobe lights mounted in pairs on locomotives have shown to be very effective in the enhancement of train visibility at grade crossings. Crew acceptance of these high intensity lights has been very good, and maintenance appears to be low. If driver awareness tests are satisfactory and cost-benefit ratios are advantageous, promotional efforts will be made to incorporate this means of accident prevention." In May, 1975, the cost-benefit ratios were identified as better than 11 to one, and the driver awareness tests were published. Both were favorable to strobe lights. The two years that have gone by since then have been sufficient time to have acted on those promising results.

We who work in government are depressingly accustomed to bureaucratic delay—for example, the delay for constituents who need their overdue pension checks or black lung benefits. But I know of no other instance in which the delay of government action is so obviously costing so many lives.

I understand your concern that FRA not issue useless regulations, but when facing the fact that three people die every day at grade crossings and that your studies show that strobe lights save money and save lives, such a regulation is far from useless.

Interestingly, you say that in your latest of a series of studies you want "to identify those institutional barriers which hinder the introduction of grade crossing technology." I can save you money by quickly identifying one of those institutional barriers: The Federal Railroad Administration and administrators of it that duck and dodge and study and study and study rather than act.

I am inserting this letter into the CONGRESSIONAL RECORD. I shall have more to say during the month of September if action is not taken by then.

Sincerely,

PAUL SIMON,
U.S. Congressman.

ORGANIZED CRIME, THE DEGRADATION OF WOMEN AND THE FIRST AMENDMENT

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. DORNAN. Mr. Speaker, last Sunday, an article appeared in the Washington Star which revealed the rotten underpinnings of the network of topless bars which has flourished in New York City since the 1964 Supreme Court decision on obscenity.

The article relates not only the widespread involvement of organized crime in topless bars and the blatant prostitution which is an integral part of their operation but it also describes the lengths to which a woman must degrade herself if she is to "earn her keep." I see little difference between the station of these women and that of degraded slaves in any period of history.

I urge my colleagues to read this article. Hopefully, it will convince some of us that this type of activity was never intended by the framers of the Constitution to be protected under the first amendment. That the ugly interpretation of the Constitution which allows this type degradation of women to flourish is wrong, as is clearly illustrated in the Star article.

Meanwhile, why can't we move faster against child pornography:

N.Y. TOPLESS BARS SEEN PROVIDING MILLIONS FOR ORGANIZED CRIME FIGURES

(By Selwyn Raab and Nathaniel Sheppard Jr.)

NEW YORK.—New York got its first topless bar in 1967. Since then these licensed drinking spots with nude dancers have become a multimillion-dollar business, and law enforcement officials say the business has fallen largely under the control of organized crime.

Police officials and agents from the Internal

Revenue Service who have been investigating topless-bar finances in the city believe that many of them earn more than $1 million a year.

"A good joint can easily take in $5,000 a night," said Sgt. Richard Klev of the Police Department's Midtown South public morals squad. "And the dancers, with tips, can make $300 a night."

A reputed mob leader, Matthew (Matty the Horse) Ianniello, alone has hidden financal interests in at least a dozen of the estimated 50 topless bars in the city, confidential police records show.

Ianniello's reported financial connections to topless bars and his other business activities are under investigation by the U.S. attorney's office.

The vast cash flows in topless bars and other sex-related business, such as "massage parlors" and book and peep stores, have prompted the IRS to begin a large-scale investigation of possible tax frauds.

Besides Ianniello, three other persons have apparently dominated the topless bar business in New York. Records compiled by city agencies, the police department and the state liquor authority, identify the others as Melvin Thaler, a former lawyer who has been linked to at least seven bars, and Sol and Sid Sitzer, brothers, who have been associated with four places.

Investigators who have followed the careers of Thaler and the Sitzer brothers said they generally run "cleaner-type" bars for tourists and businessmen. In these bars, the investigators said, dancers usually refrained from soliciting customers for prostitution.

Dancers in the Ianniello-controlled bars often were lewd and invitations for prostitution occurred frequently, detectives said.

Most of the dancers who appear in the topless and bottomless bars are hired and supplied by separate "talent agencies" that recruit through newspaper advertisements or referrals.

"Talent" agents guarantee the dancers base salaries of $48 to $51 for eight-hour day or night appearances. At one agency, the Go Go, on West 54th Street, a job applicant was assured she could earn at least $25 a day additional in tips and in commissions on drinks she "sold." Bottomless dancers, the agent said, can expect $150 or more for their added exposure.

"What the girls do on the job for tips is their business," the agent said. "We just hire them to dance."

Before the end of one 15-minute job interview the manager of the Fontana Talent Agency, at the same address, asked the young woman standing before him to disrobe and also asked her if she would have sex with the managers of bars and clubs.

He warned her not to waste her talents on those who could not reciprocate her favors.

In the back office of the Go Go, Bernard Feinberg, the manager, sat among photographs of nude women and four decals that said "Help Prevent Rape—Say Yes."

"We treat our girls right," Feinberg said, "if they behave." A handlettered sign listed fines for misbehavior such as canceling a scheduled show. More severe reprimands are employed for dancers who violate the agency's accepted standards of behavior.

Suzy, about 20, a bottomless dancer who was seated in the office during an interview with Feinberg, wore a metal-studded leather dogcollar padlocked around her neck—her punishment for soliciting the services of another talent agent.

"My girlfriend wore a collar for a whole year," Feinberg said. "It showed she was my property." He placed a large bone in front of Suzy as he distributed doughnuts from a paper bag to the other women in his office.

"Suzy was a very, very bad girl," Feinberg said as the small, blonde woman nodded agreement. "Until that collar comes off in December, she can't leave New York State, date more than once a week or miss an appearance in a club.

"If she does," Feinberg added with a smile, "she'll never work again."

AIR BAGS ENDORSED

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. MURPHY of New York. Mr. Speaker, the debate over mandating passive restraints in automobiles has already become heated and is certain to be lengthy. Charges and counter-charges have been exchanged with such fury that the resulting chaos has left many Members confused and uncertain as to who or what to believe.

I recently circulated a "Dear Colleague" letter on this subject with which I included an editorial on air bags from the New York Times. To further assist my colleagues in their deliberations I am inserting at this point two further endorsements of air bags; the first from the New York Consumer Assembly, the second from a representative of the Physicians National Housestaff Association:

[From the New York Consumer Assembly]

APRIL 22, 1977.

Hon. BROCK ADAMS,
Secretary of Transportation,
Washington, D.C.

DEAR MR. SECRETARY: The New York Consumer Assembly, a federation of labor unions, cooperatives and consumer societies, strongly advocates an early introduction of the use of air bags.

The air bag is not an expensive item, particularly when mass produced. Its efficacy has been proven, and it can save thousands of lives annually.

We are aware of your deep interest and concern about auto safety and urge you to set an early deadline for the installation of air bags.

Sincerely yours,

AL SMOKE.

AUTOMOTIVE OCCUPANT CRASH RESTRAINT PROTECTION STANDARDS

(Statement before the Secretary of Transportation by Robert G. Harmon, M.D., Past President, Physicians National Housestaff Association)

Mr. Secretary, I represent the Physicians National Housestaff Association (PNHA), a nationwide union of over 10,000 intern and resident doctors. We take care of patients in some of the biggest and busiest hospitals in the land. We are distressed at the dead and horribly injured people brought daily to our emergency rooms direct from auto crashes. We know that fighting to save lives in our operating rooms isn't the answer. Prevention is the answer, Mr. Secretary, and this critical public health decision is in your hands. Mandatory auto passive restraint systems are needed here and now. The PNHA is behind this concept 100 percent.

I am currently a resident physician in preventive medicine. My chosen specialty extends my responsibility beyond the individual patient to the general population. I also work in a public hospital emergency room. There I take care of the skull fractures, smashed faces, crushed chests, broken backs, and paralyzed limbs that could be prevented in auto crashes by systems such as air bags. I also have the unpleasant task of pronouncing dead the unfortunate victims of some of these crashes.

I read that hundreds of thousands of serious injuries and about 10,000 deaths could be prevented by air bags. Excuse my naiveté, Mr. Secretary, but why don't we get on with it?

Air bags would cost about $4 per month over 36 months. That sounds like a pretty cheap health insurance deal to me. Projected savings on health and life insurance claims would approach $2 billion annually. In this time of searching for cost controls in health care, that looms as big as President Carter's hospital "cap" of 9 percent.

The PNHA is not opposed to mandatory seat belt laws but we are pessimistic about compliance and enforcement. We are concerned about the people who are not helped by such active restraint systems. For example, a drunk driver speeding along I–66 hits a guard rail and smashes into a car containing teenagers. Both categories are notoriously negligent about seat belt usage and frequently are involved in fatal crashes. They need passive protection, Mr. Secretary, not the surgeon's scalpel.

The PNHA joins the 80 percent of new car buyers who in a recent survey favored passive protection. We urge you not to pursue a weak demonstration program which will set back passive restraint protection by five to eight years. We urge a prompt, clear mandate of passive systems. Thank you.

GIFFORD, SAYERS, GREGG, WILLIS AND STARR ARE ENSHRINED IN PRO FOOTBALL'S HALL OF FAME

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. KEMP. Mr. Speaker, I am very honored to commend to the Congress, along with my friend RALPH REGULA of Ohio the five outstanding Americans who were inducted into the Pro Football Hall of Fame last weekend in Canton, Ohio. I would like to bring to the attention of my distinguished colleagues some of the highlights of their career, the sacrifice and dedication these football greats have manifest in their lives. Frank Gifford, all time all-pro running back and flanker for the New York Giants. Forrest Gregg was an all-pro tackle for 7 years. The late Vince Lombardi called him "the finest all around team player the game has ever known". Gale Sayers, the game breaker, thought he was finished in 1968 because of a knee injury but he courageously returned the next year and led the NFL in rushing. Bart Starr was a 17th round draft choice in 1956 but the incomparable Vince Lombardi saw leadership and quarterback qualities in Bart he liked and was proved right as Bart led the Green Bay Packers to the first two victories in the Super Bowl. Bill Willis overcame lack of size and the color barrier with exceptional speed and strength to become all-pro at middle guard for the Cleveland Browns. Frank, Forrest, Gale, Bill, and Bart are truly reflective of all football greats presently enshrined and indeed of the highest qualities of pro football as played in the National Football League.

I think it would be a mistake to focus attention only on this award without recognizing the qualities developed in their lives which helped them to overcome obstacles on the way to the Hall of

Fame. For to focus attention solely on the award, and their success, is to lose sight of the many hardships and challenges that each has overcome and which seem to me the real reason the Hall of Fame exists for all America.

The meaning of the Hall of Fame is to serve as an example and a beacon, by which young men and women around this country can gain inspiration and motivation to press on, despite temporary setbacks to their goals in life. Whether or not they reach the Hall of Fame—it is in the competition and in the striving that qualities are forged that make for better people and better citizens of this great Republic.

What these great athletes really honored last weekend in Canton, Ohio is the transcendent quality of the human spirit that unites us all, black and white, young and old, man and woman, the spirit that derives strength from challenge. The spirit that never gives up. The spirit upon which this country was founded, upon which we must build even further if we are to have a better tomorrow. It has been said that if you lose your money you have lost nothing. If you lost your health you have lost something, but if you lose your spirit, you've lost everything. We must never lose our spirit, either as individuals, or as a nation.

As we look upon these outstanding and successful professional football players, Frank, Bart, Gale, Bill, and Forrest, I think it would be a mistake if we did not realize the setbacks and defeats that each has faced in his life, along with the moments when each was knocked down, only to get up and to come back to the battle, even more determined to prevail. That type of spirit will succeed, not only in the lives of individuals but in the life of our country, not only in the sports fields, but off the field as well. It is that type of spirit held by our Founding Fathers, by the American professional football players enshrined in the Hall of Fame in Canton and by millions of other Americans from every walk of life, religion and race. It is that spirit which is the real meaning of the Hall of Fame.

These men are friends of mine and inspirations to all who know of their personal and professional lives. I include at this point the great sportswriter of the New York Times, Red Smith's article on these great NFL stars:

Frank Gifford had been carrying the ball brilliantly, throwing blocks and making tackles in the National Football League for a decade when somebody realized that he never had been involved in any of the fist-fights which kept breaking out on the field in those days. Such decorum seemed slightly out of character, for the New York Giants of his time were a team with muscle and he was one of the more intensely competitive members—four times an all-pro back and once the N.F.L.'s most valuable player. Frank said he was no pacifist at heart and his exemplary deportment was only common sense. "With those big iron face-masks they wear," he said, "you can't land a decent punch, and besides, there's nobody in the league I can whip." Gifford came out of the University of Southern California as an artist's conception of the all-American Boy—handsome, versatile and candid. He was no hot dog, yet he relished his role as a sports hero and was honest enough to admit it. He tried to postpone the day when he would no longer hear the cheers of the crowd. Hoping to extend his playing days, he tried out at quarterback one year, and after Chuck Bednarik of Philadelphia put a violent end to his career as halfback, he made a comeback as a flanker.

When he was finished as a player and turned to radio and television, he worked as hard on the new job as he had worked on offense and defense. Unlike jocks who bring nothing but an athletic reputation to the microphone, Gifford set out earnestly to learn technique, to develop a presence and hone his skills as a reporter.

He is a class guy who richly deserved inclusion in the Pro Football Hall of Fame, where he was installed Saturday along with Forrest Gregg, Bart Starr, Gale Sayers and Bill Willis.

VINCE'S PET MONSTER

Gifford had to fight down his emotions when he was inducted. Butterflies may have been doing loops under Bart Starr's wishbone, too, but the coach of the Green Bay Packers was the most poised and articulate individual on the stage. There was evidence there of the late Vince Lombardi's handiwork, for before Vince took over as coach, Bart was a rookie quarterback whose insecurity was showing.

"You're my quarterback," Lombardi told him at the outset.

"I feel sorry for a boy Vince thinks has a future at quarterback," said Marie Lombardi, the coach's wife. "It's as though Vince drills a hole in his head and pours everything he knows into it."

Lombardi didn't create Starr, but he reshaped and polished him until he had a 17th-round draft pick who would lead the Packers to five National League championships. Along with football savvy, the coach instilled confidence. One summer Starr came in with an unsigned contract and named another salary figure.

"A few years ago," he said, "I'd have signed anything you gave me, but now you've taught me to be more aggressive and self-assertive and given me more confidence, and this is what I want."

"So that's it," Lombardi said. "Like Frankenstein, I've created a monster."

THE MOST UNSELFISH

Lombardi called Forrest Gregg "the finest football player I've ever coached." He was also the most unselfish. He was an all-league tackle for five years in a row and was a good bet to make it for his sixth year but gave up that opportunity at Vince's request to shift to guard and lead interference. Self-sacrifice doen't always hurt; Gregg made all-league at guard that year, then went back to regain all-pro distinction at tackle for two more seasons.

At one point he retired to a job as assistant coach at Tennessee because he was tired of traveling. On his arrival in Knoxville he was handed an air travel card and a credit card for car rentals. He went back to Green Bay. The way he has turned the Cleveland Browns around stamps him as a Hall of Fame coach.

At the age of 34, Sayers is the youngest godling ever voted into the shrine in Canton, Ohio, but he was a sure thing before he was 30. If he wasn't the most brilliant runner since Red Grange, he was certainly the most exciting of his time, meaning from the day in 1965 when he scored six touchdowns as a rookie against San Francisco through 1969, the last year he was sound enough to gain 1,000 yards.

When Paul Brown organized the Cleveland Browns of the All-America Conference, Bill Willis, who had made all-America under Brown at Ohio State, asked for a job. Though small for a pro lineman, he played eight years with the Browns, first on offense and defense, then as middle guard on defense. Whether in the All-America Conference or the N.F.L., he was all-league seven times.

Willis is sometimes identified erroneously as the league's first black player. In the 1920's blacks played in the National League. Paul Robeson of Rutgers, the singer, was an end and Fritz Pollard of Brown a halfback with the Milwaukee Badgers, and Duke Slater of Iowa played tackle for Rock Island. Comparatively few blacks attended college in those days, and after the first ones retired a de facto color line existed until Brown and Willis broke it in 1946, the year Branch Rickey hired Jackie Robinson for Brooklyn's Montreal farm team.

THE VIETNAM TRAGEDY

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. MICHEL. Mr. Speaker, I recently came across an editorial published in the Richmond News Leader. This editorial eloquently discusses the tragedy of Communist domination in Vietnam. As the News Leader points out, those voices that were heard crying "give peace a chance" only a few short years ago are curiously silent in the face of mounting evidence that the peace of Vietnam is something worse than the peace of the grave—it is the peace of Gulag, of concentration camps, of slavery. I have long held that the current silence of those who eagerly swallowed Hanoi propaganda during the war, a silence that tells us all we have to know about the concern of these self-proclaimed peace-lovers, is one of the worst examples of hypocrisy ever to be seen in this Nation. The Richmond News Leader deserves praise for setting the record straight. At this time I would like to insert into the RECORD "Vietnam's Peace" from the Richmond News Leader, July 12, 1977:

VIETNAM'S PEACE

A hit song released during the height of the Vietnam War implored people to "give peace a chance." Two years have passed since the fall of Saigon, and the South Vietnamese are learning that "peace" under Communism is far more painful than the wounds opened by 30 years of war.

The voice of Nguyen Cong Hoan silences those who doubt the severity of the terror Communism is inflicting on our former allies. A recently escaped refugee, Hoan describes a country filled with prison camps and devoid of human rights. Hoan is not an aristocrat caterwauling about lost fortune or power; he is a former leader of the antiwar movement in South Vietnam. Indeed, the Communists thought so highly of him that he was rewarded with a seat in the Hanoi assembly. He had welcomed the North Vietnamese "liberators" in 1975, and he was going to help rebuild his country.

Hoan soon learned what Communist liberation means. And unlike the moral polliwogs in America, Hoan is not afraid to admit that his anti-interventionist position was wrong. Hear him: "The Communists have violated the 1973 Paris Agreement. My first motivation was to help with the reconstruction of the country in 1975, but I realized that the Communists were worse than I had imagined."

The legacies of Ho Chi Minh, General Giap, and other heroes of the left have fashioned a Vietnam where "fundamental human rights are not guaranteed," Hoan says. "No freedom of religion, speech, or movement is allowed. In a word, there is no freedom at all except the freedom to obey the orders of the

Communist Party. Otherwise you will be put into prison."

"Re-education" is the Reds' currently favorite word. They claim that the South Vietnamese must be "re-educated" to appreciate the glories of Communism. Hoan explains that re-education means imprisonment. The Paris Agreement stipulated that Hanoi could not punish employees of the Saigon government. But Hoan says 200,000 former government workers are confined in prison camps.

Hanoi's commissars are more subtle than their comrades in Cambodia, where more than 1 million persons have been slaughtered by the benevolent armies of peace and freedom. Says Hoan, "When the Khmer Rouge took over in Cambodia, they killed the opposition immediately on arrival. But the Vietnamese Communists are wiser. They compiled lists, classified people according to their importance, and sent them to different camps. Those who are killed are killed secretly."

One particular prison camp is used to re-educate 1,000 Vietnamese who fled to Guam immediately after the fall of Saigon. The refugees refused offers to immigrate to the United States; they decided to return to their native land. The North Vietnamese said there would be no bloodbath. But peace has sentenced these patriots to indefinite terms in the Vietnamese Gulag.

Hoan explains that many South Vietnamese were relieved when the war ended. They knew that rebuilding their country would be an arduous task, but the Communist assault on their hearts and minds soon turned their relief into disillusion and fear. In Hoan's words, "We wanted peace because people had suffered from war and political oppression under the old social institutions. We now realize we lost a precious thing—freedom."

This veteran of the Red terror has learned something that American doves seem unable to comprehend: There is a difference between a weak, imperfect government—and genocide. Anti-war zealots may shed a few obligatory tears for the victims of organized terror, but they refuse to listen to voices suggesting that effective American action could have prevented the genocide of a proud people. Hoan says simply—and emphatically: "The U.S. intervention was right."

Do not expect Hoan's truthful words to elicit any response in the United States: Nowadays Vietnam is a taboo subject. And the so-called "humanists"—who so eagerly swallowed Hanoi's propaganda—prefer pretty songs about giving "peace a chance" to the harsh realities of postwar Southeast Asia. While America averts her eyes, "peace" is giving the Vietnamese a chance all right—a chance to experience first-hand the barbarity called Communism.

CONGRESS SHOULD NOT CAUSE HIGHER INTEREST RATES

HON. PAUL SIMON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. SIMON. Mr. President, if there is one thing that could help this economy tremendously without any cost to the Federal Government and with benefits to all, it would be a lowering of the interest rates, provided we do not increase the money supply. I have never advocated increasing the money supply faster than we increase productivity.

I think we have to be much more imaginative in our approaches to reducing the interest rates than we have been. We have, with much too much ease, accepted the dogmas of the traditional economists that somehow high interest rates reduce inflation, when, in fact, I believe in our current situation high interest rates are, in themselves, inflationary.

But one of the stimulants that I see to higher interest rates is the so-called NOW account. This is the movement that is gaining headway to pay interest on checking accounts.

I do not suppose one small voice of someone who is not on the Banking and Currency Committee is going to do anything to stop the movement in that direction, but we should recognize some fundamental economics.

And those fundamental economics are these: If the banks have to pay interest on checking accounts, they are going to charge more interest to their customers. There is no way of getting around that.

My hope is that we will get hold of our senses and stop the movement in the direction of the NOW accounts. They are going to hurt the consumer, and they will have a depressing effect on the economy.

I am attaching an article which appeared in the New York Times, written by Edward G. Nelson, president and chief operating officer of the Tennessee Valley Bancorp and Commerce Union Bank of Nashville, Tenn. It appeared in the New York Times of July 31, 1977:

NOW—THERE'S NO FREE CHECKING

(By Edward G. Nelson)

Consumerism in the form of free banking services has reached its limits. Banks simply cannot continue to supply significant additional services without offsetting them by increases in revenues.

So let the consumer beware. Any new rules or legislation that would increase costs for the commercial banking system will be paid for, in some way, by someone else. Rest assured that if it becomes more difficult to recognize the actual bill-payer, the likelihood will increase that he will be the smallest and poorest consumer.

Yet everyone is jumping on the bandwagon for legislation that would permit commercial banks across the country to pay interest on consumer checking accounts. "Ah," the consumer says, "now we'll be getting something for nothing out of those greedy banks."

Not quite.

It may come as a surprise, but the idea for the proposed "negotiable order of withdrawal" (NOW accounts)—which in effect, would allow banks to pay interest on checking accounts—did not come primarily from consumer advocates.

Rather, the idea originated within the powerful savings industry, whose lobbyists for years have successfully persuaded Congress to prohibit banks from paying to small savers the same high rates of interest paid to corporations or to individuals able to put $100,000 or more into one account.

The legislative battle over NOW accounts is not designed to give a break to the consumer—even though it is billed that way—but is part of an intense competition for position among various sectors of the nation's complex financial structure.

Traditionally, savings institutions have been geared to finance the housing industry by accepting savings to be reinvested in long-term investments. The savings banks grew because the commercial banks did not provide the necessary funds for an expanding number of home buyers.

Commercial banks have elected to focus on short-term lending. Many companies, for example, have seasonal businesses where receipts are bunched up in one period of a year. Such companies depend on commercial bank loans to carry them through the rest of the year so that payrolls, rent and other expenses can be met. Small and medium-sized companies also tend to rely heavily on commercial banks to finance job-creating expansion programs.

Frequently, commercial banks and savings institutions work in tandem. If a contractor is planning to construct an apartment house, he would obtain credit from a commercial bank to finance the cost of construction, which might take 18 months. Then he would get long-term financing—perhaps for 20 or 30 years—from a savings institution. In most cases, the construction financing would be available only after assurance of financing from a long-term lender.

In recent years, though, distinctions between long-term and short-term lenders have been blurred. Savings institutions have been allowed to engage in more short-term transactions, while commercial banks have been extending the maturities of their loans. It is inevitable that savings banks and savings and loan associations eventually will closely resemble commercial banks, if not actually become commercial banks.

Since checking account balances represent the ultimate in short-term funds for the consumer, the controversy over NOW accounts has become a key battle. Savings banks have driven a wedge into the New England area and wrested permission from state authorities to issue NOW accounts. To even the competition, commercial banks in the region have granted similar powers. At this point, Congress is trying to decide whether NOW-type accounts ought to be permitted on a nationwide scale.

The real question, though, has become not so much whether NOW accounts ought to be permitted, but the form they should take and how they might be applied so that no sector of the financial structure will be put in a particularly strong, or weak, competitive position.

These real reasons that NOW accounts are being urged on Congress are often camouflaged behind a barrage of consumer-oriented rhetoric. But will the average consumer actually gain?

The first question that must be asked is whether the commercial banking system is willing to reduce its profits by paying more to its depositors. If it is not—and it cannot—then the second question is, who will foot the bill? Ultimately, it will be the consumer.

The great bulk of bank funds really do not belong to the banks. At the end of 1976, the total balance sheet of all large banks in the United States amounted to slightly more than $469 billion. That sounds like a lot. But of that total, only $32 billion, or 6.8 percent, actually belonged to the banks and their shareholders. The rest was borrowed from the public, mainly in the form of deposits.

The money was used by the banks to relend to corporations, individuals and governments. Without these loans, the economy would stop. Moreover, without growth in these loans, the economy itself would not be able to expand.

The banking industry's ability to increase its deposits and loans is based on the level of the funds that it actually owns—in other words, capital and reserves. Over the last decade, the commercial banking system has become increasingly efficient and has reduced

the proportion of its own funds in relation to the funds it borrows. This might be called leveraging.

There are two basic ways this can be accomplished. The first is for a bank to earn enough to reinvest profits in its own capital accounts (retained earnings). The second method is to sell stock to the public. A banks ability to sell stock, however, depends on conditions in the stock market and on the public's perception of the particular bank's profit outlook.

To the degree that a bank's profits are under downward pressure because of interest payments on demand deposits, a bank would find it more difficult to sell its shares to the public.

If bank stocks are booming, it could be argued that bank profits are high enough and that a dividend could be paid to the public in the form of interest on checking account funds.

Unfortunately, that is not the case. Most bank stocks are selling well below book value. That means a shareholder today would get more for his investment if his bank were liquidated than if he tried to sell his shares in the stock market. Today, many bank stocks are selling as much as a third below book.

Not surprisingly, then, ways are being sought to offset the cost of NOW accounts to banks. The Federal Reserve Board has suggested that it be permitted to pay interest on funds that banks are required to keep on deposit at the Fed. The board realizes that a squeeze on profit is causing many banks to leave the Federal Reserve System, so they might avoid having to keep portions of their deposits in accounts that do not bear interest. This, in turn, is causing the Fed to lose its grip on the nation's money supply.

The Fed hopes that by paying interest on reserves, it will be able to lure banks back into the central banking system. It would also like to get the growing savings industry under monetary control. (Naturally, the savings institutions that are so eager to offer NOW accounts, are not so eager to have to abide by any reserve requirements.)

This leveraging process has gone so far that regulatory authorities have been telling many banks that they must increase their capital accounts if they are to expand their loans and deposits.

At the end of each year, the Fed remits its net earnings to the Treasury. Last year this payment amounted to almost $6 billion. To the extent the Fed's earnings are reduced because of interest payments on bank reserves, the payment to the Treasury would decline. The Treasury, then, would have to raise the money elsewhere. One method might be to raise taxes.

Another might be to increase Treasury borrowing from the money markets. This would either increase money rates or cause the Fed to inflate the money supply. Any increase in money rates would raise the cost of doing business, which eventually would be reflected in the price of consumer goods. Similarly, an increase in the money supply to finance a bigger Treasury deficit would add to general inflationary pressures. In either case, the ultimate cost to the consumer most likely would be greater than the amount he would receive in interest on his checking account.

More importantly, the consumer who has the smallest checking account, or none at all, would be the one to get hurt the worst. In effect, the so-called boon for the consumer would actually amount to a regressive tax.

Another alternative would be for banks to increase the fees they charge for their services. This, in effect, would cancel any benefits that might accrue from the payments of interest on demand deposits.

The worst that could happen is that the banking industry would stop growing, stifling the country's economy.

Adoption of NOW accounts is inevitable. The legislation may come this year, or next or the following year. NOW accounts represent only one important aspect of the evolution that is taking place in the nation's financial structure. Just as commercial banks would like to be allowed to offer a wider range of services, they would welcome competition from other industries.

But that competition must be fair, and the competitors must be given equal opportunity. The conflict over NOW accounts is not so much whether they should be permitted on a national scale, but rather over the form that they should take.

Above all, consumers should not be misled into the belief that they will be getting something for nothing. Only through fair, open competition among the nation's financial institutions will the consumer's interest best be served.

NORTHEAST PHILADELPHIA NEWSPAPER OBSERVES ITS 50TH ANNIVERSARY

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. EILBERG. Mr. Speaker, on August 10, one of the very fine weekly newspapers which serves my congressional district will celebrate its golden anniversary of service to the community.

I would like to take this opportunity to extend my congratulations to The Breeze, to its president and general manager, Mr. Richard McCuen, and to all of the fine people on its editorial, advertising, and circulation staffs who work together to bring this publication into thousands of homes each year.

The Breeze serves the communities of Rockledge, Cheltenham, Elkins Park, Hollywood, Fox Chase Manor, Bethayres, Huntingdon Valley, Bryn Athyn, Abington, Meadowbrook, and Rydal in lower Montgomery County, and the areas of Fox Chase, Burholme, Lawndale, and Crescentville in northeast Philidalphia.

In connection with its forthcoming golden anniversary, Mr. Speaker, The Breeze carried an article in its July 28, 1977 edition covering some of the newspaper's history, and I am pleased to have this opportunity to place that article in the RECORD.

BREEZE TO MARK 50TH ANNIVERSARY

(By Richard Hubbard)

In the hip-flask year of 1927, speakeasies were in full swing. An upstart young U.S. Air Mail pilot named Charles Lindbergh left Roosevelt Field, New York on May 20—flying on a wing, a prayer and a bagful of sandwiches. Landing the next day in Le Bourget Field, Paris, he had accomplished his mission.

In the same year a small tabloid newspaper called "The Breeze" took its first flight as well. And the mission, 50 years later, has been a successful one, rich in community service, involvement and non-partisan bird's-eye-view of this area which has spanned five decades.

On Aug. 10 The Breeze marks its 50th birthday with a blockbuster Souvenir Edition. The gala Birthday Issue—which promises to be a collector's item—will take a nostalgic look at the past through classic old photographs, clippings and advertisements selected from The Breeze's files.

To mark the newspaper's golden anniversary, letters of congraulations are expected from President Carter; Governor Shapp; the area's Congressional delegation in Washingon, D.C.; our State Senators and Representatives; and a host of other dignitaries. All will be published in the Souvenir Edition.

Breeze readers can stroll down Memory Lane on Aug. 10 and share our own observations of the last 50 years here. A history of local landmarks; a "Do You Remember" column; and scores of interesting historical pictures and stories are expected to swell the pages of the anniversary edition.

The first editions of The Breeze catalogued some of the memorable events of August 1927:

Pitcairn Aviation, Inc. of Bryn Athyn was lowest of three bidders for the contract for the Atlantic-Jacksonville, Miami Air Mail route opened at the Post Office Department in Washington in 1927. The bid was $1.46 a pound for all mail carried.

In August, 1927 the Fox Chase Camp 127, Patriotic Order of America, had nearly 100 members. In 1952, the group was still meeting at Grookett's Corner, Fox Chase.

The date for the cornerstone laying for the Lawndale Presbyterian Church, Oakley and Levick St., was set for Nov. 17, 1927.

Members of the Artisans Fox Chase Assembly No. 71, A.O.M.P. joined with 82 other groups for a day at Wildwood, N.J. on August 20, 1927.

The Northeast Shrine Club, local church and school teams and Penn State College made The Breeze's local sports headlines.

In the Aug. 4, 1927 edition of The Breeze, it was reported that three members of the Rockledge Borough Council were going to retire from active political life. The headline read "Rockledge Salons Retire."

The Breeze was born and nurtured in times of change and upheaval. In 1927, "The Jazz Singer" starring Al Jolson demonstrated the first part-talking pictures, in a New York City showing.

Meanwhile, back home in the Philadelphia area, the age was one of rapid growth and change. Philadelphia's population had already reached 1,950,000 and the urban overflow into suburban counties—including Montgomery—had already become substantial.

A huge "underdeveloped" section was opened up, too, with a road called Roosevelt Blvd. cutting northeast from the old Hunting Park race track, and the Frankford Elevated Line, following the curve of the Delaware River.

The Breeze was there through it all, to record and catalogue local history in the making.

Back then, people were lamenting the fact that Philadelphia's 1926 Sesqui-Centennial celebration (the nation's 150th birthday)—was a bust, drawing very few crowds.

Parallel that with last year's bicentennial celebration in Philadelphia; a classic case of history repeating itself?

The joy and the heartbreak of five decades has been catalogued on the pages of The Breeze . . . for the world to share. Literally thousands of births, deaths, engagements and weddings in the pages of The Breeze have unfolded the rich panorama of the people who make this are alive and breathe.

The Breeze invites its readers, then, to share with us a milestone in local journalism on Aug. 10. You, the reader, has made it all possible.

GOVERNMENT REGULATIONS: HOW MUCH CAN WE AFFORD?

HON. BILL ALEXANDER

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. ALEXANDER. Mr. Speaker, I would like to share with my colleagues a recent editorial from the American Cotton Grower written by my good friend and constituent, Chauncey Denton of Denwood, Ark. Chauncey is former president and chairman of the board of the National Cotton Council and in this editorial has captured what I believe to be the mood of a growing number of Americans. I commend the article to my colleagues:

GOVERNMENT REGULATIONS—HOW MUCH CAN WE AFFORD?

(By Chauncey L. Denton, Jr.)

No cotton grower—and probably no person involved in any other enterprise today—can escape the direct impact of government regulation on the cost of doing business. If we have employees, we are—or soon will be—meeting requirements of the Occupational Safety and Health Administration (OSHA). If we use pesticides or have discharges from processing operations, we are regulated by the Environmental Protection Agency (EPA). If our products go into textiles or food, we are affected by rules of the Consumer Product Safety Commission (CPSC) or the Food and Drug Administration (FDA). This list could go on and on.

Important pesticides have been removed from the market by EPA, and their replacements are often more costly, less effective, and shorter-lived.

CPSC flame-retardant regulations have cost cotton farmers over 100,000 bales per year in the children's sleepwear market, while allowing the use of synthetic fibers that melt, drip, and cause severe burns, but do not ignite. The Commission is considering addition flame-retardant standards in other apparel markets which consume 1.4 million bales of cotton annually.

Unless the temporary stay on OSHA's machinery-guarding rules is extended, that agency this fall will begin enforcing its requirement that all drive shafts and power transmission "nip points" on *old* farm machinery be guarded.

OSHA also has proposed a universal cotton dust standard from gin to mill and beyond, which will add nearly 30¢ per pound to the cost of using cotton at the textile mill—assuming the technology is available—and this will make it next to impossible to meet man-made fiber competition.

These are regulations we all are aware of because they affect us directly. Less apparent are those that affect our suppliers. EPA requirements for the registration of new pesticides involve so much expense that new registrations dropped from 700 in 1970 to about 25 last year. Re-registration of those already in use is so expensive that some manufacturers whose patents have run out are seriously considering whether the future profit potential for the materials justifies the cost. The end result? Higher pesticides costs for you and me.

Now the Administration and many Congressional leaders want to add a new layer of regulation—the so-called "Agency for Consumer Advocacy"—to regulate the regulators, and put a battery of lawyers at the disposal of dissidents all over the nation. The added cost in taxes and product prices is incalculable.

Most of us are concerned about the environment. We like to hunt and fish and swim. We want to breathe clean air and drink clean water. We want our employees to be safe and healthy. We are consumers ourselves, and we want the products we buy to be safe. Therefore, we do not dispute the need for reasonable regulation.

What we do object to is regulation that grows, uncontrollably, like a cancer. The Congress, in many instances, has created Frankenstein monsters which are answerable to no one. The OSHA administrator has authority to destroy our industry by imposing the proposed cotton dust regulations. An appeal to the courts can only determine whether the law has been broken, not whether bad judgment was involved in an administrator's decision. We saw this demonstrated in the DDT case.

How, then can we stop the cancer of overregulation? The only answer is public arousal. Last year OSHA became the butt of many jokes as a result of its warnings that "manure can be slippery" and its proposal to put toilet facilities in the fields and pastures of the nation. Congress promptly adopted an amendment to the Labor Department appropriations bill which exempted farms and businesses with 10 or fewer employees from OSHA regulation.

The House Labor Appropriations Subcommittee is recommending the same provision for next year.

Public opinion accomplished this, and it can do more. The new OSHA administrator has promised to do away with many of the Agency's "nit-picking" rules. She is beginning to get the message. We must see that she and other administrators continue to get the message over and over again from every conceivable source. The public must be made aware that in the end they pay the cost of all the regulations, directly or indirectly. Again and again we must raise the question, "Does the benefit justify the cost?"

In the final analysis, the public must decide where the line should be between each individual's responsibility in protecting himself and the government's invasion of this area under the guise of protecting its citizens. And all of us must realize that insofar as we delegate that responsibility to government, we will have to pay for it in the form of both taxes and higher prices.

ADMINISTRATION ENERGY PLAN IS LIKE SWISS CHEESE, FULL OF HOLES

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. TEAGUE. Mr. Speaker, the July 12 issue of the Energy Daily carried a report of the discrepancies between the President's projections for energy production and the General Accounting Office's—GAO—estimates of future energy production. Part of the text of the article reads as follows:

If the General Accounting Office is correct, oil imports in 1985 may be 10.3 million barrels a day, not the six million b/d targeted in the Carter Administration's national energy plan. In a lengthy discussion of Carter's proposals released on Tuesday (July 26), GAO restated its earlier objection to the Administration's proposals—that they expressly fail to meet the objectives set forth by Carter—and added a few more caveats. Specifically, GAO believes the production levels targeted for 1985 for coal, natural gas and nuclear power are overstated and cannot be met. In the coal area, GAO believes the Carter plan will fall short of its goals by the equivalent of 2.3 million b/d of oil. In natural gas supply, GAO believes the Administration has overstated the achievable goal by about two trillion cubic feet a year, leaving another one million b/d of oil equivalent to be made up by oil imports. Where the Administration's plan contemplates 1985 annual supply of 17 Tcf, GAO considers a 15 Tcf level more realistic. Finally, in the area of nuclear power, GAO believes the Administration has overstated what is realistic by about 0.6 million b/d of oil equivalent.

Mr. Speaker, in the 4 weeks ending in mid-July this country used 4.7 percent more oil than it did at the same time last year and it imported 12 percent more, according to Government figures. As our oil consumption increases, our domestic production continues to decline. According to ERDA our demand for oil has been rising by more than 5 percent each year, but domestic oil production has been falling recently by more than 6 percent. This can only mean increased dependence on foreign oil supplies. With this comes the assumption that oil exporting nations will continue to be willing to produce and sell as much oil as its customers, United States included, want and need to buy. In light of the sudden oil embargo of 1973 this is a shaky assumption.

If one couples this already bleak scenario with the reality that oil prices have continually increased and the OPEC nations have no inclination to sympathize with the oil importing nations' petrodollar outlays, the United States as a heavy oil importer is at the mercy of forces completely beyond its control.

In June of this year, the United States sustained another record trade deficit as imports rose 11 percent and exports declined 3 percent. Oil imports were responsible for the bulk of this rise.

Mr. Speaker, all of these facts tell us that the United States is in energy trouble and is paying billions of dollars to play catchup ball. The present is bad and the future could be worse because the President's energy proposal is speculative and assumptive. This energy plan also includes a recommendation for the indefinite postponement of the Clinch River breeder reactor. The breeder could offer America the energy independence which has historically assured our economic stability and national security. If the demonstration plant at Clinch River is not built now to test and perfect the breeder technology that could insure us against the possibility of greater energy voids in the future, we may well be legislating a cold, dark future for this Nation.

If we indefinitely postpone the practical demonstration of our breeder know-how, we are asking Americans to walk an energy tightrope. We are asking them to have faith in assumptions and speculations that may well prove wrong. We are actively denying them a secure energy source to fall back on if they

need it at some future date. We are asking them to accept energy insecurity.

I am asking my colleagues to carefully consider these issues before the upcoming vote on the Clinch River breeder reactor.

SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meetings as they occur.

As an interim procedure until the computerization of this information becomes operational, the Office of the Senate Daily Digest will prepare this information for printing in the Extension of Remarks section of the CONGRESSIONAL RECORD on Monday and Wednesday of each week.

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Thursday, August 4, 1977, may be found in the Daily Digest of today's RECORD.

MEETINGS SCHEDULED

AUGUST 5

9:00 a.m.
Human Resources
Labor Subcommittee
To continue hearings on S. 1871, to increase the Federal minimum wage.
4232 Dirksen Building

9:30 a.m.
Finance
To continue consideration of H.R. 7200, to improve the supplemental security income benefits program and child welfare services and social services, and other committee business.
2221 Dirksen Building

10:00 a.m.
Energy and Natural Resources
To continue markup of S. 1469, proposed National Energy Policy Act, and other pending calendar business.
3310 Dirksen Building

Judiciary
To hold hearings on the nomination of John H. Shenefield, of Virginia, to be an Assistant Attorney General.
2228 Dirksen Building

Joint Economic
To hold hearings to receive tesitmony on the July employment/unemployment situation.
6226 Dirksen Building

AUGUST 8

10:00 a.m.
Banking, Housing, and Urban Affairs
To hold hearings on the relationships between Federal welfare reform and public housing programs.
5302 Dirksen Building

Finance
To hold hearings on title II, Tax Provisions of H.R. 6831, proposed National Energy Act
2221 Dirksen Buiding

AUGUST 9

10:00 a.m.
Finance
To continue hearings on title II, Tax Provisions of H.R. 6831, proposed National Energy Act.
2221 Dirksen Building

AUGUST 10

10:00 a.m.
Finance
To continue hearings on title II, Tax Provisions of H.R. 6831, proposed National Energy Act.
2221 Dirksen Building

AUGUST 11

10:00 a.m.
Finance
To continue hearings on title II, Tax Provisions of H.R. 6831, proposed National Energy Act.
2221 Dirksen Building

AUGUST 12

10:00 a.m.
Finance
To continue hearings on title II, Tax Provisions of H.R. 6831, proposed National Energy Act.
2221 Dirksen Building

AUGUST 29

10:00 a.m.
Banking, Housing, and Urban Affairs
International Finance Subcommittee
To hold hearings on the dimension of national debts and payments deficits, and the outlook for the future.
5302 Dirksen Building

AUGUST 30

10:00 a.m.
Banking, Housing, and Urban Affairs
International Finance Subcommittee
To continue hearings on the dimension of national debts and payments deficits, and the outlook for the future.
5302 Dirksen Building

SEPTEMBER 8

9:00 a.m.
Commerce, Science, and Transportation
Consumer Subcommittee
To hold hearings on automatic auto crash protection devices.
5110 Dirksen Building

10:00 a.m.
Judiciary
Antitrust and Monopoly Subcommittee
To resume hearings on S. 1874, to allow recovery for damages by direct or indirect purchasers of goods.
2228 Dirksen Building

Select on Indian Affairs
To hold hearings on Federal Indian Domestic Assistance Program.
Room to be announced

SEPTEMBER 12

9:30 a.m.
Banking, Housing, and Urban Affairs
To hold hearings on S. 1710, proposed Federal Insurance Act of 1977.
5302 Dirksen Building

SEPTEMBER 13

9:30 a.m.
Banking, Housing, and Urban Affairs
To continue hearings on S. 1710, proposed Federal Insurance Act of 1977.
5302 Dirksen Building

10:00 a.m.
Commerce, Science, and Transportation
To hold hearings on the nomination of Donald L. Tucker, of Florida, to be a member of the Civil Aeronautics Board.

SEPTEMBER 14

9:30 a.m.
Banking, Housing, and Urban Affairs
To continue hearings on S. 1710, proposed Federal Insurance Act of 1977.
5302 Dirksen Building

10:00 a.m.
Select Committee on Indian Affairs
To hold hearings on the concept of creating an independent Indian Agency.
Room to be announced

SEPTEMBER 15

9:00 a.m.
Commerce, Science, and Transportation
Consumer Subcommittee
To hold hearings on consumer protection and education in the energy conservation area.
5110 Dirksen Building

10:00 a.m.
Banking, Housing, and Urban Affairs
To mark up S. 1594 and H.R. 5959, to revise and extend the Renegotiation Act.
5302 Dirksen Building

SEPTEMBER 16

9:00 a.m.
Commerce, Science, and Transportation
Consumer Subcommittee
To continue hearings on consumer protection and education in the energy conservation area.
5110 Dirksen Building

SEPTEMBER 19

9:00 a.m.
Judiciary
Improvements in Judicial Machinery Subcommittee
To resume hearings on S. 1819, proposed Federal Criminal Diversion Act (voluntary use of intensive supervision at the time of arrest or soon thereafter).
2228 Dirksen Building

SEPTEMBER 20

10:00 a.m.
Governmental Affairs
Energy, Nuclear Proliferation, and Federal Services Subcommittee
To hold hearings on H.R. 7792, to establish certain limitations on the use of franking privileges, and on simplifying mailing procedures.
6226 Dirksen Building

Judiciary
Constitution Subcommittee
To hold hearings on S. 35, proposed Civil Rights Improvement Act of 1977.
2228 Dirksen Building

SEPTEMBER 21

9:30 a.m.
Veterans' Affairs
To hold hearings on S. 364, Veterans' Administration Administrative Procedure and Judicial Review Act.
Until 1 p.m. Room to be announced

10:00 a.m.
Judiciary
Constitution Subcommittee
To continue hearings on S. 35, proposed Civil Rights Improvement Act of 1977.
2228 Dirksen Building

SEPTEMBER 27

9:00 a.m.
Commerce, Science, and Transportation
Consumer Subcommittee
To hold oversight hearings on the Consumer Product Safety Commission.
5110 Dirksen Building

SEPTEMBER 28

9:00 a.m.
Commerce, Science, and Transportation
Consumer Subcommittee
To continue oversight hearings on the Consumer Product Safety Commission.
5110 Dirksen Building

10:00 a.m.
Veterans' Affairs
To receive legislative recommendations from representatives of the American Legion.
412 Russell Building

SENATE—*Thursday, August 4, 1977*

(Legislative day of Tuesday, July 19, 1977)

The Senate met at 8:30 a.m., on the expiration of the recess, and was called to order by the Acting President pro tempore (Mr. METCALF).

PRAYER

The Reverend Dr. George Gilman Watson, of the First United Methodist Church, Lithonia, Ga., offered the following prayer:

O God our Father, send Your blessing upon this Senate Chamber that each Senator will be filled with Your Holy Spirit to the end that Your love permeates every law that is passed here.

When weariness of long hours in committee would weaken minds, fortify us with a determination to stand for the right.

When pressures from without and powers from within would seek undue influence, keep us anchored in the truth.

When personal anxieties and emotional strain from the drudgery of crowded schedules would tempt isolation, give patience to be open to the needs of others.

Forgive us when we hunger for possessions and fail to feed the hungry.

Forgive us when our thirst for power prevents us from educating deserving youths who are thirsty for knowledge.

Forgive us when we clothe ourselves in a mantle of self-righteousness to the neglect of the indigent.

Hold us in the hollow of Your hand that we will never cease from striving to be better.

Turn us around when our motives have strayed from Your purposes.

Prod us when we would be content with our past accomplishments.

Shove us along when, in selfish obstinance, we think our way superior to others.

Encourage us when depression would seek to overcome us.

Pick us up when we fall under the weight of the responsibility of living our faith.

Take all that is worthwhile and magnify it to Your glory. Take all that is noble of purpose and consecrate it for Your service. For we ask everything in the name of Jesus. Amen.

RECOGNITION OF LEADERSHIP

The ACTING PRESIDENT pro tempore. The Senator from West Virginia.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of yesterday, Wednesday, August 3, 1977, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

TIME LIMITATION AGREEMENT—S. 71

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at such time as Calendar Order No. 302, S. 71, a bill to strengthen the supervisory authority of Federal agencies which regulate depository institutions, and for other purposes, is called up and made the pending business before the Senate, there be a time limitation thereon for debate of 1 hour, to be equally divided between Mr. PROXMIRE and Mr. BROOKE; that there be a time limitation on any amendment of 30 minutes; that there be a time limitation on any debatable motion, appeal, or point of order, if such is submitted to the Senate, of 20 minutes, and that the agreement be in the usual form.

Mr. BAKER. Mr. President, reserving the right to object, I wonder if the majority leader, in propounding that request, might consider any further restrictions on the nature and type of amendments which might be offered.

Mr. ROBERT C. BYRD. Yes.

Mr. President, I suggest the absence of a quorum on my time.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BAKER. Will the distinguished majority leader yield to me?

Mr. ROBERT C. BYRD. I yield.

Mr. BAKER. Mr. President, I believe, in view of our previous conversations with respect to the scope of this bill and the possibility of amendments to it, and because of the early hour it being impossible for me at this time to check with certain Senators at this moment, I wonder if the majority leader would agree to modify his request so that the unanimous-consent order could be vitiated on motion or request from the distinguished junior Senator from Massachusetts (Mr. BROOKE), who is the ranking member of the jurisdictional committee?

Mr. ROBERT C. BYRD. Mr. President, in view of the peculiar circumstances surrounding this particular measure at this particular moment, I modify my request in accordance with the suggestion of the distinguished minority leader.

Mr. BAKER. Mr. President, I thank the majority leader.

The ACTING PRESIDENT pro tempore. Without objection, the unanimous-consent request, as modified, is agreed to.

NO ROLLCALL VOTES PRIOR TO 10 A.M. TODAY

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there be no rollcall votes today prior to the hour of 10 a.m. Several Senators on both sides of the aisle will be at the White House.

The ACTING PRESIDENT Pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I yield back the remainder of my time.

RECOGNITION OF LEADERSHIP

The ACTING PRESIDENT pro tempore. The Senator from Tennessee.

ENERGY AND CLIMATE

Mr. BAKER. Mr. President, during this summer of unusually hot weather it seems appropriate for me to invite the attention of my colleagues to a recent article which appeared in this week's "U.S. News & World Report."

The conclusion of this article is that heavy dependence on the burning of fossil fuels could lead to a gradual warming of the Earth's climate. According to one leading researcher, Columbia University's Wallace S. Broecker, the effects of burning coal, oil, and natural gas "could be the single most important environmental issue of the next 30 years."

The burning of all fossil fuels releases carbon dioxide into the atmosphere. For example, combustion of 1 ton of coal produces 3 tons of carbon dioxide.

While carbon dioxide is not a health hazard and is one of the most common gases in our atmosphere, increases in the amount can lead to a rise in the temperature of the Earth through the green house effect.

Just like the glass of a green house roof, the molecules of carbon dioxide allow sunlight to reach the ground, but block the escape of the heat it produces.

A report which was just released by the National Academy of Sciences concludes that if fossil fuels remain the world's principal energy source during the next hundred years, the carbon dioxide content of the world's atmosphere will quadruple and result in large alteration in climate.

Long range side effects of such a rise in average global temperature could cause drastic changes in the world rainfall patterns, partial melting of the polar ice caps, and a rising of the ocean levels.

Mr. President, I think this "U.S. News & World Report" article provides valuable information on the possible consequences of excessive burning of fossile fuels. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IS ENERGY USE OVERHEATING WORLD?

The world may be inching into a prolonged warming trend that is the direct result of burning more and more fossil fuels—coal, oil and natural gas.

This man-made climate modification, which some scientists say is already taking hold, could have a profound impact on this planet for at least the next 1,000 years unless the industrialized world comes up with some alternative to massive utilization of fossil fuels during the next few decades.

For a number of years, some respected climatologists were saying that the earth was getting cooler, not warmer. These "ice age" theories, based on the natural climate cycles, now are being convincingly opposed by growing evidence of human impact on the weather.

While it is still too early to prove either hypothesis, says J. Murray Mitchell, Jr., a Government climate expert, "it seems likely that industrial man already has started to have an impact on global climate," which could lead to a warming trend.

In the next 30 years. One of the leading researchers in the field, Wallace S. Broecker of Columbia University's Lamont-Doherty

Geological Obeservatory, says the effects of burning coal, oil and natural gas "could become the single most important environmental issue of the next 30 years."

Reasons for all the concern are the long-range side effects that even a slight rise in average global temperature could cause—drastic changes in world rainfall patterns, partial melting of the polar ice caps and rising ocean levels.

Not all the changes caused by a 5 degree (Fahrenheit) temperature rise over the next 30 to 100 years will necessarily be bad, Broecker says, but "before we take actions which will lock us into bestowing a millennium of warmer climate on the generations to follow, we had best learn more than we now know" about possible side effects.

Key to the worldwide research effort now under way is carbon dioxide, among the earth's most common gases, a by-product of all fires and one of the primary constituents of exhaled air from human lungs. By burning large amounts of coal and oil, industrialized nations are slowly putting more of this gas into the atmosphere than nature's recycling mechanisms can handle.

As use of fossil fuels increases, the atmospheric concentrations of this gas go up, creating a greenhouse effect around the globe. Just like the glass of a greenhouse roof, the molecules of carbon dioxide allow sunlight to reach the ground, but block the escape of heat radiating off the surface. This results in steadily rising temperatures, or so the theory goes.

Once the levels of carbon dioxide are altered, Mitchell says, it will take thousands of years—even after consumption of fossil fuels has been reduced—to bring things back into equilibrium.

The earth has been in a warm period, called an "interglacial," for the last 10,000 years. Broecker calls the era he believes the earth is now heading into a "superinterglacial," a period of even warmer weather. Says Broecker:

"The addition of large quantities of carbon dioxide to the atmosphere will likely push the earth's climate into a realm considerably warmer than that experienced during the last several interglacials. In this sense, the postcoal-burning era will be a superinterglacial."

Researchers have been monitoring carbon dioxide concentrations at remote sites for the last 20 years. From stations at the South Pole and Hawaii, they have tracked a small but steady rise, from 313 parts per million of carbon dioxide to 331 parts per million.

A less definitive record, going back several hundred years, comes from analysis of tree rings. It indicates that levels of carbon dioxide started to rise in the early 1900s as the industrial revolution, with its massive use of fossil fuels, was getting into full swing.

One factor that could have contributed to rising levels of this gas in the past, and could be adding to the problem today, is the rate at which the world's great forests have been harvested.

All plants depend on carbon dioxide for life in the same way that all animals rely on oxygen. Trees consume more carbon dioxide than other flora and are essential in balancing the earth's carbon-dioxide budget.

In fact, when carbon dioxide levels are raised, plant growth is stimulated. Unfortunately, the rate at which growth is spurred is not nearly enough to counteract the rate at which humans are flooding the atmosphere with the gas.

The big worry. Coal is the energy about which researchers are most concerned. It represents the largest fossil-fuel resource left on earth, and has just begun to be exploited. President Carter, for example, is calling for the U.S. to nearly double its coal use by the mid-1980s to a billion tons annually.

The problem: For every ton of coal burned, three tons of carbon dioxide are shot off into the atmosphere.

One clue to the direction the earth's climate is going may be unfolding in desolate reaches of the Antarctic. Researchers say they may be seeing the start of the collapse of the Western ice sheet that covers roughly a third of that continent. They don't know whether ice movement is being caused by warming climate or by some other mechanism, but they guarantee it will add momentum to any warming trend if the ice sheet goes. The collapse of this continental ice mass could take less than 100 years.

Murray Mitchell warns that if the world puts off finding options to fossil fuels, "much of the damage will already have been done."

Mr. BAKER. Mr. President, I yield back the remainder of my time.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from Vermont (Mr. LEAHY) is recognized for not to exceed 15 minutes.

SENATOR LEAHY MOVES STAFF TO VERMONT FOR AUGUST RECESS

Mr. LEAHY. I thank the distinguished President.

Mr. President, I am delighted that both the distinguished majority leader and the distinguished minority leader are present today because I intend to announce an experiment in my office, an experiment that in many ways is made possible because of the leadership shown by both Senator ROBERT C. BYRD and Senator BAKER, and the type of work they have done in providing the schedule of the Senate.

Mr. President, I wish to emphasize at the beginning of my speech that I have the highest respect and admiration for the U.S. Senate. The people of Vermont have given me the greatest honor possible by letting me represent them in this body.

Moreover, I fully realize the national responsibility of serving in this country's highest legislative body.

It is because of this respect and admiration for the Senate that I would suggest we Senators spend far too much time in the Senate and far too much time in Washington. Like so many in Washington we reach the point where we can believe all wisdom resides here. Instead of fulfilling our representative capacities, we run the risk of emulating much of the national news media.

Instead of talking to people, we often end up interviewing each other.

Mr. President, this Republic has survived well. It is the oldest democracy in existence today. It has survived because of its representative form of government and its unique system of checks and balances.

As we enter our third century as a country, we need to reaffirm, by our actions, the commitment to a representative form of government.

Mr. President, I have been constantly impressed by the diligence and conscientious hard-working nature of my colleagues on both sides of the aisle. I sincerely doubt if there is a harder working group of 100 people anywhere in the world.

Nonetheless Mr. President, we could do more by doing less. We could spend less time here in Washington—even though it means less legislation passed and more time in our individual 50 States. During my first 2 years here, I have made nearly 100 trips back and forth to Vermont.

In returning to my birthplace—and returning to the people I represent and serve—I found, on many occasions, that the people thought differently than the "experts" in Washington. They gave me the encouragement and support in 1975, when I cast a vote in the Armed Services Committe to finally cut off the funds for the Vietnam war—a motion that was carried by a single vote margin. They gave me the support in the sometimes lonely fight to reverse a Federal urban bias in programs involving the needs of rural America. Time and again, when my family and I have been emotionally and physically exhausted by Washington, it has been friends and neighbors in our native Vermont who have rejuvenated and restored our spirits and my very strong commitment to this Government.

Mr. President, I hope that, notwithstanding an enormous complexity of our Government, the day will come when we can return for a month out of every three to our constituents to fulfill our primary responsibility in a representative government. I wish to praise my distinguished colleagues (Mr. BYRD and Mr. BAKER) for making returns possible this year.

I believe the leadership of the Senate realizes that it has probably never been demonstrated before how important it is for us to see the people we serve.

I wish that in future years, summers could be set aside to return home with our families and be with our constituents. I hope also that a month during the spring and again in the fall would be available for the same purpose.

Mr. President, I am willing to try ways to carry out my philosophy, I intend to try an experiment—one I understand is unprecedented in the Congress—during our statutory recess in August. I intend to move my Washington staff to Vermont.

To me it is as important for the members of my staff to have the kind of constant contact with Vermonters we serve as I do.

Staff members will travel extensively throughout the State, working and talking with Federal, State, regional, and local government officials and with other Vermonters who have contact with the Federal Government.

For many of them, it will be a sacrifice, for they will be away from their families and will have to bear additional living expenses while traveling around the State. There will also be long working hours, but they and I feel that this is an important effort.

Already, many people in the State have contacted me to say how happy they are with this experiment. Many have offered invitations to come visit them. Others have offered staff members a place to stay, room and board.

While I am encouraged by the response thus far, I shall not prejudge the usefulness of the program until we have returned to Washington and have gotten

specific feedback from Vermonters on how they feel about the program. If the response is positive, we will do it again next year. If, on the other hand, this program turns out to be unnecessary, we will try something else.

The important point here is that all of us in the Congress have to experiment in an effort to find new and better ways to reach people and respond to our constituents' needs and wishes. Congress has been criticized for a great many things, oftentimes legitimately, but I do not think I can recall a time when we have been criticized for being too sensitive to what our constituents are thinking.

In my own case, I have already done several things to stay in touch with Vermont, but together with my staff, I am constantly trying to come up with new ideas to better serve those who elected me.

Mr. President, in conclusion I cite just one example of how I have learned from some constituents.

Last year, staff members of the Plainfield Food Co-op wrote to me to explain that, under existing regulations, food stamps could not be used when preordering food. The Plainfield Co-op serves 1,500 families who are able to save on food costs because the organization's markup is between 10 percent and 40 percent lower than non co-op food outlets. However, as with most co-ops, customers must pay when the food is ordered and delivery usually takes two weeks.

Clearly those regulations did not square with the principles of the food stamp program, but I would never have known it if thoseVermonters had not told me. As a result, the legislation that was passed last year and the new bill this year both contained corrective language.

We have to realize, and so do those who work for us, that those of us in Washington do not have a monopoly on wisdom. Nor are we the source of every bright idea or solution. Our job must be viewed as a partnership with those people we serve, truly as representatives of the people.

Mr. ROBERT C. BYRD. The Senator from Vermont is conducting a very, very important experiment which I think all Senators will want to keep their eyes on.

Mr. BAKER. Mr. President, I want to commend the Senator from Vermont, not only for the experiment but for calling it to our attention today. It is a subject that is near and dear to my heart. I commend him for his courage to do it.

Mr. LEAHY. I thank the distinguished leaders.

Mr. President, I yield the remainder of my time back to the majority leader.

Mr. ROBERT C. BYRD. Mr. President, how much time remains out of the Senator's time?

The ACTING PRESIDENT pro tempore. The Senator from Vermont has 10 minutes remaining.

Mr. ROBERT C. BYRD. I ask unanimous consent that I may control that time.

The ACTING PRESIDENT pro tempore. Without objection it is so ordered.

TIME LIMITATION AGREEMENT—LABOR, HEW APPROPRIATIONS CONFERENCE REPORT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at such time as the Labor-HEW appropriations conference report is called up before the Senate, there be a time limitation thereon of not to exceed 1 hour on the adoption of the conference report, to be equally divided between Mr. MAGNUSON and Mr. BROOKE; that there be a time limitation on any amendment in disagreement of not to exceed 1 hour, to be equally divided between Mr. MAGNUSON and the distinguished minority leader or his designee, and with the further proviso that this agreement may be vitiated by either Mr. MAGNUSON or Mr. YOUNG or Mr. BROOKE.

Mr. BAKER. Mr. President, reserving the right to object, and I shall not object, as far as I know, that agreement is entirely satisfactory on this side. We have cleared it as best we can at this hour.

I appreciate the majority leader's making the proviso for vitiation by the distinguished ranking member of the committee and the ranking member of the subcommittee, and we have no objection.

The ACTING PRESIDENT pro tempore. If there is no objection, the unanimous-consent request is agreed to.

ORDER FOR CERTAIN AMENDMENTS TO BE CONSIDERED EN BLOC

Mr. ROBERT C. BYRD. Mr. President, with the understanding that we had earlier that Mr. MAGNUSON, or Mr. YOUNG, or Mr. BROOKE may vitiate all or any part of the agreement entered into with respect to the Labor-HEW appropriations conference report, I ask unanimous consent that, when the amendments in disagreement to H.R. 7555 are considered, amendments 3, 12, 13, 28, 45, 66, and 72 be considered en bloc.

The ACTING PRESIDENT pro tempore. Is there objection?

The Chair hears none. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum on my time.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. JAVITS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Under the previous order, the Senator from New York (Mr. JAVITS) is recognized for not to exceed 15 minutes.

EMPLOYEE RETIREMENT INCOME SECURITY ACT OF 1974

Mr. JAVITS. Mr. President, as a principal coauthor of the Employee Retirement Income Security Act of 1974—"ERISA" of the "act"—I have had a deep and abiding interest in assuring the retirement income of millions of pension plan participants and beneficiaries. Starting in the 90th Congress in 1967 and in each succeeding Congress thereafter until 1974, I introduced bills to protect the benefit rights of American workers. Seeing the bill through to passage was a herculean task, and I understandably take pride in having played a major role in shaping this landmark piece of legislation.

ERISA was necessary because the private pension system was becoming discredited to the American worker. It simply did not have adequate minimum standards and safeguards for guaranteeing the payment of promised benefits. The Senate Labor Subcommittee's 3 years of intense study revealed innumerable cases of workers putting in years of honest labor and expecting to receive their pensions only to find that no benefits would be paid because of trustee abuse, inadequate funding or unfair qualifying rules. The human suffering caused was enormous.

Faced with so major and cruel a shortcoming in our social system, Congress finally acted to correct the situation. Because of the special tax treatment afforded employee benefit plans, the congressional tax committees became involved in the process which had been started by the congressional labor committees.

The involvement of four committees made the passage of a bill an extremely difficult matter, especially when one considers the rather abstruse subject matter. During my many years in Congress, I have never participated in a more politically and substantively complex legislative House-Senate conference than on the passage of ERISA.

With the exception of dual agency jurisdiction, the basic concepts of ERISA have proved to be sound. The reporting and disclosure provisions, the minimum standards including vesting, the funding and fiduciary requirements as well as the enforcement and plan termination provisions have withstood their initial test. Because of ERISA, benefits under many terminated plans are continuing to be paid by the Pension Benefit Guaranty Corporation, PBGC. The minimum standards protections are being incorporated into hundreds of thousands of plans across the country. The participants in the Teamsters Central States, Southeast and Southwest Areas Pension Fund can thank ERISA for assuring that their plan is now on the way to becoming a better and more reliable program for retirement security.

There are, to be sure, problems with some of ERISA's provisions, but this was not unexpected with so massive, complex and pioneering a statute forged under such divergent political pressures. Those provisions found wanting can, of course, be amended. But, Mr. President, we should not stop there because much can yet be done to expand the act's protections. We should make every effort to identify those areas where advances can be made and to fashion provisions which effectively and reasonably implement the desired ends. We have had almost 3 years to observe the implementation of the act, and the time is now right for Congress comprehensively to review ERISA and

to take steps to perfect as well as expand its protections.

In order to avoid the legislative difficulties of the past, I recommend that Congress proceed prudently, responsibly, and deliberately, emphasizing cooperation not confrontation. I also recommend that as we determine problems with the act and suggest solutions, we keep in mind that the overriding and paramount policy of the act is to assure retirement income security for workers and their beneficiaries. The bottom line consideration for every solution we propose must be whether it will benefit the workers the act was intended to protect and will be feasible for employers. In no way should our reconsideration of ERISA be turned into a grabbag for special interests pursuing their own benefits—the history of "Christmas Tree" tax bills must be avoided at all costs.

Mr. President, if I may, I would like to discuss some of the more pressing problems that have arisen and point out some of the new directions in which we should move to better protect participants and beneficiaries. I want to make clear that my remarks today are the first of many I intend to make about ERISA and are not meant to be an exhaustive discussion of all the issues which merit attention.

DUAL JURISDICTION

When ERISA was passed, I had grave doubts about the overlap of jurisdiction between the Labor and Treasury Departments with respect to certain areas of regulation. Parts 2 and 3 of title I of ERISA—regarding participation, vesting, benefit accrual, and funding—as well as section 406 of title I—regarding prohibited transactions—have corresponding provisions in the Internal Revenue Code added by title II of ERISA—hereafter, all section references are to ERISA. The dual administration of these substantive areas was the product of political compromise rather than objective analysis that this was the best way to proceed. As the original proponent of an independent pension agency, I was dissatisfied with this compromise when the act was passed, and I am still dissatisfied with the arrangement. To no one's surprise, dual jurisdiction has interfered with the effective administration and enforcement of ERISA.

Two basic approaches to solving dual jurisdiction have recently been proposed. In H.R. 4340, Congressmen DENT and ERLENBORN propose that the administration of ERISA be centralized in an Employee Benefit Administration, EBA. The President would have discretion to place EBA in an existing Federal department or to make it an independent agency. In S. 901, Senator BENTSEN proposes dividing jurisdiction between DOL and Treasury by giving exclusive jurisdiction over fiduciary responsibility and prohibited transactions to DOL and over participation, vesting and funding to Treasury.

The administration is presently considering a solution which basically follows the philosophy of S. 901 but which differs in some respects from the Bentsen bill. The administration solution is intended to reduce delays in issuing regulations, opinions and exemptions and will probably be sent to Congress for approval as part of the President's reorganization program. When the administration finally submits its proposal to Congress, I recommend that the Human Resources Committee hold hearings to study closely the division of responsibilities and the need for personnel changes.

I have given much thought to the dual jurisdiction problem as well as to the lack of policy coordination between not only the three principal ERISA agencies but also the other agencies whose decisions impact upon employee benefit plans. I have concluded that the administration approach, as presently formulated, may be a satisfactory short-term approach to dual jurisdiction and that the establishment of an independent, SEC-style pension agency on or about January 1, 1980 is the best long-term approach to dual jurisdiction as well as tri-agency administration.

The continuation of my initial, favorable reaction to the administration approach will, of course, be a function of the terms of the proposal. The administration approach, as distinguished from S. 901, should reduce administrative delays without causing disruptive change. I think that the employee benefit plan community is still adjusting to ERISA and that any significant administrative changes at this time would be counterproductive.

By January 1, 1980, though, the pension community should have amended its plans and should have adjusted to ERISA's requirements. At that time it will be appropriate to once and for all rationalize and clarify the Federal Government's administration of ERISA.

The independent agency I propose, which is similar to the agency I advocated before ERISA's passage, would be called the Pension Security Administration, PSA, and would become operational on or about January 1, 1980. The PSA Board of Directors would have five full-time members appointed by the President. The PBGC would become a division of PSA without its own Board. PSA personnel at the national office and in the field would be drawn to the fullest extent possible from the existing agencies.

All present DOL and PBGC functions would be transferred to PSA. I think it advisable to establish an impartial panel to study the extent to which present IRS functions could be transferred to PSA without interfering with the effective administration of the Internal Revenue Code. I do not foresee any changes in the IRS's present functions of determining the taxability of distributions or the collection of excise taxes. I do, however, advocate that the qualification of pension plans and the administration of the minimum funding standards be transferred to the PSA. Other IRS functions which should be considered for possible transfer include the determination whether contributions are within the required range, the enforcement of limitations on deductions, and the administration of code provisions on individual retirement accounts and code section 403(b) annuities. A PSA office of policy coordination should be established to coordinate PSA actions with those of the IRS.

In addition, the President should be directed to transfer, to the extent feasible and appropriate, the functions of other agencies dealing with employee benefit plans. All agencies should be required to coordinate with PSA those decisions and actions which relate to such plans.

The establishment of the PSA will result in the more efficient administration of ERISA, the orderly development of a national policy on pension and welfare plans, and the proper balancing of competing interests. The January 1, 1980, startup date for PSA will give enough time for the existing agencies to get their shops in order and for affected personnel to make their career decisions. It would also give enough time for the development of logistics to set up the PSA and for the pension community to prepare for the new agency.

My proposal on dual jurisdiction and tri-agency administration is a practical solution to a difficult problem. It combines a short-term attempt to reduce present administrative delays with a long-term reorganization to overcome the splintered administration of ERISA.

If the administration is serious about rationalizing and reorganizing the Federal Government and about helping American workers, it should adopt my proposal for streamlining and improving the administration of ERISA. As our population grows older placing greater strains on the capabilities of our retirement systems, the need for a thoughtful and coordinated national policy on retirement income security becomes a matter of the highest priority. In announcing his intent to appoint a blue ribbon panel to study our retirement systems, the President has indicated that the subject is of great concern to him. A centralized Pension Security Administration would provide the mechanism for rationally and wisely dealing with coming retirement income problems which involve ERISA as well as go beyond it.

MULTIEMPLOYER PLANS

In my view, ERISA's treatment of multiemployer plans is tentative and in need of further development. Time has shown that certain changes are necessary if plan participants are to avoid becoming "second class citizens." Representatives of organized labor have changed their views somewhat on the treatment of multiemployer plans, and I hope they will work closely with us. Without trying to cover all the topics worthy of legislative attention, I intend to touch on a few changes which should be made to help participants in such plans.

With respect to title IV which deals with plan termination insurance, multiemployer plans have several problems. I have been informed that a number of multiemployer plans intend to terminate on or about January 1, 1978, the first day of mandatory termination insurance coverage by the PBGC. Some of these plans may cover employees in "dying industries." One estimate of PBGC's potential liability from such terminations is in the hundreds of millions of dollars. Obviously, such staggering increases in liability will necessitate equally staggering increases in the premium paid to PBGC by multiemployer plans. Three ways of dealing with this problem are imposing a

cap on liabilities assumed by the PBGC, instituting some form of experience rated premium structure or combining the PBGC's single employer and multi-employer funds. Raising the 30 percent of net worth liability may also be a factor to consider. In order to give us time to devise a solution, I am introducing legislation to postpone the effective date for mandatory insurance coverage from January 1, 1978 to January 1, 1979. My purpose is to bring about high priority consideration by the PBGC and the Congress, and to have a vehicle before us for preliminarily dealing with this problem. My bill is intended to cause the marshaling of pertinent facts, ideas and solutions. I have accordingly requested the PBGC to accelerate its current study of potential plan terminations so that within 30 days the Congress will have the benefit of the latest available evidence.

A problem related to the potential multiemployer terminations in 1978 is the possibility that under section 4082, the PBGC will be required to reduce or terminate payments to plans discretionarily covered by the PBGC prior to January 1, 1978, in order to avoid jeopardizing the payment of mandatorily covered benefits. This requirement is unfair to those participants who are presently depending upon discretionary payouts from the PBGC.

I am deeply concerned about the district court decision in *Connolly* v. *Pension Benefit Guaranty Corporation*, 419F Supp. 737 (C.D. Cal. 1976), which held that a typical multiemployer plan—Taft-Hartley plan—was an individual account plan not subject to the premium payment requirements of title IV. The effect of this decision will be to deny title IV's termination insurance protection to millions of participants in collectively bargained plans. Congress never intended to exempt Taft-Hartley plans from title IV, and I hope this decision is rectified on appeal. As I said during consideration of ERISA, Congress "had no intention whatsoever of treating workers in these plans as second-class citizens and is determined that benefits be fully protected to the statutory limits regardless of the type of plan involved."

The present method under section 4064 for allocating liability when a plan with more than one contributing employer terminates is simply not fair. The liability is allocated according to the employer's share of total contributions for the 5 years immediately preceding the termination. The effect of this formula is to penalize younger, faster growing employers and to benefit older, less vigorous employers who have been making a lower proportion of recent contributions but whose employees will represent a larger proportion of retirees. One way to ameliorate this situation is to extend the 5-year period to 10 years. Since under section 4064(b) the PBGC can by regulation determine liability on an equitable basis, the Corporation should and is considering correcting this situation.

The definition of "substantial employer" in section 4001(a)(2) should be amended so that it covers employers who have contributed at least 10 percent of the total contributions to the multiemployer plan for 5 rather than 2 successive years. The present 2-year provision has a deterrent effect on large contractors undertaking temporary projects within the jurisdiction of one or more multiemployer funds. If the contractor accounts for 10 percent of the contributions for two consecutive years and subsequently no longer contributes to the plans, the contractor may be considered a substantial employer who has withdrawn from the plan. In that case, the employer would be required to place large amounts in escrow or post a surety bond under section 4063.

With respect to nontitle IV matters, I have two recommendations. First, in order to assure the prompt payment of employer contributions to multiemployer plans, ERISA should provide that the failure of any employer to meet his contractual obligations violates the statute's funding requirement without regard to whether the plan as a whole is funded or underfunded. The effect of this change would be to impose an excise tax on the employer under code section 4971. Serious consideration should be given to whether the tax should be treated as liquidated damages payable to the plan rather than the Treasury.

Second, the present definition of a multiemployer plan should be amended by eliminating the requirement that no employer can make more than 50 percent of a plan's aggregate contributions and substituting the requirement that the fund have at least 10 contributing employers or satisfy the Secretary of Labor that it encompasses a substantial portion of an industry or trade in an area. The purpose of this change is to make ERISA's multiemployer provisions applicable to industry plans which are dominated by one company.

PLAN TERMINATION INSURANCE

There are a multiplicity of issues arising under title IV which must concern us.

Section 4023 provides that the PBGC shall insure any employer who maintains or contributes to a plan covered by title IV against the payment of any liability imposed by subtitle D of that title. No insurance can be provided, though, unless the premiums on such insurance have been paid and the insurance has been in effect for more than 5 years. The PBGC has been working diligently to implement its statutory mandate and may have its final proposal ready by early September. One possible option for this contingent employer liability insurance program, CELI, is to make it a mandatory system involving bankruptcy procedures. Because CELI undercuts the basic 30 percent net worth liability provision for employers and because of feasibility problems, we may have to consider eliminating the program. We may wish, though, to give the PBGC some flexibility with respect to waiving liability for small employers in cases of substantial business hardship.

The PBGC is also considering requesting congressional approval in September of a premium increase. The size of the increase will depend in part on whether PBGC assets from terminated plans are invested in higher yield private sector securities or in lower yield Treasury obligations. Since lower premiums benefit pension plans and their participants by leaving more assets in the fund, I urge the PBGC to invest its assets from terminated plans in private sector securities. If the Treasury Department persists in frustrating what I regard as clear congressional intent in this respect, then I will propose statutory amendments that will assure PBGC investment in private securities.

Litigation has shown that it is difficult and costly to establish the net worth of an employer for purposes of imposing the 30 percent of net worth liability. I would consider amending section 4062 to apply the 30-percent figure to a more easily ascertainable measure of the employer's unencumbered assets. I also think clarification is needed as to whether the 30-percent liability applies to each plan termination or to all plans terminated by an employer. As the statute is presently drafted, an employer who terminates four of its plans over a 1-year period could arguably be liable for 120 percent of its net worth. With respect to the applicability of the 30-percent liability to a controlled group, I think there is such group liability, and I hope the bankruptcy judge's decision in *PBGC* v. *Avon Sole Company* (D. Mass., May 13, 1977), is reversed. The court in that case found that in order to be liable for a terminated underfunded plan, an employer must be the direct employer and not a stranger to plan beneficiaries who becomes the "employer" through control group theory. I also think consideration should be given at the same time to raising the 30-percent figure.

The present lack of coordination between the Internal Revenue Service and the PBGC with respect to the termination of qualified defined benefit plans is unacceptable. The IRS issues a letter of determination of qualification upon termination but conditions it upon the PBGC's approval of the section 4044 asset allocation. If the PBGC requires a change in the asset allocation, the employer must then go back to the IRS for its approval. If the agencies cannot administratively correct the present situation, the Congress will have to.

Under section 4022(b)(3), monthly benefits guaranteed by the PBGC cannot exceed: First, the employee's average monthly gross income from his employer during a defined 5 consecutive calendar years period, or, second, $750 multiplied by a factor tied to the social security contribution and benefit base. Rapid increases in the social security base have caused the $750 figure to jump to $937.50. Good sense dictates that we tie the ceiling on guaranteed benefits to a less volatile factor than the social security base. The cost-of-living indicator would be preferable in my judgment.

Serious thought should be given to how the PBGC's potential liabilities can be minimized with respect to pension plans sponsored by employers with low net worth. An employer with hardly any assets can establish a tax-qualified pension plan, maintain it for 5 years, and then terminate, leaving the PBGC holding the bag. Another example is when a large corporation sells a division to a smaller company with a much lower

net worth. Where the division's pension plan had the assets of the large company behind it, the same plan now maintained by the small company has a much lower net worth covering its liabilities.

I also believe that section 403(d)(1) could be amended to provide that upon the termination of a defined benefit plan, plan assets will be allocated according to section 4044. Upon the termination of a defined contribution plan, assets should be allocated according to the terms of the plan.

PLAN TERMINATIONS, SMALL PLANS, AND REPORTING (PAPERWORK) AND DISCLOSURE REQUIREMENTS

I am very concerned about the number of plans terminated since the passage of ERISA. In 1975, 4,000 plans covered by title IV terminated, while in 1976, 7,300 such plans terminated. The terminations during 1975 and 1976, though, affected only about 1 percent of all participants covered by plans on September 2, 1974. The PBGC has informed me that the rate of plan terminations in 1977 has decreased.

According to the PBGC, 65 percent of the terminating plans cited the following non-ERISA reasons for termination: business conditions or other business reasons, plan too costly, change in ownership, or liquidation of sponsoring employer. ERISA was given as the reason for termination by 20 percent of the plans and as one of several reasons by another 15 percent. Of the terminating plans, 86 percent were plans of ongoing employers. Among these terminated plans, about 28 percent were being replaced by another plan, and about half of these new plans were profit-sharing plans.

The IRS has recently reported that a preliminary and limited telephone sampling of employers suggests that possibly 30 percent of the Nation's 500,000 private pension plans may have or will terminate. Most of these plans were small plans. It should be emphasized that contrary to certain news accounts, many of these plans may have terminated prior to ERISA. The IRS is now preparing a mass mailing and expects to have reliable termination statistics by November. In addition, the Labor Department is preparing studies on plan terminations and formations.

I understand that the IRS is looking into the possibility of proposing separate statutory sections for small plans. I applaud this effort and agree that there are good reasons why small plans should not always be treated the same as those of major corporations. I urge the Department of Labor to take similar steps.

In addition, it may be advisable to establish two federally sponsored and administered pension benefit plans—one a defined contribution plan and the other a defined benefit plan—to which employers with 25 employees or less could make tax-deductible contributions. Such federally-run plans would encourage those small employers who may have terminated plans to once again provide for their employee's retirement security. There would be minimal reporting and disclosure burdens and no need to apply to the IRS for the tax qualification of such a plan. Asset management, funding calculations and recordkeeping would be performed pursuant to arrangements made by the Federal Government. It may be desirable to have such a program administered by a quasi-governmental corporation rather than by an existing agency.

With respect to the reporting and disclosure requirements for small plans, the Labor Department has taken a number of significant steps to reduce their burdens:

All unfunded welfare benefit plans and plans funded exclusively through insurance contracts and covering less than 100 participants have been exempted from the reporting requirements.

The requirement for an opinion from an independent qualified public accountant has been waived for plans covering less than 100 participants.

A shorter annual report for small plans—Form 5500-C—has been instituted, and plan administrators have been permitted to use low-cost second- and third-class mail to send summary plan descriptions to participants.

Beginning in 1978 all annual reports, including the 5500-C, will be sent only to the IRS on a specified date.

The DOL is studying the need for information presently required on its forms and will hopefully be able to eliminate unnecessary questions.

Some have advocated completely exempting small pension plans from the reporting and disclosure requirements. I do not support this idea because there is a justifiable need to have information even from small plans. Abuses and violations of the law can occur with small plans just as easily as they can with large plans. I do not think protecting participants should be sacrificed because of complaints about paperwork burdens, but I do think we should continue to find ways to reduce these burdens as much as possible as long as the interests of participants are adequately protected.

I support the proposal that for tax-qualified plans, the filing deadline for the initial EBS-1—DOL Plan Description Form—be changed to within 120 days after the plan receives a favorable determination letter from the IRS. The filing deadline for the amended EBS-1 should be changed to within 60 days after the plan receives reaffirmation of its qualified status from the IRS. The proposal will cut down on unnecessary paperwork. I also encourage the IRS and the DOL to analyze the feasibility of eliminating the filing of an EBS-1 with the DOL when a tax-qualified plan is amended and possibly when it is established. The IRS could simply report information which it receives in the qualification application to the DOL.

PREEMPTION

ERISA preempts all State laws that "relate to any employee benefit plan." While the act exempts State insurance statutes from preemption, it provides that no employee benefit plan shall "be deemed" to be an insurer for purposes of State insurance regulation. Any fund or program, therefore, which qualifies under ERISA as an employee benefit plan cannot be regulated by State law.

The original Senate and House bills preempted only those State laws which regulated substantive matters already covered by ERISA. In explaining why the conference version of the bill provided for broader preemption, I stated:

> Such a formulation (the Senate and House bills) raised the possibility of endless litigation over the validity of State action that might impinge on Federal regulations, as well as opening the door to multiple and potentially conflicting State laws hastily contrived to deal with some particular aspect of private welfare or pension benefit plans not clearly connected to the Federal regulatory scheme.
>
> Although the desirability of further regulation—at either the State or Federal level—undoubtedly warrants further attention, on balance, the emergence of a comprehensive and pervasive Federal interest and the interests of uniformity with respect to interstate plans required—but for certain exceptions—the displacement of State action in the field of private employee benefit programs.

I also called for further study of the preemption provision.

While I still think that broad Federal preemption is preferable, experience has shown that section 514 of ERISA may have gone further than desirable with respect to welfare benefit plans.

California's Knox-Keene Act, which regulates the funding, disclosure, sales practices and quality of services of health care service plans including self-funded welfare benefit plans, has been held preempted by ERISA. *Hewlett-Packard* v. *Barnes*, 425 F. Supp. 1294 (N.D. Cal. 1977). The Idaho attorney general has concluded in an advisory opinion that ERISA preempts Idaho's 1974 statute regulating self-funded health care plans. Other States, including Minnesota, Hawaii, Arkansas, Missouri, North Carolina, Oklahoma, Utah, and West Virginia have statutes regulating self-funded employee benefit plans which presumably will be held to be preempted by ERISA.

As a result, a regulatory vacuum has arisen in such areas as funding and participation where ERISA sets no substantive standards for welfare benefit plans. Welfare plan abuses include inadequate actuarial valuation, insufficiencies in claim reserves, and excessive marketing fees.

One especially serious problem is the use of the self-funded multiple employer trust—MET. A MET has been defined in a recent paper on preemption as a trust created to provide welfare benefit programs to employees of small employers with claim payments contingent, in whole or in part, on the availability of trust funds if benefits are not funded through insurance contracts. Insured MET's have been popular with small businessmen for years.

Recently, two California-based self-funded MET's have gone bankrupt, and others may follow. The two bankrupt MET's had covered 40,000 individuals and left at least $7 million in unpaid claims. Self-funded MET's cover an estimated 1 million people and allegations have been made that "industry sharks" are becoming involved in their operation. The Labor Department is studying this very complex matter, but has not yet decided whether certain MET's are employee benefit plans immune from State regulation.

In addition, other areas of potential conflict between ERISA and State laws involve State equal employment and age discrimination laws.

There are at least two ways of resolving the preemption problem involving welfare benefit plans. The first is to provide for complementary State and Federal jurisdiction by not preempting State statutes with additional standards for welfare plans. The second is to extend ERISA's substantive standards, for example its funding requirements, to welfare plans. The matter is very serious and should be thoroughly reviewed by Congress.

THE DANIEL CASE

In *Daniel* v. *International Brotherhood of Teamsters,* 410 F. Supp. 541 (D.C. Ill. 1976), the district court held that participation in a collectively bargained, compulsory, noncontributory employee pension plan involves the sale of a security to the employee-participant, subject to the antifraud disclosure requirements of the Securities Exchange Act of 1934. The effect of the decision, if upheld, will be to impose large liabilities on collectively bargained plans.

Mr. Daniel was the unfortunate victim of a brutally unfair break in service provision which denied him a pension in 1973 after 22 years of service because his service was interrupted by a few months' involuntary layoff. If ERISA's vesting requirements and break in service rules had been applicable, Mr. Daniel would have received his pension.

In its amicus curiae brief on appeal, the Labor Department points out that in balancing the competing considerations of retroactively protecting individuals like Mr. Daniel and forcing pension plans to face large new liabilities, Congress decided to make ERISA's protections prospective only. It therefore provided in section 203(b)(1)(F) that plans may disregard vesting years of service before the act's effective date which "would have been disregarded under the rules of the plan with regard to breaks in service as in effect on the applicable date." The Labor Department urges that even though the Daniel decision is based on securities laws rather than ERISA, the court, in exercising its discretion with respect to a judicially created cause of action, should heed pertinent policy decisions by Congress. The Department also recommends that the court consider that the securities law antifraud disclosure requirements are largely duplicative of ERISA's extensive reporting and disclosure provisions.

The issues raised in Daniel are of great concern to me, and I will be closely monitoring how the case proceeds through the courts. While there may well be an important subsidiary role for the application of the securities antifraud provisions to private pensions, we must see to it that such a role does not result in displacing or disturbing fundamental policies established by Congress under ERISA. After all, if the securities laws were intended to create remedies for participants that rival those provided by ERISA, there would have been little reason to enact the latter.

CONCENTRATION OF SECURITY HOLDINGS AND MODIFICATION OF THE PRUDENT MAN RULE

It has been advocated by Senator BENTSEN, who has been a wonderful friend and ally in developing ERISA, that a tax be imposed on pension managers with authority over more than $1 billion in assets who hold more than 5 percent of any class of security of any corporation. While those seeking to prevent the concentration of holdings of any one security by large institutional investors have admirable motives, I am not yet convinced that the issue is not more appropriately within the province of the Securities and Exchange Commission.

Questions have also been raised whether the prudent man rule has had a deleterious effect on pension plan investment in small companies. Senator BENTSEN has advocated that a 2-percent leeway clause be added to ERISA's prudent man rule to encourage pension funds to invest in small businesses. I am concerned, if it is a fact, that the flow of pension assets in the direction of small corporations has decreased because pension fund managers are being overly cautious. I do not, though, think that the way to solve this problem is to set aside 2 percent of pension plan assets as "mad money." I think the better approach is to clarify the prudent man rule preferably by DOL advisory opinion but if necessary by statutory amendment. One clarification to consider is providing that an investment in securities shall not be imprudent merely because the number of such securities is relatively small or because the securities are not widely held or regularly traded.

Another possible approach is to determine the prudence of an investment by looking at the entire portfolio. Such a provision, though, should not permit trustees to invest in unacceptably speculative investments.

Of course, if we are going to open the subject of the social uses to which pension assets can or should be put, I think it worth considering whether a percentage of such assets, particularly those in pooled real estate trusts managed by banks and insurance companies, should be invested in low- and moderate-income housing. In fact, I do not see how the venture-capital application of pension funds can be given priority over other socially desirable applications.

NEW PROTECTIONS

Since the passage of ERISA, I have given much thought to how its protections can be expanded. I have concluded that there are a number of ways in which ERISA can be responsibly extended.

Since the ultimate protection of an employee's right to an accrued benefit is the vesting of that benefit, I am in favor of establishing a faster vesting schedule so that an employee will be 100 percent vested after 5 years of service. This will give employees, particularly those who change jobs frequently, significantly greater protections. There may be a need for a transitional period in order to implement faster vesting.

In this era of continuing inflation, I think it is important that the benefits of retirees be protected from economic erosion. A fixed dollar pension is in reality a decreasing benefit. I, therefore, am in favor of requiring plans to make some provision for cost-of-living increases for retired participants. Because of the cost implications of this change and others, I will propose that the Human Resources Committee have conducted a cost study to determine the impact of these changes on pension plans.

The protections of section 205 regarding joint and survivor annuities can and should be significantly expanded. ERISA presently requires that if a pension plan provides an annuity benefit, such benefit must be in a form having the effect of a qualified joint and survivor annuity. Such an annuity essentially provides an annuity for the life of the participant with a survivor annuity for the life of the spouse which is not less than 50 percent nor more than 100 percent of the amount of the annuity payable during the joint lives. A pension plan, though, is not required to provide such an annuity before the later of the earliest retirement date or 10 years before the normal retirement age.

If a participant dies before he is covered by a joint and survivor annuity, the surviving spouse can lose even the participant's vested accrued benefits. I advocate that this be changed so that a surviving spouse will be entitled to a survivor's annuity based upon the participant's vested benefit.

Section 205 should also be amended to require that a participant's spouse be given the same information as the participant on the consequences of rejecting the joint and survivor annuity. In addition, section 205 should be amended to permit the receipt of survivor's benefits by divorced spouses. The present requirement that a spouse be married to the participant throughout the 1 year immediately preceding the participant's death has had the inadvertent effect of precluding divorced spouses from receiving benefits. The provision that any election or revocation of the form of annuity payment may be deemed ineffective under a plan if the participant dies within 2 years of the election or revocation should be eliminated. A surviving spouse should not be denied the protection of a survivor annuity simply because the participant dies within the stated period.

My staff has been working with outside experts on the feasibility of establishing a central, federal portability fund to which vested accrued benefits can be transferred upon termination of employment. Even though the jury is still out on the proposal in some quarters, the justification for such a fund has been somewhat diminished by the creation of the rollover IRA. An employee who terminates employment and receives a lump sum distribution may transfer his benefits into a rollover IRA, and may, if the qualified pension plan of his second employer permits, transfer the assets of of his rollover IRA to the second pension plan. If an employee does not receive a distribution, he will, of course, not lose his vested benefits and upon application for social security benefits, will be informed by the Social Security Administration of all the plans under which he is credited with vested accrued benefits.

The concept of reciprocity, that is, the

transfer of years of service credit from one plan to another, is extremely difficult to implement because of the great differences between plans. I am aware that certain multiemployer plans have reciprocity provisions, and to the extent we can, we should encourage the development of reciprocity arrangements between plans in the same industry or area.

For those employees who are covered by qualified plans with low employer contributions, limited employee retirement account, LERA's, should be permitted. Under a LERA, an employee could contribute to an individual tax-exempt account the difference between a maximum figure of $1,500 and the amount of the employer contribution. In addition, during those years when an employee is not vested, he should be permitted to contribute the maximum amount to the LERA.

The present declaratory judgment procedure under section 7476 of the code should perhaps be broadened in scope with respect to subject matter, forum and agency action covered. The adequacy of the act's present remedies should be examined as should the possibility of strengthening the investigatory powers and staff of the enforcement agencies.

In addition, the possibility of requiring representative participant involvement in the administration of pension and welfare plans should be considered as a means of assuring that the needs of participants are continually communicated in a responsible fashion. I also support studying the possibility of paying some kind of retirement benefits to the approximately 1 million workers who lost their pensions prior to ERISA.

Finally, under section 206(b), a plan may not decrease the benefits of a pension plan participant in pay status or a vested participant who is separated from service by reason of any increase in social security benefit levels. This section should be amended to provide that benefits under disability benefit plans may not be decreased because of social security increases.

In conclusion, it is clear that there are many issues arising under ERISA which deserve our immediate attention. I will therefore, Mr. President, as ranking minority member of the Human Resources Committee, recommend that our committee hold ERISA oversight hearings early this fall.

I want to reemphasize that all concerned should do their best to proceed thoughtfully, steadily and responsibly so that every point of view is heard and considered before a bill is written. Cooperation rather than confrontation will produce a bill which will be in the best interest of plan participants and beneficiaries.

EXECUTIVE SESSION

(The following proceedings occurred later in the day and are printed at this point in the RECORD by unanimous consent.)

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider nominations on the Executive Calendar.

There being no objection, the Senate proceeded to the consideration of executive business

The PRESIDING OFFICER. The nominations on the Executive Calendar will be stated.

OFFICE OF THE SPECIAL REPRESENTATIVE FOR TRADE NEGOTIATIONS

The legislative clerk read the nomination of Alonzo Lowry McDonald, Jr., of Connecticut, to be a Deputy Special Representative for Trade Negotiations, with the rank of Ambassador.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

DEPARTMENT OF AGRICULTURE

The legislative clerk read the nomination of Ray V. Fitzgerald, of South Dakota, to be a member of the Board of Directors of the Commodity Credit Corporation, and the nomination of Sarah Weddington, of Texas, to be General Counsel of the Department of Agriculture.

The PRESIDING OFFICER. Without objection, the nominations are considered and confirmed.

THE JUDICIARY

The legislative clerk read the nomination of Earl E Veron, of Louisiana, to be U.S. district judge for the western district of Louisiana.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

DEPARTMENT OF JUSTICE

The legislative clerk read the nomination of John C. Krsul, of Montana, to be U.S. marshal for the district of Montana.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

TENNESSEE VALLEY AUTHORITY

The legislative clerk read the nomination of Simon David Freeman, of Maryland, to be a member of the Board of Directors of the Tennessee Valley Authority.

Mr. STENNIS. Mr. President, the nomination of Mr. David Freeman as a Director of the Tennessee Valley Authority leads me today to make some deeply felt remarks about the role and importance of that great institution to the Nation, and especially to the State which I am honored to serve in the Senate. Its distinguished past and its critical future are closely related to the nomination before us today.

TVA is the largest power-generating utility in the country, and its contribution during wartime and peace to the expansion of energy availability has been of incalculable benefit to the region it serves and to the Nation. For example, in 1933 approximately 3 percent of the farms in the TVA area had electricity; and, now, thanks to the energy program of that institution, the coverage is almost total. TVA has brought electricity to once remote and inaccessible areas and with it a new hope for development and progress toward a fuller life for the citizens of the Valley. On a nationwide scale, the energy technology developed at TVA has been and continues to be an important resource and model.

TVA is, of course, much more than a utility. Its farsighted and broad charter gives TVA as part of its purpose the following mandate: "fostering an orderly and proper physical, economic, and social development of said areas." TVA's development programs include a very wide variety of programs: river navigation, flood control, water management, community and economic development assistance, forestry development, health care service to remote areas, fisheries and wildlife development, environmental protection, recreational areas and projects, and its highly important fertilizer research and development programs—just to mention a few.

My home State of Mississippi has had a particularly beneficial relationship with the Authority. The first TVA customer for power was Tupelo, Miss., in 1934; and in the same year, Alcorn County, Miss., became the first rural electric power cooperative to purchase power from the system. Today, TVA power is marketed in our State through 28 rural electric cooperatives and municipal distributors who serve a quarter of a million customers.

The Authority's efforts in the area of fertilizer technology and farm development deserve special commendation. They make their technology available to the producers of fertilizer across America; and much of the agricultural and commercial fertilizer used today arose from TVA technology. Further, TVA makes special efforts to get the word to the small as well as large farmers by setting up demonstration projects and using demonstration farms in the various communities. This program has contributed substantially to America's agricultural output, as well as having improved the lot of many small farmers.

The future of TVA is of critical concern to us all. We live in complex times when all sorts of pressures and counterpressures develop around us. And, an agency like the Authority often finds itself caught in the midst of these maelstroms that swirl around us. Development versus conservation, economic growth versus environmental protection, energy expansion verus energy conservation, coal versus nuclear, and so forth—the controversies are deep and the solutions elusive.

In times like these it is important for an agency like TVA to stay close to the mission of its original charter. The original law was based on a vision broad enough to have brought TVA through the changing times since the early 1930's. TVA can and should serve as a model for the rest of the Nation in the area of responsible energy development and utilization, but it also must never lose its basic commitment to the people of the

Valley. This commitment is based upon its mission to advance the quality of life in that region by expanding life's opportunities for the people, developing the economy, and protecting and enriching the natural environment.

The TVA Act requires that "* * * all members of the board shall be persons who profess a belief in the feasibility and wisdom of this act." I personally attended the hearing on Mr. Freeman's nomination and questioned him about his dedication to the vision of TVA and the specific provisions of the act. I was particularly concerned about his full commitment to the continued economic growth and development of the entire valley. The nominee answered me fully, and affirmed that commitment. He said, in part:

I believe TVA's prime responsibility is to advance the economic and social well-being of the people. TVA's programs should be designed to spur economic growth.

And, in response to my quoting certain provisions of the act, Mr. Freeman responded:

I pledge myself to the vigorous execution of the above quoted provisions, especially those dealing with overall development of the Valley, without any reservation.

Based upon my careful scrutiny of Mr. Freeman's credentials and qualifications for this important post, and based upon his testimony and upon private conversations I have had with him, I support his confirmation. I believe that he is qualified to be a TVA director and is committed fully to the vision and programs of the Tennessee Valley Authority.

Mr. BAKER. Mr. President, I support the nomination of S. David Freeman to the Board of Directors of the Tennessee Valley Authority. His nomination received careful and thorough attention in 3 days of hearings in the Environment and Public Works Committee. Based upon his responses and the quality of knowledge of energy affairs he demonstrated, the committee has sent his nomination to the Senate unanimously.

Frankly, it was with some misgivings that I initially received this nomination. Mr. Freeman has worked as a part of the administration energy planning group which recommended the termination of the Clinch River Breeder reactor, an action which I believe would be extremely detrimental to the energy future of this Nation and the world. But in the course of the committee's hearings I questioned the nominee extensively on this issue. His responses were assurances that he felt the breeder was a vital technology and that while he personally held reservations regarding the present formulation of this program, he would not as a director of the TVA seek in any way to thwart the will of Congress if we approve continued funding for this program.

While I would prefer more enthusiastic support for the breeder program which both Mr. Freeman and I feel is essential to the full development of the nuclear energy option, I will accept his assurance that he will not use this office to impede the completion of the program.

Many questions on a wide variety of issues from Senators on and off the committee were asked of the nominee during the 3 days of hearings. His views on economic growth, the nuclear energy option, the future of coal, coal purchasing policies, and many other matters were carefully elicited. His responses have, I believe, indicated a proper attitude toward the need for balanced growth and careful objective analysis of all energy options. His responses have also indicated a broad knowledge of energy issues derived from his long involvement in national energy policy.

I believe that Dave Freeman will bring a new and fresh perspective to TVA in both energy and environmental matters.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

RAILROAD RETIREMENT BOARD

The legislative clerk read the nomination of Earl Oliver, of Illinois, to be a member of the Railroad Retirement Board.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

ACTION AGENCY

The legislative clerk read the nomination of John Robert Lewis, of Georgia, to be an Associate Director of the ACTION Agency.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that it be in order to move to reconsider en bloc the votes by which the nominations were confirmed.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. I so move.

Mr. STAFFORD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of the nominations.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate return to legislative session.

There being no objection, the Senate resumed the consideration of legislative business.

(This concludes proceedings which occurred later in the day.)

CLEAN WATER ACT OF 1977

The ACTING PRESIDENT pro tempore. Under the previous order, the Senate will now proceed to the consideration of S. 1952, which the clerk will state.

The assistant legislative clerk read as follows:

A bill (S. 1952) to amend the Federal Water Pollution Control Act Amendments of 1972.

The Senate proceeded to the consideration of the bill.

The ACTING PRESIDENT pro tempore. Time for debate on this bill is limited to 3 hours, to be equally divided and controlled by the Senator from Maine (Mr. MUSKIE) and the Senator from Vermont (Mr. STAFFORD), with 1 hour on any amendment in the first degree, except an amendment by the Senator from Texas (Mr. BENTSEN), on which there shall be 2 hours, and with 30 minutes on any amendment in the second degree, debatable motion, appeal, or point of order.

Does the Senator from Maine yield time?

Mr. MUSKIE. Mr. President, I yield myself such time as I may need.

The ACTING PRESIDENT pro tempore. The Senator from Maine is recognized.

Mr. MUSKIE. Mr. President, 5 years ago, Congress completed a comprehensive revision of national water quality policy. The 1972 Amendments to the Federal Water Pollution Control Act were initiated by Congress and enacted over the President's veto. Their implementation has been uneven, often contrary to congressional intent, and, frequently more the result of judicial order than administrative initiative.

The Committee on Environment and Public Works has now completed a comprehensive review of those 1972 amendments. That review involved 15 days of hearings at which 159 scheduled witnesses and over 75 unscheduled witnesses appeared.

The committee was unanimous in its final vote to report this bill, and I believe that every member of the committee supports the overall thrust of this measure which reaffirms the basic regulatory structure of the 1972 act.

My colleagues in the Senate will recall that earlier this year, in April, House and Senate conferees were unable to reach agreement on continued funding for the water pollution program as part of the Public Works Employment Act. The Senate bill dealt with water pollution funding only, while the House bill contained far more extensive amendments to the act. Finally, the conferees were forced to drop all water pollution provisions so that the jobs bill could go farward.

At that time, we assured both the House conferees and the Members of the Senate that the committee would conduct a comprehensive review of the Clean Water Act and report back to the Senate before the August recess. We are here today with a bill that fulfills that promise.

As chairman of the Subcommittee on Environmental Pollution, and floor manager of this complex and important legislation, I am grateful for the time and effort that went into its production. Our committee deliberations were marked by a high level of debate, deep involvement of individual members, and a spirit of constructive compromise.

I am especially grateful to the members of the subcommittee who chaired

hearings in Washington and throughout the country. Senator ANDERSON travelled to Duluth and Alexandria, Minn., and Seattle, Wash.; Senators HART and WALLOP went to Ft. Collins, Colo.; Senator CULVER went to Le Mars, Iowa and was joined by Senator CHAFEE in New Orleans, La.; Senator STAFFORD conducted a hearing in Burlington, Vt. Each of them, by assisting in these hearings, made a comprehensive review of the Nation's water pollution control program possible.

The Subcommittee on Environmental Pollution was fortunate to have as new members, Senator ANDERSON and Senator CHAFEE—no members participated more in our hearings or contributed more to our markups.

I also express the appreciation of all of the members of the Committee on Environment and Public Works and to the staff. Without their help, we could not have accomplished so much.

Congress knew when it wrote the act in 1972, that its far-reaching scope and long-term goals would require periodic review. In anticipation of that need, the Congress authorized the appointment of a National Commission on Water Quality to study the implications of achieving or not achieving the 1983 requirements imposed by that act. The Commission study, which cost $17 million, provides valuable insight into the environmental and economic implications of the regulatory requirements which will be applicable at the beginning of the next decade.

Little contained in the study of the Commission could be construed as justifying major change in the direction established in 1972.

The Commission found the costs of achieving the 1983 regulatory requirements to be small and the benefits as substantial:

Additional price increases due to best available technology are smaller than due to best practicable treatment. Cumulative effects are predicted to average only 1.1 percent in 1985.

Generally the number of plant closures directly attributable to the regulatory requirements will be small. In many cases, they will be old, small, single-plant firms that could not remain economically viable over the next decade regardless of water pollution requirements.

Benefits expressed only in economic terms will reach a level of at least $33.3 billion and as much as $88.1 billion by 1985.

The Commission identified significant gains for the environment from the investment in achieving the 1983 regulatory requirements. And, the Commission pointed out that failure to proceed on the course directed in 1972 could eliminate many of the important water quality gains which will result from achievement of the 1977 requirements.

The hearings the committee conducted this year throughout the country and in Washington confirmed much of what the Commission study reported.

Russell Train, former Administrator of the Environmental Protection Agency, appeared before the committee and stated:

It has been approximately five years since the 1972 Clean Water legislation was enacted and a year since the submission of the report of the National Commission on Water Quality. Thus, the time is appropriate for undertaking a mid-term review of the FWPCA to determine what, if any, legislative changes are needed.

Much of the testimony that the subcommittee will be receiving will doubtless focus on economic aspects of the program. Questions will be raised about cost-effectiveness and these are important questions to address. However, I think it is critical that your review of the 1972 legislation emphasize above all the Act's stated objective to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters." To restore the ecological integrity of our waters—to clean up our streams and rivers, our ponds and lakes, our harbors and estuaries—is surely one of the most inspired goals any nation ever set for itself . . .

As a closing word, I will simply reemphasize the point I made at the outset: whatever revisions of the statute are considered—and I would hope these could be kept at a minimum—they should be considered in the context of how best they contribute to the overriding purpose of the statute, to restore and maintain the ecological health of our nation's waters. We must not be distracted from that objective.

And Thomas C. Jorling, Assistant Administrator for EPA's Office of Water and Hazardous Materials, appeared before the committee and said:

I am sure you have heard from previous witnesses, here and in other parts of the country about particular problems with the Act's implementation. It is a complex piece of legislation and there have been probiems, but I want to strongly assert that despite the problems, the Act is working. It is gratifying to report that the great majority of industry will be in compliance with the 1977 requirements. Out of 4000 major industrial dischargers, an estimated 3,400 have complied with the deadline, and most of the remaining 600 are moving toward compliance. I think this stands as conclusive evidence of the basic validity and effectiveness of the Act's strategy for the application of uniform standards to point source discharges. Also, it is tribute to the ingenuity, dedication and good faith demonstrated by most of America's industry toward achieving water pollution control . . .

Let me preface my comments in this regard by saying that EPA feels the Act is basically sound as a mechanism for advancing the nation's water pollution control program. The proposals being offered by the Agency are aimed at fine tuning the Act's provisions.

This bill focuses on several major program areas: the municipal program, the industrial program, toxics control, and non-point source control. I would like to highlight each of these areas.

MUNICIPAL PROGRAM

In 1972, the Congress recognized that growth of the major urban areas in the United States and the continued degradation of the rivers, streams, and oceans demanded adequate treatment of municipal pollution. The Congress authorized, through contract authority, $18 billion which, when matched, would provide $24 billion to help meet the pressing need of cleaning up the pollution from existing public sources.

The purpose was to provide funding to achieve the objectives of an earlier statute and an earlier program.

In order to achieve this objective, a regulatory program was established codifying EPA's requirement for secondary treatment of municipal wastes. A deadline of 1977 was established for achieving secondary treatment. Cleaning up the pressing backlog was given the highest priority.

But another priority was evident. Congress recognized that most sewage is fresh water and that many valuable nutrients are lost when fresh water contaminated with human sewage is discharged into the oceans and rivers. The same nutrients that cause lakes to eutrophy could be recycled and reclaimed. Thus, the law required programs which emphasized reclaiming and recycling sewage, conserving water, reusing valuable nutrients, and reducing flows.

Unfortunately, these three primary directions—providing adequate funding, addressing the backlog of unmet needs, and moving toward reclaiming and recycling wastewater—have been inadequately addressed and often ignored.

Half of the $18 billion of Federal dollars was impounded early in the program. Collector sewers, interceptor sewers, and treatment plants were approved even though their primary purpose was to meet new growth needs. Secondary treatment was defined without recognition of reclaiming and recycling alternatives.

The result is a municipal program which lacks uniformity and is in serious disarray. Many of the nation's large cities such as Philadelphia, New York, and San Francisco, still discharge raw or inadequately treated sewage into rivers, lakes, bays, and oceans. At the same time, oversized interceptors and new collectors are constructed in suburban areas in anticipation of development, and treatment plants are sized to accommodate that growth.

Small communities are overwhelmed by complex requirements, the result of which is construction of conventional systems which they do not understand how to operate and cannot afford to run. Alternatives exist but are not encouraged by the institutions and personnel involved. Thus, the committee found only one operating major land irrigation-sewage treatment system in the U.S. It approaches self-sufficiency through the sale of a corn crop. This system achieves a level of treatment which exceeds drinking water quality.

With this background accumulated in hearings in small and large cities throughout the country, the committee addressed the municipal treatment program. The committee's objectives were to replenish funding; provide reasonable relief from specific regulatory requirements; reorient the direction of the program toward use of alternative technologies as required in the 1972 act; reestablish that the primary focus of the program is the backlog of needed facilities; reduce the costs to small communities; and reaffirm the requirement that the program be operated and maintained on the utilitylike basis.

FUNDING AND FEDERAL SHARE

One of the most pressing issues identified for the committee is the need for continued funding of the municipal construction grant program. Without additional funding for fiscal year 1977 and subsequent years—

At least nine States will not have sufficient funds to cover their need between now and September 30;

An estimated 20 States will run out of available funds by the end of October and 12 more would run out by January if they continued funding at normal rates;

State project planning for fiscal year 1978 through the priority list process will probably be deferred in many States until new funding is in hand, resulting in disruption to planned project scheduling;

States and localities will act to slow down project completions based on lowered estimates of funding;

States will be unable to develop funding strategies that ensure a good mix of planning, design, and construction projects for effective use of funds.

The National Water Quality Commission, the Administration, and most of the testimony before the Committee supported a long-term commitment of Federal dollars to the construction of publicly owned treatment facilities needed to eliminate the backlog of needed waste treatment works in the Nation's communities. It is anticipated that the cost of eliminating that backlog is greater than $60 billion, of which at least $45 billion in Federal funds will be required under current grant policy.

The committee considered a 10-year, $4.5 billion annual authorization to provide for these needs, but decided that the responsibility of the Congress in exercising budgetary control taken together with the need to reexamine, on a periodic basis, the Nation's priorities, suggested only a five-year authorization at that level. By its action, the committee does not suggest that the 10-year program will not be forthcoming. The Senate Committee on Environment and Public Works will continue active oversight responsibility for this program to determine whether or not the public investments are sound, and whether or not the kinds of projects assisted by the act are, indeed, part of the country's waste treatment backlog or are intended for other purposes.

This bill also provides an additional year for the obligation of funds released under a Supreme Court order—so-called fiscal year 1976 funds. This extension of the reallotment date for these funds was approved for several reasons.

The release of the impounded fiscal year 1976 funds, the fiscal year 1976 allotment, was $9.0 billion. more than twice the level of any previous allotment;

At least five States and the District of Columbia are projected to lose funds to reallotment if the date is not extended—Connecticut, Maryland, Delaware, Washington, D.C., South Carolina, and Michigan;

In order to use available funds, a number of other States would be forced to bypass the highest priority projects to reach those lower priority, but eligible, facilities that are ready to proceed before September 30;

EPA policy is to use the scarce funds now available for treatment related projects only, except for health emergencies, and the current reallotment date prevents effective implementation of that policy.

The committee is concerned about the possibility that the current reallotment date, along with the general tendency to speed the flow of money, has had the effect of inducing the construction of poor projects, especially projects constructed with the inadequate consideration of alternatives to conventional treatment. The committee expects the Administrator to manage the program to avoid this result.

By its actions, the committee underscored the intention of the 1972 act; the purpose of these funds is not to finance the future growth needs of the United States. Rather, the purpose is to eliminate the backlog with limited provisions for growth set forth specifically in the statute to recognize the cost-effectiveness factors and to achieve a balance between the pressures for economic development and the need for environmental improvement.

In order to stress this point, the committee considered eliminating entirely the eligibility for Federal financial assistance of lateral collector sewers. The committee decided that many small communities with serious ground and surface water quality problems caused by inadequate or overcrowded septic systems needed some form of financial assistance. At the same time, the committee intends that funds for these systems not be available for any future capacity. And the committee expects the States and the Administrator to fund alternative waste treatment systems which do not rely on collection and central treatment.

The availability of a 75-percent Federal grant has encouraged the construction of collectors. A town in Wisconsin installed an entirely new collection and treatment system to replace existing septic tanks and ended up spending $500 per household per year for debt service and operation and maintenance. A similar situation in Maine has produced costs of $220 per household per year for debt service and operation and maintenance.

The committee was disturbed by the fact that there seemed to be little relationship between the enforceable requirements of the act and the distribution of public funds for this program.

In a county neighboring Washington, D.C., the Environmental Protection Agency, the State, and county had proposed to construct a $400 million advanced waste treatment facility whose capacity was at least four times that needed by the existing population. Meanwhile, 43 other cities in that same State which would have gone without funds to construct needed secondary treatment facilities are potentially subject to abatement action for failure to comply with minimum treatment standards.

Again, to underscore that the purpose of the program is to reduce the backlog of future growth, the law specifically requires that State priority lists reflect the enforceable requirements of the act—the deadlines for municipalities and for those industries which will discharge through those municipalities.

The Administrator may not approve a grant award for a facility designed to meet new growth. He may only approve a grant for that portion of any facility which meets the specific criteria of this act.

The Administrator may not approve a grant for a project primarily designed to deliver more waste to a receiving water. No collection system for an existing community can be approved unless there will be available when that collection system is completed, a completed secondary or high level treatment facility to treat the waste prior to its discharge into a receiving water.

This bill also restricts the Federal share of a treatment works to a 10-year reserve capacity and a 20-year reserve capacity for interceptor sewers. This restriction will reduce Federal contribution by about $2.5 billion and will also limit unnecessary oversizing of plants.

The committee recognizes that the total package of amendments in this measure which deal with the municipal construction grant program may have the effect of slowing down the pace of grant awards. However, because these changes encourage the examination of cost-effective alternatives, efficient design for industrial contribution, and other factors to assure the proper use of Federal dollars, the committee feels that a slower pace is justified. This program is an environmental protection/water pollution control program, not a public works/jobs program, and steps must be taken to assure that the grants program is regarded as such.

ALTERNATIVE AND INNOVATIVE TECHNOLOGIES

The committee bill emphasizes the need to use alternative technologies that have been developed in place of conventional secondary treatment plants and encourages the development of new and innovative systems. To accomplish this, the bill requires republication of cost-effective guidelines to reflect the long-term benefits of reclaiming and recycling; creates a special setaside for rural and lightly populated areas to be used for alternative technologies; and authorizes 100-percent grants for the development of innovative technologies. The bill also includes a provision for extension of deadlines for industries which use innovative technologies to meet the 1983 requirements.

The committee intends that all of those involved in implementing the program—the Environmental Protection Agency, States, communities, and consulting engineers—redirect the program away from the conventional collection and secondary treatment approach and toward the use of alternative technologies, especially those which rely on natural systems, such as land or lagoons or marshes, in order to make use of the nutrients in the waste waters.

More than any other issue concerning the construction grant program, the committee hearings focused on the need to encourage alternative and innovative systems. The problems of small communities coping with expensive capital-intensive waste treatment systems and the wastefulness of discharging valuable nutrient resources to the Nation's waters were stressed throughout the country. The need for new industrial processes which produce no waste was emphasized.

The committee bill, in every possible way, attempts to reinforce the specific statement of the 1972 act with respect to innovation, use of alternatives, and

the adoption of policies which would lead to the confined and contained disposal of waste, utilization of the values of waste, and the elimination of the discharge of pollutants to the Nation's waters.

The committee bill recognizes that sludge, which is a burden to many communities, can be usefully applied as a soil conditioner, as a nutrient, and as a fertilizer. But the bill also recognizes that often sludge is so contaminated by the chemicals and metals which find their way into municipal waste treatment systems that it is useless. The committee adopted amendments to stop the waste of this important resource. The committee expects the Administrator to heed that emphasis of this legislation.

There is no defense for the practice of dumping all of the waste that this country generates into rivers, lakes, and streams. The 1972 act stipulated that the Nation's fresh and marine waters would not be an element of the waste treatment process. That continues to be national policy. For communities and industries, the discharge of waste directly into the Nation's waters and oceans is permitted only where there will be no interference with attainment and maintenance of that water quality which assures protection of water supplies and the protection and propagation of a balanced, indigenous population of fish, shellfish, and wildlife, and allows recreational activities, in and on the water: that is only where ecological balance can be assured. Thus, alternative technologies for dealing with waste, particularly land treatment options which will take advantage of the valuable nutrients in the waste stream, and other waste recycling options should become the highest priority for funding under this act wherever these are feasible or available.

OPERATION AND MAINTENANCE EXPENSES

The committee discussed the issue of assuring proper operation and maintenance of municipal treatment systems with particular reference to the user charge question. The bill reaffirms the requirement of the 1972 act that operation and maintenance expenses be distributed in proportion to costs of operation and maintenance. The committee bill continues the policy that there be established a clearly identified revenue base for the operation and maintenance of municipal treatment facilities.

The committee considered testimony regarding the difficulties for some existing residential areas which do not have user charge systems to determine the exact usage of each recipient of the waste treatment service. To clarify any doubts, the committee bill includes an amendment which provides that meters are not required for existing users and that a flat rate or an ad valorem tax could be imposed as the flat rate or tax is proportional to use.

If the system of charges is based on something other than metering, the Administrator must require the applicant to establish a system whereby the necessary funds will be available for operation and maintenance of the treatment works. He also must require the applicant to establish a procedure to notify the residential user as to how much of his total payment will be allocated to the operation and maintenance of treatment works.

This amendment recognizes the privilege of local governments to carry out their responsibilities under the act in a manner which is particularly appropriate to their citizens. The amendment allows such flexibility, while insuring that the goals of proportionality will be carried out.

A system of charges based on a flat fee per household or per plumbing fixture would be authorized under this amendment. A user charge system based on a flat fee for residential users would save communities the high cost of installation, maintenance and reading of meters.

Charges levied on residential users in the manner allowed by this amendment may be collected as part of the ad valorem taxes or by some other means. Funds so collected must be sufficient for the dedicated purpose of proper operation and maintenance of the treatment works. The amendment does not authorize a system which would allow these funds to be diverted to other uses within the municipality or withheld from the treatment works.

The proposed amendment requires the Administrator of EPA to impose restrictions on the applicant who establishes a charge system based on something other than metering. The intent of these restrictions is to address the reservations raised above. First, the amendment requires the applicant to establish a system which will ensure the funds necessary for the operation and maintenance of the treatment works. Such system could include a separate fund such as an escrow account. Second, the applicant is required under the proposed amendment to notify the individual user as to the costs paid by the individual for the operation and maintenance of the treatment works.

The committee believes that public knowledge of the cost of operation and maintenance of the treatment works to individual residential users will promote efficient management of the system and foster a public interest in water conservation and other measures to reduce flows and thereby reduce treatment costs.

This provision is a modification of the user charge provision of existing law, which requires that no construction grant for a municipal waste treatment facility may be made after March 1, 1973, unless the applicant has established a system of charges to insure that each user of the facility pays its proportionate share of operation and maintenance costs, including replacement, of services provided by that facility.

As early as 1966, the problems associated with the operation and maintenance of federally financed waste treatment facilities were recognized. The major problem was the inability of municipalities to sustain the costs of operation and maintenance of facilities constructed with Federal grant money.

The committee reviewed the industrial cost recovery question and adopted changes which, while reaffirming the basic intent of the act, provide that industrial users should repay that portion of capital cost of the system attributable to their use. The purpose of industrial cost recovery is to avoid inequity through subsidy which creates a competitive advantage for an industrial point discharging through municipal plants over those sources which must construct separate treatment works and pay the entire cost.

The limited changes would provide relief for industries which have conserved subsequent to joining a municipal system, allow industrial cost recovery payments to be used for program implementation and exempt certain small industries whose discharges are nontoxic.

DEADLINE EXTENSIONS AND MODIFICATIONS

The committee approved a case-by-case extension for municipalities which were unable to meet the July 1, 1977, requirements, in part as a result of recognition of the impact of impounded funds. These extensions are available only to municipalities which would require substantial construction and for which Federal funds were not available, if they agreed to establish and maintain an interim compliance schedule.

Of 12,500 treatment plants now in operation, 4,150 or one-third will meet the 1977 requirements of Public Law 92–500. These plants serve about 52 million persons. Plants that will not meet the deadline serve about 92 million persons. EPA has provided the following estimates as to ultimate municipal compliance:

Most facilities were operated out of municipal budgets and were thereby subject to municipal fiscal constraints. These constraints included legal limitations on the amount of general obligation debt, limitations on municipal tax sources and the taxing power of special districts, rapid increase of the demand for other public services, and reliance on additional burdens on property taxpayers to improve operation and maintenance.

The concept of "user charges" was originally proposed as a means of assuring that each Federally assisted facility would have adequate operation and maintenance funds. In this way, municipalities could employ their limited taxing powers in providing other forms of public services, and waste treatment facilities could be operated and maintained efficiently, thereby assuring adequate waste treatment services and the sound investment of Federal dollars.

Further examination of the user charge concept revealed additional benefits. A charge to the "consumer" based on cost of treatment, would be a positive force in encouraging more efficient management of wastes discharged through a municipal system as well as an economic inducement to reduce excessive use.

Under the committee amendments, greater flexibility will be provided for the assessment of user charges among residential users. The community may use water meters, flat rates, or ad valorem taxes, so long as the basic requirement of proportionality in the distribution of costs among each recipient of waste treatment services is assured. In adopting this amendment, the committee did not change the basic requirements

of the law, the committee only provided more options to communities.

EPA estimates the cumulative number of facilities currently in operation that would achieve secondary or more stringent treatment levels:

Fiscal years:	Meet level	Not meet level
1977	4,150	8,370
1980	5,260	7,260
1985	8,250	4,270
1990	11,200	
1993	12,500	

Although there is no precise estimate of the number of present industrial hookups to municipal waste water systems, roughly 50,000 industries, most of which are relatively small, is an EPA approximation. Based on a survey this year of major industrial discharges in the paper industry, the total number of major industries—flow greater than 50,000 gallons per day—in all categories desiring hookups to municipal systems would be in the order of 70 to 100. There is no estimate of potential hookups for the small industries, but EPA believes that several thousand such industries may find hookups to be advantageous.

The purpose of this amendment is to allow the permitting agency to extend the date of compliance for those treatment works, and industries with contracts to tie in to treatment works, which have made all possible good faith efforts to meet the July 1, 1977, deadline and whose failure to do so is primarily the fault of the Federal Government. For those industrial and municipal sources which are unable to meet this statutory deadline due to their unwillingness to take appropriate actions and spend necessary amounts of money at the earliest possible time, the committee intends that no extension be granted and that enforcement actions be undertaken under section 309.

Some communities located along the Nation's oceans have argued that there is no need to require secondary treatment for municipalities which discharge into ocean waters. The committee determined, after much analysis, that there should be a mechanism by which communities making this argument can test their case in the administrative process. No such contention was made for fresh water discharges. There seems to be general acceptance of the need to achieve a high degree of municipal waste treatment for discharges into the Nation's rivers, lakes, and streams. But with respect to marine discharges, the committee has provided a limited exception. The Administrator can, on a case-by-case basis, exempt a publicly owned waste treatment plant from the requirements of secondary treatment for marine discharges where a specific showing is made.

Where applicable water quality standards exist specific to a pollutant in a discharge, the municipal source can apply for a waiver from the secondary requirement for that pollutant if a showing is made that the applicable water quality standard will be maintained; there will not be interference with the national water quality standard for that pollutant, if indirect sources which discharge into that system meet all applicable pretreatment requirements; if no other point or nonpoint source will be required to meet additional requirements because of a modification of the secondary treatment requirement; and if the volume of discharge of the pollutant will not increase beyond that specified in the modified permit for the period during which the waiver is granted.

Throughout its deliberative process, the committee sought to keep a basic objective: That the funds for the program must be replenished and must be provided over a sufficient period of time to allow communities to know what they can expect in order to meet what is expected of them; that the primary thrust of the program must be directed toward the backlog of untreated wastes; that the program must be redirected from its current emphasis on capital-intensive conventional treatment systems toward those alternative systems which reclaim and recycle wastewater; that operation and maintenance must be on a utility basis; and that the States, the municipalities and the Federal Government must continue to operate this program in a shared relationship, with shared responsibilities.

INDUSTRIAL

With respect to the industrial program, the committee recognizes and applauds the significant success that most of the Nation's major industries have attained. And, for those who have begun, have made the investment in waste treatment facilities, have complied with the 1977 requirements, there will be significant economic as well as environmental benefits. There will be environmental benefit to receiving waters, economic benefit to those companies which bought pollution control when pollution control was considerably less expensive than it will be as result of inflationary patterns, and competitive improvement as a result of the delayed compliance fee required by this act.

Ninety percent of the Nation's industries will meet the 1977 requirements of the 1972 act. A good portion of those who will not, will fail for what appear to be legitimate reasons. And about half of those who fail, according to Environmental Protection Agency, will not have complied because of lack of diligence, lack of good faith, or lack of interest in the success of this program.

The committee believes that a case has been made in our hearings on this bill that some relief from penalties must be granted for those sources which have made a good faith attempt to comply with the deadlines in the statute but for justifiable reasons have been unable to do so. The committee considered but rejected the alternative of providing a case-by-case extension of the deadline set out in the statute. That alternative was rejected because the committee felt that such a case-by-case extension would not only burden the administrative process but that it would provide further opportunity for delay for those sources which are otherwise unable to make a legitimate case for additional time. Consequently, decisions by the Administrator pursuant to this new provision of law should not be the subject of administrative hearings and appeals but rather, if the Administrator feels he cannot determine that a source meets the requirements of section 309(a)(5)(B), that he will immediately proceed under any of the other enforcement options set out in section 309. This authorization of limited flexibility granted to the Administrator will maintain the pressure for compliance while at the same time enabling the Administrator to use his discretion to grant any justifiable extension.

With regard to the 1983 requirements for industries, the bill authorizes a case-by-case exemption for industries which demonstrate, to the satisfaction of the Administrator, that pollutants in their discharge are not toxic or harmful to the aquatic environment; that the pollutants discharged will not interfere with the attainment of the national water quality standard—defined as protection of public drinking water supplies, protection and propagation of a balanced population of fish, shellfish, and wildlife and allows recreational activities, in and on the water; that there are applicable water quality standards for each exempted pollutant; that the new limitation will not be less than required by best practicable treatment; and that the exemption would not be available for pollutants designated as toxic or hazardous pursuant to the act or the Safe Drinking Water Act.

This approach allows the discharger to demonstrate no adverse effect of pollutants in his discharge and have his requirement reduced.

1977 DEADLINES

Only a small percentage of sources within a few major industrial categories will be out of compliance with the 1977 requirements and subject to enforcement actions. Of 4,000 major industrial dischargers, only 633 or 15 percent will fail to meet the deadlines. Of these, only 300 are candidates for enforcement. Of the remainder, more than 100+ are powerplants awaiting 316(a) exemption decisions; 100 are in adjudicatory hearings contesting legitimate issues; and 100 are tied into municipal systems. Some of the 300 will end up in court if the enforcement order is contested. There are 94 district courts in the country; there is no danger of the courts being overloaded by enforcement actions, and EPA is trying to negotiate enforcement orders without going to court.

For those industrial dischargers not in compliance, the bill provides the Administrator with yet another tool by, in effect, sanctioning what has been a policy of dubious legality with respect to delays in compliance. Two new enforcement tools are provided. First, these amendments provide the Administrator with authority to issue enforcement orders which specify a reasonable time for compliance with a final deadline. Current law limits the Administrator to issuing orders of 30 days duration.

Second, these amendments allow the Administrator, at this initiative, to grant a simple extension of 18 months to a source whose facilities are under construction but could not have been completed by July 1, 1977. This is simply a codification of the enforcement compli-

ance schedule letter process which the Administrator has used for sources which, in good faith, have tried to comply with the law.

The Environmental Protection Agency has developed an enforcement strategy under current authority to initiate enforcement actions only against recalcitrant major dischargers. Dischargers who are going to miss the July 1, 1977, deadline through no fault of their own will not be subject to enforcement actions; instead, they will receive enforcement compliance schedule letters, stating a specific date by which they must comply with a final deadline and an interim compliance schedule. The committee bill, essentially, codifies this policy.

A case-by-case extension through section 301 for industrial dischargers would be a variance. It would place a significant administrative burden on the resources of the Agency. EPA would have to determine bad faith before rejecting a variance, which determination would be subject to administrative procedures and judicial review. Because the action focuses on a particular "person" and is the modification of an effluent limitation, it requires a formal adjudicatory hearing. The determination is subject to judicial review.

This process is resource-intensive and time consuming. According to EPA estimates, adjudicatory hearings involving major dischargers require, on the average, 86 days to review the request for a hearing, 157 days to publish public notice and allow time for intervenors, and 473 days until an adjudicatory hearing can be held.

Two examples of steel industry use of these procedures are instructive. A permit was issued to United States Steel in Gary, Ind., in October 1974. The final settlement was reached in April 1976. This was one that EPA pursued vigorously and moved quickly. The final resolution by the circuit court of appeals was wholly in the Agency's favor. The second case also involved United States Steel in its Monongahela works. There was no contest on the prescribed technology, just the actual limitations to be achieved. Yet this case, also resolved wholly in favor of the Agency, took 2 years and consumed 5 percent of enforcement resources during that time—25 man-years. During that period, two other steel plants in the same area installed the technology.

A good faith variance would create a new layer of review. If the industry did not like the variance decision, it would adjudicate it. During the period of adjudication, it would seek a stay from the requirement. EPA would have to prove "bad faith" through every step of a cumbersome process.

Although there occasionally are cases in which the discharger's inability to comply is clearly due to factors beyond its control, the majority of cases require extremely subjective judgments. In such cases, an Agency denial would almost certainly be followed by an appeal to the court of appeals, thus delaying Agency enforcement efforts. There is adequate opportunity for judicial review in Federal district courts in an enforcement action. The committee bill maintains this opportunity.

The legitimate concerns of those industrial dischargers who cannot comply with their pollution abatement requirements by July 1, 1977, through no fault of their own, is adequately handled by the committee bill. Such dischargers are further protected against any unjustified enforcement action by their ability to present their good faith as a mitigating factor to the district court which controls any enforcement action which may be brought.

The industry with the greatest rate of noncompliance with the 1977 requirements is iron and steel: 46 percent. It is also one of the industries with a major discharge of toxic and nondegradable pollutants. Normal constituents include phenols, cyanide, fluoride, chromium, nickel, and lead. Although the 1977 requirements are not geared directly to toxics, they will achieve a substantial reduction of all materials within the iron and steel industry dischargers. Continued litigation and delay would mean that these discharges would continue unabated until final judicial resolution first of the variance, and then, if necessary, of the ensuing enforcement order.

TOXICS/1983 REQUIREMENTS

While the committee found little disagreement over the need to regulate toxic discharges to the Nation's waters, some controversy exists over the best mechanism with which to regulate toxics.

The committee decided that the 1983 requirements based on best available technology in Public Law 92–500, supplemented by earlier limitations under section 307(a), provide the most effective mechanism in the act for dealing with toxic pollutant discharges. Not only is BAT a technology-based requirement as recommended by the National Commission on Water Quality, but it also calls for heavy reliance on advanced technology and in-process controls which are appropriate for dealing with the majority of toxic discharges. More importantly, the nature of the toxics problem is so pervasive that the most effective approach in dealing with it is on an industry-by-industry basis.

Studies over the past year have identified large numbers of pollutants that have known or strongly suspected toxic effects, many of which are carcinogens. Past experience has shown that the only practical way of dealing with such a problem is to examine each industry category or subcategory. In this manner, control options can be developed that deal most effectively with the entire waste stream of an industry. This is the approach called for by best available technology.

Another, and possibly more important, reason for maintaining the 1983 requirements is that the Agency currently has a major program underway of using BAT to control toxics. Technology-based effluent limitations are being developed which will place limits on toxic pollutants which pose or are likely to pose human health and ecological hazards.

To take a different course for dealing with toxics at this point would require a major reprograming of EPA resources. Such a delay, whether it be to allow utilization of a different section of the act or in order to implement a completely new section, would only cause confusion and add still more delay to efforts to solve the toxics problem. The discharge of toxic pollutants in toxic concentrations should be eliminated as soon as possible. Because EPA is already embarked upon a program to control toxics using a proven mechanism, technology-based effluent limitations, and because of the urgency to control toxics, prudent public policy demands that that strategy be maintained.

The seriousness of the toxics problem is just beginning to be understood. New cases are reported each day of unacceptable concentrations of materials in the aquatic environment, in fish and shellfish, and even in mother's milk. Emperical evidence has shown a statistical correlation between materials in New Orleans' drinking water and cancer mortality rates; Kepone has destroyed the James River, one of America's most productive, and most historic rivers. PCB's are pervasive and have ruined the fishing in the Hudson River and the Great Lakes; carbon tetrachloride is only the most recent material to contaminate the Ohio River; the pesticide endrin has been found in the Mississippi; perhaps worst of all, are the ones we do not know of yet.

The more we find out, the more cause there is for concern. PCB's, the most studied and the most prevalent, are good examples. The cancer risk from breast feeding has been placed at approximately 10 times than that from consumption of saccharin, due to the levels of PCB, DDE, dieldrin, and others, according to the environmental defense fund. Salmon in the Great Lakes have been found with 10.45 ppm and lake trout with 22.91 ppm of PCB's—twice and four times the Food and Drug Administration's tolerance levels. Since these are sports fish, they are not screened by the FDA and are routinely eaten. The herring gull is failing to reproduce in the Great Lakes region because of PCB's and Mirex, a chemical cousin. And another study found that between 41 percent and 45 percent of the U.S. population has at least 1 part per million of PCB's concentrated in human tissue.

It is imperative that these materials be controlled. The 1977 requirements have made a beginning, but much more is required. Early data indicates substantial toxics remaining after BPT. In iron and steel, there are benzene, napthalene, and phenolics. Leather tanners are discharging 60,000 pounds/year of chrome and 130,000 pounds/year of phenols; in petroleum refining, those numbers rise to 400,000 pounds/year, and 180,000 pounds/year, respectively. Timber processing discharges cadmium, benzene, toluene, and PCP.

The National Commission on Water Quality did only limited work on toxics in its environmental study but its findings also were disturbing.

Based on their review of 41 study sites, the Commission reported that two major categories of recognized toxics, heavy metals—including mercury and cadmium—and pesticides, were the most

commonly observed. Concentrations of one or more of the heavy metals commonly exceeded suggested safe limits in the water column or in fish tissue at 17 sites—41 percent. At an additional 12 sites, heavy metal concentrations sometimes exceeded safe limits or were evident in high concentrations in bottom sediments. Six sites—15 percent—were found to have no problems with heavy metals, while detailed data were not presented for six sites. The most commonly cited heavy metals were mercury, zinc, lead, manganese, and iron. Major sources of heavy metals cited included industrial point sources, urban runoff and mine drainage.

Pesticide concentrations commonly exceeded suggested safe limits or were linked with fish kills at nine sites—22 percent—in recent years. Presence of pesticides at an additional five sites were noted as being sometimes above safe levels. Low concentrations of pesticides appeared at 7 sites—17 percent—and detailed data were not available for the remaining 20 sites—49 percent. The most commonly cited pesticides were DDT, dieldrin, and Heptachlor. Runoff from agricultural land was cited as the major pesticide source at eight of the problem sites. Forested and urban land runoff was noted as a contributing source at a number of sites.

Other toxic substances were detected at a number of sites. Polychlorinated biphenyls—PCB's—were noted as exceeding safe concentrations in fish tissue and sediments at five sites, all associated with industrialized areas. Phenols linked with industrial discharges were cited as possible toxics at seven sites.

The committee reaffirmed the commitment made in 1972 to achieve a second phase of technology-based controls on industrial point sources aimed at toxic and other exotic materials which remain after achievement of the 1977 requirements. Considerable testimony was taken on the 1983 requirements based upon best available technology, more than on any other subject. The issue was pursued by all committee members with great interest.

These requirements were a primary focus of the National Commission on Water Quality, and were the subject of panels in hearings in Duluth, Seattle, New Orleans, and Washington, D.C. The committee was impressed by the testimony of Dr. Robert Harris of the environmental defense fund, and Dr. Edwin Gee of the duPont Co., who appeared together on a panel in Washington, D.C. on June 23. They each spoke persuasively of the urgent need to limit or eliminate the dispersal of toxic or unknown materials into the aquatic environment.

Senator CHAFEE pursued the question of the most appropriate mechanism for controlling toxic pollutants, particularly the use of case-by-case controls on specific substances versus industrywide application of best available technology. Dr. Harris replied:

> . . . I think the current strategy of course is instead a prohibition of discharge where needed; PCB was mentioned as one example of the very persistent biochemical type of chemical which poses a substantial threat to the public which should be banned from commerce and there should be no discharge of this chemical in the water. There are other toxic substances for which we have enough information that we can justify setting threshold effects, if you will, or concentrations which would represent safe concentrations to the aquatic environment, to the humans consuming that water, and there are other toxic substances for which we don't have that amount of data which practically necessitates that they be controlled through a best available control technology together with their potential toxic effects and economic impacts.
>
> I believe that is all of these approaches being used now under the existing Act and I believe to the extent that I think there is some agreement among us on that, that is how I interpret what is needed . . . .
>
> . . . That is what we are doing, I think right now, through the BAT requirements. So I would support that. I think maybe I would disagree, and Dr. Gee can respond to this, in fact we do disagree, that it should not be done on a case-by-case basis, BAT determined on a case-by-case basis.
>
> That is really getting into the pitfalls that led us to issuing the Act in the first place. Clearly, I think there is a need for industrywide standards that can be justified for best available control technology and regulations of toxic pollutants.
>
> You get into the problem of obviously when you go another route of blackmail. If you require us in this case to clean up toxics, we will move somewhere else where the standards are not as stringent I think is something we ought to avoid.

Dr. Gee then responded to the same line of inquiry:

> I am basically in agreement with what Mr. Harris said. I ought to preface my remark and say that I do think he performs, his organization, an important social service in bringing to the attention of society the kind of thinking that he has here today of trying to point our potential hazards that we can look at and try to do something about.
>
> I doubt that enough of that has been done in the past. We perhaps differ on this last point on my emphasis on the case-by-case basis in the treatment of toxics because it is a very large, very complicated list.
>
> We are already removing many toxics. We are using biochemical decomposition; we are using salt extraction, carbon absorption, stream stripping, and if you really want to take these toxics out, first you have to decide are they there, what are they; then you take the procedure to take them out.
>
> Use the shotgun, your opportunity of getting all of them is reduced. I think it is important that wherever we have the knowledge we use it; wherever we don't, I am completely in agreement with Mr. Harris, we ought to go to best available treatment.

Control of toxics is the major, but not the only, reason the committee maintained the 1983 requirements based upon the best available technology requirements in the law. After achievement of the 1977 requirements, there is still a need to control conventional pollutants. Twenty percent to 34 percent of the Nation's waters will not be suitable for game fish populations; east of the Rockies, that percentage is 32 percent to 49 percent.

Furthermore, according to the National Commission on Water Quality, growth will at least double the discharge of conventional pollutants if only the 1977 requirements and new source performance standards are used. And industrial sources are still projected to account for about half of the BOD loadings after the 1977 requirements are achieved.

It has often been argued that after the 1977 requirements are achieved, the major problem will be non-point sources. This is generally true, but those loadings do not usually create serious water quality problems because they occur at time when flows are extremely high. For example, during Hurricane Agnes, dissolved oxygen readings for the Potomac River were over 8 mg/1, approaching saturation, even though enormous amounts of BOD was reaching the water.

The National Commission on Water Quality recommended that Congress postpone the best available technology requirement for a sufficient period of time to determine the receiving water quality impact of compliance with the best practicable technology requirements for 1977. The Commission based its recommendation on studies which seemed to suggest that the national goal of water quality which would protect balanced indigenous populations of fish, shellfish, wildlife, and other aquatic life throughout their ecological cycle would be achieved with the 1977 requirements. The Commission projections were based on the anticipated improvements in the dissolved oxygen content of water as a result of the application of best practicable technology.

The committee did not challenge the judgment of the Commission with respect to dissolved oxygen even though no national water quality criteria has yet been published. The committee recognizes that any particular level of water quality would be dictated by the particular location, the particular species and the particular activity in which that species was involved. Thus, higher levels of dissolved oxygen would be required in areas in which fish propagation is occurring or more susceptible elements of stream life on which fish depend for survival are going, than might be the case in other areas.

The committee did determine that, in fact, it was possible that the best available technology requirements might result in the application of excessive controls to certain kinds of conventional pollutants for which sufficient information was available to make a judgment as between a particular discharge and a particular receiving water quality. Where that judgment could be made, the committee felt that it was appropriate that relief should be provided. The committee was particularly concerned, however, that such a waiver not be extended to those pollutants for which significant knowledge has been accumulated.

The Administrator is expected to expedite these determinations. Whenever he determines that there is substantial likelihood that a petition for a waiver will not prevail on the merits, the committee expects the Administrator to reject the application so that the process of compliance can begin.

The committee is aware of the administrative and judicial implications of case-by-case extensions and case-by-case exemptions from a law as complex as the Clean Water Act. There was only one exception provided in the 1972 act and, in that case, there had been great abuse. More than 100 steam electric powerplants applied for modification of thermal effluent limits. None have yet

been placed on a compliance schedule to meet effluent limitations because of extensive delay as a result of this exception. And there is little question that after the administrative process there will be extensive litigation. Heat has become an unregulated pollutant, clearly not the intent of the Congress. The Congress intended that there be a very limited waiver for those major sources of thermal effluents which could establish beyond any question the lack of relationship between federally established effluent limitations and the national water quality standard. That limited exemption has been turned into a gaping loophole.

The cumbersome process which the Agency initiated resulted in part in a decision to avoid any application of 1977 regulatory requirements for steam electric powerplants. There is no basis for that decision in the law. The committee does not expect, however, that the Agency will not impose any additional 1977 requirement other than State water quality standards. The Agency also concluded that the 1972 act was preemptive with respect to the application of State water quality standards and effluent limits for heat. This is a determination for which there is no substance in law and which is wholly contrary to the committee's long-held view that the States are free to establish any more strict standards or effluent limitations, as specifically set forth in section 510 of the act.

Even without the State water quality standards/effluent limits question, the delays in section 316(a) would be unfortunate and indefensible. Similar delays under the waivers of this act would be disastrous to this program. The committee expects the Administrator to establish an expeditious process for determining the validity of applications for exceptions, and to proceed swiftly to enforce effluent limitations applicable to pollutants for which there are no water quality standards or which would clearly interfere with attainment and maintenance of that water quality which provides for the protection of public water supplies and provides for the protection and propagation of fish, shellfish, and wildlife, and provides for recreation, in and on the water. Only in this way can these waivers be useful, both to the source which needs to know as early as possible what will be required and to the environment which will benefit from an entire reduction of discharges of pollutants.

OTHER REGULATORY PROGRAMS

In 1972, the Congress made a clear and precise distinction between point sources, which would be subject to direct Federal regulation, and nonpoint sources, control of which was specifically reserved to State and local governments through the section 208 process.

The committee hearings focused on the progress of the 208 program, methods developed for nonpoint source control, and the relationship of the regulatory program under 402 and 404 to the section 208 program, with a specific view as to the way water pollution programs related to agriculture.

Between requiring regulatory authority for nonpoint sources, or continuing the section 208 experiment, the committee chose the latter course, judging that these matters were appropriately left to the level of government closest to the sources of the problem.

But that should not be interpreted as a lack of concern of the committee. The committee clearly intends 208 to produce specific nonpoint source abatement programs and will review the program as more plans are completed.

The $150 million authorization for section 208 for fiscal year 1978, 1979, and 1980 will be used to support the continuing development of water quality management plans and programs that are needed to attain the national goals for 1983. The committee recognizes that the requirements of section 208 provide the primary means for the control of nonpoint sources of pollution, and expects EPA to direct the funds authorized under this section towards assisting in the development of effective nonpoint source control programs.

In addition, the planning and development of regulatory mechanisms can be used for a large number of problem categories—urban-industrial problems such as municipal facility planning, pretreatment, sludge disposal, and urban runoff, and efforts in the area of water conservation and reuse.

The States and EPA should carefully evaluate the success of initial work by designated areawide agencies. The committee expects that continuing funding of any 207 agency will be given to those agencies which have demonstrated the ability to carry out their plans, and have the capability to deal with future priorities and problems.

Proper and effective use of these 208 funds has the potential for identifying significant cost savings in municipal and industrial facility investment.

AGRICULTURE

Agriculture was demonstrated to be a major source of pollution. The current strategy in the act to divide agriculture into point and nonpoint sources is effective with regard to feedlots, but ineffective with regard to irrigation return flows. Yet the threat of direct regulation by permit has moved farmers and the farm-service community into a willingness to work with the section 208 areawide process, recognizing the advantage of locally initiated regulatory programs.

In most instances, the section 208 "best management practices" are not actual abatement programs, and interim strategies need to be developed. Section 208 offers the potential for abatement programs to control both irrigation return flows and nonpoint source agricultural runoff, and the committee considered several proposals to pursue this proposal.

For these reasons, the committee adopted several amendments which generally concern section 208 and specifically relate to agriculture. First, the committee renewed funding for section 208 planning and plan implementation. This is necessary to continue the work that has begun. Unfortunately, like other Public Law 92-500 programs, initial implementation of section 208 was slow. Few plans are completed, and accordingly the committee also extended completion deadlines.

Secondly, the committee exempted irrigated agriculture, defined under the act as a point source, from the 402 permit program and included it within the 208 program.

Third, the committee examined a variety of ways to strengthen the implementation of the 208 program, so that it would become a meaningful nonpoint source abatement mechanism. The committee provided an opportunity in its consideration of the section 404 issues for States to develop an approvable 208 regulatory program for specified activities. Approval through this process would remove those activities from direct Federal control.

DREDGE AND FILL PERMIT PROGRAM

There has been considerable discussion of the provisions of section 404 of the act, much of which has been related to the suspicions and fears with respect to that section, and little of which has been related to substantive solutions to real problems while providing an adequate regulatory effort to assure some degree of wetlands protection. There is no question that the systematic destruction of the Nation's wetlands is causing serious, permanent ecological damage. The wetlands and bays, estuaries and deltas are the Nation's most biologically active areas. They represent a principal source of food supply. They are the spawning grounds for much of the fish and shellfish which populate the oceans, and they are passages for numerous upland game fish. They also provide nesting areas for a myriad of species of birds and wildlife.

The unregulated destruction of these areas is a matter which needs to be corrected and which implementation of section 404 has attempted to achieve. The upland farming, forestry and normal development activity carried out primarily by individuals and as a part of family business or family farming activity need not bear the burden of an effort directed primarily at regulating the kinds of activities which interfere with the overall ecological integrity of the Nation's waters. At the same time, these activities cannot be fully ignored. Without question, they should not and cannot be regulated by the Federal Government. Equally without question, there should be a degree of discipline over the extent to which these activities destroy wetlands or pollute navigable waters. The committee bill addresses these questions and tries to deal both with the institutional method for reducing the impacts of this program and also maintain a program of effective wetlands protection.

Section 208, the 1972 act's laboratory for new institutional control mechanisms for vexing nonpoint source problems, is undoubtedly the logical element for dealing with this and other similar problems. It may not be adequate. It may be that the States will be reluctant to develop the control measures and management practices which protect upland wetlands and navigable waters, and it may be that sometime in the future a Federal presence can be justified and afforded.

But for the moment, it is both necessary and appropriate to make a distinction as to the kinds of activities that are

to be regulated by the Federal Government and the kinds of activities which are to be subject to some measure of local control. The distinction does not necessarily need to be limited to the waters into which the discharge occurs so much as the kind of discharge which occurs, whether or not it is point source or nonpoint, whether or not it is major or minor, whether or not it is a conventional activity or a major change in the use of an area.

The committee bill includes a provision which utilizes existing legislative mechanisms, and maintains the primary thrust of section 404 with respect to protection of wetlands from spoil and fill discharges where wetlands protection is an important public need. At the same time, the bill tries to free from the threat of regulation those kinds of manmade activities which are sufficiently de minimus as to merit general attention at State and local level and little or no attention at the national level.

The bill intends to develop a better response from the States with respect to the development of better management practices for nonpoint sources and de minimus point sources. The proposal would permit the degree of exemption from the section 404 program to be determined by the States as opposed to the courts, as is currently the case when there is a dispute between the regulator and the potentially regulated. By the act of assuming the regulatory program under section 208, the State can define those covered by State best management practices, the effect of which, if approved by EPA, will be a specific, precisely defined exemption from section 404. And at the same time, the public will benefit from the hoped-for improvement in the manner in which polluting activities are carried out in order to reduce the discharge of effluents and improve the quality of water.

The provision solves most real problems with section 404 by providing general delegation authority to the States; by specifying exempt activities; and by bringing the program under the general procedures of section 402.

OIL AND HAZARDOUS SUBSTANCES

The committee made some changes in the liability scheme for discharges of oil and hazardous substances. The changes made, while limited, are of considerable importance in the overall implementation of this provision.

The committee considered amendment to section 311 to establish liability for damages occurring outside the jurisdiction of any State as a result of an oilspill, including compensation for income loss due to damage to property or natural resources. A related amendment creating a new compensation fund covering claims from damages above the spiller's limits of liability and funded by a 3-cent-per-barrel throughput fee on oil not already subject to the fees associated with the existing compensation funds, was also considered. The committee deferred action on these proposals and will consider them as part of the comprehensive oilspill liability legislation, which will be taken up after enactment of this bill. In that context, a provision of liability for damages and a compensation fund which does not preempt State liability requirement will be included in any committee action.

The language of the bill would permit the expenditure of funds from the section 311 fund for the purpose of mitigating the effects of a spill of a nonremovable hazardous substance. The effect of this amendment would be to place the financal burden of protecting persons and property from the harmful effects of discharges, of hazardous substances upon those who are responsible for the discharges, and to thereby provide an incentive to such discharges to take every reasonable step to mitigate the effects thereof.

Under the current wording of the statute, while it appears that such costs can be recovered in cases of discharges of substances determined to be nonremovable, the language is somewhat ambiguous, and the purpose of this amendment is to remove any ambiguity by making clear the intention that such costs can be recovered, regardless of whether the substance is determined to be removable or nonremovable. In addition, the amendment would make clear that the section 311(k) revolving fund could be used to pay for the mitigation effort. Such authority is essential to insure prompt action to protect public health and safety, including, for example, protection of drinking water supplies in the event of a discharge of a hazardous substance.

The bill also removes the total dollar ceiling on liability for oil spills from vessels. The ceiling served no useful purpose, inadvertently subsidizing large tankers and thus enhancing their competitive position over smaller vessels. According to testimony, the $150 per ton limit should be adequate for cleanup of all but the most catastrophic spills. The $14 million limit in existing law is totally inadequate to deal with an oil spill of any magnitude from the size of tanker that is expected to be plying the waters of the United States.

The committee also established a maximum liability for small vessels carrying oil as cargo of $150 per gross ton or $500,000 whichever is greater. Again, according to testimony from the Coast Guard—the agency charged with the responsibility for cleaning up oil spills—very often spills from small tankers and other sources are among the most difficult to clean up because they occur in areas where the water is moving and the urgency of the application of clean-up techniques is most pronounced. Additionally, the first cost of any clean-up activity is the most costly. The perton limit on smaller vessels is not adequate to provide liability commensurate with the costs of clean-up which have been experienced with such spills.

The committee was particularly concerned with the soundness of the contingency fund. As a result of the 1970 act, $35 million was appropriated to that fund. Most of that has now been depleted. While there are over $26 million in pending claims and while liability payments and penalties have been returned to the fund, depletion has resulted from clean-up from unknown sources, clean-up where costs exceeded liability, and clean-up of spills where a defense to liability was raised. The new minimum liability for smaller oil tankers and the removal of the upper limit should make the fund more sound.

In addition, the committee has adopted a provision which assures that the Government can pursue the insurer or the spiller to recover clean-up costs without awaiting final disposition of all third-party damage claims. This provision was adopted as a result of discussions with the Justice Department which indicated that the greatest limit on speedy clean-up cost recovery was the joining of clean-up liability suits with third-party negligence actions. This will no longer be the case.

The committee has extended the jurisdiction of section 311 out to the 200-mile limit of the fisheries management zone. The many recent incidents of tanker spills, especially the disaster caused by the *Argo Merchant* off the coast of New England, underscore the immediate need for improved protection from and jurisdiction over marine pollution. The absence of clear legal authority to deal with oil spills beyond the territorial seas is indefensible.

Finally, the committee approved language that would permit costs expended by the Federal government or any State government for the restoration or replacement of natural resources damaged by a spill of oil or hazardous substance to be paid by the contingency fund. This provision authorizes the President, or a State representative, to act on behalf of the public as trustee of natural resources to recover such costs. This is an important protection for these natural resources, and this particular provision is fashioned after a similar one in the Deepwater Ports Act.

ISSUES BEFORE THE COMMITTEE

The committee specifically reviewed every legislative issue which has been raised to the committee, either in the form of an introduced Senate bill, as a proposal from the Environmental Protection Agency, as a provision of the House-passed bill, H.R. 3199, or as a specific recommendation to the committee in the hearings. I ask unanimous consent to have printed in the RECORD at this point a list of all the issues considered by the committee during its mark-up of this bill and their ultimate disposition. Those issues which are not included in S. 1952 were specifically considered by the committee and determined not to be included.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

INCLUDED IN S. 1952 OR REPORT

Federal Facility Compliance.
State Certification.
Enforcement of POTW Permits.
Authorizations.
Allotment.
Eligible Categories.
User Charges.
Secondary Treatment Waiver.
BAT Waiver.
Oil & Hazardous Substances.
Delayed Compliance Penalty.
1977 Industrial Extensions.
Combined Step 2 & 3.
1977 Municipal Extensions.
State Reports.

Industrial Cost Recovery.
Reserve Capacity.
Sludge Disposal.
EPA Issuance of Permits.
Section 404.
Cost-Effective Guidelines.
Pretreatment.
Reallotment.
Estuarine Study.
Aquaculture Permits.
208 Deadlines.
Interagency Agreements.
Operator Training.
Training Grants.
Enforceable Priority.
Water Conservation.
R&D Projects.
Compliance with State Requirements.
National Water Quality Standard.
Sludge Utilization Study.
Combined Sewer Overflow Study.
Contract Enforcement.
BAT Extension for Innovation Technology.
Set-aside for Alternative Systems.
Procedures for Modifications.
Check-Off for Innovative Systems.
Irrigation Return Flows.
Best Management Practices for Industry.
Marine Sanitation Devices.
Clean Lakes.
Individual Systems.
Agricultural Cost-Sharing.
Alaska Village Study.
Exemption for Seafood Processing.
Exemption for Rum Distillers.

NOT INCLUDED IN S. 1952

Sewage Collection Systems.
Reimbursement.
Priority Lists.
Buy America.
Financial Disclosure.
Deer Island Relocation.
Deputy Administrator for Engineering.
Urban Pass-Through.
Flow Reduction.
Phosphates in the Great Lakes.
Judicial Review.
Corps of Engineers Management of Grant Program.

Mr. MUSKIE. Mr. President, I ask unanimous consent to have printed in the RECORD a section-by-section summary of S. 1952.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

SUMMARY OF PROVISIONS OF CLEAN WATER ACT OF 1977

AUTHORIZATIONS

This section provides authorizations for EPA's non-research operating programs for fiscal years 78, 79, and 80.

ESTUARINE STUDY

This section amends section 104, Research, Investigations, Training and Information, to permit the estuarine report to be submitted every six years instead of every three years.

CLEARINGHOUSE FOR ALTERNATIVE TREATMENT

This section amends section 104, Research, Investigations, Training, and Information, to establish a national clearinghouse for the collection and dissemination of information developed on alternative treatment technologies.

CHECKOFF FOR INNOVATIVE SYSTEMS

This section amends section 105, Grants for Research and Development, to allow up to ½ of 1% of a State's construction grant allotment to be used for paying the non-Federal share of a project utilizing innovative treatment technologies.

ASSISTANCE FOR RESEARCH AND DEMONSTRATION PROJECTS

This section amends section 105, Grants for Research and Development, to authorize grants for operation and maintenance costs of an EPA funded research and demonstration project to reduce those costs to those comparable to a conventional secondary treatment sytsem.

PRIORITY LIST REQUIREMENTS

This section amends section 106, Grants for Pollution Control Programs, to require that State priority lists reflect the enforceable requirements of the Act.

TRAINING GRANTS

This section amends section 109, Training Grants and Contracts, to increase the limit of a grant for a training facility from $250,000 to $500,000, and to exempt any such grant from the requirements of section 204.

RURAL VILLAGE STUDY

This section amends section 113, Alaska Village Demonstration Project, to authorize a study for the development of a comprehensive program for adequate sanitation services in Alaska villages.

REALLOTMENT

This section amends section 205, Allotment, to extend the period of availability of sums made available during FY 76 to September 30, 1978.

CONSTRUCTION GRANT PROGRAM

This section amends section 207, Authorization, to authorize $3.5 billion for the municipal construction grant program for FY 77, and $4.59 billion for each of the fiscal years 78, 79, 80, 81, and 82. This section also provides for the allotment of these funds.

AREAWIDE PLANNING

This section amends section 208, Areawide Waste Treatment Management, to provide that each Statewide planning agency shall have three years for completion of their plan. This section also provides that each initial planning grant shall be 100% and further grants shall be 75%.

INDIVIDUAL SYSTEMS

This section amends section 201, Purpose, to permit grants for construction of privately-owned treatment works where a public body applies for such grant on behalf of a number of such units and will assume that such treatment works are properly operated and maintained, and where such service is more cost-effective than collection and central treatment.

RESERVE CAPACITY

This section amends section 201, Federal Share, to restrict the amount of reserve capacity which is eligible for Federal funding to 10 years for the treatment works and 10 years for sewers and associated appurtenances.

CONTRACT ENFORCEMENCT

This section amends section 203, Plans, Specifications, Estimates and Payments, to authorize the award of a combined Step 2 and Step 3 grant in the case of a treatment works costing less than $2 million which will serve a population of 25,000 or less. In States which have unusually high construction costs, the grant may be increased to $3 million.

CONTRACT ENFORCEMENT

This section amends section 203, Plans, Specifications, Estimates and Payments, to make EPA a party to construction contracts to ensure enforceability of contract.

METERING

This section amends section 204, Limitations and Conditions, to permit the use of something other than metering, including ad valorem taxes, for the collection of user charges from residential users of waste treatment services. If metering is not used, there must be assurance of adequate funds for operation and maintenance of the treatment works, and each user must be notified as to the amount to be used for such costs.

WATER CONSERVATION

This section amends section 204, Limitations and Conditions, to permit a proportional reduction of industrial cost recovery payments as the industrial user reduces his flow to the system.

INDUSTRIAL COST RECOVERY

This section amends section 204, Limitations and Conditions, to permit the exemption of small discharges (less than 2,500 gallons a day) from industrial cost recovery requirements.

STATE MANAGEMENT ASSISTANCE

This section amends section 205, Allotment, to authorize reservation of up to 2% of a State's construction grant allotment, but no less than $400,000, for use by the State in administering any aspects of the construction grant program. Such funds may be increased to assist in the administering of the 402 permit program, statewide 208 planning, and responsibility for managing construction grants for small communities.

SET ASIDE FOR ALTERNATIVE SYSTEMS FOR SMALL COMMUNITIES

This section amends section 205, Allotment, to require the setting aside of between 5 percent and 10 percent of construction grant funds alloted to a rural State (States with a rural population of 28 percent or more of the total population of the State) for use only for alternative or unconventional systems for communities of 2,500 or less. Nonrural States may request, through the Governor, a set aside of up to 10 percent of its grant allotment to be used for such purposes.

IRRIGATION RETURN FLOWS

This section amends section 208, Areawide Waste Treatment Management, to specifically exempt discharge from irrigation return flows from the 402 NPDES permit program, and to add irrigation return flows to the 208 program.

AGRICULTURAL COST SHARING

This section amends section 208, Areawide Waste Treatment Management, to authorize funds for use by the Secretary of Agriculture in cost-sharing programs to implement best management practices on agricultural non-point sources of pollution.

GRANT ELIGIBLE CATEGORIES

This section amends section 211, Sewage Collection Systems, to eliminate from eligibility the construction of treatment works for the control of discharges from separate storm sewers, the replacement or rehabilitation of a collection system unless necessary to correct excessive infiltration, and the construction of a new collection system unless the grant is limited to existing population, there is or will be treatment capacity to serve the system, the system is necessary to protect ground or surface water supplies or to attain water quality standards, and the alternatives have been proved less cost-effective.

COST-EFFECTIVENESS GUIDELINES

This section adds a new section 213 to require that cost-effectiveness guidelines must provide for the identification and selection of cost-effective treatment alternatives.

WAIVER FROM BEST AVAILABLE TECHNOLOGY

This section amends section 301, Effluent Limitations, to provide for a waiver from best available technology for a pollutant for which there is a water quality standard as long as the modification is at least best practicable technology, will not require additional controls on any other source, will not interfere with the attainment or maintenance of the national water quality standard, and presents a reasonable cost for level of reduction achieved.

WAIVER FROM SECONDARY TREATMENT

This section amends section 301, Effluent Limitations, to provide for a waiver from the secondary treatment requirement for any

conventional pollutant in a discharge into marine waters from existing municipal sources if it can be shown that the modification will not interfere with protection of public water supplies and the attainment or maintenance of the national water quality standard, will not require additional controls on any other source, assures enforcement of all applicable pretreatment requirements, and assures that there will be no substantial increase in the volume of the discharge.

MUNICIPAL TIME EXTENSIONS

This section amends section 301, Effluent Limitations, to permit a case-by-case modification of the July 1, 1977 deadline for publicly-owned treatment works up to July 1, 1983, where construction cannot be completed or where Federal funds have not been made available. Such modification is available to dischargers into the system if such dischargers have been found to have acted in good faith.

PROCEDURES FOR MODIFICATIONS

This section amends section 301, Effluent Limitations, to establish the procedures for obtaining a waiver from secondary treatment and best available technology.

INNOVATIVE TECHNOLOGY

This section amends section 301, Effluent Limitations, to permit a two year extension of the best available technology requirement for sources utilizing innovative technology.

INFORMATION AND GUIDELINES

This section amends section 304, Information and Guidelines, to require publication of water quality criteria to implement the national water quality standard.

BEST MANAGEMENT PRACTICES FOR INDUSTRY

This section amends section 304, Information and Guidelines, to permit the control, through best management practices, of ancillary industrial activities which contribute toxic pollutants to the navigable waters.

INTERAGENCY AGREEMENTS

This section amends section 304, Information and Guidelines, to authorize $500,000,000 for fiscal years 79–83 for interagency agreements to encourage the use of expertise in other Federal agencies.

STATE REPORTS

This section amends section 305, Water Quality Inventory, to permit the submission of State water quality reports every two years instead of every year.

TOXIC POLLUTANTS

This section amends section 307, Toxic and Pretreatment Effluent Standards, to revise the procedures for establishing and publishing a toxic pollutant and extend the period for compliance from one to up to three years as long as there is no significant risk to public health, public water supplies, or the environment.

PRETREATMENT

This section amends section 307, Toxic and Pretreatment Effluent Standards, to provide a mechanism for EPA enforcement of pretreatment standards for pollutants which pass through or interfere with municipal treatment processes or contaminate sewage sludge.

TECHNICAL AND CONFORMING AMENDMENTS

This section amends section 309, Federal Enforcement, to ensure the enforceability of permits issued under section 318 (aquaculture) and section 405 (sewage sludge).

1977 INDUSTRIAL DEADLINES

This section amends section 309, Federal Enforcement, to provide two new enforcement options for violations of the 1977 best practicable technology requirement for industrial dischargers. The first option authorizes the issuance of an enforcement order requiring a "reasonable" time for compliance, reserving the 30-day requirement for violation of operation and maintenance requirements and interim compliance schedules. The second option authorizes up to an 18 month extension of the 1977 deadline where the Administrator finds that the discharger acted in good faith; that a serious commitment to achieve compliance had been made; that compliance will occur no later than January 1, 1979; that the extension will not impose additional controls on other sources; that an application for a permit was filed before December 31, 1974; and that the necessary abatement facilities are under construction.

MITIGATION COSTS

This section amends section 311, Oil and Hazardous Substance Liability, to permit the expenditure of funds from the Contigency Fund for the purpose of mitigating the effects of a spill of a non-removable hazardous substance.

OIL SPILL LIABILITY

This section amends section 311, Oil and Hazardous Substance Liability, to extend the jurisdiction under this section out to 200 miles; to raise the limits of liability for clean-up of oil spills from vessels to $150 per gross ton or $500,000, whichever is greater; to raise the limits of liability for clean-up of oil spills from onshore and offshore facilities to $50 million; to authorize the use of Contingency Funds for protection against threatened discharges; to permit immediate recovery of clean-up costs from oil cargo vessels or oil storage or handling facilities in the event of allegations of third-party fault, reserving rights of subrogation; and to permit the recovery of costs expended by the Federal or a State government in restoring or replacing natural resources damaged by an oil spill.

MARINE SANITATION DEVICES

This section amends section 312, Marine Sanitation Devices, to (1) require the EPA Administrator to prohibit the discharge of treated sewage from vessels in drinking water intake zones, upon an application of a State and (2) to require the Administrator to amend current marine sanitation device regulations for commercial vessels on the Great Lakes and navigable waters other than coastal waters to require said devices, within a time period to be determined by the Administrator, to produce an effluent, at a minimum, of a quality of secondary treatment; and that such vessels be required to treat greywater also.

FEDERAL FACILITY COMPLIANCE

This section amends section 313, Federal Facilities Pollution Control, to assure that all Federal activities comply with all Federal, State, interstate and local requirements.

CLEAN LAKES

This section amends section 314, Clean Lakes, to require the Administrator to provide financial assistance to the States to prepare surveys to identify and classify freshwater lakes and to issue biannually information to the States on methods and procedures to restore and enhance freshwater lakes. Section 314 is further amended to authorize $450,000,000 for fiscal years 1978, 1979, and 1980 for the Clean Lakes program.

AQUACULTURE

This section amends section 318, Aquaculture, to assure that permits issued under this section are consistent with section 402.

NONCOMPLIANCE FEE

This section amends section Title III of the Act by adding a new section 319. Any point source (other than a publicly owned treatment works) not in compliance with the effluent limitations and compliance date in its permit, shall be required to pay a fee equivalent to the economic value of noncompliance. The payment shall be imposed automatically for sources out of compliance with the 1977 requirements or applicable new source, toxic or thermal limitations beginning on July 1, 1979, and for sources out of compliance with the 1983 requirements beginning on January 1, 1984.

COMPLIANCE WITH STATE REQUIREMENTS

This section amends section 401, Certification, to assure compliance with all State requirements.

EPA ISSUANCE OF PERMITS

This section amends section 402, National Pollutant Discharge Elimination System, to permit EPA to issue a permit where a State-issued permit is inadequate.

ENFORCEMENT OF MUNICIPAL PERMITS

This section amends section 402, National Pollutant Discharge Elimination System, to permit the EPA to enforce against a violation of a municipal permit.

DREDGE AND FILL PERMIT PROGRAM

This section amends section 402, National Pollutant Discharge Elimination System, section 404, Dredge and Fill Permit Program, and section 208, Areawide Waste Treatment Management, to modify the existing program for controlling the disposal of dredged and fill material. The bill amends section 402 to provide a mechanism for approving permit programs of States for controlling disposal of dredge and fill material which meet their particular needs. Section 404 of the Act is amended to provide specific exemptions from any permit requirement for certain activities. The amendment also provides for the use of general permits as a mechanism for eliminating the administrative burdens and delays associated with this program.

A third provision amends section 208(b)(4) to provide that the placement of fill material associated with activities which a State chooses to regulate by requiring best management practices under that section, is also exempt from any permit requirement under section 404 or 402.

The National Wetland Inventory is required to be completed by December 31, 1978, and $6,000,000 is authorized for that purpose.

SLUDGE DISPOSAL

This section amends section 405, Disposal of Sewage Sludge, to assure that permits issued under this section are consistent with section 402.

COMBINED SEWER OVERFLOWS

This section amends section 516, Reports to Congress, to authorize a study by EPA on combined sewer overflows in municipal treatment works.

UTILIZATION OF TREATED SLUDGE

This section amends section 516, Reports to Congress, to authorize a study by EPA on the use of municipal effluent and sludge for agricultural and other purposes.

Mr. MUSKIE. Finally, Mr. President, I would like to extend special appreciation to the staff who worked long and hard with us to fashion this legislation, see it through markup and bring it to the floor.

We are all grateful for their help.

I ask unanimous consent to include the staff members at this point in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

STAFF MEMBERS

Leon Billup, John Freshman, Sally Walker, Phil Cummings, John Yago, Jackie Schafer, Bailey Guard, Jim Range, Mimi Feller, Mike Morgan, Demming Cowles, Bob Van Huevelin, Len Stewart, Dick Oshlo, and Mike Naeve.

Susan Martel, Peter Gove, Marcia Johnson, Lee Rawls, Judy Parente, Peggy Nagel, Frankie Williams, Debbie Canavan, Maggie Meyer, Joan Ramsey, Julie Devlin, Pat Underwood, Zoe Tierney, Jerry Cohen, and Dick Harris.

Mr. MUSKIE. Mr. President, I am happy to yield to my good friend the Senator from Vermont, who is a valued assistant as ranking Republican member on the committee and without whose support we would not be here on the floor.

Mr. STAFFORD. Mr. President, I ask unanimous consent that Peter Van Oot, Vic Maerki, and Rick Herron be accorded the privilege of the floor throughout the consideration of the pending measure.

The PRESIDING OFFICER. (Mr. SARBANES). Without objection, it is so ordered.

Mr. GRIFFIN. Mr. President, I ask unanimous consent that Mary Butler, Larry Able, and Randy Jones of my staff have the privilege of the floor during the consideration of this legislation.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ANDERSON. Mr. President, I make a similar request in behalf of Peter Gove and Susan Martell of my staff.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. STAFFORD. Mr. President, there is no need for me to speak at length concerning the Clean Water Act of 1977. The chairman of the subcommittee, Senator MUSKIE, has presented an exceptionally thorough discussion of the provisions of the bill before us today, as he always does.

I wish to emphasize my feeling that it has been a real pleasure and privilege to work with Senator MUSKIE, under his distinguished leadership, in connection with bringing clean water back to this country.

For my part, it is important to note the degree of support that these amendments enjoy from the Republican members of the Committee on Environment and Public Works. First, the bill, S. 1952, was ordered reported from committee by a unanimous vote. Second, every effort was made to fully consider as broad a range of viewpoints on the issues as possible. This was accomplished by conducting 15 days of hearings in the field and in Washington, D.C. throughout the month of June and into July, and by a conscientious effort to work from an agenda in committee meetings which included virtually every issue which was brought to our attention. We set aside a few matters which were of special interest to certain members which may be brought up on the floor or in conference with the House. We proceeded to agree on those issues about which there was no controversy. Then we voted on those issues on which there was disagreement. To a remarkable degree, however, those differences which did exist among members on controversial items were worked out to the satisfaction of all the members.

Minority members of the committee played a critical and constructive role in this process. Specifically, a new member of the committee, Senator CHAFEE, probably more than anyone else, labored to mould the section providing for a modification of the "best available technology" requirement for industrial point source dischargers into a sensible and workable procedure which is intended to provide genuine relief for dischargers of conventional pollutants where controls beyond "best practicable technology" are not necessary to meet water quality standards. His efforts resulted in a unanimous rollcall vote on this provision of the bill.

On the issue of eligible categories of treatment works to be assisted by Federal funds in the municipal construction grants program, Senator DOMENICI persuasively argued against the total elimination of collector sewers as an eligible item. As a result the committee agreed instead to limit the capacity of new sewers to that necessary to serve populations existing on the date of enactment of this act and to require that treatment facilities are adequate to treat the volume of sewage which is collected. Thanks to his role in retaining the eligibility of collector sewers under these conditions, this provision was agreed to unanimously.

After extensive discussion led by Senator MCCLURE over far-reaching amendments to the oil spill liability provision of the statute, that section was adopted unanimously.

The development of a formula for allotting construction grant funds represented a joint effort in which every Member participated. The concept which I advanced, providing a minimum allotment to each State, was retained in the reported bill. Thus, no State will receive less than $22.5 million during fiscal years 1978–82 assuming an annual appropriation of $4.5 billion.

On a very few items, unanimous agreement was not possible, but they are important matters and worth mentioning. First, the issue of whether user charges or ad valorem taxes ought to support the operation and maintenance costs of publicly owned treatment works generated a great deal of discussion, in which Senator DOMENICI vigorously participated, and which was the subject of several rollcall votes. The course which was ultimately followed by the committee permits residential users to pay for waste treatment services according to a scheme other than metering, including ad valorem taxes, so long as adequate funds for operation and maintenance are assured thereby and each user is notified of the costs attributed to his use of the system. This was endorsed by all the minority members of the committee other than myself. From our vantage point in Vermont, the present system is working well, and I preferred not to tamper with it.

Another important matter which required a divided vote was an amendment to extend for 2 to 3 years the deadline for achieving "best practicable technology" for industrial point source dischargers which failed to meet the July 1, 1977 deadline. An amendment offered by the committee chairman, Senator RANDOLPH, was defeated, and instead an amendment offered by Senators MUSKIE and BAKER was adopted 14–1. This amendment offers the Administrator of the Environmental Protection Agency the option of extending the deadline for achieving BPT as much as 18 months for point source dischargers who in good faith have tried to meet the requirements of the act, but which for justifiable reasons were unable to do so. Here again the participation of the minority was a key element in the adoption of this provision by such a clear margin.

One other matter of critical importance to the minority is the amendment adopted by the committee pertaining to section 404 of the 1972 Water Pollution Control Act. The staff worked out a recommendation which represented their best effort to take into consideration all of the concerns raised over the implementation of this provision of the law. I am mindful of the preference of some of my Republican colleagues for an alternative solution to the problems posed by section 404 regulation of the disposal of dredged and fill materials in the Nation's waters.

Because of the continued controversy over this provision, which will unfold later this morning in the Senate, I would like to offer some observations of my own in support of the committee's effort.

The section 404 program as outlined in the committee bill will be a successful and reasonable process for protecting inland and coastal waters, including wetlands, from adverse environmental effects resulting from the discharge of dredged or fill material. The section 404 program is essential if we are to achieve the objective of the Water Act, which is to restore and maintain the chemical, physical and biological integrity of our waters. The chemical makeup and the biological life of the Nation's waters have been adversely affected by the physical destruction or alteration of water bodies by discharges of dredged or fill material. In addition, such discharges sometimes contain dangerous levels of toxic substances that must be regulated carefully. The program is necessary, it is manageable, and it will work well. The ultimate success of the program will depend, in large part, on the growing partnership of Federal, State and local government.

The Federal Water Pollution Control Act Amendments of 1972 mandated the restoration and maintenance of the chemical, physical, and biological integrity of the Nation's waters. Full implementation of the section 404 decisionmaking process is imperative if we are to achieve this objective. The section 404 process is an essential tool for preventing the unnecessary degradation of water quality by discharges of dredged or fill material. Without it, critical aquatic areas including swamps, marshes, and submersed grass flats, which are such an important segment of this Nation's water resource and are essential to the preservation of migratory and resident fish, bird and other animal populations, might otherwise be irrevocably destroyed.

The lasting benefits that society derives from coastal and inland wetlands often far exceed the immediate advantage their owners might get from draining or filling them; we are losing wetlands at the rate of some 300,000 acres per year. The committee recognizes the need for a program which regulates the discharge of dredged or fill material into our waters and wetlands. They did, however, assure that this program should be carried out in a way that avoids undue Federal regulation and that does not tie up individuals in unnecessary redtape.

The Corps of Engineers and the Environmental Protection Agency are aware that the program must be realistic and manageable. Not only must we guard against unnecessary regulation but we must also insure that the program does not allow unnecessary environmental destruction. We believe that the committee amendment will successfully meet both of these goals.

In addition to the sections of this bill which I have already discussed, a number of other provisions which are contained in S. 1952 represent specific contributions of the minority members of the committee. I want to call attention to these provisions not only to argue for support for the bill as a whole, but to demonstrate the active and constructive contribution from this side of the aisle.

Thanks to the combined efforts of Senator WALLOP and Senator HART, who conducted a field hearing in Fort Collins, Colo., on July 13 on agriculture's concerns about the Water Pollution Control Act, the committee adopted an amendment which, in effect, exempts irrigated agriculture from all permit requirements under section 402 of the act, and instead insures that areawide waste treatment management plans under section 208 include consideration of irrigated agriculture. This amendment promotes equity of treatment among farmers who depend on rainfall to irrigate their crops and those who depend on surface irrigation which is returned to a stream in discreet conveyances. While this amendment may appear to be a minor matter to those of us from the East, to the farmers in the semiarid and arid West this amendment is a critical feature of the bill.

Several provisions of the bill represent attempts to encourage the use of innovative technologies in the construction of sewage treatment facilities and in controlling industrial pollutants. One amendment, offered by Senator DOMENICI, provides that R. & D. grants under section 105, which presently qualify for a 75-percent Federal grant, can receive 100 percent if a State opts to provide the additional 25 percent out of its allotment under the construction grants program. To qualify, the R. & D. project must appear on the State's priority list and the total contribution to the non-Federal share of all such R. & D. projects cannot exceed one-half of 1 percent of a State's allotment.

Senator MCCLURE offered an amendment which gives industrial point source dischargers up to 2 years beyond 1983 to achieve the best available technology requirement if such discharger selects an innovative technology which has industrywide application and which achieves a degree of effluent reduction greater than BAT would accomplish or which achieves an equivalent degree of control at significantly less cost.

Senator MCCLURE also offered an amendment which requires, in addition to the BPT and BAT controls over industrial polluters, the use of best management practices for the ancillary activities of those industries which might otherwise discharge toxic pollutants which are not subject to a point source permit limitation. The management requirements authorized are intended to control pollution by toxic materials from site runoff, spillage of leaks, lagoons, sludge or waste disposal or drainage from raw materials storage. The kepone which found its way into the James River originated from an outdoor storage area, not from an intentional discharge. This amendment would authorize the Administrator to require control measures to deal with this type of problem.

With further respect to toxic pollutants, the committee agreed with the administration's proposal to amend the procedures which determine the degree of control of toxic pollutant discharges under section 307. While the bill changes the rulemaking procedures from formal to informal, an amendment offered by Senator DOMENICI provides an opportunity for oral and written presentations and cross-examination on disputed issues of material fact.

At this point, Mr. President, I would like to indulge myself in a discussion of certain provisions which were of particular concern to me, coming as I do from the most rural State in the Nation.

During the consideration of this bill in committee I have focused on the special problems faced by small communities in rural areas which must undertake the construction of a wastewater treatment facility. In order to determine the nature of these problems I chaired a hearing in Burlington, Vt., on July 9.

It is, very briefly, that conventional secondary wastewater treatment facilities which require the construction of a network of collector sewers and a centralized plant is an expensive, and often overwhelming financial burden on rural communities. A scaled-down version of a municipal treatment plant is simply not suitable for a town of 2,000 people or so.

At our Vermont hearing, we also explored the availability of alternatives to these conventional treatment works, and focused on the technical, environmental, financial and institutional advantages and disadvantages of adopting such alternatives.

What I have proposed in response to the information gathered from our witnesses is a set-aside out of the construction grant allotment for use in constructing financing alternative systems for small communities. This provision appears as section 21 of the bill before us.

The set-aside, which amounts to not less than 5 nor more than 10 percent of a State's allotment under the construction grant program, is required to be reserved for small communities which choose to construct alternative systems only in those States having a substantial rural population—where 25 percent or more of the population live in places of 2,500 or less inhabitants. In other States, a Governor can request that the funds be set aside for this purpose.

The projects which may be constructed with such funds may, under authority provided elsewhere in the bill, include individual systems which are not necessarily publicly owned so long as the local community applies for the grant on behalf of a number of households and will assure that such individual or cluster treatment systems are properly operated and maintained and meet all other requirements of section 204 of the act. Other alternatives which might be selected include various types of land treatment alternatives which have always been eligible for assistance under the act but which have been resisted by State administrators or by the construction and engineering fraternity. I found that communities have been willing to explore other options to control water pollution when they are presented and promoted. However, few States actively promote alternatives and tend to rely instead on the tried, if not so true, conventional plants which they are confident will be approvable by the EPA.

Because a portion of a State's funds can only be used for nonconventional systems, one highly desirable effect of this set-aside amendment will be the creation of the expertise and interest in State pollution control agencies to promote and assist in the development of less costly alternatives in small rural communities.

The committee adopted a number of other provisions which will be of definite benefit to small communities. I call attention to the section providing management assistance for administering portions of the construction grant program which are assumed by State agencies on EPA's behalf. Up to 2 percent of a State grant allotment may be used for this purpose, with a minimum of $400,000 in any one State. Grants are increased where States administer the NPDES permit program, a statewide section 208 water treatment management planning programs, or manage the waste treatment grants for their small communities.

Another section of the bill provides for the combining of the grant process steps 2 and 3—advanced engineering and design with the actual construction phase—where a treatment plant has an estimated total cost of $2 million in communities of 25,000 or less. This amendment will eliminate a good deal of redtape for small communities.

Yet another provision will authorize the Administrator of EPA or the State to be a party to any contract in connection with the construction of a treatment works, at the request of a grantee. This is intended to help small communities which do not have the legal or technical resources to force a consulting engineer or a contractor to perform on time or correct a problem in design, construction or operation of the plant.

In closing, Mr. President, I emphasize why we are seeking this legislation at this time. Most importantly, we are providing authorizations totalling $26 billion over the next 5 fiscal years to continue our work on the construction grants program. While most large industrial dischargers have or will soon meet the 1977 requirements for control of water pollution, the vast majority of municipalities will have not constructed the publicly owned treatment systems necessary to assure that water quality which will contribute to the protection of our water supplies, or provide a balanced population of aquatic life, or provide recreation in and on the water. An enormous investment of public funds will be needed to achieve this goal. By the end of the cur-

rent fiscal year, most States will have obligated all of their share of the $9 billion which was authorized for use beginning in fiscal year 1976. Unless a new authorization is provided the momentum which these States have achieved will slow down, and our pollution cleanup effort along with it.

As I have discussed, there are also a number of program changes which have been suggested by the National Commission on Water Quality and by witnesses before the committee which are important to the smooth and effective operation of this entire Federal effort. Although much has been achieved in the past 5 years, even more needs to be done. The problems of toxic pollutants, the nonpoint sources of pollution and the remaining untreated municipal sources of water pollution must be attacked during the next 5 years. This will not be an easy task and it will certainly not be cheap. But it is vital to the future generations of Americans, and we must provide for it now.

Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. ANDERSON addressed the Chair.

Mr. MUSKIE. Mr. President, I have asked the distinguished junior Senator from Minnesota to floor manage the bill so I yield my time to him to manage and he will take such time as he may require.

The PRESIDING OFFICER. The Senator from Minnesota.

Mr. ANDERSON. Mr. President, I ask unanimous consent that Len Stewart, of Senator HART's staff, and Jerry Cohen, of Senator MOYNIHAN's staff, be accorded the privilege of the floor during debate on this matter.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ANDERSON. Mr. President, I strongly support the Clean Water Act of 1977 and am pleased to have had the opportunity to participate in the development of this legislation by the Environment and Public Works Committee.

The first testimony I presented to Congress as Governor of Minnesota in December 1971 was on the amendments to the Federal water pollution control program that legislation was enacted the next year over President Nixon's veto and became Public Law 92–500, the Federal Pollution Control Act of 1972. Since 1972, no Federal law in the environmental area has affected my State more than the legislation that S. 1952 succeeds.

As I indicated at length in the committee report on the Clean Water Act of 1977; Minnesota, by definition, throughout its history, and at present, is particularly dependent on its rich and varied water resources.

A priority of my administration as Governor of Minnesota was the restoration and presentation of the natural resources and quality of life of the North Star State. In fact, when I now reflect on my 6 years as Governor of Minnesota, I believe there is no other area where more substantive, comprehensive progress was made than in the protection of Minnesota's air, land, and water resources. In my judgment, no State enacted a more comprehensive legislative program to protect the environment than did Minnesota in these years. I would match my State's environmental record in this decade against any other. I listed in the committee report 27 separate legislative and administrative actions taken in Minnesota since 1970 to protect its water resources. This list is evidence of what one State has done to see to it that clean water will be enjoyed by the children and grandchildren of our residents.

I approached consideration of the Clean Water Act of 1977 with this Minnesota background. I had the good fortune to chair three of the eight field hearings held by the committee on this legislation and several of the seven hearings held in Washington, D.C. At the Duluth and Alexandria, Minn., hearings I chaired, 60 witnesses presented statements commenting on many aspects of the Federal Government's efforts to clean up our Nation's water. My colleagues need only review the hearing record from Duluth and Alexandria to see the important and wide-ranging recommendations the Senate received in those 2 days. I am very grateful to Senator RANDOLPH, Senator MUSKIE, and the subcommittee staff for the 2 days of Minnesota hearings.

Panel discussions were held on several critical issues addressed in S. 1952, including the 1977 and 1983 industrial deadlines; the control of toxic chemicals; the operations of large municipal wastewater systems; the problems of small communities; the availability and use of alternative wastewater treatment systems, particularly those that utilize the water content and nutrient value of treated wastewater or sludge; the clean lakes program for the restoration of freshwater lakes; and section 404.

During markup, the committee adopted several amendments I offered and supported on a number of other initiatives, based on testimony received at the Minnesota field hearings. These amendments permit assistance to communities for the operating and maintenance costs of research and wastewater treatment plants; expand the use of grant funds for the training of operators of municipal plants; permit the EPA or State to be a party to a contract between a consulting firm and municipality for enforcement purposes; amend the industrial cost recovery program to provide incentives for water conservation and relief for small businesses; clarify the Marine sanitation device section; expand the clean lakes program; mandate that all dredging activities of the Corps of Engineers be conducted in compliance with applicable State water quality standards, and require EPA to report to Congress on the problem of combined sewer overflow and the status of potential projects that utilize municipal wastewater and sludge for a productive purpose.

Mr. President, since several of these amendments have important background and justification from testimony the committee received, I request the opportunity to submit for the RECORD additional material on several of these issues of particular importance to me and the State of Minnesota.

The fact that the Senate is in a position to act today on S. 1952 is due to the diligence of the Environment and Public Works Committee, particularly our distinguished subcommittee chairman, Senator MUSKIE, and the committee staff. The Senate should be aware that the process of amending Public Law 92–500—an exceedingly complex and comprehensive statute of nearly 100 separate provisions—was begun by the committee barely 2 months ago. Since July 1, 15 days of public hearings and 2 weeks of intensive markup sessions have produced the Clean Water Act now before us today. As my colleagues are no doubt aware, during this same period this same committee has done double duty with the Clean Air Act of 1977, for which the conference committee concluded barely 24 hours ago.

The Senate should clearly recognize the tremendous efforts of Senator MUSKIE, the Senate's wise and dedicated adviser and defender of the environment, and, from a talented, dedicated staff. I want to commend two staff members in particular, Leon Billings and Phil Cummings. It has also been an honor and privilege for me to work on this legislation under the dedicated direction of our distinguished chairman, Senator JENNINGS RANDOLPH.

Mr. President, the Senate's goal today is to enact comprehensive amendments to the Federal Water Pollution Control Act of 1972 to expand, refine, and improve the Federal Government's effort to clean up and preserve the Nation's waters resources.

I was a conferee earlier this year on the Public Works Employment Act. This legislation included funds for fiscal year 1977 to construct water pollution control plants. That conference ended without the authorization of these needed construction funds because the House insisted on a number of significant changes to the 1972 act that had not been considered by the Senate. After that conference committee ended, the Senate Environment and Public Works Committee set a course of action to carefully consider amendments to the 1972 legislation. With passage of this bill today, the Senate meets its obligations to the House. I share the expectation of Senators RANDOLPH and MUSKIE that the House will be prepared immediately following the August recess to conference on this matter and send it to the President.

In Minnesota we need the Clean Water Act of 1977. Several dozen communities are waiting for construction funds to build sewage treatment plants. Over a hundred more are ready to prepare step 1 plans or begin step 2 engineering. Communities and lakeshore owners associations are anxious for additional lake restoration projects. The Minnesota Pollution Control Agency is prepared to assume the expanded role in the administration of the construction grants program authorized in S. 1952. Small businesses need relief from the burdens of industrial cost recovery. Many communities will be interested in the set-aside authorized for alternative systems. And many other provisions of this legislation will be of benefit to my State. I share Senator MUSKIE's hope the House acts quickly on it.

In testimony before the Congress

nearly 6 years ago on water pollution control, I said:

We must act now to reshape priorities so that both clean water and productive capacity are achieved. If we do not act, rivers like the Buffalo, Rouge, and Cuyahoga will continue to catch fire because of the pollution in them. And nobody sets his house on fire to keep temporarily warm. When that glow is gone, all we are left with is ashes. Our people deserve a better legacy.

National priorities were reshaped by the Federal Water Pollution Control Act of 1972. Much has been accomplished since the 1972 legislation to insure that our waters are cleaner for our children and grandchildren than they are today.

S. 1952 continues the Federal Government's commitment to clean water. It deserves enactment today by the Senate. Implicit in the Clean Water Act of 1977 is that the Nation's glass of water is now half full. The severe pollution in the Buffalo, Rouge, and Cuyahoga Rivers that caught the attention of the public and Congress in earlier years and gave impetus to the 1972 act, are now only memories.

But the burning rivers of the past are now replaced by kepone in the James River and PCB's in the Great Lakes and the Mississippi River.

Seven out of ten municipalities still are not discharging adequately treated sewage.

Nonpoint source pollution has not been confronted; 112 chemicals have been found in the drinking water of New Orleans; wetlands continue to be threatened; massive quantities of sludge are simply dumped into the oceans; cancer mortality is increasing and what we drink is increasingly suspect as the cause; algae clogs thousands of recreational lakes.

Chlorination of water is suspect because of the potentially harmful compounds that are formed in the chlorination process.

Pesticide use will increase by 50 percent by 1984 with potentially serious consequences of runoff to the Nation's waters.

And in my own State of Minnesota, on beautiful Lake Superior—the world's largest freshwater lake—another 67,000 tons of taconite tailings would be dumped into the lake today as they have been daily for nearly 22 years.

The challenge of clean water for all Americans remains. The Clean Water Act of 1977 continues the commitment of the Congress to restore and maintain the ecological health of our Nation's waters. I solicit my colleagues' favorable support for S. 1972 and thank Senator MUSKIE, Senator STAFFORD, and the other members of the Environment and Public Works Committee for the opportunity to participate in the development of this legislation.

Mr. President, three amendments in S. 1952 are of particular concern to me and I would like my colleagues to have the benefit of their background.

S. 1952 amends section 404 to mandate that all dredging by the Corps of Engineers is carried out in compliance with State water quality standards. The committee report recites the history of the litigation initiated by the State of Minnesota in 1975 to require the corps to dredge consistent with the water quality standards of the Minnesota Pollution Control Agency.

I believe the efforts of the State of Minnesota, through the Minnesota Pollution Control Agency, to insure that the significant dredging activities of the corps in Minnesota are carried out in compliance with MPCA water quality standards are very appropriate and reasonable. Dredging is a major activity in the Nation's waters and the water quality impacts associated with the massive removal and subsequent disposal of bottom sediments in rivers and harbors throughout the United States are of great significance, and, can be mitigated with appropriate planning and operational techniques. The on-land or confined disposal of dredge spoil, versus the predominant practices to date of open water disposal, is available in almost all instances at a cost that is not prohibitive.

The necessity of the States having the authority to require on-land disposal of dredge spoil becomes more apparent each day as new substances are discovered which are carcinogenic, mutagenic, or teratogenic. Many of these substances have made their way into the environment and are dormantly locked in the sediments of our lakes and rivers, including areas where the corps dredge to maintain navigation. Dredging obviously disturbs the pollutants in bottom sediments and again gives them an opportunity to enter the ecosystem.

An excellent example of the problems of unregulated dredging and dredge spoil disposal is the case of polychlornated biphenyls, PCB, concentrations that have been found in the Duluth-Superior Harbor and along the Mississippi River. It is essential in these locations for the corps to periodically dredge to maintain the navigation channel, but it makes little sense to then dispose of the spoil by returning it to the waterway. In this case, as with other pollutants, disposal in a lake, river or harbor simply allows the PCB's another chance to make their way into the fatty tissues of fish and potentially into human beings.

The amendment adopted by the committee recognizes that the capability of the corps to comply with State water quality standards, and other State and local procedural and substantive requirements, is influenced by the availability of funds for mitigation technology to the corps. As the committee report indicates, corps dredging must be approached with the same general philosophy that the 1972 act uses for other discharges. That is, if a mitigation technology is available at a reasonable cost, it must be utilized. Certainly it is beyond the budgetary capability of the corps to provide on-land or confined disposal of all dredge spoil in all locations in the United States. However, several corps district offices, including the St. Paul district, have requested and received funds for these practices to date. Pursuant to this amendment, the corps will be required in many instances by the States to expend additional funds to protect water quality. The committee report supports funds for this purpose and has determined that it is the responsibility of the Secretary of the Army to seek funds from the Congress, with the support of the Environmental Protection Agency.

This amendment to section 404, is neither intended nor will result in compromising the ability of the corps to maintain navigation as some have maintained. The permit program in the 1972 act provides ample opportunity for the corps to obtain relief from water quality standards in those cases where compliance is not economically feasible or is not required from a water quality perspective. Also, the States like Minnesota that have taken administrative and judical action to seek corps compliance with water quality standards, have a comparable interest in the movement of commerce on waterways maintained by the corps by dredging. I am confident that the States will act both to insure compliance with water quality standards and continued corps dredging activities. Finally I share the view of Justices Stevens, Rehnquist, and Marshall in their dissent to the Supreme Court's decision not to review Minnesota against Callaway. The justices said, in part, "Section 404 simply provides that dredging permits are issues by the Army Corps rather than the EPA. It says nothing about any exemption from State water pollution regulation." (45 U.S.L.W. 3706, 1977) I agree and so did the committee. This amendment leaves no question that the Corps of Engineers must comply with State water quality standards when dredging in Minnesota and across this country.

The committee also amended the marine sanitation device section to require that sanitation devices on commercial ships meet or exceed secondary treatment requirements. The committee did not go as far as I recommended on this matter but at least on the Great Lakes for commercial vessels the treatment of sewage from vessels will be improved.

The States of Michigan, Minnesota, and Wisconsin all enacted statutes prior to the 1972 Federal Water Polution Control Act requiring all vessels in intrastate and interstate waters to be equipped with marine sanitation devices that retained all vessel wastes, for subsequent disposal on-shore through a pumpout facility. Because of the difficulties these and other States encountered in enforcing their regulations in interstate waters, particularly on commercial vessels, these States petitioned the EPA to enact Federal standards.

Prior to enactment of the 1972 act, the EPA, acting pursuant to prior authority, promulgated regulations (40 C.F.R. 140) to control marine sanitation devices. These regulations eventually required all vessels to be equipped for no-discharge of wastes. Later, pursuant to section 312 of the 1972 act, these regulations preempted the authority of States to enforce State regulations. Testimony by the Minnesota Polution Control Agency and Michigan Department of Natural Resources at the Duluth field hearing, indicated that both States did not oppose the preemption of State authority in section 312 because then current EPA regulations, and assurances at that time to the States by the EPA and Coast Guard, all pointed toward no-discharge for all vessels. No-

discharge is particularly important to the Great Lakes States because of the large number of commercial vessels on the Great Lakes passing through recreational waters.

These Great Lakes States were disappointed when in June 1974, the EPA reconsidered its regulations, indicating a willingness to discuss the use of "flow-through treatment" or non-detention devices, when in January 1975, the Coast Guard promulgated regulations pursuant to Section 312 that permitted flow-through devices, and when in January 1976, the EPA amended its regulations to allow the discharge of vessel wastes in coastal waters, the Great Lakes and on navigable interstate waters, while retaining no-discharge requirements on land-locked bodies of water. The EPA and Coast Guard justified these regulations because of the cost of retrofitting existing vessels and the inadequate number of pumpout facilities, particularly for commercial vessels engaged in interstate and foreign commerce.

The States of Michigan, Minnesota, and Wisconsin subsequently exercised their prerogatives under section 312(f), that permits the Administrator to declare no-discharge zones where sufficient pumpout facilities exist or where the waters under such consideration require special protection. These States, confronted with Federal regulations that were less stringent than their own requirements that were now preempted, accordingly appealed to the EPA to declare their waters zones of no discharge.

From the record of the Michigan, Minnesota, and Wisconsin experiences with the section 312(f) provision, it is apparent to me that these States have been denied protection of their waters by both the EPA and Coast Guard regulations and the 312(f) procedure. All but one petition, filed pursuant to section 312(f)(3) and (4) have been denied by the EPA because of the lack of pumpout facilities. The State of Minnesota suggested in testimony to the committee that the EPA denial of no-discharge zones for Lake Superior and other waters from a lack of pumpout facilities is ironic since these pumpout facilities are not required when vessels, pursuant to EPA and Coast Guard regulations, need not install holding tank equipment. Also, I agree with the concerns of these States that many of these devices, particularly for large volume commercial vessels, do not meet the secondary treatment requirements of on-shore treatment works.

The situation in 1977 with the regulation of marine sanitation devices, particularly on the Great Lakes, in short, is not at all satisfactory to the States of Michigan, Minnesota, and Wisconsin. Speaking for these upper Great Lakes States, the Minnesota Pollution Control Agency at the Duluth hearing testified as follows:

> The Agency feels that the Federal regulations on vessel wastes are, at best, inadequate. Where discharge is allowed, effluent standards are not at the secondary treatment level—the level required for shorebased industries and cities. What is more, there are no monitoring, testing, or reporting requirements to insure proper operation and maintenance of "flow-through treatment" devices. Despite the fact that federal regulations were designed to promote a unified regulatory approach, the situation on the Great Lakes is the same as it was six years ago, but with an additional set of federal regulations involved. Parts of Lake Michigan and Superior are now no-discharge (along with land-locked lakes) and under state control, while the rest of the Great Lakes are currently under federal flow-through regulations, subject to further state petitions.

The States of Michigan and Minnesota recommended to the committee that section 312 should be clarified and that a uniform enforceable Federal vessel waste regulation of no-discharge on all waters be enacted. These States contend that their recommendation was the stated goal of the EPA at the time of the enactment of the 1972 act and the only reasonable, workable standard for the control of vessel wastes. These States suggest a no-discharge requirement would end the confusion and conflict which currently exists between the States and the Federal Government.

The committee was sympathetic to the position of these Great Lakes States and acted in part to assist them. In retrospect, the developments since the 1972 act do call into the question the preemption of State authority to regulate marine sanitation devices by section 312 and the absence in section 312 or the legislative history of direction to the EPA and Coast Guard by the Congress to implement, in the regulations authorized by section 312, the standard of no-discharge that was the goal of regulations in force at the time of enactment.

The Environment and Public Works Committee has been reluctant to preempt State authority in any matters affecting the health and safety of the public. In the setting of water quality standards, pursuant to this and earlier Federal water pollution legislation, the States are permitted to enact more restrictive requirements than those of the Federal Government. Elsewhere in S. 1952, the committee amended section 313 and 404 to make it abundantly clear that the activities and discharges of the Federal Government are not outside the jurisdiction of State substantive and procedural requirements. Consequently, the preemptive effect of section 312 of the 1972 act was carefully considered by the committee. but enacted to insure a uniform system of regulation of a class of dischargers, particularly susceptible to varying State requirements.

While the logic of the States of Michigan and Minnesota are in recommending enactment of a no-discharge standard cannot be easily dismissed, the committee recognized that since the 1972 act, thousands of recreational and commercial vessels have been constructed and retrofitted to comply with the EPA and Coast Guard regulations. The manufacturers and owners of those vessels acted in good faith to build or renovate their vessels to comply with Federal regulations. The committee determined that, at this time, to enact a no-discharge requirement for all existing and new vessels, would not be equitable, notwithstanding the regulatory advantages of such a standard. I accept this judgment and hope that the amendments that were adopted will assist in improving the quality of wastewater treatment onboard vessels on the Great Lakes.

On the clean lakes program, the 1972 Senate report on the clean lakes section of the Federal Water Pollution Control Act said, in part:

> In many areas of the nation, freshwater lakes and reservoirs are seriously degraded by municipal-industrial pollutants, by agricultural runoff, and by accelerated sedimentation. These pollutants greatly accelerate the rate of eutrophication . . . Excessive eutrophication, accumulated sludge and other pollutants, reduced flow and severe water level fluctuations, and heavy sedimentation all are contributing to critical conditions which must be remedied promptly if the lakes are to recover and continue their natural function in our national life.

The 1972 act recognized the urgent need for a lake improvement program to restore the significant number of the Nation's 95,000 freshwater lakes that were in a eutrophic and deteriorated condition. The clean lakes program was conceived to respond to this problem. The Environment and Public Works Committee and the Congress, in enacting the clean lakes program as part of the 1972 act, joined the author and tireless supporter of this program, then Senator from Minnesota, now the Vice President of the United States, WALTER F. MONDALE, in expecting the EPA to restore freshwater lakes. During the debate on the Senate legislation on November 2, 1971, Senator MONDALE said of the clean lakes program:

> For the magnificent freshwater community lakes of this country are threatened now with destruction and this legislation is designed to prevent that destruction. I am hopeful that it will be fully funded and that we will begin, at long last, to save this irreplacable resource for our country.

Nearly 5 years have passed since Public Law 92–500 went into effect. The hopes and expectation of the Congress for lake restoration programs have not even begun to be realized. The EPA has shown little interest nor given even a modest priority to the clean lakes program. Only 15 percent of the 95,000 freshwater lakes of this country have been investigated pursuant to section 314. The EPA has not requested any of the research funds authorized for lake pollution. The EPA's approach to the clean lakes section is simply summarized in the level of appropriations for lake restoration to date. Only $40.3 million has been appropriated since fiscal year 1975.

In fact, neither the Nixon nor Ford administrations ever requested funds for the clean lakes program. Of the funds appropriated through fiscal year 1977, the EPA has only allocated $19 million. With tens of thousands of lakes in a condition warranting the use of clean lakes project grants, the EPA has only funded 54 projects to date. With the discouraging lack of interest by EPA in this program, I am nonetheless encouraged that 54 lake restorations projects were in a position to qualify for these grant funds.

My concern for the poor record of the EPA in implementing section 314 and my interest in hearing directly from individuals involved in lake restoration

projects, resulted in a panel discussion on section 314 at the Alexandria, Minn., public hearing. The panelists confirmed both that section 314 provided an adequate framework for a successful lake restoration program, and, that the EPA, to date, has seen fit to all but neglect this program. The hearing record from the Alexandria panel clearly demonstrated to the committee that there is great interest in lake areas in the restoration and preservation of degraded freshwater lakes, that the clean lakes grants that have been made have had some impact and that additional research and demonstration efforts are necessary so to successfully implement clean lakes projects, especially in urban areas.

The committee in the report expressed its disappointment to the Administrator regarding the implementation of the clean lakes program since 1972. I believe that the basic structure of 314 is adequate. The amendments to this section were suggested in testimony before the committee and intended to correct two inadequacies of the program.

I share the hope of the committee that these amendments and the language in the report will result in an expanded clean lakes program as a high priority program for the U.S. Environmental Protection Agency.

Mr. President, I yield to the Senator from Rhode Island for the purpose of submitting a conference report, without relinquishing my right to the floor.

Mr. RANDOLPH. Mr. President, the Senator from Maine (Mr. MUSKIE), who is the chairman of our Subcommittee on Environmental Pollution, has presented in detail the provisions of this legislation.

This vitally important measure was marked up by the full Environment and Public Works Committee. The basic work, however, was carried out by our Subcommittee on Environmental Pollution under the able direction of Senator MUSKIE. Again, I commend him for his dedication to environmental matters and for his efforts to achieve a reasonable, balanced, and workable program.

As always, the committee has been greatly facilitated in its work by the cooperation and shared concern expressed by our minority members. Senator STAFFORD, the ranking minority member of the committee, who has spoken, has been particularly helpful in moving this legislation forward.

The extensive hearings and committee meetings to develop this bill were well attended by the members and I commend them for their concern. Their participation was extensive and constructive, and I extend my appreciation to Senators GRAVEL, BENTSEN, BURDICK, CULVER, HART, ANDERSON, MOYNIHAN, BAKER, MCCLURE, DOMENICI, CHAFEE, and WALLOP.

The Members are always appreciative of the work of the committee staff in the preparation of legislation. In the development of this bill, I am particularly gratified by the contributions of John Yago, Leon Billings, Philip Cummings, Bailey Guard, Judy Parente, John Freshman, Sally Walker, Richard Harris, Jacqueline Shaffer, Richard Herod, James Range, and Paul Chimes.

Mr. President, the Clean Water Act of 1977 is a major adjustment of the program established with enactment of the Federal Water Pollution Control Act of 1972. When that measure became law 5 years ago we anticipated that it would be necessary to make adjustments such as those represented in the bill before the Senate today. The Committee on Environment and Public Works has carefully reviewed the implementation of the 1972 act. We have developed these amendments in response to that implementation and the events of the past 5 years.

The bill addresses issues in all water pollution areas—inland as well as marine, industrial as well as municipal, toxic substances as well as conventional pollutants, large cities as well as small communities. In each of these areas we have proposed modifications of the basic act to strengthen its ability to respond to needs in various facets of our society. As reported, the bill provides the means to continue progress in reducing water pollution through a fair, flexible, and workable program.

In anticipation of the need to adjust the program, the 1972 act provided for the establishment of the National Commission on Water Quality. I was privileged to serve as a Senate member of that Commission together with Senators MUSKIE, BENTSEN, BAKER and former Senator Buckley. During its 3-year existence, the National Commission on Water Quality, under the chairmanship of Nelson Rockefeller, examined both the long-range objectives of the water pollution program and the mechanism and timetables we established for achieving them. The bill before the Senate today reflects many of the findings and recommendations of the Commission.

The Committee on Environment and Public Works did not adopt each of the Commission's proposals, but we did find that its work was helpful in helping us to focus on particular problems and to devise solutions to them. Without the efforts of the Commission, the committee would have faced a much more difficult task in bringing this legislation to the Senate.

A major feature of the water pollution control program is the Federal grants to assist local communities in the construction of sewage treatment systems. The backlog of needs for these systems remain high and the cost of building them is far beyond the capacity of local governments, even some State assistance. The 1972 act, therefore, provided 75 percent of the construction cost should come from Federal funds. The $18 billion authorized in 1972 has been largely committed with the result that substantial progress has been made in reducing the discharge of pollutants in the waters of the United States. The Clean Water Act of 1977 continues the construction grant program. It authorizes $3.5 billion to supplement the $1 billion already appropriated for fiscal year 1977. The bill authorizes $4.59 billion for each of the next 5 fiscal years. These authorizations will permit long-term planning for development of new treatment facilities.

The committee considered various means for the distribution for these funds, including those based on need, those based on population and various combinations of the two approaches. The formula in the bill as reported by the committee is a combination of both needs and population and is intended to avoid inequities in the distribution of funds solely on the basis of population or needs. The bill also provides that a minimum amount go to smaller States.

In the allocation of funds to the States, the bill recognizes that encouragement must be given to the development and construction of alternative methods of sewage treatment. The United States has traditionally relied on centralized treatment plants served by widespread collection networks. In many instances these are neither the most effective nor least costly method of resolving the problem. The bill, therefore, encourages the consideration and implementation of alternative systems.

Committee members gave particular concern to the high construction and operating costs that some communities, particularly smaller communities, have encountered by adopting conventional treatment systems. Alternative technologies should provide these communities with options which will enable them to meet basic needs without placing unnecessary financial burdens on the people of the community.

To encourage the alternative systems approach, the bill contains a section sponsored by Senator STAFFORD and myself which requires specific amounts to be earmarked for alternative systems. For those 34 States in which the total population is more than 25 percent rural, the Administrator of the Environmental Protection Agency would set aside at least 5 percent and up to 10 percent of those States' grant allocations. This money would be used exclusively for alternative treatment systems. This would not prohibit States from using an even greater percentage of Federal allocation for alternative systems, nor would it prevent States with smaller rural populations from making the same use of their construction grant funds.

This earmarking of funds is closely related to another section of the bill which I sponsored. That provision would permit the Environmental Protection Agency to make grants to individuals for the installation of individual treatment systems in homes and small commercial establishments. Such grants are intended to resolve pollution problems in rural and lightly populated areas where conventional collection and treatment systems are not suitable. The Appalachian Regional Commission has conducted a demonstration program in Boyd County, Ky., which has shown that individual and cluster systems are a realistic means of meeting rural sewage treatment needs.

This section of the bill authorizing grants to individuals corrects an impediment in existing law. While grants can be made for individual and cluster systems, they cannot be made to individuals. The proposed change would permit these awards to individuals but

only if the applications are made through a public body which then must assume the responsibility for proper maintenance and operation of the systems.

Mr. President, I think such a program as envisioned with alternative systems will contribute to the reduction of overall costs in the construction grant program.

For many years, we have relied so extensively on conventional systems that in many areas little is known about other methods. The bill, therefore, contains another provision I sponsored which would direct the Environmental Protection Agency to establish a clearinghouse for information on alternative systems. Such a clearinghouse would collect and disseminate information on the types of technology that are available and how they can be applied to various situations. This, I believe, is another means of encouraging the use of alternative treatment systems.

Mr. President, as a Senator from the Nation's second most rural State, I am naturally concerned with the problems of small communities in meeting the objectives of the water pollution control program. As with many Federal programs in the water pollution area, there are substantial administrative requirements—redtape—in the distribution of construction grant funds. Small communities, particularly, are ill-suited to cope with the administrative and regulatory requirements of the program. At the present time, approval in three steps is required of applications for municipal treatment facilities. The first of these is initial planning, followed by the design of the system and finally actual construction.

In recent years, there has been a move toward standardized facilities, particularly for smaller communities. The committee, therefore, believes that the process could be streamlined by the combination of steps two and three in smaller communities. Such authority is provided in the bill for those projects costing less than $2 million and which will serve a population of less than 25,000. An exemption is made for States like Alaska in which construction costs are considerably higher than average. In those States, the step two and three combination is available for those projects costing less than $3 million. This provision will not only remove much of the frustration and take away a major burden of small communities, many of them functioning with only part-time officials, it can also accelerate the construction program and the reduction of pollution.

Mr. President, one of the most extensively debated sections of this bill is that relating to the types of facilities which are eligible for Federal assistance under the construction grant program. The Environmental Protection Agency proposed removing collector sewer systems from eligibility. The Committee on Environment and Public Works rejected this recommendation. The bill continues eligibility for collector sewers under limited conditions.

I recognize that under the existing program. there may have been abuses in some States and communities which utilized funds for excessive construction of collector sewers. In many areas, however, it is impossible to build a treatment system without assistance for the total sewer system. I turn to the State of West Virginia as an example. My State generally has a widely-dispersed population and extensive sewer lines are needed for the system to function. The cost is so high that sewage plants cannot be built if local funds must be relied on for all of the sewers. In West Virginia, in fact, it has been estimated that approximately three-quarters of the cost of building treatment systems is attributable to the sewers themselves. Without Federal assistance for collector sewers, many communities in my State simply would be unable to participate in the program and would be forced to continue without pollution abatement facilities.

The committee, therefore, decided to continue collector sewers as an eligible item. Federal funding is available when collector sewers are intended to serve an existing population, when there will be adequate treatment capacity to serve the sewers, and when they are necessary to protect water supplies and when there are no less cost efficient alternatives.

Excessive construction of collector sewers also will be controlled by other provisions in the bill which restrict the reserve capacity of treatment systems. Sewers, for instance, may be constructed to accommodate the anticipated need for the next 20 years, whereas treatment plants can be constructed with a reserve capacity of up to 10 years. Both of these requirements, again, will prevent overconstruction and thereby excessive costs to communities for operation and maintenance.

I refer again to the emphasis on alternative treatment systems to stress that their use should reduce the need for the construction of extensive sewage networks.

Mr. President, I have spoken on several occasions to the difficulty faced by communities in financing sewage treatment projects to reduce pollution. I turn again to the State of West Virginia where many municipalities and public service districts have been frustrated in their efforts to comply with the law. Until recently, they found it extremely difficult and in some cases impossible to raise the necessary 25 percent local share to qualify for Federal assistance. Now the strain is no longer so great. The West Virginia Water Development Authority has developed its own program to assist communities in raising the local share. All the communities, for instance, are now eligible to receive 5 percent of the costs from the Water Development Authority.

In addition, under hardship conditions, the State can provide up to 15 percent grants in addition to the basic 5 percent. Therefore, the State can, in some instances, pay 20 percent of the cost to qualifying communities. More recently, the West Virginia Water Development Authority has begun loans to communities to make up their local share.

A program such as this combines Federal, State, and local efforts and is permitting West Virginia to move ahead more rapidly than it has in past years in meeting its responsibilities under the Water Pollution Control Act. I commend the State for its forward-looking approach to this problem and suggest that others may wish to examine what has been done in West Virginia.

Mr. President, one of the most difficult and controversial issues is that relating to the regulation of the disposal into the waters of dredged and fill material. This issue was extensively debated last year and again earlier this year.

The situation arose from judicial and administrative interpretation of the provisions of section 404 of the Water Pollution Control Act of 1972. These actions greatly expanded the authority of the Army Corps of Engineers to regulate the placement of dredged and fill materials in the Nation's waters. As a result, there has been widespread concern that many activities that are normally considered routine would be prohibited or made extremely difficult because of the complex regulatory procedure.

Last year, in developing the water pollution bill, Senator BAKER and I sponsored a provision to give congressional direction to the regulatory program now carried out solely by the Corps of Engineers. This proposal was adopted by the committee and by the Senate. Unfortunately, however, the conference on the water pollution bill was not concluded before the end of the 94th Congress.

The Committee on Environment and Public Works has, therefore, approached this problem again and has devised a realistic and workable way of protecting our Nation's waterways from contamination by the disposal of dredged and fill materials. The section of the Clean Water Act of 1977 addressing this subject is similar to that in last year's bill.

The committee bill recognizes that there should be no gaps in the effort to protect our Nation's waterways from contamination. For that reason, a broad program of control is provided and permits for the discharge of dredged and filled material are required. Parts of the program would continue to be administered by the Army Corps of Engineers, but the bill provides for the assumption by the States of substantial portions of the permit program.

To facilitate the carrying out of routine activities, our bill specifically states that permits are not required for such activities as normal farming, silviculture or ranching, some mining and construction activities. The exemption of these activities from permit requirements will greatly simplify the administrative process and reduce the potential redtape burden.

I emphasize, Mr. President, that while silvicultural activities are exempted from permit requirements, this exemption does not extend to clearcutting in eastern mixed hardwood forests. Clearcutting has resulted in extensive damage to the land and pollution of streams where it is practiced. The committee report, therefore, specifies that clearcutting in eastern mixed hardwood forests is not a normal silvicultural activity and thereby is subject to the permit requirements of the act. I personally believe that in those instances when clearcutting is practiced that it must be done only under the most

careful supervision and control so that the adverse effects of this regrettable practice will be kept to a minimum.

The permit program also is simplified by providing for general permits which could be issued on a regional or national basis for classes of activities.

I believe that the committee has developed a realistic response to a very difficult and complex problem. I hope the Senate will give its endorsement to our work in this respect.

Mr. President, the 1972 act established deadlines for the achievement of certain goals. By July 1, 1977, it was required that both municipal and industrial dischargers would have installed the best practicable treatment technology. It was anticipated that such installation would greatly reduce the amount of pollution being emptied into our waterways.

Neither all municipal nor all industrial dischargers met this goal for a variety of reasons.

A major obstacle to the municipalities was the lack of Federal funds. Although $18 billion were provided in the 1972 act for Federal assistance, much of this money was impounded by the executive branch during the early years of the program. Its subsequent release sometimes was too late to be utilized by municipalities to meet the 1977 deadline. In addition to the shortage of funds, there are other extenuating circumstances which prevented the achievement of this goal. As a result, only about half of the municipalities met the 1977 deadline.

The record with respect to industry is considerably better. Of the 4,000 major industrial dischargers, nearly 90 percent achieved the 1977 objective for installing the best practicable treatment technology. As a result only about 600 industrial sources are now in violation of the 1977 deadline. Action will not be taken against many of these sources, many of which are not in compliance because of reasons beyond their control.

With respect to municipalities, the committee agreed that circumstances were such that an extension of the time to meet the 1977 deadline was required and such an extension is provided on a case-by-case basis under specified conditions.

The committee was more reluctant to provide relief for industry, although recognized that in some instances there were conditions beyond the control of industry sources which prevented them from attaining the 1977 standard. I raised this issue of industrial extensions before the committee and proposed that extensions be granted in those instances where a good faith effort had been made to meet the 1977 deadline. The provision of the bill on this subject reflects the committee's acknowledgement that some relief is required in those instances where industry could not meet the goals despite their best efforts and for reasons that were not always within their control. This provision is based on the existing act and provides the Environmental Protection Agency with two methods to provide relief for industrial dischargers. The first allows the Administrator to issue an order to comply within a reasonable time. The second option provides up to 18 months' extension of the 1977 deadline where the Administrator finds that the discharger acted in good faith, where he finds it a serious commitment to achieve compliance has been made, that the extension will not impose additional controls on other sources and that an application for a permit was filed before December 31, 1974, and that the necessary facilities for abatement are under construction.

There was considerable discussion in the committee as to the type of commitment to providing pollution control facilities that an industry must have undertaken to qualify for a permit. It is my belief that the commitment of resources to an abatement program meets the requirements of this provision. The initiation of plans, hiring of technical personnel, approval of permits, and the commitment of financial resources all should be taken as meeting the requirements of this section. In some instances, physical construction may not have begun, but this should not be considered as failure to meet one of the requirements.

In some instances, industries are working on approved compliance schedules that do not require construction until sometime in the future. The requirement that abatement facilities be under construction in order to receive an extension of the deadline need not be interpreted as requiring that actual physical activities be underway.

Mr. President, this is a broad bill covering all water pollution issues. It is the result of extensive hearings, consultations and deliberations by the Committee on Environment and Public Works. It continues the important effort that we began in 1972 and the necessary adjustments to make this program compatible with contemporary needs. I hope that it can be enacted and that a conference with the House of Representatives can be completed in the shortest possible time to remove the uncertainties that are faced by many public and private groups throughout the country. Of particular importance is the construction grant program. Federal funds for this activity are nearly exhausted. The program is being continued solely on a $1 billion appropriation that was adopted earlier this year. We must enact this legislation so that the construction grant program can continue in an orderly fashion and so the States and local communities can begin planning for their long-range pollution control programs. The people of America will be benefited by its passage.

Mr. GRAVEL. Mr. President, clean water is a motherhood issue. Who can be against it? Who does not want it now and in the future? Who does not want to see fish return to the Great Lakes, and never be threatened in now pristine areas? If that were the only question, Senators MUSKIE and STAFFORD, the able managers of the bill, and Senator RANDOLPH, the fine chairman of the Environment and Public Works Committee, would not have had to toil as they did. But toil they did.

Was there any difficulty in marking up the committee bill, in bringing to the floor the first amendments to the 1972 Federal Water Pollution Control Act amendments? Because the question is not whether we want clean water, but how do we attain it and preserve it? What standards do we set to assure clean water that can be met by technology and by the treasuries of large and small companies alike? How much should we have to pay for it, and how will we pay for it? Should exceptions to the general requirements be granted, and if so, on what basis to assure clean water and equity for all others concerned? What areas of the thrust toward clean water should the Federal Government finance, and to what extent? To what extent should the Government, and at what level, regulate activities that are viewed by some as minor, and by others as major? How do we accommodate those who want to use the waters for recreational or aesthetic purposes with those who need the water for agricultural or industrial purposes?

Mr. President, these are the types of questions that make Senator MUSKIE and Senator STAFFORD and Senator RANDOLPH have a difficult time in reporting out a clean water bill. These are the issues that each and every Member has to wrestle with, to appreciate, to decide upon, even if a particular issue does not directly affect his constituency. And they are all issues on each side of which there are strong feelings. That also makes it difficult for all of us, both on the committee and on the floor today.

Mr. President, the true significance of the Clear Water Act, the midcourse correction of the 1972 water law, is that most of the current law will remain intact. The law has worked. Water is getting cleaner through the largely commendable efforts of industry and despite the politics of vetoing construction grant funding. EPA, in most respects, has been able to function in its issuance of guidelines and permits.

Experience has shown that changes are in order, however, and the committee was willing to wrestle with some 60-odd issues in trying to fine-tune the act to address those problems that remain. Some municipal extensions are in order. Some waivers for traditional pollutants are in order that will not make it necessary for industry to install additional pollution control equipment merely for the sake of meeting the 1983 standard. The waivers will be limited, but they will be granted to those who can make a showing that basic environmental and economic concerns are met. Some municipalities that discharge into the coastal waters and saline estuarine waters with strong tides and currents may obtain waivers from the secondary treatment standard if they can show basic environmental concerns are satisfied. Some extensions of the 1977 requirements for industry may be granted for limited periods of time and in cases of good faith attempts to comply—some will have to accept delayed compliance penalties. The rum distillers in the Virgin Islands and Puerto Rico and the seafood processors, many of them in Alaska, will be reviewed to determine whether there is justification to exempt them from the 1977 standards. These provisions are a credit to the committee's ability to strike a balance between environmental protection and recognition

of the complications of what we affectionately call civilization.

Changes in the discharge of dredge and fill materials were addressed. Problems of lake freighters on the Great Lakes were addressed. Fears of many States were allayed when Federal agencies were required to conduct their activities in accordance with State environmental law. Small communities were assured funds to address problems of dispersed populations and limited tax bases. Innovative systems were allowed to be constructed in small communities on a house-by-house basis. Rural villages in Alaska will be studied to determine appropriate methods of providing adequate sanitation services. Local communities will have some control over the method used to assure the funds necessary to operate and maintain plants constructed by Federal funds.

Not only were errors in the system corrected, but new directions were given. Emphasis will now be placed on attacking the pernicious problem of toxics that are so pervasive. No more will we tolerate, nor require our citizens to be subjected to, the wanton and mindless discharge of dangerous toxics and carcinogens. The Clean Water Act will assure more rapid action in this area, while preserving the due process rights of those who are polluting.

Mr. President, the Clean Water Act is legislation we can all be proud of. It is a well conceived approach to a difficult set of problems, the solution of which will assure some significant progress toward continuing the clean-up and protection of our Nation's waters. The committee has taken some difficult steps to handle some tough questions. All the better to assure the motherhood status of clean water.

I urge all my colleagues to support the Clean Water Act of 1977.

ARMS CONTROL AND DISARMAMENT ACT AMENDMENTS—CONFERENCE REPORT

Mr. PELL. Mr. President, I submit a report of the committee of conference on H.R. 6179 and ask for its immediate consideration.

The PRESIDING OFFICER (Mr. SARBANES). The report will be stated.

The legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 6179) to amend the Arms Control and Disarmament Act to authorize appropriations for fiscal year 1978, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by all of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the RECORD of August 3, 1977.)

Mr. PELL. Mr. President, on June 16, the Senate approved this legislation by a unanimous rollcall vote, 82 to 0, and the committee of conference has accepted the Senate bill.

Mr. President, I believe that the Arms Control and Disarmament Act Amendments of 1977, is an excellent piece of legislation. It authorizes $16,600,000 in expenditures for the Arms Control and Disarmament Agency in fiscal year 1978, and includes provisions which will increase the activities and effectiveness of the Agency in a number of important areas.

I urge that the Senate adopt the conference report.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The conference report was agreed to.

CLEAN WATER ACT OF 1977

The Senate continued with the consideration of S. 1952.

The PRESIDING OFFICER. Who yields time?

Mr. ANDERSON. Mr. President, I suggest the absence of a quorum, and ask unanimous consent that the time consumed by the quorum call be equally divided between the two sides.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. MUSKIE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

JOINT REFERRAL OF LEGISLATION AFFECTING THE BUDGET PROCESS

Mr. MUSKIE. Mr. President, I send a unanimous-consent request to the desk.

Mr. President, I ask unanimous consent that legislation affecting the congressional budget process, as described below, be referred jointly to the Committees on the Budget and on Governmental Affairs. If one committee acts to report a jointly-referred measure, the other must act within 30 calendar days of continuous possession, or be automatirally discharged.

Legislative proposals affecting the congressional budget process to which this order applies are:

First. The functions, duties, and powers of the Budget Committee—as described in title I of the act;

Second. The functions, duties, and powers of the Congressional Budget Office—as described in title II and IV of the act);

Third. The process by which Congress annually establishes the appropriate levels of budget authority, outlays, revenues, deficits or surpluses, and public debt—including subdivisions thereof. That process includes the etablishment of: mandatory ceilings on spending and appropriations; a floor on revenues; timetables for congressional action on concurrent resolutions, on the reporting of authorization bills, and on the enactment of appropriation bills; and enforcement mechanisms for the limits and timetables, all as described in titles III and IV of the act.

Fourth. The limiting of backdoor spending device—as described in title IV of the act;

Fifth. The timetables for Presidential submission of appropriations and authorization requests—as described in title VI of the act;

Sixth. The definitions of what constitutes impoundment—such as "rescissions" and "deferrals," as provided in the Impoundment Control Act, title X;

Seventh. The process and determination by which impoundments must be reported to and considered by Congress—as provided in the Impoundment Control Act, title X;

Eighth. The mechanisms to insure Executive compliance with the provisions of the Impoundment Control Act, title X—such as GAO review and lawsuits; and

Ninth. The provisions which affect the content or determination of amounts included in or excluded from the congressional budget or the calculation of such amounts, including the definition of terms provided by the Budget Act—as set forth in title I thereof.

This consent agreement has been worked out carefully by Senator RIBICOFF, who is chairman of the Government Affairs Committee, by Senator PERCY, who is ranking Republican, by myself as chairman of the Committee on the Budget, and by Senator BELLMON as ranking member of the Budget Committee. The attempt is to divide between the two committees those legislative proposals which made an impact on the budget process without denigrating the Committee on Government Affairs general jurisdiction over such budgetary matters. It has been cleared by both committees. It has been examined by the majority leader. I ask for its approval.

The PRESIDING OFFICER. Is there objection?

Without objection, it is so ordered.

Mr. MUSKIE. Mr. President, as chairman of the Senate Budget Committee, I express my appreciation to the distinguished majority leader for his cooperation in the formulation of this unanimous consent agreement with respect to joint referral to the Budget Committee and the Committee on Governmental Affairs of legislative matters affecting the congressional budget process. The distinguished chairman of the Governmental Affairs Committee, Senator RIBICOFF, and his ranking minority member, Senator PERCY, have worked closely with me and Senator BELLMON, the ranking minority member of the Budget Committee, to reach agreement on an appropriate referral of legislation that affects the congressional budget process.

Under these circumstances, we have agreed that legislative proposals to revise the congressional budget process could best be referred to our two committees jointly, with the proviso that if one committee orders the bill reported, the other must report within 30 calendar days of continuous session or be automatically discharged.

The subjects to which we wish joint referral to apply are:

First. The functions, duties, and powers of the Budget Committee—described in title I of the act.

Second. The functions, duties, and powers of the Congressional Budget Office—as described in title II and IV of the act.

Third. The process by which Congress annually establishes the appropriate levels of budget authority, outlays, revenues, deficits or surpluses, and public debt—including subdivisions thereof. That process includes the establishment of: mandatory ceilings on spending and appropriations; a floor on revenues; timetables for congressional action on concurrent resolutions, on the reporting of authorization bills, and on the enactment of appropriation bills; and enforcement mechanisms for the limits and timetables. All as described in title III and IV of the act.

Fourth. The limiting of backdoor spending devices—as described in title IV of the act.

Fifth. The timetables for Presidential submission of appropriation and authorization requests—as described in title VI of the act.

Sixth. The definitions of what constitutes impoundment—such as "rescissions" and "deferral," as provided in the Impoundment Control Act, title X.

Seventh. The process and determination by which impoundments must be reported to and considered by Congress—as provided in the Impoundment Control Act, title X.

Eighth. The mechanisms to insure Executive compliance with the provisions of the Impoundment Control Act, title X—such as GAO review and lawsuits, and

Ninth. The provisions which affect the content or the determination of amounts included in or excluded from the Congressional Budget or the calculation of such amounts, including the definition of terms provided by the Budget Act—as set forth in title I thereof.

We have consulted with the distinguished majority leader and minority leader on the appropriate form for the joint referral. At this time, I express my appreciation to the leadership on both sides of the aisle for their cooperation in this matter.

We have agreed that legislation affecting the congressional budget process as described above shall be referred jointly to the Committees on the Budget and Governmental Affairs, whereupon if one committee acts to report a measure, the other must act within 30 days of continuous session or be automatically discharged.

Mr. President, I believe that this joint referral will expedite the handling of these legislative matters by both the Budget Committee and the Governmental Affairs Committee.

Mr. ROBERT C. BYRD. Let me ask the chairman of the Budget Committee for clarification on this matter. Is it his understanding that the joint referral order covers all matters with respect to impoundment?

Mr. MUSKIE. The distinguished majority leader raises an important point. As a cosponsor and floor manager of the Budget and Impoundment Control Act of 1974, the Senator from West Virginia is keenly aware that Congress adopted title X of the act to establish a structure for decisionmaking on impoundment matters. The procedures are spelled out in the provisions of title X. It is revisions or amendments of title X to which this order is addressed.

Mr. ROBERT C. BYRD. Does the Senator understand this order to include legislative matters which address the constitutional dimensions of impoundments?

Mr. MUSKIE. I recognize that the distinguished Senator from West Virginia, as a member of the Judiciary Committee, has a continuing interest in the separation of powers doctrine. Let me assure the Senator that this order in no way detracts from the jurisdiction of the Judiciary Committee of constitutional matters which may arise with respect to the relationship between the role of the executive and the legislature on impoundment matters. This order simply seeks to recognize the joint interest of the Budget Committee and the Committee on Governmental Affairs in orderly development of any revisions to the congressional budget process.

COMMITTEE MEETINGS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Committee on Human Resources may be authorized to meet until 12 o'clock noon today.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGE FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

APPROVAL OF BILLS AND JOINT RESOLUTION

A message from the President of the United States announced that he had approved and signed the following bills:

On August 1, 1977:

S. 1474. An act to authorize certain construction at military installations, and for other purposes.

On August 4, 1977:

S. 826. An act to establish a Department of Energy in the executive branch by the reorganization of energy functions within the Federal Government in order to secure effective management to assure a coordinated national energy policy, and for other purposes.

S.J. Res. 79. Joint resolution to amend the Federal Home Loan Bank Act.

CLEAN WATER ACT OF 1977

The Senate continued with the consideration of S. 1952.

The PRESIDING OFFICER. Who yields time?

Mr. ANDERSON. Mr. President, I yield 5 minutes to the Senator from Texas.

UP AMENDMENT NO. 726

Mr. BENTSEN. Mr. President, I send an amendment to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Texas (Mr. BENTSEN) proposes an unprinted amendment numbered 726.

Mr. BENTSEN. Mr. President, I ask unanimous consent that reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 65, beginning on line 14, strike out all through line 12 on page 76 and insert in lieu thereof the following:

SEC. 49. (a) Subsection (a) of section 404 of the Federal Water Pollution Control Act (33 U.S.C. 1344) is amended by adding immediately after "navigable waters" the following: "and adjacent wetlands".

(b) Such section 404 is further amended by adding at the end thereof the following new subsections:

"(d)(1) The term 'navigable waters' as used in this section shall mean all waters which are presently used, or are susceptible to use in their natural condition or by reasonable improvement as a means to transport interstate or foreign commerce shoreward to their ordinary high water mark, including all waters which are subject to the ebb and flow of the tide shoreward to their mean high water mark (mean higher high water mark on the west coast).

"(2) The term 'adjacent wetlands' as used in this section shall mean (A) those wetlands, mudflats, swamps, marshes, shallows, and those areas periodically inundated by saline or brackish waters that are normally characterized by the prevalence of salt or brackish water vegetation capable of growth and reproduction, which are contiguous or adjacent to navigable waters, and (B) those freshwater wetlands including marshes, shallows, swamps, and similar areas that are contiguous or adjacent to navigable waters, that support freshwater vegetation and that are periodically inundated and are normally characterized by the prevalence of vegetation that requires saturated soil conditions for growth and reproduction.

"(e) Except as provided in subsection (f) of this section, the discharge of dredged or fill material in waters other than navigable waters and in wetlands other than adjacent wetlands is not prohibited by or otherwise subject to regulation under this Act (except for effluent standards or prohibition under section 307), or section 9, section 10, or section 13 of the Act of March 3, 1899.

"(f) If the Secretary of the Army, acting through the Chief of Engineers, and the Governor of a State enter into a joint agreement that the discharge of dredged or fill material in waters other than navigable waters and in wetlands other than adjacent wetlands of such State should be regulated because of the ecological and environmental importance of such waters, the Secretary, acting through the Chief of Engineers, may regulate such discharge pursuant to the provisions of this section. Any joint agreement entered into pursuant to this subsection may be revoked, in whole or in part, by the Governor of the State who entered into such joint agreement or by the Secretary of the Army, acting through the Chief of Engineers.

"(g) In carrying out his functions relating to the discharge of dredged or fill material

under this section, the Secretary of the Army, acting through the Chief of Engineers, is authorized to issue those general permits which he determines to be in the public interest.

"(b) The discharge of dredged or fill material—

"(1) from normal farming, silviculture, and ranching activities, including, but not limited to, plowing, terracing, cultivating, seeding, and harvesting for the production of food, fiber, and forest products;

"(2) for the purpose of maintenance of currently serviceable structures, including, but not limited to, dikes, dams, levees, groins, riprap, breakwaters, causeways, and bridge abutments and approaches, and other transportation structures (including emergency reconstruction); or

"(3) for the purpose of construction or maintenance of farm or stock ponds and irrigation ditches,

is not prohibited by or otherwise subject to regulation under this Act.

"(i) The discharge of dredged or fill material as part of the construction, alteration, or repair of a Federal or federally assisted project authorized by Congress is not prohibited by or otherwise subject to regulation under this Act if the effects of such discharge have been included in an environmental impact statement or environmental assessment for such project pursuant to the provisions of the National Environmental Policy Act of 1969 and such environmental impact statement or environmental assessment has been submitted to Congress in connection with the authorization or funding of such project.

"(j) The Secretary of the Army, acting through the Chief of Engineers, is authorized to delegate to a State upon its request all or any part of those functions vested in him by this section relating to the adjacent wetlands in that State if he determines (A) that such State has the authority, responsibility, and capability to carry out such functions, and (B) that such delegation is in the public interest. Any such delegation shall be subject to such terms and conditions as the Secretary deems necessary, including, but not limited to, suspension and revocation for cause of such a delegation.

"(k) The Secretary of the Army, acting through the Chief of Engineers, is authorized to delegate to a State upon its request all or any part of those functions vested in him by this section and by sections 9, 10, and 13 of the Act of March 3, 1899, relating to any fresh water lake located entirely within the boundaries of such State (other than such a lake constructed, in whole or in part, by either the Secretary of the Army, acting through the Chief of Engineers, or the Secretary of the Interior) if he determines (A) that such State has the authority, responsibility, and capability to carry out such functions, and (B) that such delegation is in the public interest. Any such delegation shall be subject to such terms and conditions as the Secretary deems necessary, including, but not limited to, suspension and revocation for cause of such a delegation.".

The PRESIDING OFFICER. On this amendment there is a limitation of 2 hours, evenly divided.

Mr. BENTSEN. Mr. President, for 2 years now, the people of America have lived with section 404 of the Federal Water Pollution Control Act as interpreted by the courts and administered by the Corps of Engineers. Mr. President, we can now say with certainty that this is one Federal program that has been weighed in the balance and found wanting. Section 404 has become a symbol to many Americans of how a well-intentioned legislative initiative can turn into a quagmire of disruption, frustration, and bureaucratic entanglement for the ranchers, farmers, foresters, and average citizens of this country.

The message we have heard from the people is clear and unequivocal; they have told us with their letters, their telegrams, their telephone calls, and their personal appeals that they are sick and tired of attempting to cope with the provisions of section 404. With the passage of time, their anxiety has turned to resentment, their concern has become determination.

Section 404 has assumed an importance that extends far beyond dredge and fill activities; it has become synonomous with Federal overregulation, overcontrol, cumbersome bureaucratic procedures, and a general lack of realism. Accordingly, our debate today will be seen by many Americans as a test case in which Congress attempts to come to grips with a blatant example of unwarranted Federal intrusion into the daily lives of millions of Americans, the sort of intrusion that costs us the support of the people as we strive to realize commendable objectives.

Mr. President, it is with regret that I rise to oppose my good friend, the Senator from Maine.

I had hoped that we would be able to report legislation that resolved the problems inherent in section 404, but such is not the case. The committee has failed to recommend any reduction in the scope of the section 404 permit program as interpreted by the courts. It has not addressed the concerns and frustrations so evident to all of us.

Mr. MUSKIE. Mr. President, will the Senator yield for a question?

Mr. BENTSEN. I would be pleased to yield to my distinguished friend who, I think, has done as much for clean water and clean air as any Member of Congress, and I regret to have to oppose him on this one.

Mr. MUSKIE. So I understand.

The PRESIDING OFFICER (Mr. HUDDLESTON). The Senator from Maine.

Mr. MUSKIE. I think it ought to be clear that no Member of the Senate, as far as I know, defends section 404. The Senator knows that I vigorously opposed the interpretation of section 404 which the Corps of Engineers undertook to implement, and the committee undertook in its proposal to meet the objections of section 404 in one way, and the Senator's amendment seeks to meet it in another way. So the contest is really not between those who defend section 404 and those who object to it but rather it is a competition between two different methods of dealing with the problems created by the corps' interpretation of section 404.

I just thought it might be useful to have that point stated.

Mr. BENTSEN. I would say to the Senator from Maine that I think that is a fair statement. But I do not believe the committee proposal really addresses the problem. I think you still have, in effect, a shadow Federal program that is imposed on the people of this country.

The committee's amendment skirts the fundamental problem: the definition of Federal jurisdiction in the regulation of dredge and fill activities. The program would still cover all waters of the United States, including small streams, ponds, isolated marshes, and intermittently flowing gullies. We are left with a scope of jurisdiction as defined by the courts, a jurisdiction that runs counter to the original intent of the legislation as passed by Congress.

True, the committee has provided for possible delegation of authority to the States in the enforcement of 404. But will this formula reduce the number of activities subject to control? It does not. Does it diminish the burden on the average citizen? It does not. The committee amendment merely shuffles the administrative structure for enforcing a federally imposed permit program.

Under the committee proposal, it is clear that the individual States would have minimal flexibility in developing diversified permit programs to meet their specific requirements and environmental conditions.

Let us consider for a moment how this phantom delegation of power would operate in practice. Before a State could be authorized to assume delegated authority over phase II and III waters, EPA would have to review and approve the State proposals. The EPA, in turn, would be required to consult with the Corps of Engineers and the Fish and Wildlife Service before acting on a State plan. Since that troika of original enforcers, EPA, the Corps, and the Fish and Wildlife Service, each retains an effective veto over any State proposal. I fail to see how we can realistically claim much in the way of progress.

Furthermore, under the committee proposal, EPA would retain authority to withdraw approval of State programs if they are not administered in strict accordance with the federally sanctioned guidelines. The committee has also accorded EPA the right to review and disapprove individual permits granted by the States in accordance with delegation of powers under 404.

If the committee language is accepted by the Senate, we will be dealing with a shadow Federal program that would saddle the individual States with the administrative burden of implementation.

I sincerely question whether many States will accept delegation of 404 power under such conditions. If the States do not accept delegation, the Corps will continue to administer the permit program over all waters of the United States. Nothing will be changed. We will have done nothing to resolve what is obviously an unacceptable situation.

The amendment I am proposing would provide for effective delegation of power to the individual States. It would allow States the freedom to develop programs that reflect their individual needs and situations, but would also require States to demonstrate that they have the resources and the capability to effectively manage the program.

Mr. President, I believe we are entering a period in the life of our Nation when people are becoming concerned—perhaps even resentful—about the growing control Washington is exerting over their daily lives. We now have a new

President who was elected to office on a platform that called for less government, and a return to a simplier way of life. Jimmy Carter understood the mood of America, and responded to it with a message that the voting public embraced as their own.

Faced with the prevailing anti-Washington sentiment, I am confident those Senators now facing reelection will soon begin to hear that same message from their constituents. It would be difficult, indeed, to face the voters at home after tomorrow's recess without having voted to limit this pervasive and excessive Federal regulatory program.

Since enactment of the 1972 act, the budget for the Corps of Engineers Permit Division has escalated from $8 million to a requested $41 million for the next fiscal year. More than 95 percent of this budget increase has occured since the 1975 court ordered expansion of the 404 program. Furthermore, other agencies are also spending vast sums of tax money simply to keep up with the growing number of 404 permits that they must jointly process. For example, the Fish and Wildlife Service has 160 full-time employees—at a cost to the public of nearly $3 million—just to review permits and send their comments to the corps. EPA has budgeted $1.5 million next year for section 404 activities. But despite these rapidly growing expenditures, the average application still takes 125 days to review.

I find it offensive that before a small farmer can dig new irrigation ditches he must first write the U.S. Army for permission, complete the necessary Federal forms, and then wait an average of 125 days while his request is shuffled from one bureaucrat's in-box to another. I also find it offensive that a farmer who paid hard-earned money for new land 2 years ago may now be prohibited by the Government from improving that land for agriculturally productive uses, and will not receive a penny in just compensation for his loss of income from the property.

Mr. President, most individuals currently affected by section 404 are completely unaware that they must petition for Government permission to conduct many of their routine business activities. As more and more people learn what is necessary to comply with this law, public outrage will continue to build. The expressions of alarm that we now hear will be insignificant compared to the deafening cries that we are destined to hear.

Our amendment offers the only responsible approach to resolving this controversial problem. By limiting the scope of section 404 coverage to those waters that are navigable for interstate and foreign commerce, this amendment will restore the program back to the manageable dimensions originally intended by Congress. It also provides protection for our valuable coastal wetlands and for wetlands adjoining navigable waters. Further, because I realize the importance of protecting important wetland that may not fall within this jurisdiction, our amendment calls for Governors to designate those wetlands and flowing waters within their States which shall be covered in the Corps' administration of the program.

The overall thrust of this amendment is to preserve strong measures protecting important wetlands while dramatically cutting the size, redtape, and bureaucratic entanglements of the present program. It is a reasonable approach, and identical to the language that has been overwhelmingly adopted for the past 2 years by the House of Representatives.

I am aware, Mr. President, that one lobbyist who opposes this amendment was calling news organizations throughout Washington yesterday and advising them that this legislation would permit toxic discharges into smaller, nonnavigable, waterways.

This is false, Mr. President. Nothing could be further from the truth and I am deeply disappointed that the Washington Post, on its editorial page this morning reported the assertion of this lobbyist in an editorial, when it said:

> The dumping of toxic spoil in a creek, for instance, can poison water supplies miles downstream.

The Washington Post has a deserved reputation for accuracy, Mr. President, for careful research of the facts that it includes in its editorials.

In this case, though, this newspaper made a grievous error.

The fact in this case is that our amendment deals with section 404 of the water pollution law which regulates dredging and filling activities on navigable waters. Section 404 does not speak to toxic discharges, that falls within the purview of section 307 and we do not propose to change the law and permit any relaxation of our efforts to clamp down on the dumping of sewage or "toxic spoil" or any other toxic discharges in even the smallest creek in this Nation.

Any assertion to the contrary is inaccurate, Mr. President, and has no place in the debate taking place today.

I urge my colleagues in the Senate to rise above this atmosphere of emotionalism and deception, and join with me in supporting this reasonable and responsible amendment.

Mr. President, I ask unanimous consent to add as cosponsors of the amendment Senators HANSEN, HAYAKAWA, HELMS, and BARTLETT.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BENTSEN. Mr. President, I ask unanimous consent that Mike Naeve, Margaret Blaszak, Bill Taggart, and Jim Giltmier be accorded the privilege of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BENTSEN. I told my friend I would yield to him, and I yield to him.

Mr. MUSKIE. I simply wanted the Senator to yield on a point of correction. The Senator's discussion referred to his understanding of the committee bill.

Mr. ANDERSON. I cannot hear.

Mr. BENTSEN. I understand. If it is a matter of discussion, I would like to yield on the Senator's time if I may.

Mr. MUSKIE. I yield on my time. I was going to yield to the Senator from Colorado.

Mr. BENTSEN. All right.

Mr. MUSKIE. It seems to me that the Senator probably inadvertently made a reference to the committee bill which I consider to be inaccurate when he said that in the committee bill it is necessary for a farmer to write to Washington to get permission to dig an irrigation ditch.

The committee bill explicitly exempts construction, and I am reading from the bill, "construction or maintenance of farm or stock ponds or irrigation ditches or the maintenance of drainage ditches."

So there is no such requirement for a farmer, under the committee bill, to write to Washington to get any kind of permission to dig an irrigation ditch.

Mr. BENTSEN. To my understanding, it does exempt the construction of new irrigation ditches. I was referring to drainage ditches.

Mr. MUSKIE. But the word "construction" is in the language of the bill.

Mr. BENTSEN. Of the ditches for drainage?

Mr. MUSKIE. It says:

> * * * construction or maintenance of farm or stock ponds or irrigation ditches, or the maintenance of drainage ditches; * * *

Mr. BENTSEN. Is it "or the maintenance"?

Mr. MUSKIE. Yes.

Mr. BENTSEN. But not the construction, of drainage ditches?

Mr. MUSKIE. No, the word "construction" does not occur there.

Mr. BENTSEN. But not the construction, that is right.

Mr. HART. Mr. President, will the chairman or the manager of the bill yield me such time as I may need under the limitation?

Mr. ANDERSON. I yield the Senator from Colorado such time as he may require.

Mr. HART. Mr. President, I believe the Senator from Texas has urged us not to bend to emotionalism here. I think if that admonition is followed by Senators, then the amendment of the Senator from Texas will be rejected, because that is exactly what the amendment of the Senator from Texas is based on—emotionalism and fear of a set of circumstances that will not exist if the committee bill is passed.

We could start out by arguing whether the farm organizations supported this amendment or not. I do not necessarily debate with the Senator from Texas about the misinformation and fear flowing from Washington offices about what this program may or may not do.

So I think the Senator from Maine is absolutely correct in describing the decision before the Senate here today as one between the amendment of the Senator from Texas and the committee proposal. It is not a debate, as the Senator from Texas would have us believe from some of his remarks, between his amendment and the previous program. That is not the decision we have before us.

I think the issue has to be clarified as

to what the decision before Senators is. The Senator from Texas is correct in saying we should not bend to emotionalism. The important issue is that of regulation. The Senator from Texas couched many of his remarks in terms of whether we are for or against Government regulation.

Mr. President, that obviously is not the issue before the Senate today. If it were simply a matter of political rhetoric, and trying to calculate how best to pander to the mood in the country today, we would seek to abolish a lot of the laws we have, and try to curry public favor by eliminating regulations. But that is not the business of the Congress of the United States. The business of the Congress of the United States is to solve national problems, and to lead, not to retreat. The position of the amendment of the Senator from Texas is to retreat, and much of the justification for that retreat is that there is a public mood in this country against regulation.

The committee bill does not increase regulation. It very sanely and soundly addresses the difficulties that were caused by the original act and the misinterpretations of that act. It puts to rest the fears that developed in large part through misinterpretations of what the 404 program does. The committee amendment addresses the problem in a sane and moderate way, and not a Draconian way, as I think the amendment of the Senator from Texas does.

The question here as posed by the amendment before us is a jurisdictional question: What should be the interpretation of "navigable waters?"

Mr. President, the analogy here is organic. I think we can use the human body.

So now what the Senator from Texas is suggesting is that we are only going to treat the cancer if it occurs in the trunk of the body, but not to allow any treatments for the arms and the legs, so that if you have cancer in the hand, the arm, the foot, or the knee, we cannot treat that even though it may spread to the rest of the body or cause the loss of that limb.

The Senator from Texas has a very appealing approach because it is very simple; but, like most simple approaches to difficult problems, it is wrong, and it seeks to limit the treatment available by saying we can only control pollutants if they occur at a certain place, and not at another place, even though all those places are interrelated from an ecological and environmental point of view.

The difficulty with the Bentsen amendment is that it takes a meat-ax approach; and, like most other amendments that take a meat-ax approach, it destroys more than it corrects.

The Senator from Texas has said, I think wrongly, that the committee amendment does not change any issue under the present law, or exempt any activity. The fact is that it does exempt activities which are normal farming or agricultural activities, run by individuals or family farmers. The Senator from Maine, I think, has corrected the record, and did so accurately.

That, in short, should be the basis upon which Senators make their judgment, and not the erroneous statement that nothing is changed here, because the committee bill does in fact make a substantial change, and alleviates the problem which many people had fears about in previous days.

I have heard from probably as many farmers and agricultural interests in the State of Colorado and around the country as has the Senator from Texas. If we weighed our legislative solutions to problems by trying to respond to those contacts, I think we would make a lot of mistakes. The Bentsen amendment would certainly be a mistake. The committee approach is not merely to chop off sections of the law people are afraid of, but to make those sections work.

There is a Federal and national interest in the waterways of this country. There is a national and Federal interest in waterways other than those on which a ship can be floated. That is essentially the issue here today.

The Congress can capitulate. The Congress can abandon the national interest. The Congress can permit activities of a dredge-and-fill nature to go forward on those small streams, marshes, wetlands, and swamps which will make their way into the bigger waterways of this country and have a tremendous adverse effect on the people of this country and on their welfare, on their crops, on many of their activities. Or we can establish a program of the sort the committee has established, which will protect all of those water systems, which will protect all of the elements of those systems, which will not permit dredge and fill activities to deposit very toxic materials into those waterways.

The Senator from Texas talked about resistance to Federal intrusion. Again, if we took the meat-ax approach we would just lop off laws that anybody does not like, or particularly laws somebody may be afraid of as to what their effect might be. I think the better solution is to educate people, to eliminate those, fears, to deal with the problems, and not just say, "We are going to respond to your fears by just chopping up this law, regardless of what the effect might be."

Mr. President, the basic decision before the Senate today is between a Draconian and overly reactive solution as proposed by the Senator from Texas, or a moderate, balanced, and reasonable approach such as proposed by the committee.

Mr. President, I just want to make a couple more points.

The proponents of the Bentsen amendment have circulated and have on the desks of our colleagues, correspondence conveying the import and the elements of the amendment being offered. I just want to cite one or two statements which I think are absolutely misleading as to the issue we confront.

In the first paragraph of that correspondence the proponents say:

> Ever since the courts dramatically expanded the responsibility of the Corps of Engineers to regulate dredge and fill activities, this permit program has become an unfortunate example of extensive federal interference in the routine activities of farmers, ranchers, foresters, and numerous other private citizens.

Mr. President, that is not the case. The permit program which is so feared here today has never yet really gone into effect. The proposed third phase permits were revised before they were ever imposed on the farmers, ranchers, and foresters.

I do not disagree with the Senator from Texas that this has been an unfortunate example. It is an unfortunate example of misinformation and, I think, poor initial judgment on the part of the Corps. That has been corrected. Much of that was corrected before this committee action was ever taken. I think that should be acknowledged.

Just because people were afraid of certain interference in their activities does not legitimatize an effort here today to take a legislative approach which is going to have tremendously adverse effects on water quality in this country.

If, Mr. President, we permit this amendment to be adopted, substances such as mercury and cadmium, PCB's, arsenic, oil, and grease, which are contained in much of the dredged material of this country, could be dumped into the waterways and wetlands as a result of the dredging activity. I do not believe the Senator from Texas wants that to happen.

For example, Mr. President, under the Bentsen amendment, if the tributaries of the James River contain kepone in their sediment, we could have, under this program, a situation where those tributaries would be dredged and that dredged spoil could be deposited back to the waterways or into the adjacent wetlands releasing that toxic material into those waterways. That would not serve the people of this country.

The fact of the matter is that if this amendment is adopted it will remove 98 percent of all the rivers, streams, and lakes from the protection program which the Congress has adopted. It will remove 85 percent of the wetland areas of this country from this kind of necessary national and Federal protection. It will also allow coverage of the above waters and wetlands only if a State decides to take action. If a State decides not to take action, Mr. President, the people in that area are just in trouble, and the people in the downstream areas of the water system are in trouble.

Mr. BENTSEN. Will the Senator yield?

Mr. HART. I am just about to conclude, and I will then yield.

Mr. President, I am very hopeful that the Senate will not be panicked today because of a lot of misinformation, and I certainly hope the Senate will not adopt a meat-ax approach to a very serious national problem.

I yield back the floor to the manager of the bill.

Mr. BENTSEN. Mr. President, I yield myself 3 minutes.

I certainly share with my friend from Colorado that I hope the decision will not be made on misinformation or emo-

tionalism but we disagree obviously on the information.

Certainly, the Hazardous Waste Disposal Act is still in effect. Certainly, the Toxic Substance Control Act is still in effect. Certainly, section 307 is still in effect. So I do not agree at all that we are going to find toxic substances suddenly dumped in there by this amendment. I would share his concern if that was the case, but I do not believe that is so. I think these other situations will take care of that.

It now seems we have taken the position that all of a sudden we are omniscient; that we are clairvoyant; that we know better how to do it here on the Federal level in Washington than they know how to do it back in the States; that the States cannot regulate this type of thing, and that they do not better understand their local conditions and what should be done. That is a serious mistake.

We give them that kind of authority under my amendment. I believe it is the most appropriate approach. I reserve the remainder of my time.

Mr. HART. Will the Senator from Minnesota yield, Mr. President?

Mr. ANDERSON. I yield.

Mr. HART. Merely saying that there is a section 307 in the law which authorizes the EPA Administrator to list toxic substances does not solve this problem. How is the Administrator to know that somebody is off on some tributary of an interstate stream conducting dredge and fill operations and putting toxic dredged spoil into that waterway or adjacent wetlands unless we have a program which permits him to do something about it?

Just to say there is a section in the law which deals with toxic substances does not solve the problem. The problem is how to control people from conducting activities which are going to have tremendously adverse impacts on the water system. That is the problem. Section 307 does not deal with that problem.

I yield to the Senator from Maine.

Mr. MUSKIE. I believe the Senator from Vermont wishes to speak at this point.

Mr. STAFFORD. Will the Senator yield 10 minutes?

Mr. MUSKIE. I yield.

Mr. STAFFORD. Mr. President, section 404 of the Federal Water Pollution Control Act Amendments of 1972 established a permit program to control the following adverse effects caused by point source discharges of dredged or fill material into waters: First, the destruction and degradation of aquatic resources that results from replacing water with dredged material or fill material; and second, the contamination of water resources with dredged or fill material that contains toxic substances.

The committee amendment is designed to reaffirm this intent and dispel the widespread fears that the program is regulating activities that were not intended to be regulated.

Issues raised concerning the section 404 program may be divided into four categories:

First. Jurisdiction. The role of the Federal Government in regulation of waters beyond waters that support navigation;

Second. Activities exempt from the section 404 permit program. Certain activities that do not involve point source discharges and those activities that are more appropriately dealt with under section 208 management practices and performance standards;

Third. State programs. The manner in which the States will be authorized to administer the program;

Fourth. Unnecessary regulation and redtape. The use of general permits and time constraints on Federal review to eliminate unnecessary paperwork and delays in permit processing.

SECTION 404 JURISDICTION

Initial consideration of the section 404 controversy stimulated discussion on the extent of the waters in which discharges of dredged or fill material will be regulated.

The 1972 Federal Water Pollution Control Act exercised comprehensive jurisdiction over the Nation's waters to control pollution. This decision was the result of extensive and careful study and debate. In its report on that legislation, the Senate Public Works Committee stated "waters move in hydrologic cycles and it is essential that discharge of pollutants be controlled at the source."

It is the objective of the 1972 act to protect the physical, chemical and biological integrity of the Nation's waters. Restriction of jurisdiction to those relatively few waterways that are used or are susceptible to use for navigation would render this purpose impossible to achieve. Discharges of dredged or fill material into lakes and tributaries of these waters can physically disrupt the chemical and biological integrity of the Nation's waters and adversely affect their quality. The presence of toxic pollutants in these materials compounds this pollution problem and further dictates that the adverse effects of such materials must be addressed where the material is first discharged into the Nation's waters. To limit the jurisdiction of the Federal Water Pollution Control Act with reference to discharges of the pollutants of dredged or fill material would cripple efforts to achieve the act's objectives.

After extensive deliberation, the committee amendment rejects the redefinition of navigable waters. Instead, the committee amendment insures continued protection of the Nation's waters, but allows States to assume the primary responsibility for protecting those lakes, rivers, streams, swamps, marshes and similar areas that lie outside the corps program in the so-called "Phase I waters." Under the committee amendment, the corps will continue to administer the section 404 permit program in all navigable waters until the approval of a State program.

ACTIVITIES EXEMPT FROM PERMITS

Testimony received concerning the types of activities that are subject to section 404 permits revealed two basic problems: confusion over whether permits are required for certain "gray area" types of activities, and the inappropriate use of the permit mechanism for regulating certain point source discharges of dredged or fill material.

The committee amendment addresses those concerns. The amendment clearly assigns responsibility to the section 208 program for earth moving activities that do not involve discharges of dredged or fill material into navigable waters. Thus, no permits are required for farming, silviculture and ranching activities such as plowing, seeding, cultivating and harvesting, or for upland construction of minor drainage ditches and of soil and water conversation measures including sediment basins and terraces to prevent pollutants from entering the Nation's waters. Similarly, no permits are required for other such "gray area" practices involving those agriculture, mining and construction activities listed in section 208(b)(2)(F) through (I) that are more properly controlled by State and local agencies under section 208(b)(4). For example, section 208(b)((4) regulatory programs are responsible for controlling pollution that may result from sheet flow across a site prepared for construction or from the placement of pilings in water to support structures such as highways, railroad tracks, and docking facilities. Under the committee amendment, no permits are required for such activities.

The committee amendment also addresses the recognition that certain activities that involve the addition of dredged or fill material into water can meet the objectives of the Act if conducted in accordance with performance standards and best management practices established under the section 208 program, and thus do not require the detailed scrutiny of a Federal permit program. The amendment exempts from permit requirements the maintenance and emergency reconstruction of existing fills such as highways, bridge abutements, dikes, dams, levees, and other currently serviceable structures. This does not include maintenance that changes the character, scope or size of the original fill. Emergency reconstruction must occur within a reasonable period of time after destruction of the previously serviceable structure to qualify for this exemption.

The committee amendment specifically exempts construction or maintenance of farm or stock ponds, as well as construction and maintenance of agricultural irrigation ditches and the maintenance of drainage ditches from the permit requirements.

The construction of farm and forest roads is exempted from section 404 permits. The committee feels that permit issuances for such activities would delay and interfere with timely construction of access for cultivation and harvesting of crops and trees with no countervailing environmental benefit. The prescribed management practices for construction of exempt roads require that the construction, use, and maintenance of the

roads not significantly alter the biological character or flow, reach, and circulation of affected waters.

During the Committee oversight of the Corps program last year, testimony was received regarding potential disruption of mining operations due to delays resulting from permit review of routine filling activities. The committee amendment exempts the construction of temporary mining roads for the movement of equipment from permits. These roads must not only be designed and constructed in accord with the prescribed requirements for protection of the navigable waters applicable to roads; they must be removed in a manner consistent with those requirements.

These specified activities should have only a minor impact on water quality if performed in a manner that will not impair the flow and circulation patterns and the chemical and biological characteristics of the affected waterbody, and that will not reduce the reach of the affected waterbody.

All exempt activities will be required to have permits if the activity introduces toxic materials into the navigable waters in other than trace amounts. For this purpose, toxic materials shall include those substances for which, because of their harmful properties, EPA is developing standards and guidelines pursuant to sections 301, 304, 307, and 404 because of their harmful properties.

The committee amendment continues the requirement that a permit must be obtained under section 402(1) or section 404 to minimize or prevent adverse effects caused by altering the flow or the reach of the navigable waters from direct discharges of dredged or fill material. For example, permit review is necessary for discharges to convert a hardwood swamp to another use through construction of dikes or drainage channels.

STATE PROGRAMS

Testimony received firmly established that the permit review process is most appropriate for regulating discharges of dredged or fill material. During the last 2 years the section 404 permit review process resulted in the modification of more than 3,500 projects to protect the aquatic environment.

The committee amendment is in accord with the stated policy of Public Law 92–500 of "preserving and protecting the primary responsibilities and rights of States or prevent, reduce and eliminate pollution." It provides for assumption of the permit authority by States with approved programs for control of discharges for dredged and fill material in accord with the criteria and with guidelines comparable to those contained in 402(b) and 404(b)(1).

By using the established mechanism in section 402 of Public Law 92–500, the committee anticipates the authorization of State management of the permit program will be substantially expedited. At least 28 State entities which have already obtained approval of the national pollutant discharge elimination system under the section should be able to assume the program quickly.

The use of this mechanism will also expedite State authorization because the administrator only has to amend guidelines under section 304(h)(2) of the Act to establish the exact procedures and other requirements that a State must meet to achieve approval of its program.

Under the amendment, a State may elect to seek approval of a dredge and fill permit program independent of any application for approval of a national pollutant discharge elimination system program. This will prevent any delay in processing applications for the national pollutant discharge elimination system.

The amendment also provides that a State may elect to administer its dredge and fill permit program independent of the National Pollutant Discharge Elimination System program. Several States have already established separate State agencies to control discharges of dredge or fill materials. These agencies need not be the same as the National Pollutant Discharge Elimination System agency. The committee expects the administrator to insist that any designation of a non-National Pollutant Discharge Elimination System agency be accompanied by a demonstration of full capability to adequately administer this program.

The amendment encourages the use of a variety of existing or developing State and local management agencies and recognizes mapping, protective orders, standards of performance and the like as useful management tools. It is anticipated that State and local government will coordinate and integrate the permit program for discharges or dredged or fill material with the section 208(b)(4) program for regulating pollution from nonpoint sources and from the placement of materials where such placement results from activities that are explicitly exempted from obtaining section 404 permits.

Although discretion is granted to establish separate administration for a State permit program, the authority of the administrator to assure compliance with guidelines in the issuance and enforcement of permits and in the specification of disposal sites which is provided in sections 402 (c) through (k) and 404(c) is in no way diminished or compromised.

The authority for control of discharges of dredged or fill material granted to a State through the approval of a program pertains solely to the environmental concerns reflected in the specific guidelines set forth in the amendment, and the responsibility of the Corps of Engineers under the Rivers and Harbors Act of 1899 is not affected or altered by this amendment.

The committee adds that the administrator consult with the Secretary of the Army and the Director of the Fish and Wildlife Service prior to his approval of a State permit program for control of discharges of dredge and fill material—Sec. 402 (1)(2). The committee amendments relating to the Fish and Wildlife Service are designed to, first, recognize the particular expertise of that agency and the relationship between its goals for fish and wildlife protection and the goals of the Water Act, and second, encourage the exercise of its capabilities in the early stages of planning. By soliciting the views of the principal Federal agencies involved in the review of these programs at an early stage, objections can be resolved that might otherwise surface later and impede the operation of a State program approved by the administrator. This consultation preserves the administrator's discretion in addressing the concerns of these agencies, yet affords them reasonable and early participation which can both strengthen the State program and avoid delays in implementation.

That is, early participation in the development and design of programs, guidelines, and regulations should serve to reduce the emphasis now placed on the review by the Fish and Wildlife Service of individual applications for permits under the Water Act.

The committee expects that this consultation process be carried out in an expeditious manner and that it will not be used to delay approval of acceptable State programs. These additional requirements will add to present demands on the Service and it is expected that the Secretary of the Interior will take appropriate action to insure availability of resources to get this job done.

The committee has added a requirement for a consultation process with the State agency having primary jurisdiction over fish and wildlife resources in developing the 208 regulatory program. This amendment is needed because many State water pollution control agencies with jurisdiction over section 208 activities may be not cognizant of important fish and wildlife values and the water quality conditions necessary to maintain those values. The amendment would help insure that the insights and concerns of the State fish and wildlife agency are reflected in the design and implementation of programs. Their participation will also decrease the probabilities of delays based on environmental challenges to the issuance of individual permits or other regulatory actions taken under section 208.

In this regard, the committee has also included an amendment to section 208 which would authorize and direct the Secretary of the Interior, acting through the Director of the Fish and Wildlife Service, to consult with and provide technical assistance to any State or designated agency in developing and operating a continuing planning process—Sec. 208(j)(1). Early involvement of the service in the 208 planning process will assure proper consideration of the ecological goals of the act and will minimize the potential for objections in the implementation phase.

The committee added a requirement for a coordination process with the Fish and Wildlife Service, including a process for use of the national wetland inventory being conducted by that agency, as part of the State's regulatory program under section 208(b)(4). The service is a primary source of ecological information

in the Federal establishment and has stewardship responsibilities for fish and wildlife resources. The basic reason for this coordination process and the consultation with State fish and wildlife agencies mandated elsewhere in the amendments is to assure that the ecological goals of the Water Act are adequately addressed.

The national wetland inventory is developing information about the extent and distribution of wetlands types that will be invaluable in the decisionmaking process under statewide 208 regulatory programs. The inventory identified the boundaries of wetlands and defines different vegetational areas within the wetlands. This information, coupled with a knowledge of species commonly associated with these types, as well as such other natural values as their contributions to water quality through filtering action, maintenance of water tables, amelioration of drought and flooding conditions, and the like, will aid decisionmakers in determining less sensitive areas. By using the nationwide inventory, the committee believes that more informed choices can be made, more promptly, among alternative plans and proposals.

The committee is aware that the implementation of this program under the 208 process may require significantly more of State and local 208 agencies than at present.

It is the committee's intent that the administrator seriously scrutinize any 208 proposal, and monitor any such approved program on a continuing basis to assure that the program represents a realistic way to achieve the goals of the act.

The committee has included an authorization of $6 million to the Secretary of the Interior to complete the initial phase of the national wetland inventory by December 31, 1977. The inventory identifies the ecological attributes of wetlands with regard to vegetational types. It will provide valuable information which can be used in the 208 planning process as well as other coastal planning activities under the Coastal Zone Management Act.

UNNECESSARY REGULATION AND REDTAPE

The committee amendment reaffirms the use of general permits by the corps and States with approved programs for classes or categories of activities which cause, individually or cumulatively, only minimal environment impact.

The general permits mechanism is derived from the Corps of Engineers regulations. The corps, during the last 2 years of administering the section 404 program, has issued general permits on a regional and nationwide basis to eliminate the need for individual permits for a number of activities involving the discharge of dredged or fill material. These include streambank protection, stream alterations, backfill for bridges, erosion control, and, in at least one instance, a general permit for road fill and culverting on a statewide basis. For general construction activities, general permits issued on a statewide or regionwide basis will greatly reduce administrative paperwork and delay.

The committee amendment also responds to concerns that were expressed during testimony over delays in permit processing by the corps, including those caused by other Federal programs which interface with the corps' section 404 program. The amendment requires the corps to issue a public notice within 15 days of receipt of all required information necessary to evaluate a section 404 permit application. It also requires the Secretary of the Army to enter into memoranda of understanding with other Federal agencies to coordinate their respective reviews in order that a decision can be reached in most cases within 75 days of the public notice. In some cases, this would require revisions to existing memoranda of understanding, including the one that now exists between the Secretaries of the Army and the Interior to implement the Fish and Wildlife Coordination Act.

(The following proceedings occurred earlier in the day and are printed at this point in the RECORD by unanimous consent.)

Mr. MUSKIE. Mr. President, the next amendment will be offered by the distinguished Senator from Texas (Mr. BENTSEN). He has not yet arrived. For personal reasons, Senator CHAFEE would like, at this point, to make his statement on the section 404 issue. I ask unanimous consent that he may make his statement at this point and that it follow Senator BENTSEN's statement when Senator BENTSEN arrives to present his amendment and begin debate on the issue.

The PRESIDING OFFICER. Without objection, it is so ordered.

Who yields time?

Mr. MUSKIE. How much time would the Senator like?

Mr. CHAFEE. Ten minutes.

Mr. MUSKIE. I yield 10 minutes to the distinguished Senator from Rhode Island.

The PRESIDING OFFICER. The Senator from Rhode Island is recognized for 10 minutes.

Mr. CHAFEE. Mr. President, I thank the managers of the bill for this opportunity to speak on a subject that I think is of tremendous importance to our Nation. Of course, what I am talking about is the matter covered by section 404, which will be the subject of an amendment to be presented by the two distinguished Senators from Texas.

The part of this amendment that particularly concerns me is the part that deals with our wetlands. It is hard to believe that at least 75 percent of our wetlands are covered by the so-called phase II and phase III waters, which, under this amendment, would be very drastically removed from Federal jurisdiction. The amendment presented by the Senator from Texas would leave many of our Nation's ecologically important wetlands with no protection and many with uncertain protection from discharges of dredged or fill materials. Such discharges are potentially destructive to the integrity of wetlands, streams, and rivers, and must be regulated if we are to reach the national goal of restoring the quality of our waters.

Mr. President, I think it is important to bear in mind that marshes and wetlands are not a parochial responsibility or an asset; they are not a local asset; they are a national asset. They are not just confined within boundaries which happen to exist for any one of our States.

The wetlands perform a vital part of the food chain for our wildlife.

Mr. President, I call the attention of the Members of the Senate to the fact that 90 percent of the fish and shellfish in the whole Gulf of Mexico, that mammoth body of water, 90 percent of those fish and shellfish spend some part of their life cycle in Louisiana wetlands. More than two-thirds of the cash value of fish harvested along the Atlantic coast is derived from species that depend upon the estuaries.

In other words, it is a life chain that starts with the tiny little organisms that grow in these marshlands, are generated there, and then go to provide food up through the animal chain.

As we all know, the New England commercial fishery is vital to our economy. It is one of our more productive industries, For instance, in the State of Maine, in 1975, the last year for which we have figures, nearly $50 million was the value of the fishing harvest there. Ninety-eight percent of that was made up of species that depended upon the wetlands for some part of their life cycle.

Some of these wetlands are coastal and may be protected under this bill. But the inland marshes and the wetlands and those above the high water mark will suffer because, under the Bentsen amendment, the protection by the Federal Government of the coastal wetlands only goes up to mean high water mark. Those above mean high water will suffer because they will not be definitely protected. So we have to care about these marshes above the high water mark and about our inland wetlands.

It is also important for those who are sportsmen to remember that these wetlands provide the breeding and feeding areas for our migratory waterfowl and for furbearing mammals and the spawning grounds and nursery areas for fish.

We must care about what happens to inland wetlands. We must do more than this. I must say, Mr. President and Members of the Senate, that I did not fully appreciate this until I got into this study in connection with the whole Clean Water Act. I learned that wetlands not only are nurseries for the fish and waterfowl and for the mammals, but also they retard the flow of water from the land and thus reduce the opportunities for flooding. They prevent erosion.

Furthermore, the wetlands serve to purify the water by filtering out and absorbing silt, nutrients, and pollutants that otherwise would enter into domestic water supplies. They help to preserve the waters for irrigation, for streams, estuaries, and ground water.

Furthermore, and this is very apparent up our way, in our State, where we are subject to hurricanes in the autumn,

in September and early October, the wetlands stabilize the shorelines against erosion of the beaches, against the assaults of storms, winds, and waves. Of course, in some areas, the production of hardwood timber depends upon the wetlands ecosystems.

Then there is an aesthetic purpose that the wetlands serve. I think many of us have seen the beauty and the different moods and the diversity of the worlds that exist within swamps, bogs, and marshes. Who has not seen the mist rise over the bogs in the State of Maine in the early morning?

Think of the classic swamplands in the Southeast, such as the great Okefenokee, the Great Swamp of New Jersey, which lies just across the Hudson River from the city of New York, and the majestic, sweeping marshes of the Everglades, the remote Alakai in Hawaii, and the tiny mountain bogs of New England.

Mr. President, in connection with my service on the Environment and Public Works Committee, I recently had the privilege of going to Louisiana for a committee hearing on this very bill and this very section, section 404, and wetlands protection. I was fortunate enough to spend an afternoon in the Atchafalaya River Basin, an extraordinary river basin, just off the Mississippi River, up near Baton Rouge. This basin is tremendously important to the fish and water fowl in the gulf area. The Atchafalaya is not only esthetically beautiful but is ecologically bountiful. It serves a very important place as an overflow area when the Mississippi River rises to unprecedented heights, as it has in the past. We cannot afford to lose areas such as this and other similar marshes and wetlands.

The real tragedy for this Nation is that Congress had not wrestled with this problem decades ago. Now we are here, and let us do something about it. The wetlands in this Nation are disappearing.

The Department of the Interior estimates—listen to this figure, if you do not think it is a shocker—that between 50 percent and 65 percent of our Nation's wetlands, coastal and interior, have been lost. No region is exempt.

In the area of the distinguished Senator from Minnesota (Mr. ANDERSON), the Minnesota Conservation Federation told the committee that during the last 10 years wetlands decreased in Minnesota's 19 western counties at the rate of 4 percent a year. Salami that off every year, and pretty soon you do not have any wetlands left.

Listen to this statistic: In California, they started with 3.5 million acres of wetlands, and now less than a half million are left. What a waste of our natural resources. We do not just blame the people in California. We are all responsible for this. Here is a chance to do something about it.

I think we can take some slight consolation—very slight—that as a result of the protection act that was passed in 1972, this rate of attrition has been diminished to some extent.

I certainly agree with the desire of many Members of the Senate with respect to the responsibility of the States. I am a State's righter. I was a Governor. I believe in the States being given responsibility to have a large part of the program for regulating discharges of dredged and fill material. Some States already have some excellent wetlands protection acts. Georgia does; my own State of Rhode Island does. But many States do not.

Under this act, we acknowledge that States can have a responsibility in phase II and phase III. We have provided for a delegation to the States, under more than one means, of the materials disposal program for these waters. But the amendment by the Senator from Texas leaves phase II and phase III in limbo. It provides for no certain Federal or State protection for waters other than navigable waters and adjacent wetlands. That leaves lots of areas out of it, and furthermore, the areas included are very narrowly defined in the amendment.

This amendment excludes numerous ecologically important wetlands and streams. Second, it provides that those excluded waters or portions of them may be regulated only through the formation of Federal-State agreements that are optional to begin with and that can be revoked by either party, and apparently for any reason. That is not much of an agreement. That does not give much protection to the Federal Government or to the citizens of this Nation.

I should like to stress that these wetlands are not something that belong to Louisiana or Rhode Island or Michigan or Minnesota. They belong to all the citizens. They are much too valuable to be abandoned to some unstable, fragmentary kind of protection. We must bear in mind that these wetlands are part of this larger system. They are not independent. They do not belong only to Minnesota, so that if Minnesota wants to fill them in, it is too bad for the Nation. We have to remember that it affects everything else downstream. There is a linkage between wetlands and streams and estuaries and rivers, and they all must live in harmony, through wise management.

Here is an example, and I did not know about this until we started work on the clean water bill. Let us take the Kissimmee River, in south central Florida. In the early 1960s, this 90-mile-long stream, with its 45,000 acres of flood plain marshes, was channelized to form a 50-mile canal, leaving intact only about 8,000 acres of the original marsh, and essentially eliminating the naturally occurring water level fluctuations of the river marsh. They drug the canal and channelized it and poured concrete all over the place. This was the idea when concrete was in its hay day. The unexpected result of that project is a gross deterioration of water quality in the Kissimmee River and in Lake Okeechobee.

The PRESIDING OFFICER (Mr. BURDICK). The time of the Senator has expired.

Mr. CHAFEE. Will the Senator yield me 2 additional minutes?

Mr. ANDERSON. I yield the Senator 3 minutes.

Mr. CHAFEE. What has happened as a result of all this? All the leaders in Florida, from the Governor down, fear that unless something is done, this marvelous lake will become unfit for game and fish and water fowl and may be unfit as a source of water for the people in southern Florida.

They are going to try to undo all this damage. It is going to cost a lot more money to undo it; and when you try to restore the marsh, it is practically impossible.

We know enough now to avoid the terrible disasters such as took place in the Kissimmee River in Florida. We know enough to intelligently regulate the uses of wetlands so as to prevent the collapse of the vital functions they serve. We will soon have a national wetlands inventory, which will give us an accurate, comprehensive picture of our remaining wetlands resources and provide a systematic means for up-to-date tracking of wetland losses and alterations. We now have an opportunity for a sound, balanced, and responsible program to regulate discharge of dredged and fill materials into wetlands.

That does not mean that if you are a farmer, you cannot plow your field. That is one of the red herrings that has been raised in this bill. No one was watching over this more carefully than our distinguished presiding officer. He comes from farmland. He made sure that the farmers are protected under this bill, and they are.

But what we are talking about is just indiscriminately filling in, and that is what the committee bill takes care of.

I must say, Mr. President, that I support the bill enthusiastically. I hope that everybody who is interested in the chain of life of our fish and game, will support it and oppose the amendment that is about to be presented by the Senator from Texas.

(This concludes proceedings which occurred earlier.)

The PRESIDING OFFICER. Who yields time?

Mr. BENTSEN. Mr. President, I yield 7 minutes to the distinguished Senator from New Mexico.

Mr. BAKER. Will the Senator from Maine yield me a few minutes to speak to this issue?

The PRESIDING OFFICER. The Senator from Texas has yielded 7 minutes to the Senator from New Mexico.

Mr. BENTSEN. I leave it to my two Republican colleagues to decide who wants to proceed first.

Mr. DOMENICI. I prefer to hear what the Senator from Tennessee has to say and follow him, so I shall yield to the Senator from Maine to yield to the distinguished minority leader.

We are on the same side of this, but I would like the last word.

Mr. BAKER. Mr. President, the distinguished Senator from New Mexico almost always has the last word, and I admire him for that.

Mr. President, if the Senator from Maine can yield me 5 minutes, I shall be grateful.

Mr. MUSKIE. I yield 5 minutes to the Senator from Tennessee.

Mr. BAKER. I thank the Senator.

I thank my colleague from New Mexico, who is such an extraordinarily effective member of the Public Works Committee, and whom I support in his positions, almost without variation. I find it a unique and unlikely prospect that we are in disagreement on this issue, but I am afraid we may be.

Mr. President, with the passage of the 1972 amendments to the Federal Water Pollution Control Act, our fundamental objective became the restoration and maintenance of the chemical, physical, and biological integrity of the Nation's waters.

Implementation of the 404 decisionmaking process is imperative if we are to achieve that goal. Section 404 represents an essential tool for moderating the degradation, and sometimes the irrevocable destruction, of aquatic areas that naturally control the quality of water, including those vital areas of shallow water known as wetlands.

I might add that if we did not have those wetlands, the cost of abating pollution in this country by industry and municipalities would be enormously increased because of the additional costs that would be required by the technology to take the place of what nature has provided us.

The Federal Water Pollution Control Act places the responsibility upon EPA to administer a permit program for industrial and municipal discharges. The act reserved to the Corps of Engineers a separate permit program under section 404 for discharges of dredged or fill material into the Nation's waters.

The statutory language authorizing the 404 program requires the cooperation of the corps and EPA to insure that discharges of dredged material and fill material will not have unacceptable adverse effects on municipal water supplies, shellfish beds, fisheries, wildlife, and recreation.

A fundamental element of the Water Act is broad jurisdiction over water for pollution control purposes. Several Federal courts have endorsed the wisdom, and constitutionality, of this Committee's observation that:

> Water moves in hydrologic cycles and it is essential that discharge of pollutants be controlled at the source. Therefore, reference to the control requirements must be made to the navigable waters, portions thereof, and their tributaries.

Comprehensive jurisdiction is necessary not only to protect the natural environment but also to avoid creating unfair competition. Unless Federal jurisdiction is uniformly implemented for all waters, dischargers located on nonnavigable tributaries upstream from the larger rivers and estuaries would not be required to comply with the same procedural and substantive standards imposed upon their downstream competitors.

Thus, artificially limiting the jurisdiction can create a considerable competitive disadvantage for certain discharges.

Mr. President, continued applicability of the 404 program to our Nation's waters is essential if we are to moderate the two most significant types of harm caused by dredged or fill material.

First, just as water uses are degraded by industrial and municipal wastes, adverse effects also occur from dredged and fill materials that contain a wide range of pollutants, including toxic substances.

An initial screening of sediments from over 700 harbor and waterway locations showed that sediments in over half of the locations contained a significant pollutant load. Pollutants identified in the sampling included lead, arsenic, cyanide, PCB's, mercury, and cadmium.

Contaminated materials threaten water supplies, fisheries and other beneficial water uses unless carefully managed. The Corps and EPA are currently using the 404 decisionmaking process to assess the risk of dredging James River sediments that are contaminated with Kepone.

It is important to understand that toxic substances threaten the aquatic environment when discharged into small streams or into major waterways. Similarly, pollutants are available to degrade water and attendant biota when discharged in marshes and swamps, both below and above the mean and ordinary high water marks.

Second, unlike most industrial and municipal pollution, dredged and fill material can physically destroy essential parts of the aquatic system, including swamps, marshes, submerged grass flats and shellfish beds. These critical aquatic areas are essential to many water uses, not the least of which is a viable commercial and sports fishery.

Wetlands serve as spawning and nursery areas while providing natural control of organic and inorganic nutrient transfers that dictate quantity and quality of life in the water. The declining availability of swamps, marshes, and free-flowing streams to assimilate pollution from point and nonpoint sources will greatly increase the dollar and energy costs of maintaining desirable water uses.

For example, discharge of fill material into certain swamps in New York and New Jersey can affect the quantity and quality of water seeping into the aquifers from which many communities draw their water supply, thereby naturally causing increased treatment costs.

Mr. President, I have some additional remarks on the section 404 issue that basically reflect on the background and status of the existing program and testimony received before the committee during its hearings in June.

The Army Corps of Engineers and EPA have cooperated to establish a joint program under section 404.

Interim final regulations were promulgated by the corps on July 25, 1975. These regulations were followed by the publication of interim final guidelines by EPA on September 5, 1975.

Together the regulations and guidelines established a manageable program that focused the decisionmaking process on significant threats to aquatic areas while avoiding unnecessary regulation of minor activities. On July 19, 1977, the corps revised its regulations to further streamline the program and correct several misunderstandings. I understand that the revisions have received a favorable reaction by all interest groups involved with the section 404 issue.

Continuation of the comprehensive coverage of this program is essential for the protection of the aquatic environment. The once seemingly separable types of aquatic systems are, we now know, interrelated and interdependent. We cannot expect to preserve the remaining qualities of our water resources without providing appropriate protection for the entire resource.

Earlier jurisdictional approaches under the 1899 act established artificial and often arbitrary boundaries that included only part of some bodies of water. For example, the old jurisdictional mean high water line in our coastal waters was costly to establish and excluded one-half to one-third of most coastal marshes. Depending on the degree of control exercised by the States, this situation allowed for little or no protection of these important coastal resources.

Today this problem has been eliminated. The location of a coastal marsh by using the aquatic vegetation line accurately identifies most marsh areas. One Florida developer informed us that with the new approach, the location of coastal marshes is less time consuming and less expensive. No longer is it necessary to expend thousands of dollars for tide experts and surveyors to establish the exact mean high water mark as required by the old corps program.

Second, let me emphasize that while the geographical jurisdiction of the program is broad, confusion has continued to plague the program over the type of activities that actually require permits. The committee's amendment has responded to this confusion and makes it clear, for example, that normal farming, silviculture and ranching activities such as plowing, cultivating, seeding, harvesting, upland soil and water conservation practices and minor drainage are excluded from section 404 altogether.

Third, the corps has used nationwide and general permits to the maximum extent possible to authorize categories of discharge that cause only minimal harm to water quality.

Thus, the need for dischargers to apply for individual permits is eliminated except in those instances involving environmentally significant activities. General permits to authorize erosion control bulkhead and fill and for fills associated with highways and long roads have already been issued and the committee amendment allows this practice to continue.

Fourth, phased implementation of the broad jurisdiction over water has provided a measure of moderation and

flexibility we all see as necessary to a reasonable program. A commendable management effort by the Corps of Engineers has already resulted in improved coordination with EPA, other Federal and State agencies, and the public.

I would like to emphasize, I think the corps has done an outstanding job in moving this program forward and developing reasonable and manageable regulations. Everyone who testified in the committee's hearings was strongly supportive of the corps' effort in this regard, and indicated that they really have done an outstanding job.

Finally, considerable effort has been made in developing a 404 program that would directly involve the States in the decisionmaking process. Several States with existing permit programs to regulate the same types of activities that are regulated under section 404 are taking advantage of the opportunity to participate in the joint processing of Federal-State permit applications.

Iowa, Michigan, and Maryland are notable examples. I believe this opportunity to establish joint programs will encourage needed improvement in many States that have not yet adequately addressed the environmental problems caused by discharging dredged or fill material into the water environment and provide the mechanism to readily transfer the permit issuing responsibility to the States as provided by the committee's amendment.

To conclude my remarks, let me emphasize that the protection of water quality must encompass the protection of the interior wetlands and smaller streams.

In this regard, I should remind you that through the International Convention on the Prevention of Marine Pollution by the Dumping of Wastes and Other Matter and our own Ocean Dumping Act of 1972, the United States has established both international and domestic programs to protect the oceans from uncontrolled discharges of sludges and dredged material.

The criteria for permitting the ocean dumping of dredged or fill material are, by design, consistent and very similar to those issued under section 404(b). Without an appropriate and effective program under section 404, only ocean dumping of dredged material will be closely regulated while many of our more productive and more limited inland water resources will be unprotected from both chemical and physical degradation.

The Department of the Interior has estimated that almost half of the wetlands which originally contributed to aquatic resources of our Nation have already been lost through draining, dredging, or filling.

Even with numerous programs aimed at their preservation, in excess of 25,000 acres of prime wetlands are lost each year. Our most productive aquatic systems have already been drastically reduced from their original 127 million acres to less than 80 million acres.

As you know, wetlands are a priceless, multiuse resource. They perform the following services:

First, high yield food source for aquatic animals;

Second, spawning and nursery areas for commercial and sports fish;

Third, natural treatment of waterborne and airborne pollutants;

Fourth, recharge of ground water for water supply;

Fifth, natural protection from floods and storms; and

Sixth, essential nesting and wintering areas for waterfowl.

We should be mindful of the fact that when these areas are polluted out of existence, we will have lost the very valuable free service of nature; and if toxic-laden dredged or fill material is discharged into wetlands, we risk poisoning the very foundation of our aquatic system.

Mr. President, I thank the distinguished Senator from Maine for yielding. I thank my friend from New Mexico for permitting me to go first and out of sequence so that I could make these remarks at this time.

The PRESIDING OFFICER. Who yields time?

Mr. BENTSEN. Mr. President, I yield 5 minutes to the distinguished Senator from New Mexico.

Mr. DOMENICI. I thank the Senator from Texas.

Mr. President, I say to my friends in the Senate that I find myself supporting the amendment of the distinguished Senator from Texas, not because I do not want to protect the wetlands of this country, but rather, because I think we have an opportunity here in the Senate to undo something that has grown up that we really never intended, and not to continue to ignore the fact that we never intended under section 404 that the Corps of Engineers be involved in the daily lives of our farmers, realtors, people involved in forestry, anyone that is moving a little bit of earth anywhere in this country that might have an impact on navigable streams. We just did not intend that.

What we are doing with the committee amendment is to say now, after we have a situation in existence in this country that we never intended, let us try to exclude some things from it. That means whatever we did not exclude is included within it, and so the universe of activities by Americans is still subject, unless we were smart enough to include it in an exemption, to the permit system under 404 and under the supervision of the Corps of Engineers.

The Senator from Texas and the committee have seen hundreds of examples of situations, that were absolutely never contemplated to come under 404, come within its purview. Then we come along and, because we find them, we try to exempt them.

How many hundreds, if not thousands, of citizens are going to be either still subject to this or questionable in terms of the general exemptions we have in it?

We exempt ordinary farming, but farming should not have been involved to begin with. So the farmer still does not know whether his activity is normal or not.

As to any kind of forestry, we say that normal forestry activities are excluded, but what is normal and what is not?

So we have the universe included, the universe of activities, and we exempt a few that we have been advised of.

Now, how did we get ourselves in this situation? I have no objection at all to protecting the wetlands, no objection to protecting what Senator BAKER has indicated we ought to be protecting. But the plain facts are that section 404 was put into the original clean water bill, in my opinion, by a few selfish people who wanted to leave the Corps of Engineers involved in dredge and fill activities in navigable streams.

They were concerned that EPA might be taking that jurisdiction away. So at some point in its evolution, they plugged in an exemption to EPA and left jurisdiction in the Corps of Engineers for dredge and fill in navigable streams—a very limited intention, and selfishly motivated by those who wanted to protect the corps and who had an interest in protecting dredge and fill operations and wanted it over them.

Then we get to the interpretation, saying almost all waters in the country were navigable and, therefore, dredge and fill, and the corps ends up being a national permit system.

All we are doing with the committee bill is saying that to the best of our knowledge, from the aberrations we found, we are going to exempt some of them.

I say that for those who are concerned about super regulation in this country, and it is greater by leaps and bonds, that the way to address it is to adopt the amendment of the Senator from Texas and let the Senate and the House prepare a wetlands protection bill. If they cannot do it, then it does not seem to me that the activities of Americans across this country—and I will give some examples in a minute—ought to be used by us as a means of getting a wetlands protection bill, because we cannot draw one.

If we cannot draw one, why should it be on the shoulders and in the backyards and in the offices of Americans, and in the corps, and in the Bureau of Reclamation, across this country, to try to protect the wetlands when that was not even what we were talking about when we started this action, but rather the dredge and fill activities of the corps as it might affect wetlands?

We have situations in the State of New Mexico where we held up for a year and a half the building of a bridge across the river, which bridge had been planned, gone through EIA, been under consideration for 8 years, and because they had to move some sand to build pilasters to build the bridge across it, it was a fill activity, under dredge and fill, and the corps had to permit the State highway commission, which had been cleared by every agency around.

The Senator from Texas has two dams. I have one. I will speak about mine.

After 16 years of planning, clearing

every environmental mandate of the Congress, the Bureau of Reclamation has to submit under 404 to the Corps of Engineers because they are going to move some earth to build a dam and that dam is going to put some dirt in some waters which might end up in the navigable streams of this country.

We are saying we will exempt those activities. But the point I am making is, how many other activities are we not yet aware of that Americans are going to have to be concerned about as to whether or not they must go to the Corps of Engineers or wait for a State plan to implement something we never intended from the beginning?

I say let us undo it now, and next year Congress can do it right. We can prepare a wetlands protection bill. We can define the needs of the Corps of Engineers in dredge and fill activities the way we intended and not the way it evolved in a rather cavalier district court opinion where the issue was navigable streams, not what dredge and fill meant.

Besides the example I have given, it is obvious as to the activities of farmers, ranchers, and those involved in forestry that we are exempting them with uses such as normal, day-to-day——

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. DOMENICI. Will the Senator yield me 2 additional minutes?

Mr. BENSTEN. I yield the Senator 1 minute. I am running short on time.

Mr. DOMENICI. I thank the Senator.

Mr. President, I am on the side of those who want to protect the wetlands.

I believe that other sections of this bill give EPA jurisdiction to do most of the protection we want. However, I see no reason to perpetuate the interpretation of section 404 beyond any bounds of what Congress ever intended and then justify the continuation of that by saying, "Well, we have exempted those activities that have come to our attention. They are not in it any more." That is not the way to make good law. We should get rid of this section, start over again, leave intact EPA's protective mechanisms, many of which have not been used because of the strained interpretation of section 404 and the power vested in the corps. So there is not going to be any great damage.

The EPA will broaden its jurisdiction where it should be, and we can start over again with a clear intent and a more lucid understanding of the problems in protecting wetlands, but we need not burden all American activities or try to exempt them one at a time. Next year we will have more exemptions in order to have it make sense.

Mr. HART. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. HART. Mr. President, either there is a problem of disposition of toxic and dangerous materials in waterways of this country or there is not. If there is a problem, the way to handle it is not to exempt 98 percent of U.S. waters from this part of the law. Section 307 will not handle the problem, because there is no mechanism in that section to determine when an activity is going to take place that is going to deposit those toxic substances in that system.

To say there are other sections of the law that are going to handle this is erroneous. If we were to follow the recommendation of the Senator from Texas and the Senator from New Mexico, we would subject 98 percent of the waters of this country to those kinds of harmful activities, as well as the people who depend upon those waters. That is the issue. To say that Congress can take a look at it next year does not solve the problem, either.

Mr. BENTSEN. Mr. President, I yield myself 1 minute.

There are pieces of legislation that do take care of the problem. The Hazardous Waste Disposal Act does and the Toxic Substance Control Act does. The committee report from the House on this piece of legislation states:

. . . "any disposal of dredged material may be included in such a category [of effluent standards or prohibitions relating to the discharge of toxic substances]". In the interest of clarity, however, language was added to subsection (e) of section 16 to specifically provide that section 307 would be applicable to the discharge of dredged or fill materials into any of the waters of the United States as broadly defined in section 502 of the Act.

Mr. HART. Mr. President, will the Senator yield me 1 minute?

Mr. ANDERSON. I yield.

Mr. HART. I cite testimony by the Assistant Attorney General of the Department of Justice on July 27, 1976, before a House committee, with regard to the Wright amendment, which I understand to be identical, for all practical purposes, to the amendment before us. I quote:

While some have argued that EPA could still control discharges of pollutants into waters excepted from the coverage of section 404, Mr. Chairman, I must state the firm opinion of the Department of Justice that this conclusion is of substantial doubt, and that this section could remove all federal control over discharges of dredged or fill material, whatever its physical characteristics, be they dirt, sand and gravel, or Kepone and arsenic laden spoils or soil.

The PRESIDING OFFICER. Who yields time?

Mr. ANDERSON. I yield to Senator MUSKIE.

Mr. MUSKIE. Mr. President, how much time remains?

The PRESIDING OFFICER. The opponents have 27 minutes remaining, and the proponents have 26 minutes remaining.

Mr. MUSKIE. I yield myself 5 minutes, if I may, with the permission of the floor manager of the bill.

Mr. President, I must say, with all the assurances on both sides, that this is such a serious matter that we should not react to it in an emotional or an irrational way.

Listening to some of the debate puts me in a state of considerable confusion. What is it that we are trying to do in this provision of the bill?

No. 1, we are trying to eliminate the impact and the implications of section 404, which has generated much emotion all across the Nation. No one on this floor is defending section 404; yet, much of the debate to which I listened has been directed against section 404.

I hope that Senators—there will not be many, because there are not many on the floor—will focus on the real issue, which consists of at least these questions:

First, is there a problem of protecting wetlands that is of national interest? Second, is there a rational proposal before us, either in the form of the committee bill or the Bentsen amendment, which will enable us to protect that national interest without imposing unreasonable, burdensome and unjustified regulation upon citizens who are powerless to do anything about the problem?

If I am right in stating those questions, then there is such a proposition, and I disagree wholeheartedly with my good friend from New Mexico, Senator DOMENICI, on that proposition.

We have had at least 2 years—as a matter of fact, we have had since 1972—to consider this problem, and we know there is a problem. Let me state what it is.

There is no question that the systematic destruction of the Nation's wetlands is causing serious permanent ecological damage. I have not heard even the proponents of the Bentsen amendment dispute that conclusion.

The wetlands and bays, the estuaries and deltas are the Nation's most biologically active areas. I have not heard the proponents of the Bentsen amendment argue against that.

They are a principal source of food supply. They are the spawning grounds for much of the fish and shellfish which populate the oceans, and they are passages for numerous upland game fish.

They also provide nesting areas for a myriad of species of birds and wildlife.

If there are those on the Senate floor who argue that those are not sound premises for national policymakers, I wish they would stand and tell me so. But I have heard nobody say that in the course of this debate.

So there is a problem. How do we deal with it? So far as the committee position is concerned, it says two things: One, there is a legitimate national role, roughly spelled out by the 1899 Refuse Act, which has been the basis of the Corps of Engineers' jurisdiction over dredge and fill operations for the last 80 years.

The PRESIDING OFFICER. The Senator's 5 minutes have expired.

Mr. STAFFORD. I yield the Senator 5 minutes.

Mr. MUSKIE. Within that broad jurisdiction, the committee bill would continue the jurisdiction of the Corps of Engineers, which it has always had.

It was the purpose of section 404 to discipline the Corps of Engineers' discharge of its responsibilities under the 1899 act by requiring it to take into account the toxic nature of the materials which it was shifting from the bottoms of our waterways into wetlands and other vul-

nerable areas. That was the purpose of section 404, and it is a legitimate purpose and it is a purpose which I hope will continue to be served by the decisions which the Senate makes on this question today.

But there are other wetlands problems, and they happen to exist in areas which are also the subject of rather normal human activities by foresters, by farmers, and by others who are using the land to make a living.

The initial response to section 404 was to interpret it so as to extend its potential jurisdiction over those normal activities which would subject citizens to overregulation, and we all began to get letters protesting that potential intrusion upon their normal activities.

Every proposal before this Senate, every one, is designed to exempt those normal activities from that kind of overregulation by the Corps of Engineers or anybody else. Any argument that is made on the floor to the contrary simply misrepresents one or the other of the proposals upon which we will be asked to vote before this debate is over.

The committee bill is very clear on this proposition, very clear. For instance, in response to this question let me give an answer: How does the committee proposal handle minor agricultural drainage? I put this question because the Senator from Texas put it to me earlier. The answer is this: First, the committee's program does not apply to any drainage activities which occur in upland areas.

The committee amendment also specifically exempts the construction and maintenance of agricultural irrigation ditches and the maintenance of agricultural drainage ditches.

For instance, if the drainage is being constructed in a field already in agricultural use for crops such as soybeans or corn, the drainage activity would not be subject to any permit under the provisions of the committee bill.

What types of farming and forestry practices are exempt from permit requirements under the committee bill? Let me list them: Normal farming and forestry activities such as plowing, seeding, harvesting and cultivating, minor drainage, upland soil and water conservation practices, maintenance and emergency reconstruction of existing fills such as dikes, dams and levees; construction and maintenance of farm or stock ponds and irrigation ditches; maintenance of drainage ditches, construction and maintenance of farm and forest roads, placement of dredge and fill material from farming and forestry practices which the State chooses to regulate by best management practices.

Now, it is the implication of some of the debate that has been offered by the Senator from Texas that these activities cannot be permitted unless the farmer comes here to Washington and gets a permit from some bureaucrat. That simply is not the case under the Senate bill. These activities are exempted from Federal regulation under the committee bill.

We leave those kinds of activities and other activities which involve agricultural runoff or runoff from any activities whatsoever to States under the section 208 program, and that is very clear. Or if what are involved are point sources, they will be subject to permits under the section 402 program. So these normal activities which have aroused normal Americans——

The PRESIDING OFFICER (Mr. BUMPERS). The Senator's 5 minutes have expired.

Mr. ANDERSON. I yield 5 more minutes.

Mr. MUSKIE (continuing). Normal Americans against the threat of overregulation by the Corps of Engineers have been exempted from that threat, and yet it is a threat which is the underlying and principal argument of those who urge adoption of the Bentsen amendment.

The question of toxics has been raised. Toxics have not been dealt with effectively by this Congress under any piece of legislation we have even enacted into law. Never, never. The Bentsen amendment would eliminate one of the few tools that are available under present law to EPA to at least identify what toxics particular dredge and fill activities are discharging into the waterways by eliminating the permit system.

It is all well and good to say, "Well, 307 is still there." That is like saying the Lord's Prayer is still there. But 307 will not work even to identify the toxics unless somebody has some authority to find out where they are, where they are coming from, where they are being discharged, and which ones ought to be stopped.

I am getting a little fed up myself, having written environmental laws for 15 years, to keep picking up the paper and reading about a new toxic that is killing more people, that is making more people ill because I have not done my job. We ought to be doing a better job, not a lesser job, to protect the people of this country against toxics, and the Bentsen amendment is a step backward. It is not a step sideways, it is a step backward.

I listened to the Senator from Texas make his arguments on the toxics. The Washington Post is absolutely right on this point. Section 307 does nothing to prevent the discharge of toxics into waterways because you wipe away with your amendment the permit system, which is the one way of giving teeth to section 307.

Those are the kinds of facts that most Senators ought to be listening to. You know, I have been living with this problem for a long, long time. This particular one of dealing with fill materials, dredge materials, runoff materials, is one the committee has found one of the most difficult with which it has had to deal.

Senator DOMENICI has been a very constructive force in committee debate on this question. Senator MCCLURE has been, Senator BENTSEN has been, we all have been. But, gentlemen, what the committee has proposed here is not some Draconian overregulatory scheme we are foisting on the American people. What it is is a scheme to insure that the Corps of Engineers respects environmental values within its traditional jurisdiction, and that the States are given the responsibility under section 402 to manage other sources of pollution.

If anybody in this body, including Senator DOMENICI, thinks we are going to have a better answer if we do nothing this year, he has learned nothing from his experience on the committee. We have learned in the committee that you have to build in an evolutionary way to deal with these problems.

The next big problem—it is not next, it is now—is not conventional pollutants which eat up oxygen contents of the waterways, it is toxics, toxics that cannot be dealt with effectively by secondary treatment, toxics for which we have found no total effective answer, and toxics are part of the problem we are talking about this afternoon.

I think the committee amendment, with its shortcomings—and it has them—is far preferable to the meat ax approach which is taken by the Bentsen amendment. When I say that I am not in any way denigrating the quality of the Senator from Texas, his public spirit, and his concern for the public welfare. I have had too much evidence to the contrary on that point to challenge it. We just happen to disagree on this point, and he knows when I disagree I often do it with considerable vigor.

[Laughter.]

The PRESIDING OFFICER. Who yields time?

Is all time yielded back?

Mr. BENTSEN. Mr. President, the nice thing about the Senator from Maine is he does not have to be disagreeable when he disagrees, and he is not. I appreciate that.

I yield to the distinguished senior Senator from Texas whatever time he needs.

Mr. TOWER. Six minutes.

Mr. BENTSEN. I yield 6 minutes to the distinguished senior Senator from Texas.

The PRESIDING OFFICER. The Senator from Texas is recognized.

Mr. TOWER. I thank my colleague from Texas.

Mr. President, last year, as in this session of the 95th Congress, I introduced an amendment aimed at diminishing the control which the Corps of Engineers has acquired through judicial interpretation in the courts. The amendment of my colleague from Texas which is now under consideration is almost identical to my amendment which failed in the Senate by a single vote last year.

I applaud the distinguished Senator from Texas for offering it this year.

It is neither the judicial nor the executive branch's right nor responsibility to dicate legislation. This particular usurpation of State's rights is what we will continue to be faced with if we fail to adequately design legislation which is both clear and precise.

This is very much the case regarding the Federal Water Pollution Control Act. A court decision, coupled with an administrative decision, is causing us to be

faced with a regulatory scheme which covers not just the rivers of the Nation but all surface waters and wetlands of the United States.

It is imperative that we make clear the terminology and bring it in line with the original intent of navigable waters. When this issue was considered in 1972, the conference committee intended that "navigable waters" was to include "all water bodies such as lakes, streams and rivers regarded as public navigable waters in law which are navigable in fact." However, in addition it was to encompass waters susceptible to use in their natural condition as a means of transporting interstate or foreign commerce.

Now, the courts contend that navigable waters include all waters of the United States. Now, the corps is in the position to obtain jurisdiction over waters which are navigable neither in law nor in fact, and furthermore, not even critical to navigation.

This court interpretation additionally creates the need for protecting major wetlands which can be better protected through a thorough and precise definition of what wetlands actually comprise. If this is done, there will be no doubt as to where the corps' jurisdiction lies. If the current definition of navigable waters is allowed to stand, it will mean that many day-to-day activities on lands that are wet, swampy, or poorly drained will require a permit.

If we are to take a practical, but effective, approach to regulating the discharge of dredged or fill material in navigable waters and adjacent wetlands, we must have a practical, but effective, definition of what those terms actually comprise. The corps may indeed find itself continuing with authority over land areas not within the boundaries of water bodies or lands which merely have a high water table.

Each of us is aware of the importance of regulating polluting activities on those waters which feed into larger bodies. Under our amendment States would thus be able to preserve and protect the quality of both nonnavigable and navigable waters with the assistance of the Federal Government if the States see fit.

Those favoring the committee provision assume that the definition presently used by the corps will remain constant, and that, as a result, streams with a discharge of less than 5 cubic feet per second and standing bodies of water less than 10 acres will be exempt forever from permit requirements. The committee bill depends on the corps definition. Section 329.3, part II of the Federal Register, dated July 19, 1977, states in part:

> Precise definitions of navigable waters or navigability are ultimately dependent on judicial interpretation, and cannot be made conclusively by administrative agencies.

If the committee amendment on section 404 is adopted, the courts ultimately may enlarge the definition of navigable waters even further. It is not unreasonable to say that once the present battle over 404 is concluded, nothing prohibits further litigation by groups to expand the jurisdiction of the corps to include those areas it presently exempts. If we leave the matter in the hands of the courts, the original problem may reoccur and we will have "reinvented the wheel."

If we do not act affirmatively and clean up the language in Public Law 92–500, it will result in unwarranted and despotic intrusion by the Federal Government over every brook, creek, cattle tank, mud puddle, slough, or damp spot in every landowner's backyard across this Nation. It seems unreasonable that we should choose to force more Federal Government on our citizens in an era when they want and need less.

States are currently making great strides in their efforts to protect their wetlands through their own laws and Federal laws which are already in existence. Let us allow them to continue in this manner. We should not set forth legislation which will result in a mass of national, all-encompassing regulations.

Often what may appear to be in the national interest could be diametrically opposed to what is in the States' best interest. We must take action to insure that permits are not required for those activities which either individually or collectively have little, if any environmental impact.

Our amendment effectively remedies two problems—it halts the seemingly never-ending growth of the bureaucracy and it protects our water resources at the same time. The amendment would provide a legislative mandate whereby the corps and the States would jointly be responsible and accountable for sustaining our vital wetlands. At the same time, State and local governments can provide protection based upon local knowledge and experience with existing problems.

Vital projects are being delayed because the sponsors are unsure whether or not a 404 permit is required. Critical projects are being delayed as the Fish and Wildlife Coordination Act is abused and cited as the basis for requiring mitigation of damage to wildlife habitats in public works projects approved by this body. As a result, we find 404 being used to halt progress in areas where progress is essential in providing jobs and water resources.

If we allow these and other infringements of States' rights to protect their water resources to continue; if we allow this Nation to become infested with even more bureaucracy when local areas could make viable decisions; if we allow the courts to set forth the meaning of legislation in a manner not in keeping with legislative intent; and if we allow the creation of regulations which were not envisioned as law by Congress, then in my view we are shirking our responsibilities as legislators.

If this trend is not checked or rechanneled, we may indeed reach the point where it will be difficult, if not impossible, to correct the difficulties created by the court interpretation of the 1972 Water Act. We must do all that is within our power to keep our agricultural economy and our housing industry flourishing. If we do not stop these unwarranted encroachments on decision-making responsibility, our efforts will be worthless. I urge adoption of this amendment because we need jobs for the unemployed, water for our farms and cities, and less Government infringement on people and progress.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. BENTSEN. Mr. President, I yield 5 minutes to the distinguished Senator from Kansas who was one of the very early proponents of this amendment and has been supporting it for some time.

Mr. DOLE. Mr. President, I was a member of the Public Works Committee—as it was then called—when the landmark Water Pollution Control Act was considered and passed in 1971–72. It was, and is, a credit to the environmental consciousness of Congress. The act was a giant step toward protecting the purity of our Nation's waters. But it was not a "perfect" measure, nor were its provisions sacrosanct. We have all learned a great deal about the weaknesses and the shortcomings of that original measure during the past 5 years.

One of the provisions which we have learned most about is section 404, the so-called "dredge and fill" regulatory authority. This provision has been a matter of deep personal interest to me. My involvement, as I mentioned before, began as a member of the drafting committee. In addition, the provision, as originally passed by Congress, would potentially have a tremendous impact on many of my constituents in the State of Kansas. Beyond that, the original version of section 404 could have a severe impact on many sectors of our entire economy. It has gained the reputation as one of the most excessive examples of overregulation and redtape by the Federal Government.

So the Senator from Kansas is pleased that today we can hopefully resolve this controversy in a conclusive manner to protect the navigable waters of this country as the Congress originally intended to do. Hopefully, however, what we agree on today will result in a reasonable and effective regulatory program that will not inundate agriculture and other sectors of our economy in redtape.

The so-called Bentsen amendment we are considering has been the product of a long and detailed debate over the precise form that section 404 should take. As a Senator from Kansas, I have been personally involved in this debate and in the process of developing the compromise over the past 2 years. Hopefully, the amendment we are considering reflects some of the efforts I have made.

In 1975, after the controversy over section 404 originally erupted, I introduced a bill to resolve the difficulties. The compromise Bentsen amendment reflects many of the provisions of my bill, which I would like to discuss later in greater detail. In addition, on July 27, 1976, I testified before the Senate Public Works Committee on the changes that should be made in section 404. In June of 1976, I joined 29 other Senators in asking President Ford to delay the imple-

mentation of "dredge and fill" regulations until Congress could clarify the provision. As a result of that request, President Ford did provide a reasonable delay.

On June 3 of this year, I initiated a request signed by 27 Senators to President Carter that the moratorium be extended to give Congress an opportunity to resolve the controversy in a reasonable manner. The response we received from Mr. Stuart E. Eizenstat indicates that apparently President Carter and the present administration are less sensitive to the problem. Hopefully, however, the compromise amendment we are debating today will resolve this matter conclusively. I ask unanimous consent that my letter to President Carter and the response from Mr. Eizenstat be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., June 3, 1977.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: Many of our country's citizens—particularly those engaged in farming, ranching, forestry, and construction activities—are extremely concerned about federal regulation under the auspices of Section 404 of the Federal Water Pollution Control Act. We, as representatives of those citizens, want to register our own concern about the expanding jurisdiction of the "dredge and fill" permit program, and respectfully request a 90-day moratorium on implementation of "Phase III" regulations by the Army Corps of Engineers.

When Congress originally authorized the Section 404 Corps permit program in 1972, it was principally intended to regulate the disposal of dredged fill material in "navigable waters" of the United States. A U.S. District Court interpretation of Congressional intent during 1975 effectively expanded the Corps' regulatory jurisdiction over a variety of dredging and filling operations on virtually all waters of the United States. Subsequently, Interim Final Regulations were issued by the Corps of Engineers in 1975, to implement the much expanded permit program in three stages.

Phase III is scheduled to take effect on July 1, 1977. Under the regulatory provisions, Corps permit authority will cover a broad range of major and minor dredging and filling operations on the nation's rivers, streams, and tributaries, up to their headwaters.

At this time, we believe a temporary, 90-day moratorium on the implementation of Phase III is advisable for the following reasons:

1. The House of Representatives has already approved major revisions in the Section 404 program, including a more restrictive definition of "navigable waters" which would eliminate the legislative basis for Phase III (H.R. 3199). The Senate Committee on Environment and Public Works has scheduled hearings on the issue during June and recommendations for changes in Section 404 will likely follow.

2. The Secretary of Agriculture has endorsed the intent of H.R. 3199, has supported clarification of the definition of navigable waters, and has stated, "We believe the enactment of Phase III on July 1, 1977, will significantly increase . . . delays, duplications, and expenses" in production of food, fiber, and forest products.

3. Preparation of "Final Regulations" with additional details by the Corps of Engineers for the Section 404 program has been considerably delayed. Provisions for a "nationwide permit system," along with additional exemptions, were published only last week. There will not be adequate time for thorough consideration and public comment on all aspects of Final Regulations for Phase III prior to the effective date of July 1, 1977.

In short, there are serious problems associated with implementation of Phase III in July, and Congress is now moving towards a legislative resolution of the "dredge and fill" permit issue. We are asking that you direct the Corps of Engineers and the Environmental Protection Agency to delay implementation and enforcement of Phase III of Section 404 regulations for 90 days, pending a final resolution of associated issues by Congress.

We appreciate your earliest attention to this matter, and will look forward to hearing from you in this respect.

Sincerely yours,

BOB DOLE,
U.S. SENATOR.

THE WHITE HOUSE,
Washington, June 27, 1977.

Hon. BOB DOLE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR DOLE: Thank you for your letter of June 3, requesting that the President declare a moratorium on program implementation in Phase III waters under section 404 of the Federal Water Pollution Control Act.

As you point out, the program for regulating discharges of dredged or fill material under section 404 has attracted the attention of numerous citizen groups. We believe, however, that appropriate procedures have evolved over the last five years to accommodate concerns raised by Congress, the Courts, the public and the Executive Branch. It is our view that the program is operating effectively in Phase I and Phase II waters, and that the final stage of implementation in Phase III waters beginning July 1 of this year will also proceed smoothly.

The Corps of Engineers proposed a regulation on May 16, 1977 to authorize a number of discharges by nationwide permit. Encouraging comments from several critics of the program and our experience with general permits issued on a regional basis convince us that these nationwide permits will resolve many of the fears raised over unnecessary regulation in Phase III waters. In addition, the Corps of Engineers expects to publish by July 1 a complete revision of the current program regulation which will clarify and streamline the permitting process.

The President has decided, therefore, that it is in the best interest of the Nation to allow program implementation to continue as scheduled two years ago. We all recall the confusion and uncertainty created by imposition of a Presidential moratorium on Phase II last fall. To suspend the ongoing processing of Phase III applications for projects that are scheduled to begin later this year, would only repeat the unfortunate delays that occurred during the last such moratorium.

The President announced in his message on the environment that he will recommend to Congress some adjustments to the section 404 program which will further improve its effectiveness and efficiency of administration. These recommendations are based in part upon legislative proposals debated by the House of Representatives and the Senate during the last two years. Specifically, as part of this package we expect to request authority to transfer the permitting responsibility in Phase II and III waters to States that demonstrate the capability to administer the program. We believe that the experience gained by the Federal agencies in administration of the program coupled with the authority to transfer primary responsibility to the States will ensure that the section 404 program will continue to play an essential role in protecting water resources including our rapidly diminishing wetlands.

Thus, while I can understand your concern and desire to impose a moratorium, the President is of the view that a moratorium is not required in light of the experience acquired to date and the refinements embodied in the forthcoming Corps of Engineers regulations.

Sincerely,

STUART E. EIZENSTAT,
Assistant to the President
For Domestic Affairs and Policy.

ORIGIN OF CONTROVERSY

Mr. DOLE. Section 404 of the 1972 act gives the Army Corps of Engineers primary authority to regulate dredge-and-fill operations in "navigable waters" of the United States. Historically, the corps' duties have related to preventing navigational obstructions and facilitating interstate commerce. The corps' expanded powers under section 404, however, resulted from a broader concern for environmental protection. The matter of "protection," per se, has not been at issue. Instead, it is the mechanism, and the extent of jurisdiction reflected in the administration of section 404 that has been justifiably challenged. It is time that congressional intent is clarified.

UNANSWERED QUESTIONS

Congressional intent as reflected in the language of section 404 in 1972 was admittedly vague and unspecific with respect to the issues of Federal wetlands protection, tributary protection, and of defining "dredging" and "filling" activities. A 1974 district court decision in Florida—United States against Holland—suggested that—

> Even though it seems certain that Congress sought to broaden Federal jurisdiction under the Act, it did so in a manner that appears calculated to force courts to engage in verbal acrobatics.

Subsequent attention to section 404 in scattered judicial decisions has led to interpretive gyrations that bear questionable relationship to congressional language.

Confusion and uncertainty about the scope of section 404 after 1975 resulted from the haziness of corps of guidelines for distinguishing between legal and illegal conduct. Just as the farmer needs clearcut guidelines addressed to his specific daily activities, so does the Corps of Engineers require an easily definable scope of authority to facilitate permit processing.

For these reasons, it is time for Congress to take positive steps to clarify the proper scope of the section 404 permit program and to resolve jurisdictional questions. In my opinion, House approval of section 16 to H.R. 3199 last April was an appropriate step in the right direction. It is now up to the Senate to finally resolve the issue in a manner acceptable to farming, ranching, and other affected industries.

BASIC ISSUES

There are at least three very basic issues that must be resolved at this time by Congress. What constitutes "navigable

waters" for the purposes of this act? What specific types of normal and routine activities—as practiced by farming, forestry, mining, and construction industries—are to be considered dredging or filling for the purposes of the permit program? And to what extent is Federal regulation of small waters desirable or necessary to achieve the purposes of the 1972 Water Pollution Control Act? These questions strike at the very heart of the controversy that has engulfed the section 404 provision since its enactment. A practical and definitive resolution of all these issues at this time by Congress would, I believe, largely eliminate the distress caused by undue Federal interference into routine aspects of private business.

A very fundamental question lingers about the proper definition of navigable waters. Of course, this is an issue that related to other provisions in the 1972 act as well. The courts have interpreted the term to encompass most waters in the United States and this has spread the scope of this Federal program far beyond traditional boundaries. We all understand the importance of regulating genuine polluting activities on tributaries that feed into larger waters. But whether the Federal Government should be involved in that regulation, whether routine agricultural activities fit the description of polluting sources, and whether nonnavigable water bodies wholly contained upon private property should be subject to oversight are all questions that must be resolved by Congress. If we legislate in a thoughtful and practical frame of mind, environmental protection efforts can proceed without undue encumbrance, while private business can proceed without undue regulation.

REGULATING ACTIVITIES

Following the district court decision NRDC against Calloway—1975—opposition to the section 404 permit program arose from agricultural and forestry interests who feared an expanded program would interfere with normal daily activities near inland waters and on wetland areas, such as plowing, digging irrigation ditches, et cetera. There is certainly no obvious language in the 1972 act to arouse such concern, but the imprecise definitions of dredging and filling, and the court's order covering lakes, ponds, tributaries, headwaters, and adjacent wetlands, made such regulation of normal farming acts a very real possibility.

Following the 1974 court decision, I introduced in early 1975, S. 1843, a bill that essentially parallels the Bentsen amendment by redefining navigable waters. As is often the case, action on this legislation was deferred due to the desire of the committee to resolve the issue without regulation.

SIMILAR PROPOSALS

A great many groups on both sides of this issue participated in the development of the proposal I made earlier. The outcome of the various efforts that produced the Bentsen amendment and my own proposal have many common features. In view of the interest about these proposals on the part of many different individuals and groups, I would like to call attention to several of the more significant common features.

Both pieces of legislation would define navigable waters as only those waters presently used or that could be reasonably used in interstate commerce. In my State of Kansas, for example, while we have a large surface area of water, very little of it could ever be used for interstate commerce. It would be unnecessary and excessive to require permits for these waters under the definition of navigable waters.

Those projects which meet the standards set out in the National Environmental Policy Act and which have been approved under that authority are put outside the jurisdiction of the Water Pollution Control Act. This provision which was in the first piece of legislation that I introduced would avoid the problems created by complying with two overlapping Federal regulatory schemes.

One of the major problems contained in the original version was the requirement for a permit for even normal routine activities. The Bentsen proposal and my own both would authorize the Corps of Engineers to issue general permits for activities which would not have a substantial adverse impact on the affected waters.

A matter which has been of great concern to many under the original version of section 404 was the implication that might be required for a Federal permit and a State permit where States already have equal or stricter programs. This concern has been expressed in a recent letter to me by the Governor of Kansas. I ask unanimous consent that the letter be printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STATE OF KANSAS,
OFFICE OF THE GOVERNOR,
Topeka, Kans., July 26, 1977.

Hon. BOB DOLE,
U.S. Senate, Dirksen Office Building, Washington, D.C.

DEAR BOB: The Governors and representatives of the Missouri River Basin states at the most recent Missouri River Basin Governors' Conference on Water, in Omaha, Nebraska, passed a resolution expressing concern about Section 404 of the Federal Water Pollution Control Act. The Act confers jurisdiction upon the Army Corps of Engineers for all water of the United States and I therefore must raise strenuous objections to Section 404 on the basis of duplication of federal and state efforts.

The Kansas Legislature has enacted a number of regulatory laws dealing with activities in and on the floodplain and stream channels. These laws are administered by the Chief Engineer within our State Board of Agriculture, Division of Water Resources. Additionally, my Secretary of Health and Environment is charged with administering the national discharge permit system. I have been advised by administrators of these two agencies that if Kansas issues a permit, the Corps of Engineers has agreed to regard such action as evidence of compliance under Section 404. Presently we are asking the citizens of Kansas to acquire a permit from the State as well as a permit from the Army Corps of Engineers for the same purpose. I would request therefore that careful consideration be given to elimination of unnecessary duplication of effort. If laws of a State meet or exceed the federal guidelines under Section 404, such an action would save federal tax dollars.

I look forward to your early response on this suggestion.

Very sincerely,

ROBERT F. BENNETT,
Governor of Kansas.

Mr. DOLE. Most significantly, this compromise amendment—as did my earlier proposal—clearly exempts from regulation those routine agricultural activities and other commercial activities that have nothing to do with actual navigable waters. It is this basic change that avoids the unnecessary regulation contained in the original version of section 404.

Both my original proposal and the Bentsen amendment would provide an opportunity for States, if they so desire, to administer their own permit programs under the act. Hopefully, this will avoid any requirement for an individual who obtained a permit under the State program and then subsequently be required to obtain a similar permit under the Federal program. This feature will avoid a redtape problem contained in the original section 404.

Mr. President, the adoption of this amendment is essential to the farm sector and other sectors of this Nation. It is essential if we are to avoid excessive overregulation by the Federal Government.

I commend the Senators from Texas—Senators TOWER and BENTSEN—for their efforts. Without this amendment, our farmers and ranchers and others could be subjected to unnecessary bureaucratic harassment. Yet, with this compromise proposal, we will retain the meaningful protection of our navigable waters that was originally intended by Congress. We will have the effective protection that will reserve our rivers and waterways for future generations.

I support this amendment and urge my colleagues interested in this Nation's agriculture to also support the amendment.

The Senator from Kansas had the opportunity to listen to a number of the arguments today, but I would just suggest that the amendment we are considering, authored by Senator BENTSEN, and others, who are now members of that committee, who understand the problems and the shortcomings, is a product of a long and detailed debate, and I think perhaps it does address the question. To go back to the controversy in 1975, a bill was introduced at that time and the Bentsen amendment reflects many of the provisions of the bill introduced at that time.

In addition, on July 27, 1976, this Senator testified before the Public Works Committee, and he in June 1976 joined with 29 other Senators in asking President Ford to delay the implementation of dredge and fill. The result of that request was that President Ford did provide a reasonable delay.

On June 3, of this year, I initiated a request signed by 27 Senators to President Carter that the moratorium be extended to give Congress an opportunity to resolve the controversy in a reasonable manner. Then we had

response from Mr. Eizenstat, who indicated that apparently President Carter and the present administration felt that there was no danger.

It seems to me that the matter is being properly addressed today. There really are three very basic issues: First of all, what constitutes navigable waters, what specific types of normal and routine activities as practiced by farming, forestry, mining, and construction industries are to be considered dredging and filling for the purpose of the permit program, and to what extent is Federal regulation of small waterways desirable or necessary to achieve the purposes of the 1972 Water Pollution Control Act? That controversy has engulfed section 404 since its enactment.

A very fundamental question lingers about the proper definition of navigable waters. The Senator from New Mexico and others have discussed this in great detail and with considerable expertise, but it seems to this Senator that we have an opportunity today to at least clarify it further.

I can say that from the standpoint of the States, in a letter received from the Governor of Kansas less than a week ago, he indicated that the Governors of Kansas and the other States in the Missouri River basin had passed a resolution expressing concern about section 404, about the jurisdiction of the Army Corps of Engineers, and about the permit program, whether the requirement is for State permits or corps permits, and asking that it be clarified.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. BENTSEN. Mr. President, if it is agreeable to the Senator from Colorado, the managers of the bill, and others who are interested, I think we can sum up the arguments on each side in 2 minutes, and yield back the remainder of our time.

The PRESIDING OFFICER. Will the Senator use his microphone? Is there a unanimous-consent request that each side have 2 minutes to sum up, and then yield back the remainder of their time?

Mr. HART. Yes, Mr. President, I make such a unanimous-consent request.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered. Who yields time?

Mr. BENTSEN. Mr. President, I yield myself 2 minutes.

One of the questions here is the issue of toxic substances. The argument has been made that the Bentsent amendment would allow the dumping of toxic substances into a stream such as that found in Rock Creek Park. That simply is not true.

It has been said that some of this legislation, particularly under section 307, is not effective. If it is not effective, why did they not try to amend section 307 in the committee? At that time they apparently felt it was satisfactory.

On the question of permits, the committee bill would establish a system which would perpetuate the scope of the present system which bury Government administrators under mountains of red-tape and minutiae. I think it is much better if we restore the program to manageable dimensions, and free the farmers, ranchers, and private citizens of this unnecessary burden.

It has been said today that my amendment leaves the wetlands unprotected. That is not true. Under this proposal the coastal wetlands remain protected, as do the wetlands adjoining navigable streams. It further authorizes Governors to designate important wetlands within their States that would be protected under the corps jurisdiction. I think that is doing an injustice to the State governments to say that they would not seek protection for these wetlands. I do not think we have all the answers in Washington, nor can we anticipate here the varied conditions that exist across the length and breadth of the United States.

Regulations—submitting all of the waters of the United States to permits. That, in effect, is what is done by the committee bill. They say, "We have moved it on over to the States," but what they have created is shadow Federal regulations. What they actually say is, "You cannot have a State program unless every "i" is dotted, every comma is in the proper place, and every detail is approved by the Federal bureaucracy. If at any time we decide to change our mind on it, we can withdraw that."

That is the kind of Federal regulation we are talking about.

The PRESIDING OFFICER. The Senator's time has expired. Who yields time?

Mr. HART. Mr. President, may we have order in the Senate?

The PRESIDING OFFICER. The Senator's request is well taken. The Senator from Colorado is recognized for 2 minutes. The Senate will be in order.

Mr. HART. Mr. President, I ask for the yeas and nays on this amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. HART. Mr. President, there is either a problem of the deposition of toxic and harmful materials in the water systems of this country, or there is not. If there is a problem, that problem either represents a national interest, or it does not. The Senator from Texas and the proponents of the amendment cannot have it both ways.

What they are saying is that by abandoning Federal responsibility over this problem, there is no problem in 98 percent of the waters of this country. On the other hand, they say it is a State responsibility. If it is a problem, it is a national problem, and the Federal Government and the Congress of the United States have to address it.

That is what the Environment and Public Works Committee of the Senate has done in a reasonable, moderate, and responsible manner, and that is the alternative that the Senate has before it today: That reasonable approach, or the Draconian, meat axe approach of this amendment.

Mr. STONE. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. HART. I have limited time; then I think the Senator can make his request.

Mr. President, the adoption of this amendment will not create a lasting solution to this problem. The people of the United States will have to be back before the appropriate committees of Congress next year, seeking to solve the problem. We would not, by adopting this amendment, be solving the problems of 98 percent of the waterways of this country.

This is an open invitation for the dredgers of this country to find wetland areas for the disposal of their contaminated waste and spoil. If we adopt the amendment, that is what will happen. We will be jeopardizing the health and safety of the people of this country if we permit that to happen. There is no other remedy in the law to solve that problem.

The PRESIDING OFFICER. The Senator's time is expired.

Mr. HART. I urge my colleagues to reject the amendment offered by the Senator from Texas.

Mr. STONE. Mr. President, I ask unanimous consent that Bruce Rowen of my staff may be present on the floor during the deliberations and voting on this matter.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL STATEMENTS SUBMITTED

Mr. HANSEN. Mr. President, I rise in support of Senator BENTSEN'S amendment to the Clean Water Act of 1977. It is my belief that the adoption of this amendment would return the Federal Water Pollution Control Act to the state originally intended by Members of this Congress when the matter came before us in 1972.

I firmly believe that we should follow the wise lead of the House of Representatives in adopting an amendment which would withdraw from the permit authority of the Corps of Engineers its coverage of a broad range of major and minor dredging and filling operations on the Nation's rivers, streams, and tributaries, up to their headwaters.

Mr. President, I have received numerous letters and telegrams concerning the matter of section 404 of the Federal Water Pollution Control Act and the exercise of jurisdiction by the Corps of Engineers in that area. One of the letters which I have received came from Leno Menghini, superintendent and chief engineer of the Wyoming State Highway Department.

Mr. Menghini's concern revolved about the costly delays and unnecessary duplication which result from the Corps of Engineers involvement in an area in which the State of Wyoming has long had a concern and in which State government has operated effectively. According to Mr. Menghini, as a result of a longstanding agreement between the Wyoming Highway Department and the Wyoming Game and Fish Commission, efforts are made and precautions taken to insure the protection and improvement of Wyoming waters. The corps permit procedures merely add another bureaucratic layer to the process causing increased delays and frustration.

It is much the same with so much that is done at the Federal level. The

processes and procedures which the States are most capable of handling, and Federal Government involves itself in isolated and insulated as it is, distant from the men and women whose daily lives it affects, the Federal Government acts in ignorance of so much that State and local governments know simply as a result of their proximity to the people. If there is one lesson that is clear from so much recent history, it is that the local government is the government best capable of governing, best capable of understanding the needs and desires of the American people.

There is an analogous matter concerning our Nation's waters which I would like to discuss briefly while this entire question of the Water Pollution Control Act amendments lies before the Senate. That concerns the ongoing development by the U.S. Water Resources Council of a national water resource policy.

On July 6, the Water Resources Council published in the Federal Register an announcement that, in accordance with a directive of President Carter, the Water Resources Council, the Office of Management and Budget, and the Council on Environmental Quality were entering into a review of existing water resource policy and would develop recommended reforms. The notice announced hearings scheduled for late July and early August and established the time frame for the developments of such reforms. On July 15 and then again on July 25, the Water Resources Council published in the Federal Register, five issue papers containing 21 perceived problems and 111 options to be considered.

Two days after the fifth issue paper was published in the Federal Register, the first hearings were held in Denver, Colo., at which the State of Wyoming was represented. The Governor of Wyoming, representing thousands of water users in the State, discussing the massive changes proposed by the options suggested by the National Water Resources Council, was limited to a 10-minute presentation.

Yet perhaps the most distressing fact of these hearings was the time frame for the development of the issue papers as published on the 6th of July. While the hearings were to be conducted on July 27 and 28 and August 1 and 2, and the comment period is to remain open until August 20, on August 1 the Policy Committee of the Water Resources Council was to begin to redraft the option papers. On August 16, the members of the task forces are to select preferred options and preliminary agency positions.

Between August 17 and September 1 the final option papers are to be drafted. It is my very real fear that the thoughts and ideas expressed by those who testify and write concerning this developing national water policy will be ignored and will serve only as window dressing to decisions which have already been made, options which have already been selected.

However, my concerns go beyond the manner in which this developing water policy has been administered. I have very real concerns and fears with regard to the entire thrust of these proposals, particularly with regard to issue papers, three, institutions and institutional arrangements; four, water conservation; and five, Federal reserved water rights.

Ever since gold was panned in California, the concept of prior appropriations has been the system upon which the West has relied in the utilization and development of its water. Based upon this system and the State water laws developed around it, farms and ranches were created from the frontier. Based upon this system, industry developed. And based upon this system, cities and towns grew up. For over 100 years the arid West has relied upon this system and developed in accordance with it and grown strong and economically prosperous because of it.

Now the Federal Government, through a national water policy as developed by the Water Resources Council, declares that the system is inadequate because it ignores this consideration or that consideration. Now the Federal Government declares that it will make use of the 50 percent of the land that it owns in the West, that it will make use of its position as trustee for Indian lands, that it will make use of the money which it returns to the American taxpayer, to change the water law of the West and put in its place a system that someone in Washington thinks is better.

Mr. President, it is my intention to do all that I can in order to prevent the adoption of a national water policy which abrogates and destroys the ability of States to deal with problems which are State problems. It is my intent to be clear on this issue, that State water laws are matters to be dealt with by the States and not by some official in Washington.

Mr. BARTLETT. Mr. President, today we are again debating section 404 of the Water Pollution Control Act. This matter was acted on by the House of Representatives during the 94th Congress, and they provided the Senate with a reasonable solution. However, the Senate would not take the lead provided by the House, and we are again confronted with attempting to specify the parameters of Federal authority.

This amendment by my distinguished colleague from Texas, Senator BENTSEN, provides a realistic approach to defining navigable waters. It is imperative that Congress clearly express its intent so that the Corps of Engineers and other Federal agencies will have clear and specific guidelines within which to operate. Also, it is necessary that Congress define the parameters of the Water Pollution Control Act for Federal courts, thereby precluding any opportunity for the courts to misinterpret the intention of Congess.

The Corps of Engineers has published regulations requiring permits for many types of agricultural and nonagricultural activities. These requirements are in addition to applicable State and local requirements, which include compliance with State environmental policy acts, State forest acts, and State and local land use regulation. Also, there are other Federal requirements from specific agencies such as the Department of Agriculture, which must be complied with.

Delays can be ill-afforded by the agriculture community, or any other type of business. Business decisions are made on the basis of a number of tangible and intangible considerations, but depend primarily on immediate need, anticipated need, availability of capital, and present costs. Lengthy delays detrimentally affect the business planning which has become increasingly imperative in complex business and agribusiness.

The U.S. Department of Agriculture has estimated that 60,000 additional permits per year would be required if the normal conservation practices now being carried on by USDA and farmers are continued. Each of these conservation practices would be delayed, thus perpetuating the environmental problem that the "practice" is seeking to solve.

First. If the court decision to expand the jurisdiction of the corps to all bodies of water, both public and private, in excess of 5 acres is an accurate reflection of legislative intent, then it should stand. However, if the Congress should decide that it was not their intention to extend such jurisdiction, then it should immediately act to correct this error, by adopting this amendment.

Second. If Congress is serious about eliminating unnecessary paper work, redtape, and bureaucratic interference, this is the specific place to begin.

The problem is apparent, and I urge that the Members consider the present situation and move to expedite the passage of this amendment.

Mr. HUDDLESTON. Mr. President, it is my understanding that your amendment will exempt from the permit requirements the placement of dredged or fill material into navigable waters when it results from normal farming and ranching activities. I do, however, wish a clarification with respect to the application of the amendment to a large and important agricultural activity, the breeding and raising of horses. In the last quarter century many people seem to have forgotten the important part that the horse has played and still plays in the American agricultural system. Since the second World War, the number of horse farms and ranches, particularly smaller ones, has increased.

The Water Pollution Control Act was aimed at preventing the pollution of our Nation's navigable waterways. Any regulations adopted under the act should focus on the uncontrolled disposal of polluted dredge spoil and major land fillings into our waterways. Applying the act to normal agricultural activities such as horse farms and ranches is unnecessary. Requiring a permit whenever an American horseman places fill into a navigable water is a severe disincentive to American farms and ranches, particularly smaller ones.

It is my understanding that your amendment would apply to horse farms and ranches. I would like to ask the Senator from Texas whether it is his intent that the amendment exempt horse farms and ranches from the act as it does other agricultural activities.

Mr. BENTSEN. As the Senator from Kentucky well knows, Texas is one of the major producers of horses in the United States. The American Quarter Horse Association is headquartered in Amarillo. It is certainly the intent of my amend-

ment to exempt horse farms and ranches from the act. The language following "such as" is not to be read restrictively as exempting only activities that are listed. Rather, they are examples. Certainly the discharge of dredged or fill material from normal horse farming and ranching activities would not be prohibited by or otherwise subject to regulation under my amendment to the act.

I thank the Senator from Kentucky for his question and support for my amendment.

CLEAN WATER ACT TELLS AMERICAN LANDOWNERS, "BIG BROTHER IS WATCHING YOU"

Mr. TALMADGE. Mr. President, I think it is appropriate here to read a small portion of the regulatory impact statement contained in the report on this bill. It says:

The existing Federal Water Pollution Control Act has substantial regulatory impact throughout the nation. Approximately 6,000 industrial sources are regulated as to the amount of discharge into the nation's waters. In addition, virtually every municipality in the country is required to construct treatment facilities which will treat sewage. Under present law many of these sources of pollution are in violation of the 1977 deadline for secondary treatment and are thus subject to enforcement orders by EPA.

Existing law governs all discharges, not just large industrial sources and municipal dischargers. Further, the regulatory impact of section 404 requires many sources who discharge dredge or fill material into navigable waters to obtain permits from the Army Corps of Engineers. The potential regulatory impact of this program is quite extensive.

Mr. President, having said that, the report incredibly goes on to say, "The bill has no impact on the personal privacy of individuals."

First of all I would point out that the word "sources" in this report language refers to voters on whom the report admits "the potential regulatory impact of this program is quite extensive."

While section 404 purports to exact permits for dredging and filling only in the navigable waters of the United States, nowhere has the term navigable been defined, except by a court, which has determined that section 404 applies to virtually all waters of the United States.

In efficient forest and agricultural management you have to move dirt. And while this bill purports to exempt agriculture and forestry from the permit system, it does not.

On page 76 the report says that minor drainage is intended to deal with situations such as drainage in Northwestern forests or other upland areas. The exemption for minor drainage does not apply to the drainage of swamps or other wetlands.

First of all there is no determination either in the bill or the report of what a wetland is. Second, what is the point in bothering to make an exemption for uplands. The water is going to run off from those areas anyway. In other words, the bill provides an exemption for areas that are not even within the scope of the program.

However, there are no exemptions for minor drainage practices which are an every day occurence in the wise practice of agriculture and forestry.

In my State we have many lowland forests, both hardwood and pine, that would be classified as wetlands. These productive forest lands often require minor surface drainage usually with small ditches, to insure satisfactory establishment of the next tree crop—that is, to practice good forest management—after a timber harvest. It is important that this type of activity is included in the exemption. To do otherwise is to legislate against good forest management. Most of the lowland hardwood forests in my State are "wetlands" because they have excess soil moisture and a high water table at certain times of the year. This minor surface drainage is necessary to ensure proper reforestation and growing conditions for the Nation's important hardwood timber resources. It is not used to convert the site to a different land use, nor is it a threat to other forest values.

The report says that no permits will be required for practices involving those agriculture, mining, and construction practices that are properly controlled by State agencies and for which there approved best management practice programs.

I am forced to infer from this that the States will be required to establish lists of so-called best management practices for farming, which in effect will be telling a farmer how to farm his own land.

The report says on page 77 that the term normal silviculture activities—which are exempted—does not include clearcutting of eastern mixed hardwoods or harvesting associated with the even-aged management of timber.

As far as I know, the Committee on Environment and Public Works has heard no testimony related to this report language. It has conducted no studies to identify what is normal forestry practice in the East.

I would point out that if this report language is interpreted literally, it would affect virtually every private and public forest in the South, where a hardwood understudy grows even in pine plantations.

Last year the subject of clearcutting was examined extensively by the Agriculture, Nutrition, and Forestry Committee and the Committee on Energy and Natural Resources. Following extensive hearings and study the two committees sent to the Senate what was to become the National Forest Management Act of 1976.

We learned in our hearings that clearcutting was indeed a common and valid practice in the East as well as in the Western forests. Several noted scientists showed us conclusively that clearcutting does not of itself cause soil erosion.

The Congress decided that it would not stop clearcutting on public lands. Yet, this year we are being asked to submit to the idea that there should be no clearcutting on privately owned lands, as well as reverse what we said last year for the public lands.

That makes no sense at all.

What we are being asked to do here today is unduly impose the heavy hand of Government on the day-to-day lives of those Americans who work the land to provide food and fiber for this Nation.

What we are telling these people is that Government knows best.

What we are telling them is that their Government does not trust them.

For myself I refuse to participate in such a directive.

I believe that it is in the economic self-interest of farmers and foresters to protect the resource base to insure their future income.

I do not believe that bureaucrats, whether they be State or Federal, can, or ought to, be telling farmers how to farm or private foresters how to manage the woods.

If the Senate decides that it is going to diminish the ability of the private land owner to make day-to-day management decisions on his own land, then it is appropriate that section 404 be in the hands of the Army. Because it will take a fully mobilized army to enforce such a law, and in truth, it cannot be enforced.

The people are telling us they want the Government to be smaller and to spend less of their money. They are telling us to leave them alone. Yet we meet here today to pass legislation that will affect 6,000 industrial practices; that will affect every city and town in the country; that will affect virtually every private property owner. There is not a soul in this room who can predict what this bill will cost in terms of higher local taxes, higher food costs, higher wood product costs and higher costs for consumer goods.

Mr. President, I urge my colleagues to vote for Mr. BENTSEN's amendment.

Mr. HUDDLESTON. Mr. President, though I believe the Senate Committee on Environment and Public Works has made a good faith effort to solve many of the problems which are attendant to the persistent controversy over section 404 of the Federal Water Pollution Control Act, I intend to continue my support for the approach being offered by the distinguished Senator from Texas, Senator BENTSEN.

First and foremost, I support the Bentsen amendment because the members of the agricultural community in my State have examined both the Bentsen amendment and the committee bill and have indicated to me that there remain many problems with the committee approach. Primary among these problems, according to the farmers in the westernmost portions of Kentucky, is the remaining requirement in the Senate bill for a permit from the Corps of Engineers to bring wetland areas into the production of food, fiber or forest products.

Mr. President, the farmers in western Kentucky have, over the years, begun to develop heretofore unmanageable land areas into viable agricultural production. I believe very strongly that they should be able to continue this expansion of our Nation's food and grain supply without the possible intrusion of the Federal Government into their affairs. I believe that Senator BENTSEN's amendment will, once and for all, make it very clear that the Federal Government shall not intrude.

Also Senator BENTSEN's amendment will exempt from permit requirements

congressionally authorized projects if they have already been reviewed in an environmental assessment. In my view, the filing of a 404 permit application is simply duplicative effort on the part of those involved in trying to develop a project which has already received the intense scrutiny of congressional committees and also has been subject to the environmental impact statement process.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Texas. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Arkansas (Mr. McCLELLAN), the Senator from Minnesota (Mr. HUMPHREY), and the Senator from Alabama (Mr. SPARKMAN) are necessarily absent.

I further announce that, if present and voting, the Senator from Arkansas (Mr. McCLELLAN), would vote "yea."

I further announce that, if present and voting, the Senator from Minnesota (Mr. HUMPHREY), would vote "nay."

Mr. STEVENS. I announce that the Senator from Illinois (Mr. PERCY) is necessarily absent.

The result was announced—yeas 45, nays 51, as follows:

[Rollcall Vote No. 332 Leg.]

YEAS—45

Abourezk	Gravel	Nunn
Allen	Hansen	Packwood

NOT VOTING—4

Humphrey	Percy	Sparkman
McClellan		

So the amendment of Mr. BENTSEN was rejected.

Mr. BENTSEN. Mr. President, I move to reconsider the vote by which the amendment was rejected. I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The yeas and nays have been ordered. The clerk will call the roll.

Mr. TOWER. Mr. President, a motion to reconsider is debatable, is it not?

The PRESIDING OFFICER. A motion to reconsider is debatable. There are 30 minutes, under the special order, for debate on the motion to reconsider.

Mr. MUSKIE. Mr. President, I move to lay that motion on the table.

The PRESIDING OFFICER. The motion is not in order until the time has been used under the agreement.

Mr. TOWER. Mr. President, I suggest the absence of a quorum and ask unanimous consent that the time be equally divided between the two sides.

The PRESIDING OFFICER. Is there objection? The Chair hears none. Without objection, it is so ordered. The clerk will call the roll.

Mr. METCALF. Mr. President, the Senate is not in order. We cannot hear the responses.

The PRESIDING OFFICER. The Senate will be in order.

The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

The PRESIDING OFFICER. The clerk will suspend the call of the roll until we have order in the Senate. Will all Senators please take their seats or retire to the cloakroom? Will all Senators either take their seats or retire to the cloakroom, please? Order has been requested. The request is well taken.

The clerk may proceed.

The assistant legislative clerk resumed the call of the roll.

Mr. BENTSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BENTSEN. May I speak to the Senator from Colorado and the manager of the bill. I ask if we can have an agreement that 5 minutes be allowed to the proponent and 5 minutes to the opponent, that it be limited to that, and that we not use the time of the Senate beyond that.

The PRESIDING OFFICER. Is there objection?

Mr. MUSKIE. If it is agreeable to the manager of the bill, Mr. President, I have no objection to that. I think that, since the attendance was so sparse this morning, the Senate is going to benefit from a 10-minute debate. I have no objection.

The PRESIDING OFFICER. Does the Senator from Wisconsin wish to object?

Mr. NELSON. No.

The PRESIDING OFFICER. In that case, the agreement will be 5 minutes on either side, 5 minutes to be controlled by the junior Senator from Texas and 5 minutes by the Senator from Minnesota.

Mr. NELSON addressed the Chair.

The PRESIDING OFFICER. Who yields time?

Mr. NELSON. I want to make a unanimous-consent request.

The PRESIDING OFFICER. Does anybody wish to yield time to the Senator from Wisconsin for him to make that request?

Mr. NELSON. Mr. President, I ask unanimous consent that I be allowed 10 seconds for a unanimous-consent request, without the time being deducted from either side.

The following Senators requested and, by unanimous consent, the privilege of the floor was granted in behalf of the following staff members: Mr. NELSON, Jeffery Nedelman and Judy Affeldt; Mr. BARTLETT, Ed King and Joe Heaton; Mr. CHAFEE, Mimi Feller; Mr. McCLURE, Marsha Johnson; Mr. GRIFFIN, Cathy Shafran and Sue Corbett; Mr. MOYNIHAN, Dr. Jared Cohon; Mr. DOMENICI, Lee Rawls; Mr. STAFFORD, Mary Goldde; Mr. ANDERSON, Deming Cowles; Mr. EAGLETON, Jack Lewis; and Mr. GLENN, Tom Dougherty.

The PRESIDING OFFICER. Who yields time?

There are 5 minutes on either side. Who yields time?

Is all time yielded back? If neither side yields time, time runs equally against both sides.

Mr. MUSKIE. Mr. President, I will be glad to open the debate.

First of all, let me disabuse the Senate on one point. There is not a Senator on the floor, including the Senator who is speaking, who supports section 404 as it has been interpreted and implemented by the Corps of Engineers. Much of the rationale of the Bentsen amendment is based on the reaction of the country to overregulation by the Corps of Engineers of small farmers, foresters, normal agricultural activities, and so on.

Nobody defends section 404. The committee bill does not defend section 404. The Bentsen amendment is aimed at section 404.

So what we are talking about is two approaches to deal with a national problem. What is that national problem? That national problem, if there is one, involves the protection of the Nation's wetlands.

With respect to the Bentsen amendment, if it is adopted, 85 percent of the wetlands of this country will be left unprotected. Two percent of the waterways of the country will be left unprotected.

Now, what the committee bill does is very simple. It undertakes to continue the corps' traditional jurisdiction exercised since the Refuse Act of 1899 and before.

It was under that jurisdiction that the corps for all these decades has policed and monitored and approved dredging in the waterways of our country and disposing of the dredged spoil wherever it chose without any consideration for the environmental values concerned or the damage that was done because of that insensitivity.

For the purpose of disciplining the corps in that respect, section 404 was enacted into law in 1972. The corps proceeded to take that section and, by its interpretation, expand it far beyond any intent of the Congress so that it found itself threatening regulation in areas of the country which the corps had never imagined it had any jurisdiction over.

We all began to get letters from farmers, foresters, ranchers, from people whose activities in the mind of the Congress were not in the slightest bit intended to be affected by 404 when we enacted section 404.

Mr. DOMENICI. Will the Senator yield for a question?

Mr. MUSKIE. I have just 5 minutes, I say to the Senator, but I will yield for the question.

Mr. DOMENICI. I just wanted to ask, the Senator said the corps began to expand its permit system, is it not true a court intervened and interpreted this section so that they had to expand their jurisdiction?

Mr. MUSKIE. That is right. In 5 minutes, I could not cover every detail.

But the effect of it was that the corps with the courts—and whatever other footnotes the Senator wants to add—found itself in the posture of threatening all these small citizens who are trying to conduct normal activities without undue interference by the Federal Government. That is the problem as it was put in our laps.

But the other problem remains, the protection of the wetlands of this country.

If we do not regard that as a problem, then there is no problem with the Bentsen amendment. If we regard it as a problem——

The PRESIDING OFFICER. The Senator's 5 minutes have expired.

Mr. MUSKIE. As I said to the Senator, my 5 minutes was too little.

I urge to the Senators the committee's approach as a sensible approach which exempts, specifically exempts, the kinds of activities which created this storm.

Mr. BENTSEN. Mr. President, we are all agreed that 404 is bad and it ought to be changed.

My contention is that what the committee actually did was to create a shadow program by the Federal Government. That means that before a State program is approved it has to have the EPA's Good Housekeeping stamp of approval on it. They have to have the "i's" dotted and the commas in the proper place, and that is determined by the Federal Government, and not just by one agency. States have to have the approval of the EPA, they have to have the approval of Fish and Wildlife, and they have to have the approval of the Corps of Engineers.

I still contend that all of the waters in the United States will be subject to a permit program, under the legislation proposed by the committee.

Mr. MUSKIE. Will the Senator yield?

Mr. BENTSEN. I have the same problem with time that the Senator had before, but will yield for a question, not for a speech.

Mr. MUSKIE. Yes. I want to make it clear, the exempt activities in the committee bill are not subject to any Federal agencies.

Mr. BENTSEN. I understand. Concerning exempt activities, there is substantial question as to the meaning of many of those exemptions.

One of the other questions was, what do we do about toxic substances?

Section 307 was not changed; 307 is still in full force and effect to protect on toxic substances.

The point was made that it really is not effective. If it was not effective, then why did they not try to modify it, improve it, during the committee hearings?

In addition to section 307, the Toxic Substance Act, the Waste Disposal Act provide tough penalties for toxics which are still in force. My amendment does not restrict these important measures that protect waters from toxics.

Perhaps the most crucial issue is that people are fed up with Federal regulations. All the committee approach does is substitute State regulation for Federal regulation. The bill sends a clear message to State authorities, "Just keep watching over your shoulder because unless you continue to satisfy the Federal bureaucrat, he can pull back his authorization to you any time he wants to."

When they give him that Good Housekeeping stamp of approval, that is not permanent, not by any means.

The bill also permits EPA to review and veto individual permits. The Federal Government retains that kind of restrictive authority under the committee's measure.

So I do not really think the committee has addressed the problem of trying to cut back on paperwork, on redtape, on bureaucracy in this country. I believe the Bentsen amendment does accomplish that. We decided that the Federal Government does not have all the answers, that the States and the Governors and their legislators can best adapt to local conditions and can take care of the wetlands in their jurisdictions. We continue to protect the wetlands along with the navigable streams and along the coastlines. Those are fully protected, under the Bentsen amendment.

I urge the Senate to adopt this amendment. I urge Senators to put their action where their words are, when they say they want to cut back on overregulation and bureaucracy in this country. Here is a chance for Senators to show that they mean it by voting for the Bentsen amendment. I urge Senators to vote in the affirmative.

Mr. MUSKIE. Mr. President, I move to table the motion to reconsider.

Mr. TOWER. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER (Mr. HATHAWAY). Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to table the motion to reconsider. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Arkansas (Mr. MCCLELLAN), and the Senator from Alabama (Mr. SPARKMAN) are necessarily absent.

I further announce that, if present and voting, the Senator from Arkansas (Mr. MCCLELLAN), would vote "nay."

Mr. STEVENS. I announce that the Senator from Illinois (Mr. PERCY) is necessarily absent.

The result was announced—yeas 51, nays 45, as follows:

[Rollcall Vote No. 333 Leg.]

YEAS—51

NOT VOTING—4

Abourezk	Percy	Sparkman
McClellan		

So the motion to table the motion to reconsider Mr. BENTSEN's amendment was agreed to.

The PRESIDING OFFICER. The Senator from Minnesota.

UP AMENDMENT NO. 727

Mr. ANDERSON. Mr. President, I have an amendment at the desk and I ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Minnesota (Mr. ANDERSON), for himself and Mr. CULVER, Mr. RIEGLE, Mr. HUDDLESTON, Mr. FORD, Mr. SARBANES, and Mr. MATHIAS, proposes unprinted amendment No. 727.

Mr. ANDERSON. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 12, line 15, strike the quotation marks and following period.

On page 12, after line 15, insert the following:

"(3) For the fiscal years 1978, 1979, 1980, 1981, and 1982, no State shall receive an allotment of less than the lower dollar amount it would have received under either (A) an allotment based on the ratio of its 1975 population to the 1975 population of all the States or (B) the ratio of its total needs for categories of treatment works eligible under this Act indicated in the 1976 Needs Survey to such total needs in all the States. For the purpose of carrying out this paragraph, there are authorized to be appropriated, subject to such amounts as are provided in appropriation Acts, not to exceed $60,000,000 in each of fiscal years 1978, 1979, 1980, 1981, and 1982.

"(4) For the fiscal years 1978, 1979, 1980, 1981, and 1982, no State's proportional share

allotment shall be reduced by more than 25 per centum of its proportional share allotment for fiscal year 1977 under paragraph (1) of this subsection, and any State's proportional share allotment which would be reduced by more than 25 per centum of the proportional share allotment for fiscal year 1977 shall be adjusted to provide a proportional share allotment representing no more than such a 25 per centum reduction. For the purpose of carrying out this paragraph there are authorized to be appropriated such amounts as may be necessary in each of fiscal years 1978, 1979, 1980, 1981, and 1982, subject to such amounts as are provided in appropriation Acts.".

Mr. ANDERSON. Mr. President, this is an amendment offered by myself and Senators CULVER, RIEGLE, HUDDLESTON, FORD, SARBANES, and MATHIAS.

It deals with two problems.

First, we discovered this morning that the allocation formula deals very unfairly with one of our States. It would lose 48 percent of the funds from one year to the next. There are eight other States that lose substantially this amount.

This amendment, has the support of both the minority and majority sides with respect to the leadership on this bill, and I hope that the Senate will support it as well.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Minnesota.

The amendment was agreed to.

The PRESIDING OFFICER. The Senator from Wisconsin.

Mr. NELSON. Mr. President, I was going to call up an amendment, but I will withhold momentarily and yield to the Senator from Colorado.

Mr. HASKELL. I thank the Senator from Wisconsin.

The PRESIDING OFFICER. The Senator from Colorado.

UP AMENDMENT NO. 728

Mr. HASKELL. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Colorado (Mr. HASKELL) proposes unprinted amendment No. 728.

Mr. HASKELL. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 73, line 3, strike the quotation marks and the period.

On page 73, after line 3, insert the following:

"(h) No permit shall be required under this section for any Federal water resource project specifically authorized by the Congress for which a final environmental impact statement under section 102(2)(C) of the National Environmental Policy Act has been prepared.".

Mr. HASKELL. Mr. President, I should state that I have cleared this amendment both with the distinguished Senator from Maine, Senator MUSKIE, and the distinguished Senator from Vermont, Senator STAFFORD, and it is my understanding it is acceptable to them.

Basically what this amendment says is that, when you have a Federally authorized water resource project for which a final NEPA environmental statement has been filed, there will be no need for a permit for the construction to be issued by the Corps of Engineers.

In my State certain groups have indicated that they would challenge the authority of the Corps of Engineers in issuing a certain permit on water projects saying they are not in accordance with the Corps of Engineers regulations.

To my way of thinking this is merely obstructionism, and for this reason I have proposed this amendment and ask, Mr. President, that it be accepted.

The PRESIDING OFFICER. Is all time yielded back?

Mr. HASKELL. I yield back the remainder of my time.

Mr. ANDERSON. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Colorado.

The amendment was agreed to.

The PRESIDING OFFICER. The Senator from Wisconsin.

AMENDMENT NO. 810, AS MODIFIED

Mr. NELSON. Mr. President, I call up amendment No. 810, as modified, which is at the desk, and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Wisconsin (Mr. NELSON), for himself and Mr. ANDERSON, Mr. MOYNIHAN, Mr. HART, Mr. PROXMIRE, Mr. RIEGLE, Mr. LEAHY, Mr. BAYH, and Mr. METZENBAUM, proposes amendment No. 810, as modified.

Mr. NELSON. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 64, after line 9, insert the following new section and renumber subsequent sections accordingly:

SEC. 46. Title III of the Federal Water Pollution Control Act is amended by inserting at the end thereof the following:

REGULATION OF DETERGENTS IN GREAT LAKES REGION

"SEC. 302. (a) In recognition of the particular danger to the Great Lakes and the residents of the Great Lakes region represented by the use of phosphates in cleaning agents and water-conditioning agents is in the purpose of this section to regulate such use in such region and to provide for a study to determine whether such regulation should be made nationwide.

"(b) As used in this section the term—

"(1) 'Great Lakes region' means the States of New York, Ohio, Indiana, Michigan, Illinois, Wisconsin, and Minnesota; and that portion of Pennsylvania which is in the Great Lakes drainage basin;

"(2) 'cleaning agent' means a heavy duty laundry detergent, laundry additive, dishwashing compound, household cleaner, industrial cleaner, phosphate compound, or other substance intended to be used for cleaning purposes;

"(3) 'chemical water conditioner' means a water-softening chemical, antiscale chemical, corrosion inhibitor, or other substance intended to be used to treat water;

"(4) 'dishwashing machine' means equipment manufactured for the purpose of cleaning dishes, glassware, and other utensils involved in food preparation, consumption, or use, using a combination of water agitation and high temperature; and

"(5) 'phosphorus' means elemental phosphorus as further defined by the Administrator for the purpose of this section.

"(c) The Administrator shall prescribe regulations to be effective after one hundred and eighty days following the date of enactment of this section prohibiting the sale, offering for sale, or distribution, for use within the Great Lakes region of cleaning agents or chemical water conditioners containing phosphates in excess of maximum permissible concentrations prescribed by the Administrator for the purpose of this section. Such regulations shall take into consideration—

"(1) The availability of safe, nonpolluting, and effective substitutes.

"(2) The differing needs of industrial, commercial, and household users of cleaning agents and chemical water conditioners.

The maximum amount of phosphorus allowed in the following cleaning agents or chemical water conditioners shall be as follows:

"(A) laundry detergents and built soaps for machine laundry excluding chemical water conditioners, not to exceed 0.5 per centum phosphorus, by weight;

"(B) household and commercial detergents for machine dishwashing, not to exceed 8.7 per centum phosphorus, by weight;

"(C) all household cleaning agents except those listed in clauses (A) and (B) intended to be used in the home, not to exceed 0.5 per centum phosphorus, by weight; and

"(D) chemical water conditioners for machine laundry use, not to exceed 20 per centum phosphorus, by weight.

The concentration by weight of prescribed phosphates in any cleaning agent or chemical water conditioner shall be determined by the current applicable method prescribed by the American Society for Testing and Materials.

"(d) In any case where, upon application, the Administrator finds that by reason of exceptional circumstances the strict enforcement of any provision of such regulations would cause undue economic hardship on the user of a cleaning agent or chemical water conditioner; that the use of cleaning or water conditioning agents containing phosphorus in excess of the permissible levels set forth herein is necessary for the public health, safety, or welfare; or that strict conformities with these limits would be unreasonable, impractical, or not feasible under the circumstances, the Administrator may permit a variance therefrom upon such conditions as he may prescribe for prevention, control, or abatement of pollution in harmony with the general purpose of such regulations and the intent of this section.

"(e)(1) It shall be unlawful after the effective date of such regulations for any person to sell, offer for sale, or distribute for use in the Great Lakes region any cleaning agent or chemical water conditioner, unless such agent or conditioner conforms with regulations prescribed with respect to such agent or conditioner pursuant to this section.

"(2) Any person who violates paragraph (1) of this subsection shall be subject to a civil penalty of not to exceed $10,000 for each such violation.

"(f) The Administrator shall carry out a full and complete investigation and study in order to determine whether the regulations prescribed for the Great Lakes region pursuant to this section should be applied nationwide. Such investigation and study shall consider the cost to the consumer, cost to industry, benefits to be gained, and other appropriate factors. The results of such investigation and study shall be submitted to

the President and the Congress, together with any legislation necessary to carry out the recommendations, not later than one year after the date of enactment of this section.

"(g) Nothing in this section shall prevent any State in the Great Lakes region from placing into, or keeping in, effect any control over the sale, distribution, or use of any cleaning agent or chemical water conditioner if such control is more stringent than that provided pursuant to this section.".

"(h) Nothing in this section shall supersede or preclude the Administrator of the Environmental Protection Agency from issuing regulations under the Toxic Substances Control Act (P.L. 94-469) limiting the use of phosphates in cleaning agents and water conditioning agents."

Mr. NELSON. Mr. President, this modification strikes the enforcement provisions of the amendment as introduced because Public Law 92-500 has adequate enforcement mechanisms.

Mr. President, this amendment contains two major provisions.

One, it creates a series of limitations for the amount of phosphates contained in laundry detergents, dishwashing compounds, and water conditioners sold within the eight Great Lakes Basin States.

Two, it calls upon the Environmental Protection Agency to undertake a study to determine whether a national phosphate limitations program should be enacted by Congress.

This approach is the single most important step that should be taken to protect the ecological health of the Great Lakes. Every water control report issued by the International Joint Commission on the Great Lakes since 1970 has recommended that such a limitation, a phosphate ban, be enacted throughout the Great Lakes Basin.

A combination of sewage treatment and product limitation via a phosphate ban is the only way that the total phosphorus loadings in Lakes Superior, Huron, and Michigan can be reduced enough to stabilize the eutrophication process. We have inadequate information on Lake Ontario and only Lake Erie is so bad that this combination of efforts cannot resolve the immediate problem.

This approach will remove 6.3 percent of phosphorus loading from Lake Superior, 37 percent from Lake Michigan, 27.4 percent from Lake Huron, and almost 32 percent from Lake Erie.

This approach coordinates and supports programs of phosphate limitations already enacted in New York, Indiana, Chicago, and Akron, and the regulations propounded for a ban in the State of Minnesota which are being contested in court.

Over 32 million people reside in areas that have already attempted some sort of product limitation. Alternatives exist that cost the consumer no more, on a per wash basis, and that get clothes just as clean. In fact, every major manufacturer of phosphate detergents now is marketing a nonphosphate product.

So this proposal is simple and straightforward. It bans the use of detergents containing more than .5 percent phosphorus, it sets a limit of 8.7 percent by weight for phosphates contained in Automatic dishwashing compounds, and it sets a 20-percent-by-weight limitation on the amounts of phosphates contained in chemical water conditioners for machine laundry use sold in the Great Lakes Basin States.

All the necessary studies that have been done, including a very substantial 2-year study by region 5 of the Environmental Protection Agency. Every independent evaluation states that the only way to stop the deterioration of the lakes, at this time, is to stop the introduction, or dramatically reduce the introduction, of phosphorus, through phosphate detergents.

Specifically, this amendment establishes a 0.5 percent by weight limitation on the amount of phosphorus contained in laundry detergents, an 8.7 percent by weight limitation on the amount of phosphates contained in commercial and household dishwashing compounds, and a 20 percent by weight limitation on the amount of phosphorus contained in water conditioners sold within the Great Lakes Basin States. These limitations would take effect 6 months after the date of enactment of this act. In addition, this amendment directs the EPA to conduct a study to determine the economic feasibility and environmental desirability of extending this limitation program to the rest of the Nation. A report and recommendations for further action is due within 6 months.

This amendment is a reasonable, practical, and responsible approach to solving an extremely serious problem. It is based upon proven techniques and actual field experience. Basically, this language is a blending of the Minnesota Pollution Control Agency's regulation and the New York State law. The amendment, originally drafted as S. 1015, has been refined through a series of negotiations over the past 6 months with the EPA and State officials.

It provides for one uniform performance standard for all the Great Lakes States—Wisconsin, Minnesota, Michigan, Illinois, Ohio, Indiana, Pennsylvania, and New York. It is an effective step that should be immediately taken.

Getting the phosphorus out of detergents sold within the Great Lakes Basin is the single most important step that should be taken to protect the ecological integrity of the lakes.

The EPA, in a June 1977 report entitled "Detergent Phosphate Ban: Position Paper prepared by the Region V Phosphorus Committee," conclusively shows that the Great Lakes are dying a premature death. The acceleration of the lakes' natural aging process, the eutrophication process, is being caused by excessive levels of nutrients, of phosphorus. There is no dispute that the largest man-made and controllable source of this phosphorus influent is detergents. There is no dispute that by implementing a uniform basinwide standard immediate and dramatic improvements in water quality can be obtained. As a result, the acceleration in the aging process can be slowed, and the problem can be stabilized.

Detergents are not the only source of phosphorus contamination. Phosphates occur naturally throughout the Basin. Agricultural runoff and atmospheric loading contribute large amounts to the Lakes in the form of nonpoint source pollution. However, immediate action is necessary now and quite simply, we do not now have the technology to control other sources of phosphorus influent. Work needs to be expanded in all areas of control.

EPA estimates that a series of limitations like the set proposed in this amendment, will reduce by 40 percent the amount of phosphorus contained in wastewater reaching the sewage treatment plant. EPA believes that a "phosphate ban" will reduce the amount of phosphorus effluent—the actual discharge from the plant to the receiving waterways, the Great Lakes—by 50 percent.

This approach, a product limitation, is a major and significant departure from existing policy that was established in 1971. It is a necessary departure because existing policy has failed to protect the Lakes from degradation.

This approach has been endorsed by the EPA, the Carter administration, the International Joint Commission on the Great Lakes—IJC, the Great Lakes Basin Commission, and the Great Lakes Water Quality Board.

The Great Lakes Water Quality Agreements of 1972—the basic understanding on water quality this nation has with Canada—calls for the achievement in the lower lakes of 1 part per million phosphorus in the sewage effluent of all plants that produce more than 1 million gallons per day. In 1971, many people believed this standard would stabilize the problem. Recent scientific evidence demonstrates that these people and the EPA were wrong. Not only have we been unable to achieve this 1 milligram per liter guideline, but we have now discovered that the 1 part per million objective is inadequate to protect the lakes. EPA now suggests that the standard for the lower lakes should be lowered to 0.1 milligrams per liter.

There is no exclusive technological methodology that can be utilized to achieve this effluent guideline. The only way this level of treatment can be achieved so that eutrophication is stabilized is through a combination of product limitation and advanced phosphorus removal technology.

The Great Lakes are a unique international resource. They are the world's largest body of fresh water, a series of five large lakes containing over 65 trillion gallons of water. Almost 24 million people throughout the Great Lakes Basin receive their drinking water from public water systems. Of this 24 million, over 73 percent—17.2 miliion people—get their drinking water from the lakes. In Wisconsin, for example, 1.8 million people reside within the watershed of the Great Lakes. Of these residents, over 1.3 million—71 percent—get their drinking water from the lakes. The Great Lakes is such a vital resource that it is in our own vested interest to abate and halt the degradation.

The problem of accelerated eutrophication continues to grow worse almost on a daily basis. The 1975 report from

the Great Lakes Water Quality Board stressed that while eutrophication may have been slowed in some isolated locations, overall, its acceleration beyond natural rates remains "a threat" to the Great Lakes. Scientists have warned that fundamental, and probably irreversible, changes in the natural biological systems of the lakes were being caused by man's contributions to the high nutrient levels.

We in the Congress must recognize an unpleasant truth; with present technology, the only readily controllable source of phosphorus input to the environment is sewage effluent. Technology has not been able to resolve the issue. There is no technological fix to this problem. Current information from EPA's Grosse Isle Laboratory indicates that even the most modern sewage treatment plant cannot achieve and maintain over time the 1 mg/l recommended effluent guideline. The average effluent from major plants located throughout the basin runs in the range from 2–4 mgs./l, two to four times the suggested level. In fact, recent studies question whether the 1 part per million limitation will be sufficient to achieve and maintain the desired water quality levels in the Great Lakes.

Several models have been developed that demonstrate that even if the 1 part per million level is achieved and maintained consistently at all possible places throughout the basin, the phosphorus loadings to the lakes will remain so high that the eutrophication rates will not be stabilized.

We are left with the hard reality that reducing the nutrient input is the soundest preventative and restorative measures that can be taken toward reducing rates of eutrophication in the Great Lakes.

A detergent limitation works. In areas where a ban on phosphates has been implemented, measurable decreases in the concentrations of phosphorus in sewage have been reported within months of operation. Measurable decreases in total phosphorus loadings of the receiving waterway have been reported within a year of implementation. These findings are based not on theory, but on actual testing and field experience in Chicago, New York State, and in the State of Indiana.

LAKE SUPERIOR

Superior is in the best ecological shape of all the Great Lakes. However, even this lake—the cleanest and largest body of fresh water in the world—is threatened by excessive levels of phosphorus. The International Joint Commission on the Great Lakes estimates that Superior currently receives 4,140 metric tons per year of phosphorus. Scientists agree that to stabilize the eutrophication process this loading should be reduced to 3,900 metric tons per year. Sewage treatment plants can only remove 200 metric tons per year, 4.83 percent of the loading, if the 1 part per million guideline can be consistently achieved at all point sources.

A detergent limitation will remove another 60 metric tons per year, another 1.45 percent of the loading. Through a combination of technology and product limitation, the phosphorus loading of Lake Superior can be reduced by 6.3 percent, lowering the lake's overall phosphate loading to 3,880 metric tons per year, 20 metric tons below the IJC's recommended target. Neither technology nor a phosphate ban alone can achieve this necessary water quality objective.

LAKE MICHIGAN

Michigan is generally classified as mesotrophic. The IJC reports that this lake receives now 7,100 metric tons of phosphorus per year. Its recommended load is 5,350 metric tons per year. As in the case of Lake Superior, technology alone cannot reduce the amount of phosphorus entering the lake to sufficient levels to stabilize the problem. Sewage treatment can only reduce the phosphorus loading by 16.13 percent, 1,145 metric tons per year. A detergent limitation can reduce the phosphorus loading by another 1,479 metric tons per year, an additional 20.83 percent. Only through a combination of strategies, of technology plus product limitation, can the residual phosphorus loading of the lake be reduced 37 percent to 4,476 metric tons per year, 874 metric tons per year below the current target levels.

LAKE HURON

Lake Huron is the only lake in the system for which complete data exists and whose eutrophication problems can be stabilized through technology, acting independently of any other policy decision. The IJC recommends that the lake's current load of 3,720 metric tons per year be reduced to 3,600 metric tons per year. Advanced phosphorus removal can reduce the loadings 18.81 percent, to 3,020 metric tons per year. A detergent limitation will add an additional 8.6 percent reduction, removing another 320 metric tons per year. A combination of the two pollution abatement strategies will reduce phosphorus loadings by 27.4 percent.

LAKE ERIE

There is no question that Lake Erie is the most eutrophic of the Great Lakes. Recent reports that the lake is returning and recovering from its massive doses of industrial and municipal pollution are at best hopeful projections. It seems that the recent cycle of high water has helped dilute the pollution. Abatement efforts thus far have had only localized and marginal impacts. We are now entering a period where the high water is receding and the pollution, especially in the western segment of the lake, is intensifying.

Lake Erie receives, according to the Corps of Engineers, 19,607 metric tons of phosphates per year while its recommended level is 12,525. Sewage treatment can only remove 24.2 percent of the phosphorus from the influent. A detergent limitation will remove another 7.6 percent, an additional 1,494 metric tons per year. A combination of efforts will remove 31.8 percent of the phosphorus loading, but even this effort will not be sufficient enough to stabilize the lake. The lake will still receive 843 metric tons per year of phosphorus above the recommended loading guideline.

LAKE ONTARIO

Incomplete information is available for Lake Ontario.

OVERALL CONCLUSION

EPA estimates that a product limitation will reduce the amount of phosphorus contained in sewage influent—wastewater reaching the plant—by 40 percent. This in turn, if the 1 part per million standard is achieved and maintained, will reduce the amount of phosphates in sewage effluent—the discharge into the lakes—by 50 percent. As water quality improves, total phosphorus loadings in the lakes will be reduced at least 27 percent. The remainder of the phosphorus loading is nonpoint source.

ECONOMIC SAVINGS

It is in the economic interest for all concerned, including soap manufacturers, to remove phosphorus from soap products. Substantial amounts of tax dollars can be saved if phosphorus can be removed before the wastewater reaches the sewage treatment plant. Sewage treatment plants require large amounts of chemicals to remove the phosphorus, producing even greater amounts of sludge as a by-product. The sludge must be disposed of, typically by burning or transferring to a disposal site. A phosphorus ban would have many benefits:

First, less sludge would be generated at the sewage plant;

Second, less equipment would be required to handle the sludge;

Third, less sludge would have to be disposed of.

Dr. Edwin Barth of EPA's National Environmental Research Center in Cincinnati, estimates that a one-third reduction in the phosphorus concentration of sewage could reduce chemical and operating costs by 20 percent. EPA estimates that a cost savings of $1.20 per capita, per year, would result from a phosphorus ban for treatment facilities with a flow greater than 100 million gallons per day. This would mean a $41.5 million a year savings for the Great Lakes. By reducing chemical and sludge disposal costs, EPA estimates that the residents of the basin would save at least $26.3 million a year. In Wisconsin, this would amount to a savings of at least $3,800,000 per year if a detergent phosphate ban is implemented.

The city of Chicago has had a 0.5 percent by weight phosphorus ban for detergents in effect since July 1972. Mr. Wally Poston, Commissioner of the Department of Environmental Control for the city of Chicago, speaks very favorably about the beneficial effects of a ban. In testimony before the Michigan Water Resources Commission on August 27, 1976, he said, "Again, the city of Chicago has achieved an 87 percent reduction of phosphorus in effluent from the world's greatest sewage treatment plant of the Metropolitan Sanitary District of Greater Chicago, at no additional cost to the public, as a result of limiting the phosphorus in detergents." He further stated that the Chicago treatment plant would have incurred additional operating costs ranging from $14–$73 per million gallons of wastewater treated if phosphorus was to be removed by additional treatment. This would have resulted in a yearly

additional treatment cost to Chicago residents ranging from $5,100 to $30,645 per million gallons per day of sewage flow into the plant. It is important to note that figure does not even include the cost of sludge handling and disposal.

The evidence is very compelling that the alternative of controlling phosphorus before it enters the plant provides a significant savings compared to treatment at the plant. Even the soap manufacturers realize that phosphorus may not be as cost-effective. A recent article in Chemical Engineering points out that phosphorus has tripled in cost during the last 3 years. Lever Brothers, one of the big three detergent manufacturers, has been working on a less costly total phosphate substitute termed CMOS. The world's largest detergent manufacturer, Procter and Gamble, is also looking for phosphate alternatives. Last fall, the president of Procter and Gamble, Mr. John G. Smale, announced that the company is developing a new aluminsilicate product which would reduce their reliance on phosphates.

There are alternatives to phosphate detergents on the market that get clothes just as clean as their phosphate counterparts without being harmful to the environment. In areas where phosphate detergents can be sold, these nonphosphate products are setting on the shelves next to the phosphate detergents and are being purchased in rapidly increasing numbers. For example, liquid detergents which are primarily nonphosphates account for 19.3 percent of the total U.S. detergent market.

It is significant to note that industry does not make a distinction between marketing phosphate and nonphosphate detergents. In Chicago, people buy nonphosphate Tide and get their clothes just as clean as the consumers in Milwaukee and La Crosse buying phosphate Tide. The boxes are the same, the washing instructions are the same, and the advertising claims are the same.

It is obvious consumers have a stake in controlling phosphorus. State and local efforts to ban phosphorus in detergents have won widespread consumer support. More than 32 million people, 14.9 percent or 1 out of 7 Americans, live in areas prohibiting the use of phosphorus in detergents. Even in areas where phosphates have not been banned, the heavy duty liquid detergents, which are primarily nonphosphate, are being purchased by consumers. For instance, in Michigan, where a very limited ban is in effect, 20 percent of all the detergents purchased are nonphosphates.

Reports have shown that customer complaints in nonphosphate areas are very low. For example, a study in Indiana—where a 0.5 percent ban is in effect—shows that 70 percent of those interviewed were satisfied with their detergents, and the remaining 30 percent still supported the ban. Moreover, last year during hearings on a proposed 0.5 percent ban in Michigan, not one citizen came forward to oppose the ban.

In endorsing a phosphate ban for the Great Lakes Basin, EPA states that there is general public support for a phosphate ban in detergent.

Dr. Anthony Schwartz, a leading authority on phosphates, said that nonphosphate, noncarbonate detergents now being offered by the leading detergent manufacturers are as effective in overall performance as their phosphate containing counterparts. Particularly significant, he found no difference in price per load for the nonphosphate detergents to the phosphate detergents.

The major detergent manufacturers—Procter & Gamble, Lever Bros., and Colgate-Palmolive—all manufacture nonphosphate detergents. A variety of nonphosphate detergents is available for the consumer. Significantly, in areas where phosphates have been banned, liquids have taken an important share of the market, the most popular being Era—a Procter & Gamble product, Dynamo—a Colgate product, and Wisk—a Lever Bros. product.

ENERGY SAVINGS

Banning phosphorus would also help to conserve energy. The burning of sludge is a wasteful process and consumes large quantities of energy. For every ton of sludge burned, 50 gallons of oil must be used. The savings can be rather substantial; in Wisconsin, for example, 655,000 gallons of No. 2 fuel would be saved. In the Great Lakes Basin, 5,540,000 to 7,160,000 gallons of No. 2 fuel oil would be saved for home fuel consumption or other purposes.

CONCLUSION

The Great Lakes are a vital international resource that must be protected from further degradation. We know that the lakes' natural aging process is being accelerated. We know the cause of the eutrophication is excessive levels of nutrients. We know that the limiting factor is phosphorus. We know that the largest manmade and controllable source of the phosphorus throughout the basin is detergents. We know that this is not the only source of phosphate influent, but that detergents are the only source that we currently have the technology to control.

We now know the standards developed by the International Joint Commission on the Great Lakes—standards of 1 part per million phosphorus in the effluent of major sewage treatment plants—is not being achieved. We know that the loadings from the most modern treatment plants on the lakes average two to four times that limitation. And we now know that even if the 1 mg/1 guideline was achieved and maintained, not enough phosphorus would be removed to stabilize the problem in any of the lakes. Recent scientific evidence suggests that rather than an effluent guideline of 1 mg/1 phosphorus, the limitation should be 0.1 mg/1. We know that only a combination of product limitation and technology can achieve this new lower level.

We know, based upon the Chicago, New York, and Indiana experiences, that such a product limitation has an immediate and positive impact on water quality. We know that a product limitation plus technology will stabilize the eutrophication in Lakes Superior, Michigan, and Huron. We have incomplete information on Lake Ontario. Only Lake Erie's problems cannot be resolved through a combination of a product limitation and technology.

We also know that such a product limitation in the Great Lakes region of this Nation would be good for taxpayers. Operating costs of sewage treatment plants would be reduced. A potential savings of over $40 million a year could be realized. Less energy would be used. Less sludge would have to be disposed of either by burning or in landfills. And we know that alternatives exist for the consumer that are safe, acceptable, and competitive on a per wash basis.

This program of limiting the amount of phosphorus contained in detergents is the single most important step that should be taken to protect the ecological integrity of the Great Lakes. We need immediate and effective action now.

Mr. President, this is the largest collection of fresh water in the world. Lake Superior is the largest lake in terms of surface area. They are magnificent national assets, and their deterioration should be stopped.

Such a ban on the use of phosphate detergents has been in effect in Chicago, Indiana, and New York, and is working very well; and in my judgment we should not continue to unnecessarily introduce phosphates into these magnificent national assets.

If we adopt this legislation, we well, in three of those lakes, be able to stabilize the deterioration caused by phosphorus going into the lakes.

Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 25 minutes remaining.

Mr. MOYNIHAN. Mr. President, will the Senator yield?

Mr. NELSON. I yield to the Senator from New York.

Mr. MOYNIHAN. Mr President, I am pleased to join the distinguished Senator from Wisconsin as a cosponsor of this amendment to the Federal Water Pollution Control Act. This is a good amendment that will help preserve a wonderful natural treasure of the Nation.

The Great Lakes represent an important commercial, recreational, and esthetic resource of my State and for those other States in the Great Lakes region. With respect to the aesthetic attributes of the Great Lakes, I would like to share with you a New Yorker's description of Lake Ontario from the vantage point of the mouth of the Oswego River at a site which is now the town of Oswego, N.Y. These are the words of James Fenimore Cooper, writing in 1841, as he describes the experience of a girl who sees Lake Ontario for the first time:

> Here a new scene presented itself: although expected, it was not without a start, and a low exclamation indicative of pleasure, that the eager eyes of the girl drank in its beauties. To the north, and east, and west, in every direction, in short, over one entire half of the novel panorama, lay a field of rolling waters. No land was to be seen, with the exception of the adjacent coast, which stretched to the right and left in an unbroken outline of forest with wide bays and low headlands or points; still, much

of the shore was rocky, and into its caverns the sluggish waters occasionally rolled, producing a hollow sound, which resembled the concussions of a distant gun. It was a scene, on one side, of apparently endless forests, while a waste of seemingly interminable water spread itself on the other. Nature appeared to have delighted in producing grand effects, by setting two of her principal agents in bold relief to each other, neglecting details; the eye turning from the broad carpet of leaves to the still broader field of fluid, from the endless but gentle heavings of the lake to the holy calm and poetical solitude of the forest, with wonder and delight.

Now all of Lake Ontario may not still resemble Mr. Cooper's description; however, there are parts of it that still generate deep feelings in its beholder.

It is the intent of this bill to maintain the remaining beauty of the Great Lakes. I endorse the amendment and trust that my colleagues will, as well.

I would state to other Members of this body who might have some interest in the actual effect of this legislation, that, as the Senator from Wisconsin has stated, two States have adopted such legislation or the essential equivalent, Indiana and New York. I believe New York is the first to have done it. New York, which takes such an extraordinary amount of the discharge of Lake Erie and the whole discharge of Lake Ontario, has had experience with this legislation, in effect, and, as I am sure my senior colleague from New York would agree, our experience has been altogether a good one.

This legislation will work. It has been working with respect to large portions of Lake Erie and Lake Ontario now for some years. There were apprehensions and there were protests when the law went into effect. The process that the Senator from Wisconsin has described immediately took over; substitutes were provided; the people of New York are as well scrubbed today as they have ever been; and what is more, they swim in Lake Ontario a lot more than they used to do.

The words of James Fenimore Cooper show what a great, incomparable heritage these lakes are, and how we were on the way to losing them, how we talked about Lake Erie dying, and how Lake Ontario began the process of eutrophication and for years people did not swim along its shores, which were occupied only by small dead fish.

New York has done its share; but inevitably Lake Michigan, Lake Superior, and Lake Huron flow out through Lake Erie and Lake Ontario. As a matter of good judgment for your own sakes and good neighborliness for our sake, I ask that Senators support this measure.

Several Senators addressed the Chair.

The PRESIDING OFFICER. Who yields time?

Mr. JAVITS. Mr. President, will the Senator from Wisconsin yield me 2 minutes?

Mr. NELSON. I yield the Senator 2 minutes.

Mr. JAVITS. Mr. President, I simply want to join Senator MOYNIHAN in what he says. In this case, it is a little late for him to be calling me his "senior colleague." He is an outstanding Senator and we work very well together, but it is a fact that I have had somewhat more experience, having been around a little longer than he.

It so happens that, at its worst, I made an inspection tour of Lake Erie, and it was really awful. We were really dealing with pitch, and the worst kind of evidence of pollution, even to the eyes of a layman like myself.

I was deeply impressed with the laws of my State, and was deeply impressed with the fact that we tried to help ourselves, and I have joined Senator NELSON, Senator MUSKIE, and others from time to time in their efforts to deal with these matters.

But I am even more impressed with the fact that it seems to have worked. It seems to have worked; whether this particular type of regulation has everything in the world to do with it or not I cannot say, but it certainly must have made a contribution, because the results have indicated the beginning of improvement.

Having seen what I saw, and having been as appalled as I was, it was terribly impressive to me. So I, too, support Senator Nelson's amendment.

The PRESIDING OFFICER. Who yields time?

Mr. EAGLETON. Mr. President, I have a perfecting amendment which I send to the desk.

The PRESIDING OFFICER. The chair will state a perfecting amendment will not be in order until the time has expired on the initial amendment.

Mr. EAGLETON. I ask unanimous consent that my perfecting amendment be in order at this time.

Mr. McCLURE. Mr. President, reserving the right to object, and I shall not object, it was my understanding that the members of the committee had agreed that time on the pending amendment would be yielded to the Senator from Idaho.

Mr. EAGLETION. I take it the Senator from Idaho wishes to speak at this moment?

Mr. McCLURE. Yes, if I can.

Mr. EAGLETON. I ask that my amendment be held at the desk.

Mr. McCLURE. Mr. President, I wanted to take this time now while both Senators from New York, who have spoken in support of this legislation, are on the floor, because both of them have spoken in terms of the New York experience, saying that New York has passed or adopted such a piece of legislation, and that it is working.

I think the evidence is that New York has passed a piece of legislation, and stream pollution in some areas in their State has lessened since that law was passed. But the scientific evidence fails to connect the cause and the effect.

The betterment of pollution there is a fact. The senior Senator from New York perhaps adequately hazarded a guess in his statement that that may not be the reason, but the evidence is that the streams are getting better.

The Senator is correct; the streams are getting better where there is adequate sewage treatment, and not getting better where there is a failure of adequate sewage treatment. So it may be the result of the sewage treatment facilities' operation, rather than the phosphate ban.

I wanted to take this time, while the Senators are on the floor, to make that comment, so that they would know what the position of the Senator from Idaho is, and would have an opportunity to respond on that point, if indeed they wish to, at this time.

Mr. President, at this time I ask unanimous consent that it be in order for the Senator from Missouri to offer his perfecting amendment at this time, without all time having been yielded back on the principal amendment.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. EAGLETON. Mr. President, I thank my colleague from Idaho.

Mr. NELSON. Will the Senator yield for a parliamentary inquiry?

Mr. EAGLETON. I yield.

Mr. NELSON. Mr. President, what time is allowed by the unanimous-consent agreement for the amendment to be offered by the Senator from Missouri?

The PRESIDING OFFICER. A total time of 30 minutes on a perfecting amendment, 15 minutes to each side.

UP AMENDMENT NO. 729

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Missouri (Mr. EAGLETON) proposes unprinted amendment No. 729 to the Nelson amendment No. 810, as modified:

On page 10, after subsection (h) add the following new subsection "(i)":

(i) Notwithstanding subsection (h) of this section, nothing in this section shall limit or modify the authority of the Administator under the Toxic Substances Control Act to make an independent finding on the need to continue the prohibition under subparagraph (c) or to alter the terms of the prohibition based on studies and other evidence available to the Administrator.

Mr. EAGLETON. Mr. President, I believe the reading of this amendment makes very clear what I am seeking to do. For example, 6 months from now, a year from now, or 3 years from now, if the administrator should decide he wishes to alter or remove the prohibition on phosphates he would have the right to do so, exercising his statutory authority under the Toxic Substances Control Act.

Mr. President, I cite page 4 of the Nelson amendment, wherein household detergents are not to exceed 0.5 percent phosphorus by weight.

It may be that a year from now, or at some undetermined future time, the administrator might wish to alter that 0.5 percent phosphorus. He might want to make it 0.6, he might want to make it 0.4, or he might want to make it 0.0 and take it out in toto.

Thus, under this amendment, he would have that authority at such unspecified time. This clarifies the administrator's authority under the Toxic Substances Control Act. I presume at a later point in the debate the Senator from Wisconsin will place in the RECORD the letter from Mr. Costle to Senator NELSON on this subject matter.

Mr. President, I am prepared to yield

back the remainder of my time when the Senator from Wisconsin has completed.

Mr. NELSON. If I understand, the amendment of the Senator from Missouri it simply provides that if studies, conducted pursuant to section 6 of the Toxic Substances Control Act, conclude that there should be a modification of the statute the administrator would have the authority to make an adjustment in limitations based upon scientific evidence. For example, if the administrator found that the lakes could be stabilized, if detergents contained 1 percent or 1.5 percent phosphorus by weight, under those circumstances, with evidence demonstrating that fact, he would have the authority to modify the amounts that could be used in these various agents. Is that what the Senator is saying?

Mr. EAGLETON. That is correct. Also, it could remove in toto the prohibition which the Senator seeks by the amendment now pending. It would cover the whole range from changing the percentums to removing the prohibition entirely, based upon evidence or whatever the standard administrative test is.

Mr. NELSON. So that the legislative history would be accurate—the Senator is saying that if the Administrator decides to modify or withdraw the ban on the use of phosphates, that action would only be based upon compelling scientific evidence.

Mr. EAGLETON. That is absolutely correct. The evidence would have to be "clear and convincing," whatever the standard administrative test is which is used by the Administrator.

Mr. NELSON. I have no objection to the amendment.

Mr. EAGLETON. Mr. President, I yield back the remainder of my time.

Mr. NELSON. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the perfecting amendment.

The perfecting amendment was agreed to.

The PRESIDING OFFICER. The question recurs on the amendment, as amended. Who yields time?

Mr. McCLURE. Mr. President, I yield myself such time as I may require.

Mr. President, I am not going to prolong this. Obviously, there are not many Members who may be persuaded. I suspect whatever instant reaction they have when they some through the door will determine the outcome of the vote on this amendment.

The fact is, and I believe the Senator from Wisconsin would agree, that the committee has not held hearings on this matter in the last 7 years; that 7 years ago the committee held exhaustive hearings and the results were inconclusive, at least in the minds of the committee. I have no doubt that the Senator from Wisconsin is convinced now, as he was convinced then, that this action is both necessary and desirable. I am sure, from my conversations with the Senator, not only of his sincerity in that belief, but also the fact that he was exhaustively studied that question. As he has put it to me, and I will not attempt to quote, he has kept abreast of the developments during all of the period of time over the past 7 years while this matter has been debated in his State, where the States around the Great Lakes region have, in fact, legislated in this area.

The fact of the matter is the committee has not done that. I would pledge to the Senator that I will cooperate with him in seeing that the committee holds hearings, and that the committee, after holding hearings, will deliberate upon this matter and make a decision pro or con on the subject of the phosphate detergent ban.

The committee would have to say that it is acting blindly, even though the Senator from Wisconsin is not, at this time.

I would have to say to my friends from New York, as I said a few moments ago, that while they may be convinced that the pollution is reducing, the evidence is far, far from conclusive that the reason it is reducing is because of the phosphate ban. As a matter of fact, there is substantial evidence that wherever there is improvement, it is in the presence of adequate sewage treatment, not the phosphate ban. In the absence of adequate sewage treatment, there is an increase in pollution, in spite of the phosphate ban. This would suggest to me that the improvement is not the result of the ban but the result of the treatment.

I am no going to argue now, because I am not sure that I could argue effectively, that I know that the alternative which we believed 7 years was a viable alternative to be studied, phosphate removal and treatment, is a better alternative than attemping to remove it from a part of the sources.

I understand the Senator from Wisconsin is convinced that the later technical evidence indicates that is not true. But there is still substantial doubt on that question, and the committee of the Congress assigned with this responsibility has not looked at that question again in the last seven years.

I have a number of studies which are current, some coming from the State of New York and some from the State of Indiana, which indicate that the phosphate ban, while reducing the level of phosphate in the waters, has not had a measurable effect upon the improvement of the pollution effects which it is designed to correct.

I think it is premature for us, based upon our knowledge, unless we are simply going to take the conclusion that the Senator from Wisconsin has reached and take it as being totally determinative, for Congress to act upon this now.

I hope that the Senator from Wisconsin, having made his point, will allow us to hold the hearings which ought to be held, so that we can know whether or not this is the appropriate measure to take; so we can find out whether or not the cost, with the other indirect costs to our society, of this ban will be worth it in terms of measurable increases in the levels of pollutant reduction. I submit that the record at this time is not adequate on that subject. For that reason, we ought not to pass the amendment until we have had the opportunity to have hearings on the matter.

The Senator did introduce legislation on this subject. The amendment before modification was simply that of the bill he introduced earlier this year, a bill which, even though introduced and referred to the committee, has had no hearings on it. It has been pending before the committee. The Senator knows, as I know, the reasons why—simply the pressure of business on that committee on items of higher priority in the judgment of the chairman and the members of the committee.

That is not to say that the committee cannot, after having dealt with the Water Pollution Control Act amendments and the Clean Air Act amendments, now return to consideration of other matters such as this one.

Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. NELSON. Mr. President, how much time does the Senator from Wisconsin have left?

The PRESIDING OFFICER The Senator has 20 minutes.

Mr. NELSON. Mr. President, on two points raised by the distinguished Senator from Idaho as to whether adequate studies have been made as to the impact of a reduction of phosphorus on receiving bodies of water, I refer the Senator and Members of the Senate to the EPA's detergent phosphate position paper prepared by the Region V Phosphorus Committee. Specifically, I refer the Senator to page 51 through page 57. It lists study after study that shows that, once the ban was in place, there was a measurable reduction in the amount of phosphate in the water. I quote just one paragraph on page 51:

> In areas where a ban on phosphates has been implemented, measurable decreases in the concentrations of phosphorous in sewage have been reported within months of implementation. Measurable decreases in total and the phosphate in receiving streams were observed within a year. Thus, dual benefits of conservation of resources while also reducing expenditures of both energy and capital for wastewater treatment facilities are achieved.

At this point, I ask unanimous consent that five pages of technical studies, excerpts from technical reports supporting the phosphorous ban, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

EXCERPTS FROM TECHNICAL REPORTS SUPPORTING A PHOSPHORUS BAN IN DETERGENTS USED IN THE GREAT LAKES

Fourth Annual Report, Great Lakes Water Quality, International Joint Commission, 1975:

(1) "Since 1970 the Commission has recommended the limitation of phosphates in detergents. Recent studies and short-term results where limitations have been implemented have not only supported this recommendation, but suggest even greater limitations are in order. Therefore, the Commission believes that a uniform 0.5% phosphorus by weight be placed on all detergents manufactured for use in the Great Lakes Basin, including dishwashing materials, should be implemented by the appropriate authorities as quickly as procedures will permit."

Great Lakes Water Quality Agreement, between the United States and Canada, April 15, 1972. Annex 2, Control of Phosphorus:

(1) "In addition, programs may include regulations limiting or eliminating phosphorus from detergents sold for use within the basin of the Great Lakes System."

Great Lakes Water Quality 1975 Annual Report, International Joint Commission, Great Lakes Water Quality Board:

(1) "In summary, phosphorus limitation in detergents can result in reduced chemical costs. Furthermore, with less chemicals and lower phosphorus influent concentrations, the amount of sludge resulting from the separation process is also reduced. This would lessen the costs and problems associated with sludge disposal." (Page 66)

(2) ". . . that Great Lakes states which have not already done so should seriously consider the imposition of phosphorus limitations in detergents marketed in the Great Lakes Basin." (Page 70)

(3) Recommendations:

"Those jurisdictions in the Great Lakes Basin not now having any limitation on the phosphorus content of detergents, namely Ohio, Pennsylvania, and Wisconsin, consider the imposition of a ban on phosphorus in detergents, and further that—

Those jurisdictions having partial limitations, namely Canada and Michigan, also consider banning phosphorus from detergents for use in the Great Lakes Basin, and further that

Pending such action by the respective states, the municipalities in the major metropolitan areas of Cleveland and Detroit in the Lake Erie Basin give immediate consideration to banning phosphorus in detergents for use in their jurisdictions.

The Governments meet to consider the alternatives for the reformulation of detergents to exclude phosphorus compounds." (Page 12 of the Recommendations)

The Chicago Phosphate Ordinance and Meeting Phosphorus Effluent Standards through Product Control by H. W. Poston, Commissioner, Department of Environmental Control, City of Chicago:

(1) "As a consequence of the Chicago experience, we strongly recommend the regulation of phosphates in household laundry detergents as an alternative to treatment to meet effluent standards or to improve existing effluent quality as measured by BOD_5 and suspended solids concentrations." (Page 8)

Detergent Phosphate Ban Review, Environmental Protection Agency, 1977:

(1) "Region V of the U.S. Environmental Protection Agency now advocates that all States in the Great Lakes Basin that have not already done so, should give urgent consideration to the adoption of a ban on phosphorus in detergents." (Page 1)

(2) "AP (phosphorus)—ban would result in an immediate reduction of the eutrhophication rate of receiving waters, a reduction of sludge generated and resultant air and land pollution, a reduction of total dissolved solids added to the receiving waters and a reduction of energy consumption." (Page 31)

(3) "Another beneficial effect of a P-Ban is the cost saving due to the reduction of chemicals needed for phosphorus removal, equipment to handle the chemical sludge generated, and its ultimate disposal. In addition to this cost saving, a P-Ban also conserves phosphorus for food production, chemicals for other industrial use, and reduces the required treatment at small plants." (Page 37)

(4) "Region V staff feel that public sentiment, as evidenced in these conservations, public hearings, and the various studies and contacts that are referenced elsewhere in this report, indicate general public support for a phosphate ban." (Page 54)

(5) "Control of phosphorus in laundry detergents will reduce the influent phosphorus loading to all wastewater treatment facilities by about 40 percent and effluent phosphorus loading to all wastewater treatment facilities by about 40 percent and effluent phosphorus concentrations by about 50 percent. . . ."

(6) "Studies conducted by the State of Indiana have demonstrated positive effects by reducing phosphorus concentration in Indiana lakes and reservoirs." (Page 32)

Effects of the 1971 Phosphate Detergent Law, April 16, 1976 (Indiana):

(1) "In order to determine if the phosphorus reductions achieved as a result of the Phosphorus Detergent Law have had any positive effects by reducing phosphate concentrations in Indiana lakes and reservoirs, . . . Surveys conducted as part of the State's Lake Studies Program indicate that significant phosphorus reductions have occurred in a number of other lakes and reservoirs. (Page 347) On the basis of previously listed results, one can conclude that the Indiana Phosphate Detergent Ban has succeeded in its intended purpose." (Page 349)

The Chicago Phosphate Ordinance and Meeting Phosphorus Effluent Standards through Product Control by H. W. Poston, Commissioner, Department of Environmental Control, City of Chicago:

(1) "The passage and enforcement of the Chicago ordinance, limiting phosphorus in detergent formulations, provides an opportunity to study the effectiveness of controlling product formulation as a procedure to reduce the concentration of phosphorus in treatment plant effluents. A study by the Department of Environmental Control showed that an average reduction of 87 percent of phosphorus in effluent was achieved after the ordinance went into effect." (Page 3)

(2) "It is the opinion of the Metropolitan Sanitary District of Greater Chicago's Research and Development Division that there is a direct relationship between the ban and the improved effluent quality from the West-Southwest Treatment Plant." (Page 5)

(3) ". . . after July, 1972, the date from which the ban on phosphates in household laundry detergents went into effect, there followed a substantial decline in effluent phosphate concentrations to less than 1 mg/1." (Page 3)

Great Lakes Water Quality Appendix C, 1975 IJC Great Lakes Water Quality Board:

(1) "The following studies show that the reduction of phosphorus content in detergent has resulted in a significantly lower phosphorus influent concentration in sewage.

(a) During an evaluation of a demonstration pressure sewer system in New York State a small group of single family homes, the phosphorus concentration in the domestic wastewater was determined during separate 3-week periods when phosphorus detergents and nonphosphate, heavy duty soap was used. A phosphorus reduction of 48 percent observed during this study. Monthly data collected pre- and post-ban from Monroe County New York facility indicated a 55 percent phosphorus reduction from 1973 to 1975.

(b) A review of available phosphorus data from municipal discharges in the New York portion of the Great Lakes Basin has been undertaken to evaluate the effectiveness of the phosphorus-in-detergent ban. The majority of these dischargers are in Erie County where a countywide ban preceded the statewide ban by 1½ years. The statewide ban, which became effective on June 1, 1973, limited phosphorus to 0.5 percent by weight of the product content. Influent and effluent samples have been collected at most municipal facilities at least once a year in connection with New York's operation and maintenance inspection program. This annual data was evaluated for discrete time periods in order to determine the trend in municipal phosphorus concentrations. Figure 3 shows a reduction in influent phosphorus concentrations. Figure 3 shows a reduction in influent phosphorus concentrations of 53 percent by 1972 to 1975." (Page 104)

(2) Further studies indicate:

(a) "A Phosphate Detergent Law in Indiana limited the phosphorus contents of laundry detergents to 8.7 percent by weight in January 1972 and 0.5 percent in 1973. Water samples were collected from over 50 water quality monitoring stations on major streams throughout the state from 1971– to 1975. Under this program state-wide phosphorus concentrations in Indiana streams were calculated from the results of more than 100 separate analyses per month from 1971–1973 and 85 samples per month for 1974 and 1975. The combined monthly average phosphorus concentrations for the major streams indicate a decreasing trend." (Page 104–107)

(b) "To answer the question. 'what response in the open waters can be expected from the phosphorus control program?' a consultant's study was authorized and completed. It simulated Lake Ontario's ten-year response to various loading conditions . . .

The study strongly suggests the need for a new emphasis on phosphorus reduction in Lake Ontario and by inference the upstream lakes. In fact, Annex 2 of the Agreement recognized "that additional programs may be required to minimize eutrophication problems in the future" as more information is received. Because of the new estimates and forecasts contained in the study, the reasons for increasing the effectiveness of the phosphorus control program are more compelling than ever. Only marginal reductions beyond the 1 mg/1 requirement are possible from municipal point sources. . . .

The Subcommittee observes that the phosphorus reduction program currently underway in the Lower Lakes may not be adequate to reduce eutrophication in Lake Ontario. In fact, it is unlikely that the attainment of the 1 mg/1 phosphorus effluent requirement from point sources will be sufficient to maintain the present mesotropic state of the lake over the next decade." (Page 107)

Letter from Mike Stifler, Sanitary Engineer, Comprehensive Studies Section, Department of Natural Resources, Michigan:

(1) "In June 1976, staff of the Environmental Protection Agency, of the Department of Natural Resources, began collecting information in considering a total ban on phosphorus in household laundry detergents. Based on this information, the Department is strongly supporting a ban on household laundry detergents which contain phosphorus."

Comments by Nelson Thomas (Chief, Large Lakes Research Station) on Fred Lee's testimony at the December 8, 1976 Hearings in Lansing, Michigan on the Detergent Phosphate Ban:

(1) "The present phosphorus load to Lake Ontario is 12417 mta. The IJC Water Quality Agreement load limit is 9072 mta. Neither the original 1972 load limit or the lower 1975 Surveillance Subcommittee load (7450 mta) can meet with present programs. One of the problems with meeting the desired load limit in Lake Ontario is the lack of reduction in the load from Lake Erie. This results from the higher flows from Lake Erie and the lack of chemical removal at Detroit and other Lake Erie communities. A phosphorus detergent ban would decrease phosphorus input to Lake Erie 2000 mta from Detroit alone. The total maximum reduction would be 3774 mta. This includes combined sewer, unsewered and other plants not meeting 1 mg p/1 effluent. A phosphorus detergent ban would decrease the phosphorus load to Lake Ontario from 210 to 510 mta. A phosphorus detergent ban in the Lakes Huron and Superior Basin would decrease the phosphorus

inputs from 36 to 320 and 7 to 60 mta, respectively. The major benefits would be for the high population areas such as Saginaw Bay and Lake Erie. Minor near shore problems would also be lessened through a detergent phosphorus ban."

Mr. NELSON. On the question of whether or not sewage treatment plants can handle this problem, I refer to page 1 of the position paper prepared by the Region 5 Phosphorous Committee, and quote from it:

Region 5 of the United States Environmental Protection Agency now advocates that States in the Great Lakes Basin that have not already done so, give urgent consideration to the adoption of a ban on phosphorous in detergents.

This position is a departure from the EPA policy on phosphorous control from 1971 to the present. The policy was to rely on chemical treatment to reduce phosphorous levels in municipal sewage and industrial wastes discharged into waterways.

Because this policy has failed to achieve the water quality goal of sufficiently decreasing and stabilizing rates of eutrophication in both inland lakes and the Great Lakes, not only Region V of EPA, but State governments and other regional and international agencies have recently been reconsidering the need and means of reducing phosphorus loadings. No other single factor is so important for the future water quality of the Great Lakes Region.

This comprehensive 2-year study makes it clear beyond refutation that the only way to stabilize those lakes from further deterioration is by the removal of phosphates. I do not understand why the companies that manufacture detergents with phosphates continue the battle; to continue to pollute and destroy some of the most valuable assets that this country. In fact, there are a large number of alternatives, manufactured by the same people, detergents that accomplish the same purpose just as well, without destroying these lakes. It is incomprehensible to me why they continue this lobbying effort.

I live on those lakes. I have watched that deterioration. I have talked with the scientists. Not a single one who is not hired by the soap companies contests the fact that we have to reduce substantially the introduction of phosphorus and that there is only one way, at this time, to make an effective dent on the amount going in—that is by taking phosphorus out of the detergents.

I have been with this problem for 14 years. I introduced legislation in 1970 and 1971. As a matter of fact, in 1971, we were about to move to knock out the phosphates because they had a substitute—NTA. However, serious questions were raised as to whether NTA was carcinogenic. That is why action failed at that time.

Now we have adequate substitutes. Now we have a ban within the city of Chicago; the State of Indiana has a phosphate ban; the State of New York has banned phosphorus in detergents; the State of Minnesota has a ban. Now is the time to move this legislation and stop the further deterioration of those lakes.

Mr. President, I reserve the remainder of my time.

Mr. GRIFFIN. Will the Senator from Wisconsin yield?

Mr. NELSON. I am yielding the floor.

Mr. GRIFFIN. Who has control of the time?

Mr. NELSON. Does the Senator from Michigan want time?

Mr. McCLURE. The Senator from Wyoming wants some time.

Mr. WALLOP. I would like to address a few questions to the Senator from Wisconsin, if I may.

Mr. McCLURE. I yield to the Senator 3 minutes.

Mr. WALLOP. May I have the attention of the Senator from Wisconsin?

Did his ban apply to the sale of phosphates in all the States that border the Great Lakes?

Mr. NELSON. Yes, except that it applies only to that portion of Pennsylvania that drains into Lake Erie. Otherwise, it bans it in all of them.

Mr. WALLOP. Does all of the watershed of Wisconsin drain into the lakes?

Mr. NELSON. No, it does not.

Mr. WALLOP. One of the things that concerns me about the amendment—and I appreciate what the Senator is trying to do—is that the phosphates of which the Senator speaks are a small proportion of the total phosphate drainage into those watersheds. The Senator comes from an agricultural State, as do I. I am sure he appreciates the fact that the agricultural runoff is a far greater supplier of phosphates than are the detergents. To apply it uniformly across those States, even in those areas which do not drain into the lakes, seems to me to be a bit unfair, if you will, to the consumers in the rest of the areas of those States, his own State included.

The mechanism exists through the amendments already in this act to take care of the Senator's problems, the total phosphorous loadings in the Great Lakes. The mechanism exists in the Toxic Substances Control Act without this amendment and without, indeed, penalizing the consumers in the rest of the Senator's State that do not drain into those lakes.

I think it fails to take into account, although I think it is improved with the amendment that was accepted by the Senator from Missouri (Mr. EAGLETON), that there are significant advances in the detergent industry, as the Senator already mentioned.

These are the kind of things I hope would come up and be developed in the hearings, which the Senator from Idaho referred to.

But I think it is safe to say that the cost to the consumer is far greater in removing the phosphates from his detergent than it is to the consumer in removing the phosphates from his effluents, and less effective to boot.

Would the Senator care to comment on that?

Mr. NELSON. The statistics we have——

The PRESIDING OFFICER (Mr. CHILES). The Senator's 3 minutes have expired.

Mr. NELSON. I will respond on my time.

On that point, I say to the Senator from Wyoming that in terms of sewerage treatment costs alone, it will save $8,300,000 a year in costs of processing sewerage in the State of Wisconsin and over $40 million in the Great Lakes States. So there is one reduction.

Two, these other detergents do not cost any more and work as well, so where is the increased cost to the consumer?

Mr. WALLOP. The information we have is that they do cost more and more is required to provide the same cleaning efficiency.

All I am asking is, why should those people who do not drain into the lakes the Senator seeks to protect be required to submit to the same kinds of natural restraints as those who do live on them.

Mr. NELSON. In response to that, first, a watershed limitation creates a horrendous administrative problem. We cannot draw artificial lines on a map that arbitrarily cut across the 1,500 rivers. We should not let phosphates contaminate the St. Croix River, the Wisconsin River, even though these magnificent resources drain in the Mississippi. We cannot only control the Rock River, and other tributaries that end up in Lake Michigan. In addition, phosphorus is a nutrient no matter where it goes and it ought to be out of the marketplace and out of our rivers even if they are not running into the great lakes.

The lakes are at a critical state now. That is why the Environmental Protection Agency has no objection to proceeding with this statute, because they recognize, from the studies done by region 5, that we need immediate and effective action.

I hope and trust that when they are done examining this issue EPA will ban phosphates all over the United States, and the sooner the better.

Mr. WALLOP. Will the Senator allow me to respond?

Mr. NELSON. How much time does the Senator from Wisconsin have?

The PRESIDING OFFICER. The Senator from Wisconsin has 10 minutes remaining.

Mr. NELSON. Will the Senator respond on the time of my distinguished friend?

Mr. McCLURE. I will yield 2 minutes to the Senator.

Mr. WALLOP. That is fine.

I say to my friend from Wisconsin that I do not quarrel with some of what he is saying. But I do quarrel with his assessment of the cost of removing the phosphates from detergents under these amendments because the phosphates from the detergents are a small part of the phosphate removal provisions in this Water Pollution Control Act.

It is the detergents that represent a minimal part. The phosphates come from other sources in those waste waters.

That is the only point I try to make. I do not quarrel with the Senator's desire to get it out, but I think this is pouncing on a mouse when we have a lion in the cage.

I really do not see that it is an effective thing in terms of the consumers.

With regard to one other thing the Senator mentioned, it is difficult to take the drainage. It is a fairly simple deal to take a topographic map and choose those

drainages, as has been done, I understand, in the Senator's amendment in the case of Pennsylvania.

I do not oppose that by any stretch of the imagination. I do agree with the Senator from Idaho that it would be wise for us to hold hearings on these matters, and he has committed himself to seeing we can get these done as quickly as possible and accommodate the Senator's wishes.

Mr. NELSON. Let me say in response to the distinguished Senator from Wyoming and his remark that the phosphates coming into the watershed through detergents is a small amount. In fact, phosphorus from point sources of pollution constitute a substantial percentage of the total amount of phosphorus loading entering the lakes. In Lake Erie, for example, point sources contributes over 43 percent of the total loading.

No. 2, and more important, point sources are the only controllable influents of phosphate.

No. 3, in the studies, the scientists concluded that if we could reduce the loadings going into these lakes to a certain level, to 1 part million, then we would be able to stabilize those lakes against further deterioration. As a direct consequence of this ban, the eutrophication rates in Lake Superior, Lake Michigan, and Lake Huron, will be stabilized, the lakes protected against further deterioration.

On the question of how significant a ban is, let me give the Senator the figures. As to Lake Superior, it amounts to 6.3 percent.

That happens to be one of the purest lakes in the world and it has the least pollutants going into it because, as the Senator knows, there are not many big cities on that lake. However, a ban and adequate treatment does reduce the total loadings to a level the scientists say will stop further deterioration.

Now, Lake Michigan. Adoption of this provision would reduce by 37 percent the total amount of phosphorus going into the lake.

It amounts to 27.4 percent in Lake Huron and almost 32 percent in Lake Erie.

Those are very substantial amounts, and they are the only amounts we can control at this time very effectively because, as the Senator well knows, the agricultural runoff question is a long-term problem that we hope we will be able to substantially control somewhere down the road in the next decade or two.

The following Senators requested and, by unanimous consent was granted, in behalf of the following staff members, privilege of the floor during the consideration of this measure: Senator STAFFORD, Catherine Cutlipp; Senator ANDERSON, Judy Hefner; Senator WALLOP, Mike Morgan.

Mr. GRIFFIN. Mr. President, will the Senator in control of the time yield a few minutes to me?

Mr. NELSON. I agree to yield a minute or two to the Senator from Minnesota.

Mr. ANDERSON. Mr. President, I support the amendment of the distinguished Senator from Wisconsin.

The PRESIDING OFFICER. Who yields time?

Mr. NELSON. How much time do I have remaining?

The PRESIDING OFFICER. The Senator has 7 minutes.

Mr. NELSON. I yield 1 minute to the Senator from Minnesota.

Mr. ANDERSON. Mr. President, I call attention of the Senate to the fact that in 1971 my State, after extensive hearings, passed legislation which would prohibit phosphates from being used in my State. Thirty-three million people now purchase phosphate-free detergents. They are available; they do work. This has given the State of Wisconsin an opportunity to catch up to its neighboring State in at least one important area, and I think the amendment deserves support.

Mr. NELSON. Mr. President, this would be in partial response to the question raised by the Senator from Wyoming. I ask unanimous consent to have the following items printed in the RECORD, in support of this measure: a letter from the Department of Natural Resources of the State of Michigan, signed by Michael Stifler, sanitary engineer, comprehensive studies section, endorsing the measure; a letter from the Department of Environment, city of Chicago, signed by Mr. Poston, commissioner, endorsing this provision, plus a study done by Mr. Richard T. Prentki of the University of Wisconsin, on the importance of limiting detergent phosphorus inputs to lakes.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

STATE OF MICHIGAN,
DEPARTMENT OF NATURAL RESOURCES,
Lansing, Mich., July 22, 1977.

Senator GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: I appreciate this opportunity to endorse S. 1015, the bill proposing a ban on phosphate laundry detergents sold in the Great Lakes states. Michigan has been attempting to control phosphorus discharges to its waters for several years. We know that phosphorus controls the growth of nuisance algae and slimes in over 70 percent of Michigan's inland lakes and in all of the Great Lakes. Efforts to reduce the amount of phosphorus from municipal and industrial sources began in the late sixties. In 1972 a Michigan law was passed which limited the phosphorus level in laundry detergents and several other cleaning agents to 8.7 percent. However, recent scientific studies of the Great Lakes indicate that the efforts, to date, are not enough.

Michigan's Department of Natural Resources held several public hearings on a proposed phosphate detergent ban for the state. We are in the midst of the administrative rules change process to enact this ban. At the same time several bills proposing bans have been introduced in the legislature. However, these efforts are moving slowly.

The information compiled at the hearings supports the need for a ban. The scientific fact that more stringent phosphorous control is necessary is well established. It is obvious that the Great Lakes will benefit from a ban. An important point to consider is that tourism, centered about our water resources, is Michigan's second ranked industry.

The question of whether consumers will suffer is not so well established. We have reviewed much conflicting testimony. Increased consumer costs associated with a ban have been projected as well as cost savings from having less phosphorus to remove at sewage treatment plants. However, the results of these studies are either conflicting or inconclusive. In every state, city or county where a ban has been enacted, the consumer has adjusted to the new washing conditions. This is because there are adequate substitutes for phosphate detergents. Citizen response to the proposed ban in Michigan has been overwhelmingly favorable.

I shall be happy to offer you or the Environmental Pollution Subcommittee further information on Michigan's experience. Again, thank you for this chance to endorse S. 1015.

Very truly yours,

ENVIRONMENTAL SERVICES DIVISION,
MICHAEL STIFLER,
Sanitary Engineer, Comprehensive Studies Section.

CITY OF CHICAGO,
DEPARTMENT OF ENVIRONMENT,
July 6, 1977.

GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR: Thank you for forwarding a copy of Bill S. 1015, which limits the amount of phosphorus contained in cleaning agents to be found in the Great Lakes area.

It was heartening, indeed, to learn the extent of the attention now being given at the congressional level to the excessive discharge of phosphorus. By limiting the amount in cleaning agents, the quality of Great Lakes waters should be greatly improved. The Bill will also serve notice on the detergent industry to intensify its research efforts to find an acceptable substitute.

The City of Chicago's Mayor, Michael A. Bilandic, in October of 1970, in his capacity as Chairman of the City Council Committee on Environmental Control, was instrumental in obtaining the passage of an ordinance banning the use of phosphorus in detergents.

Because of the success the City of Chicago has had in reducing the phosphorus level of its influent to the Sewage Treatment Plant, I wholeheartedly endorse S. 1015.

Sincerely,

H. W. POSTON,
Commissioner.

THE IMPORTANCE OF LIMITING DETERGENT PHOSPHORUS INPUTS TO LAKES

(By Richard T. Prentki)

(Statement presented to the Environmental Protection Committee Hearing on Assembly Bill 881 to limit phosphate detergent, July 26, 1977.)

For the past eight years I have worked on the problem of phosphorus in lakes. During the last 2½ years as an Assistant Scientist in the Institute for Environmental Studies at the University of Wisconsin I have specifically studied the relationship of phosphorus pollution to aquatic weed growth in Wisconsin lakes.

I have concluded that decreasing the phosphorus content of detergents in Wisconsin is an important and necessary step in slowing euthrophication of Wisconsin's waters. I am using the term eutrophication to encompass the replacement of less objectionable algal species by the offensive bluegreen algal blooms; depletion of lakewater oxygen and consequent fish kills; decreased water clarity; and development of dense aquatic weedbeds.

In the early 1970's detergents and soaps accounted for 50–60% of the phosphorus in municipal sewage. The quantity of detergent P used annually by a town of 600 alone would have been sufficient to eutrophy a pristine lake the size of Lake Wingra. Since the early 1970's the average phosphorus concen-

trations in laundry and dish powders and liquids have decreased perhaps 50%, thus requiring the dirty clothes and dishes of 1200 people to ruin a lake. Detergents are the greatest contributor of phosphorus to lower Green Bay, and are also the most easily controllable. However, even the complete removal of detergent phosphorus would reduce at most only 20% of the total phosphorus input to the lake and should be considered only a first step in saving the Great Lakes.

Where removal of detergents may be of greater value is in slowing or in some cases even reversing the eutrophication of Wisconsin's many smaller, clear-water lakes. Many of Wisconsin's most valuable recreational lakes are heavily cottaged, each cottage with its own septic system, and each septic system doomed to eventual saturation and failure. Lake shores are notoriously poor septic system sites. Soils are often sandy or calcareous with little binding capacity for phosphorus and with high water tables which drain toward the lake. This problem has not been well researched in Wisconsin or elsewhere to my knowledge. But in three nutrient budget studies of cottaged lakes in New Hampshire, Connecticut, and Alaska with which I am familiar, leaky septic systems have been implicated as major phosphorus sources and causes of increasing eutrophication.

Decreasing the input of phosphorus has been shown to reverse the euthrophication process in several originally clear water lakes. Sewage diversion from Lake Washington, Seattle, and more effective phosphorus-removal sewage treatment in Sweden are often cited examples of decreased phosphorus loading followed by enchanced lakewater clarity, decreased phosphorus concentrations, and decreased algal populations. In Onondaga Lake near Syracuse, New York, a county ban on phosphate detergents in 1971 followed by a statewide ban in 1972 resulted in a 50% decrease in lakewater phosphate concentrations and replacement of blue-green algae by less objectionable green algae species. The replacement of the blue-green algae with greens leads to a tremendous population explosion of the zooplankton, which prefer to feed on the green algae. This increased grazing greatly clarifies the water. Simple Vollenwider-type models of lake processes used by detergent manufacturers do not include this mechanism and therefore may underestimate potential water quality improvements resulting from the proposed detergent phosphorus ban.

In conclusion, detergent phosphorus has been shown to be an important contributing cause of lake eutrophication. Removal of this phosphorus input to severely eutrophic lakes may show no immediate improvement; however, for clear water lakes, where detergent phosphorus constitutes a much greater percentage of the phosphorus input, limiting this pollutant can be effective in reversing, or at least slowing the eutrophication process.

Mr. NELSON. Also, I ask unanimous consent to have printed in the RECORD a series of jurisdictions where the ban has been put into effect, which includes a number of additional States which have banned or partially banned, and a long list of cities in Illinois, Maine, New Hampshire, and Ohio which have banned the use of detergents.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

JURISDICTIONS WITH PHOSPHORUS LIMITATIONS

Jurisdiction, limitation, and effective date:

STATES

Indiana, 8.7 percent, January 1, 1972; 0.5 percent, January 1, 1973.

New York, 8.7 percent, December 31, 1971; trace, June 1, 1973.

Minnesota, 0.5 percent, January 1, 1977 (in litigation).

Vermont, 0.5 percent, January 1, 1978.

Michigan, 8.7 percent, July 7, 1972.

COUNTIES

Orange County, Florida, 8.7 percent, December 31, 1971; 0.01 percent, December 31, 1972.

Dade County, Florida, 0 percent, January 1, 1972.

CITIES

Chicago, Ill., 8.7 percent, February 1, 1971; 0 percent, June 30, 1972.

Aurora, Ill., 8.7 percent, July 1, 1971; 0 percent, June 30, 1972.

Elgin, Ill., 8.7 percent, July 1, 1971; 0 percent, December 31, 1973.

Elmwood Park, Ill., 0 percent, December 31, 1971.

Harwood Heights, Ill., 8.7 percent, June 1, 1971; 0 percent, June 30, 1972.

Kankakee, Ill., 8.7 percent, October 1, 1971; 0 percent, January 1, 1973.

Niles, Ill., 8.7 percent, July 1, 1971; 0 percent, June 30, 1972.

Northlake, Ill., 8.7 percent, September 1, 1971; 0 percent, January 1, 1977.

Park Forest, Ill., 8.7 percent, May 1, 1971; 0 percent, June 30, 1972.

Round Lake Beach, Ill., 8.7 percent, June 1, 1971; 0 percent, June 30, 1972.

Skokie, Ill., 8.7 percent, June 30, 1971; 0 percent, June 1, 1972.

Bridgeton, Me., 0 percent, June 1, 1971.

Naples, Me., 0 percent, March 1, 1971.

Alton, N.H., 0 percent, June 1, 1971.

Sanborton, N.H., 0 percent, June 1, 1971.

Akron, Ohio, 8.7 percent, February 1, 1971; 0 percent, June 30, 1972.

Cuyahoga Falls, Ohio, 0 percent, May 15, 1973.

Fairlawn, Ohio, 0 percent, February 1, 1973.

Independence, Ohio, 8.7 percent, June 1, 1971; 0 percent, July 1, 1973.

Munroe Falls, Ohio, 0 percent, June 1, 1973.

Painesville, Ohio, 8.7 percent, September 1, 1971.

Stow, Ohio, 0 percent, April 12, 1973.

Talmadge, Ohio, 0 percent, April 13, 1973.

Mr. NELSON. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator from Wisconsin has 4 minutes remaining.

Mr. GRIFFIN. Mr. President, will the Senator from Idaho yield to me?

Mr. McCLURE. I yield 2 minutes to the Senator from Michigan.

Mr. GRIFFIN. Mr. President, I am inclined to support the amendment of the Senator from Wisconsin on its merits.

Since 1971, I have been the sponsor of legislation to control the use of phosphates in detergents. My own State of Michigan is on the verge of prohibiting such use of phosphates, although there is a question whether the Department of Natural Resources has authority to take such action.

While I support the objectives of the amendment, I must say I was disturbed to learn that there have been no hearings held on this matter, which obviously involves some controversy. Obviously, it will impose inconvenience on many consumers and is bound to cause some economic dislocation.

I feel constrained to ask the Senator from Wisconsin whether he pressed for hearings before the committee with jurisdiction? If he did so, then he may be within his rights to move in this way on the floor. If he has not, I think the legislative process would be better served by handling this matter in the regular way, so that those who are opposed or have reservations will at least have an opportunity to put their position on the record.

Mr. NELSON. We have been waiting for a long time for the completion and printing of this comprehensive study. The preliminary recommendations were available in January. They were subjected to industry review. Finally, in June, EPA came out with its final report, making the recommendations which will be implemented by this amendment.

We submitted legislation then, but the committee did not have adequate time to conduct hearings on it. That is the reason it did not happen.

I realize what the Senator is saying, but there has been an agreement between Canada and the United States to significantly reduce the phosphorus loading of the Great Lakes. Every report since 1970 by the International Joint Commission has advocated a phosphate ban. Now we have this study by EPA's region 5. In my opinion, not a single word could be added by a hearing. If the Senate had received this report in January, I am sure the Senator from Maine would have included it in hearings on this bill, but we did not have the full report at that time.

That is the explanation for it.

Mr. GRIFFIN. Did the Senator from Wisconsin take his case to the committee and ask the committee to consider his amendment? That would seem to be the orderly way to proceed.

The PRESIDING OFFICER. The Senator's 2 minutes have expired.

Mr. GRIFFIN. Are we short of time?

Mr. McCLURE. I yield the Senator 2 additional minutes.

Mr. GRIFFIN. For example, I note that there are some 10 pages of judicial procedures included in this amendment. I assume they may be all right and accord due process. But I really do not know.

Mr. NELSON. I can help the Senator on that point.

All those regulatory pages to which the Senator is referring have been stricken in the amendment, as modified.

Mr. GRIFFIN. Then, how will it be enforced?

Mr. NELSON. By the provisions of the 1972 act.

Mr. GRIFFIN. I might note that the chairman and the ranking minority member of the committee are on the floor now. I would think they might be asked to make a commitment that the committee would hold hearings and report back to the Senate within a limited period of time. It seems to me that would be the proper way to proceed.

Mr. McCLURE. Mr. President, I yield 2 minutes to the Senator from Wyoming.

Mr. HANSEN. Mr. President, I support the position taken by several Members, including my good friend the Senator from Idaho, who has yielded me time. I would like to associate myself fully with his remarks.

The violence that is inherent in the amendment proposed by the distinguished Senator from Wisconsin arises from the fact that we are legislating on

the floor. We are dealing with concerns and factual data that obviously deserve examination but upon which no hearings have been held. Thus, those persons and industries most directly affected have not as yet had an opportunity to present their case.

This entire matter illustrates how very easy it is to get caught up in the enthusiasm for a cause. While we all want to clean up the water, or to contribute toward removing some of the pollutants from the air it is imperative that we not become caught up with phrases, catch words or causes. It is imperative that we—as last week or a few weeks ago, I should say, and signed only this legislators—conduct careful, thoughtful investigations prior to enacting legislation.

The trouble I find in the amendment proposed by the distinguished Senator from Wisconsin is that I do not believe the American people or a majority of the Members of the Senate know enough about this issue to make the kind of balanced judgment that our constituents might expect and deserve.

I believe that we need to know more about this entire matter. We need the facts.

It is too easy to assume that the prohibition proposed in this amendment would achieve the results which we all desire—the cleaning up of our Great Lakes. However, that may not be the case. It is my understanding that there is scientific evidence on both sides of this question and while we may be able to decide who is correct, now is not the time and the floor of the Senate is not the place. These matters are the reasons we hold hearings and that is where this issue belongs.

Let me conclude by saying that I will not support this amendment despite the fact that I share with the distinguished Senator from Wisconsin a desire to achieve the goal toward which he believes this amendment will work.

I only hope that before we take such an important action as this amendment propose we will stop, look and listen, and expose to the light of day the unanswered questions implicit in this amendment.

I thank my friend from Idaho.

Mr. McCLURE. Mr. President, how much time remains on each side?

The PRESIDING OFFICER. The Senator from Wisconsin has 4 minutes; the Senator from Idaho has 8.

Mr. McCLURE. I thank the Chair.

Mr. President, I will yield myself such time as I may consume.

The Senator from Wisconsin makes a case which, as I said earlier, I am sure he sincerely believes. That is nothing new. He believed that before this study came in. He believed that before the study was commissioned. He believed that before the study was ordered. He believed that before we had our hearings 7 years ago, and he has not changed his mind. I think the Senator would confess that is true.

Mr. NELSON. I agree with that.

Mr. McCLURE. As a matter of fact, if the study had come in and said quite the opposite he still would have believed what he believes. So the study only reinforced that opinion which he already had, and I commend him for that steadfastness of purpose.

There are some of us, however, who did not believe it or know it then, who are not yet convinced that it is unalterably true, and while the Senator from Wisconsin can say, as he does so eloquently, that "everybody agrees this is true," everybody does not agree this is true. There is a substantial argument about what the facts are.

I might just mention to my friend from Wisconsin that there are some offsetting questions of pollution that have not even been addressed in the discussion today, and I will give him a personal example.

Last weekend was "Honeydew Weekend" at my house—"Honey, do this; and, Honey, do that." And Honey said, "Paint the porch floor." So I painted the porch floor, and I was using a good oil-based paint, which may have been made in the State of Wisconsin, I am not sure.

But when it came time for me to complete that job, I was washing out the brushes. Have you ever tried to wash a brush out with a non-phosphate-based detergent? I could have used something else. I could have gotten some of those mineral spirits and cleaned the brush with mineral spirits, which would have had different pollution effects than does the phosphate, different pollution effects to the air as well as to the water, as well as a much less satisfactory result.

If the Senator from Wisconsin is the messy kind of painter the Senator from Idaho is, he would have known that I would get some paint on myself in that process, and I had to get the paint off. I found it very convenient to have a phosphate detergent that made it very easy to get that paint off my elbow. You know how it runs down the brush and drips onto your elbow? Well, the phosphate was of very great help to me at that particular time in removing that residue of my efforts that did not result in getting paint on the deck instead of on me.

So there are some offsetting pollution effects that are not even addressed, and I think the fundamental question is, do we know what we are doing? Do we know what the offsetting effects are?

I submit that we do not. This matter was presented to the committee and the committee said, "Let us pass over it without prejudice because we do not know enough about it."

So we are going to act on the floor, admitting that the committee does not know enough about it, but we will still go ahead and legislate.

That, Mr. President, in my mind is precisely the wrong way to proceed here. It may well be that if we have hearings, and the studies are presented, if we hear the conflicting evidence, and we have had the opportunity to weigh that evidence, I might very well join with the Senator from Wisconsin, and I say that most sincerely.

I have no mind fixed on this question. It is just that, based upon the hearings we had, there was a substantial question about whether this would be effective.

I made some reference earlier to the studies of Erie County, N.Y., studies in Indiana, studies that are current, studies and comments that are right now indicating favorable effects of the phosphate reduction, and that removal from detergents is simply not as effective as the Senator from Wisconsin and others believe.

Mr. President, I ask unanimous consent that at this point in the RECORD I may have printed some remarks, and editorial that appeared in the Staten Island, N.Y., Advance on July 16, 1977, and an article from the Chicago Sun-Times of January 30, 1977, detailing the failure of the phosphate ban to accomplish what was suggested for it.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

INDEPENDENT SCIENTIFIC EVALUATIONS OF RESULTS OF PHOSPHATE DETERGENT BANS IN NEW YORK STATE AND INDIANA

1. Erie County, New York.—

Erie County enacted an ordinance reducing the level of phosphorus in detergents to 8.7 percent, effective April 30, 1971, with a total ban taking effect January 1, 1972. (This ban later became statewide.)

A. In 1973, Dr. Robert A. Sweeney of the Great Lakes Laboratory[1] issued a report which concluded that, "A reduction of the phosphate content of detergents sold in Erie County, New York, did result in an improvement in stream quality in terms of decreases in phytoplankton (Ed. note: Nuisance algae) production and biochemical oxygen demand."

This assertion has been widely quoted by pro-ban forces. However, it is contradicted by the findings of a "1973 Erie County Stream Survey" conducted by the Public Health Division, Erie County Laboratory.[2] This survey was an extension and continuation of the Erie County Stream Survey of 1970. One of the objectives of this study was to maintain a surveillance on phosphorus levels in county streams after a phosphate ban. Using the 1970 data as a guide, 14 of the 28 streams studied in 1970 were selected for reexamination, centering in the more urban areas of the County, where effects of the ban would be more readily apparent. Comparing 1973 data with that gathered in 1970, Erie County officials found no significant improvement in the streams during the 1970–1973 period. Erie County officials reported, in fact, that the condition of two streams—Scajaquada and Ellicott Creek—had deteriorated during the period. The report found that the basic problem of water quality in Erie County streams was actually a failure of the sewage treatment plants to treat sewage adequately. Nuisance algae were found to flourish in Erie County streams despite a 36 percent reduction in phosphorus concentrations between 1970 and 1973.

Erie County streams remain eutrophied to this day. Dr. Sweeney's badly flawed report (it failed, for example, to take into account the massive impact on Erie County waters of Hurricane Agnes during his study period) has never been published by the Environmental Protection Agency, which commissioned it.

B. J. Howard Brown is a Ph.D. chemist who testified in February, 1975, before the Minnesota Pollution Control Agency on

[1] Sweeney, Robert A., "Evaluation of Detergent Phosphate Reductions on Water Quality—Erie County, New York." Great Lakes Laboratory State University College, Buffalo, New York, for the Office of Research and Monitoring Environmental Protection Agency, Project No. 801227, Feb. 1973.

[2] Puleo, Joseph, Matthew C. Lanighan, Charles O. Masters, "1973 Erie County Stream Survey," Public Health Division, Erie County Laboratory, 2100 City Hall, Buffalo N.Y.

results of an Erie County, New York, stream monitoring project he had been engaged in during the two years preceding his testimony.[3] In that testimony, Mr. Brown, an environmental consultant, said the following:

"Our stream data in Erie County for 1973 is in remarkably close agreement with the data and conclusions published in the 1973 Erie County Stream Survey. Moreover, our 1974 data clearly demonstrate that there has been improvement in the subject streams over 1973 only where there have been improvements in operation of sewage treatments plants. In other words, while the phosphorus level of most Erie County streams has decreased since 1970 due to the phosphate ban, the concentrations are still far above the amount required to limit the growth of algae. I believe that these slides (Ed. note: Shown by Mr. Brown as part of his testimony) vividly illustrate the statement from the Erie County Stream Survey that I read earlier, namely: 'Because of the pollution of the County's streams as a result of inability to effectively treat sewage by the County's sewage treatment plants, these sewage nutrients apparently override any local beneficial effects of phosphate level lowering.' "

2. Indiana.—The state of Indiana imposed a phosphate detergent ban in January, 1973. During the summer of 1974, a study was made of nutrient levels in Indiana streams by Professor James E. Etzel and Professor John M Bell, Department of Environmental Engineering, Purdue University, and the results of their study were presented at a Lake Management Conference, Angola, Indiana, on May 13, 1975 Their conclusions included the following: [4]

"Results of a 1974 study of nutrient levels in Indiana streams suggest that the legislative ban on detergent phosphates has failed to reduce the remaining stream phosphorus to levels low enough to be of any biological significance in reducing the potential for algal growth. However, nutrient removal through flocculation at sewage treatment plants can be used to reduce the discharge of all nutrients.

"Since the discharge of phosphates from all sources contributes to the nutrient content of natural waters, it has been proposed by some environmentalists to decrease the nutrient content by banning the use of detergent phosphates. The desired beneficial effects of this action on water quality will, however, only be realized if aquatic plant growth is reduced by the change in concentration of the nutrient in question.

"Although eutrophication research programs typically are concerned with lakes and impoundments, where most problems with excessive algal growth usually occurs, our first season of research was aimed at Indiana's rivers primarily because the large majority of Indiana's population does not impact the state's relatively few lakes of significant size, but instead impacts the vast network of river systems that drain the state. Many locations on these rivers, especially near major population centers, are showing advanced signs of deterioration due to the excessive discharge of nutrients and cannot be ignored in a discussion of eutrophication in Indiana.

"The real issue, however, is not a demonstrated reduction in stream phosphorus concentration as a consequence of the phosphate ban, but whether or not the remaining phosphorus levels are low enough to be of any biological significance with respect to reducing stream algal growth potential. It is in this crucial respect that the results of the present study strongly suggests that the detergent phosphate ban has failed in its intended purpose. Our results consistently show that the remaining stream phosphorus levels in regions receiving significant treated-sewage discharges are still far too high to be of any biological consequence; the simultaneous failure of bioassay and extraction experiments to detect phosphorus growth-limitation confirm this. Moreover, the excess phosphorus remaining in the state's rivers relative to the commonly accepted growth-limiting range is primarily the consequence of man's impact, and is a direct function of the degree to which the rivers receive treated sewage, even when such discharges no longer contain phosphorus from detergents."

[From the Staten Island (N.Y.) Advance July 16, 1977]

BANNING PHOSPHATES DIDN'T SOLVE PROBLEM

(By Peter Weaver)

A while back, there was a big move against phosphates in detergents because it was thought that phosphorus (the main ingredient in phosphates) contributed to killing fish.

Phosphates are used in laundry detergents primarily to separate hard water minerals that leave a scum on clothes. But phosphorus combined with nitrogen, carbon and other plant nutrients speeds up algae growth in rivers and lakes. This in turn can choke off the oxygen source fish need to live.

So the use of phosphates in laundry detergents has been banned in Indiana, Minnesota, Akron, Chicago and Dade County, Florida. Because of fishkill protests from Canada and protests from environmentalists on this side of the Great Lakes, phosphates may be banned in Michigan and other nearby states.

But the ban on phosphates in laundry detergents doesn't seem to be working as expected. At least not in Indiana. A recent study of three Indiana rivers—White, Wabash and Tippecanoe—showed a 40 percent drop of phosphorus in the water. But the fish-killing eutrophication was continuing. Apparently, there were still plenty of nutrients feeding the algae.

There have been other problems, human problems, with phosphate bans. In Indiana, for example, it wasn't long before home laundry hands found they could buy such non-detergent products as certain dishwasher detergents which are loaded with phosphates. They pay extra for the non-phosphate detergents plus dishwater powder and, of course, the phosphates continue to be dumped into waste waters.

Elsewhere, laundry experts in phosphate-ban areas are finding that highly alkaline dishwasher detergents (which contain phosphates and are not usually banned) work well with soap flakes on white or fast-color clothes. Soap flakes or powders also work well in areas where the water is soft (low mineral content).

Soft water is the key to the whole problem. When water is "hard" (lots of minerals), the soap or detergent can't work well. The minerals form a scum and you get a dingy wash. When you put enough phosphates in the detergent, they act as instant water softeners and produce a clean, scumless wash.

You can have naturally hard water "softened" by equipment purchased or rented from such companies as Culligan, Servi-Soft and Lindsey. The softening devices take out calcium and other scum-causing minerals by exchanging a salt ion. Softened water and phosphate-free soap flakes work quite well.

It's not a particularly good idea to drink or cook with softened water because of the extra sodium (salt) it contains. People on salt-restricted diets for such things as kidney problems and high blood pressure have to reduce their overall salt intake. Speak to your doctor or a dietician about this.

One way around the softened-water drinking problem is to have the softener flow through your hot water tank, your laundry area (hot and cold) and to any other areas where you might do washing. Keep a cold-water drinking tap in the kitchen and your outside water free of the softener.

As for the chemical softeners, such as phosphates, laundry experts claim the substitutes—sodium carbonate and sodium silicate—just don't do a good job. And sodium carbonate, when combined with minerals in hard water, is seriously shortening the lives of washing machines. They heavy mineral scale clogs them up.

The most phosphate you can get now is 7. to 8.7 per cent concentration in such things as Cold Power, Fab and All. The lowest (6.1 per cent) can be found in such brands as Tide and Cheer. Procter and Gamble is working to bring its Tide phosphate level down to 3 per cent by combining another softener, "zeolite." You can check phosphate percentages on the side of the box.

[From the Sun-Times, Jan. 30, 1977]

INDIANA BANS PHOSPHATES IN DETERGENTS

For the last four years it has been illegal in Indiana to sell laundry detergents containing phosphates. The phosphates are accused of promoting the growth of algae and other plant life that contribute to decay and stagnation of waterways.

In that time there has been a 50 per cent reduction in the phoshorus found in sewage before treatment and a 25 per cent drop in the phosphorus found in rivers and streams, noted Oral Hert, technical secretary of the Indiana Stream Pollution Control Board.

Hert said the state has no reliable information, however, on the effect of the phosphate reduction on algae growth. But "with that much less phosphorus to induce the growth of algae, it's bound to have an impact," he guessed.

Not necessarily so, at least in central Indiana, according to an official of Indianapolis Water Co., which draws its water from the White River and from Fall Creek. "We've noticed a reduction in the phosphate levels in raw water but we've not experienced a vast improvement in algae concentrations," said Robert Becker, vice president for plant operation.

"We had algae problems prior to World War II, which was when phosphate detergent really came on the market," Becker added. "The bulk of phosphates (in waterways) occurs, naturally from a number of sources."

Mr. McCLURE. Let me conclude, Mr. President, by saying this: 7 years ago at the end of those hearings we said we do not know, the evidence is conflicting, so we asked that studies be conducted. Those studies were conducted in response to the congressional request that studies be conducted.

We have not even looked at the studies. That is not the way to legislate, Mr. President.

I reserve the remainder of my time.

The PRESIDING OFFICER. The Senator from Wisconsin.

Mr. NELSON. May I say to the distinguished Senator from Idaho, here is the result of the studies, and the result is unanimous. You have to stop using phosphorus in detergents.

Now, the Senator is correct that long before the study came out I was satisfied that you had to get those nutrients

out of the water. Anybody who knows anything about eutrophication, knows that when one excessively fertilizes the waters the lakes begin to die.

So in 1963, 14 years ago, I introduced legislation to undertake studies to demonstrate the necessity of a phosphorus ban.

Now, 14 years later there are arguments on the floor of the Senate that we need more studies. Do we have to wait 14 more years, a total of 28 years, while that whole crowd of soap salesmen run around the country lobbying against sound legislation to clean up the environment? It is the same argument we have been hearing from the auto industry year after year after year after year until we have had to fight them right to the floor and freeze them in because they will not do anything until they are forced to do it.

I do not clean paint brushes in my house, I might say. I do not even paint. My wife does the painting and she cleans the brushes. We use no phosphates in our house, and she has made no complaint to me about not being able to get the paint brushes clean, and I tell you she would not be bashful about it if, in fact, it was creating problems.

The evidence is so overwhelming that I am astonished we are on the floor debating the question. The evidence is that you cannot do it, as the EPA thought they could do it in 1971, by using sewage treatment plants. So now they say we cannot do it that way; that we have got to get the phosphorus out of the detergents.

So 7 years later the EPA changes its mind based upon overwhelming scientific evidence. The studies indicate that if we do not stop using phosphate detergents, we will continue to destroy these magnificent bodies of water, which are one of America's greatest assets.

Why should we be arguing about the soap companies keeping phosphates in their detergents when you have got all the alternatives you need? They work. Nobody is complaining about them. And we are in an argument here about "Letting us let them pollute the waters while we study the matter to death."

We have just been arguing for years. Senator MUSKIE has been leading the fight almost to exhaustion to 3 o'clock in the morning. Finally, after 7 years he has them pinned down.

Now it is time to pin down the soapers and get rid of those unnecessary nutrients that are destroying our lakes.

The PRESIDING OFFICER. Who yields time?

Mr. McCLURE. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 2 minutes remaining.

Mr. McCLURE. I thank the Chair.

Mr. NELSON. I ask unanimous consent that two charts listing alternatives and the phosphorus content of laundry detergents, automatic dishwashing compounds, and water conditioners be printed in the RECORD. Moreover, I ask unanimous consent that two speeches on this subject from 1970 and 1971 be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

NON-PHOSPHORUS ALTERNATIVES

Product name and manufacturer.—

DETERGENTS

Bold, Procter and Gamble.
Cheer, Procter and Gamble.
Dreft, Procter and Gamble.
Gain, Procter and Gamble.
Miracle White Laundry Soil and Stain Remover, Miracle White Company.
Montgomery Ward Non-Phosphate Laundry Detergent, Essential Chemicals Corp.
Miracle White Non-Polluting Laundry Detergent, Miracle White Company.
Era (liquid), Procter and Gamble.
Dynamo (liquid), Colgate-Palmolive Company.
Whisk (liquid), Lever Brothers.
Arm and Hammer Laundry Detergent, Church and Dwight Company, Inc.
Tide, Procter and Gamble.
Instant Fels Laundry Detergent, Purex Company.

CLEANSERS

Mr. Clean, Procter and Gamble.
Oxydol, Procter and Gamble.
Spic and Span, Procter and Gamble.
Top Job, Procter and Gamble.
Kleen King Copper and Stainless Steel Cleaner, Faultless Starch Company.
Kleen King Rust and Stain Remover, Faultless Starch Company.
Bab-O Cleanser, Purex Corporation.
Basic H, Shaklee Products, Inc.
Fantastik Bathroom Cleaner, Texize Chemicals Co.
Miracle White Super Cleaner, Miracle White Company.
Texize Bleach, Texize Chemicals Co.
Texize Fantastik Spray Cleaner, Texize Chemicals Co.
Texize Spray 'N Wash, Texize Chemicals Co.
Texize Pine Power, Texize Chemicals Co.
Texize Pine Household Cleaner, Texize Chemicals Co.
Bon Ami Power Cleanser, Faultless Starch Company.
Brillo Soap Pads, Purex Corporation.
Dobie Pads, Purex Corporation.
Parson's Clear Ammonia, Armour-Dail, Inc.
S.O.S. Steel Wool Soap Pads, Miles Laboratories, Inc.
Wax Remover, Amway Corporation.

DISHWASHING LIQUIDS (HAND)

Colgate Lotion Detergent, Colgate-Palmolive Company.
Culligan Liquid for Dishes, Lan-O-Sheen, Inc.
Dove Liquid, Lever Brothers.
Gaylord Liquid Hand-Dishwashing Detergent, Gateway Industries, Inc.
Gentle Fels Dishwashing Liquid, Purex Corporation.
Lux Liquid, Lever Brothers.

AUTOMATIC DISHWASHING POWDERS

(8.7 percent phosphorus limitation)

Automatic Dishwasher Compound, Amway Corporation.
Electrasol, Economics Laboratory, Inc.
Palmolive Crystal-Clear Automatic Dishwasher Powder, Colgate-Palmolive Company.
Topoco Automatic Machine Dishwasher Detergent, Gateway Industries, Inc.
Sears Automatic Dishwasher Detergent Powder, DeSoto, Inc.
Culligan Powdered Automatic Dishwasher Concentrate, Lan-O-Sheen, Inc.

WATER CONDITIONERS

(20 percent limitation)

Calgon Water Conditioner, Calgon Corporation.

PRODUCTS WITH PHOSPHORUS

Product name, manufacturer, and phosphorus percentage.—

DETERGENTS

Biz, Procter and Gamble, 17.6.
Bold, Procter and Gamble, 6.1.

[From the CONGRESSIONAL RECORD, Nov. 10, 1971]

LEGISLATIVE RESPONSE TO "SOFT SOAP" ON DETERGENTS

Mr. McINTYRE. Mr. President, the environmental concern of our friend and colleague, the distinguished Senator from Wisconsin (Mr. NELSON) has been translated into many thoughtful and prescient legislative initiatives during the 8 years he has been in the U.S. Senate.

In the case of controlling detergent pollution, Senator NELSON'S awareness of the problem and efforts to develop a coordinated, comprehensive program to provide safe nonpolluting detergent ingredients stems from his experiences and Governor of Wisconsin.

In his first year as a Senator, in 1963, Senator NELSON joined me and four other Senator in the 88th Congress in sponsoring S. 1183, the first legislative proposal in this body which focused on the national problem of detergent pollution. In each of the suceeding four Congresses, as this issue has persisted unresolved and unabated, the Senator from Wisconsin has responded legislatively and enunciated a Federal program to bring an orderly institutional response to the ongoing question of detergents, environment, and health.

Last week Senator NELSON testified before the Commerce Committee's Environmental Subcommittee on the persistent problem of detergent pollution. In his testimony, Senator NELSON concluded:

It is time that we take the experimentation on the safety and environmental impact

of detergents out of the marketplace and put it in the laboratory.

The Wisconsin Senator went on to articulate a "First Time Safe" philosophy for all detergents sold in this country.

This "First Time Safe" concept for detergents would be specifically implemented by a Federal detergent program containing these three elements: First, a limitation for the present time on phosphate content in detergents with a clear mandate for thier eventual total removal; second, establishment of test protocols, standards, and regulations for all detergent ingredients; and third, an intensified Federal program for the development of substitutes for phosphates in detergents which are safe to health and will not harm the environment. This program would in no way diminish efforts to institute the control of all nutrients at the municipal treatment stage, but would complement it.

Mr. President, so that the Senator from Wisconsin's long experience with this issue and his suggestion on how to legislatively implement a reasonable detergent pollution control program can be brought to the attention of the Senate, I ask unanimous consent that his testimony of October 15, 1971, be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR GAYLORD NELSON BEFORE THE SUBCOMMITTEE ON THE ENVIRONMENT, COMMITTEE ON COMMERCE, U.S. SENATE, OCTOBER 15, 1971

Mr. Chairman and Members of the Environment Subcommittee, I appreciate the opportunity to appear before this Subcommittee to discuss the legislative proposals dealing with the control of toxic and hazardous chemicals entering the environment, and, in particular, to testify on the subject of synthetic detergent pollution.

Eight years ago tomorrow, on October 16, 1963, the Senate was debating S. 649, the Federal Water Pollution Control Act, at that time my remarks on a specific portion of that legislation, which dealt with the control of detergent pollution, were prefaced with the following statement:

"In an age of almost continual cold war crisis, with a civil rights revolution exploding in our backyards, with serious economic and social problems all around us, it may seem easy and convenient to postpone solutions to a problem which we always have with us—the problem of our own destruction of our natural resources."

"But the solution to this problem cannot be postponed. It grows worse every day and every hour. And if we continue to delay facing up to it, we may discover some day that it is too late—that our natural resources have been destroyed to such an extent that they can never be restored again."

Eight years later, on October 15, 1971, these thoughts are still an accurate assessment of the manner in which we continue to approach the degradation of our nation's lakes and waterways. This is particularly true in our attitudes and actions regarding detergent pollution.

As growing amounts and varieties of pollutants and waste products foul the waters of America—adding toxic poisons and excessive nutrients—we placidly continue to play environmental "brinkmanship" with this critical natural resource. After yet another summer of bacterially contaminated bathing beaches and floating masses of foul algal blooms in our lakes and rivers, we still have refused to take the prohibitive and the preventive actions that are necessary to insure that the nation's water supplies are not irretrievably damaged.

Of primary importance is the fact that we are still without the institutional capability of taking any appropriate preventive or prohibitive actions. In the case of our capability to deal with long-standing problems of detergent pollution, we are still solely dependent upon industry's (quote) "voluntary" (unquote) efforts while the federal government conducts a rotating series of government press conferences as this unpleasant subject is passed like a hot potato from agency to agency.

Recognized sources of water pollution continue unabated in 1971. Consequently, even less is being done to anticipate future harmful or toxic substances before they enter the environment. As a result, we remain unable to take prospective preventive action, but must react to a series of crisis situations. It would also seem that our governmental agencies are only begrudgingly moved to activity on problems of environmental contamination after the damage has been done.

This is an extremely short-sighted and costly method of public administration of our natural resources. The safety and environmental integrity of our natural resources cannot remain dependent upon eleventh hour ad hoc decisions.

The past and present history of industry and federal government efforts to control the adverse health and environmental effects of synthetic detergents is a glaring and acute example of the failure to provide measured institutional structures and procedures capable of developing answers for a known, specific, reoccurring and chronic environmental problem.

It should be noted that the detergent controversy has been sputtering and foaming for over a decade without resolution and the issue involves the health and environmental safety of all synthetic detergent ingredients, not only the present serious controversy over phosphates and their replacements.

My concern about this problem began a little over ten years ago when, as Governor of Wisconsin, it was brought to my attention that almost one third of the shallow wells in Wisconsin were polluted by detergents. Subsequently a special investigation by several agencies of the State of Wisconsin revealed a vast amount of information on this problem.

In each of the five Congresses since I entered the Senate in 1963, I have sponsored legislation to control detergent pollution, and, of course, here we are again today discussing what has become a very familiar subject over the years.

In 1963, this country was faced with mountains of foam floating on the surface of our rivers and lakes, giving dramatic evidence to the vast quantity and persistent nature of synthetic detergents which were polluting the nation's surface and underground water supplies. Developed about the time of World War II, the soap and detergent industry and the American public did not investigate or recognize the polluting potential of synthetic detergents when they were first put on the market. The rush to capitalize upon the cleaning power of synthetic detergents was the primary goal and by 1963 the industry was marketing close to 4 billion pounds a year.

It was discovered in the late 1950's that because of the particular molecular structure of a component of this first generation of synthetic detergents, the cleaning agents were not easily attacked by the bacteria in sewage treatment systems and broken down into harmless byproducts. Instead, synthetic detergent chemicals passed through our municipal sewage disposal plants and household septic tanks into lakes, streams, underground water supplies and wells. As a result of these non-degradable detergents, foaming rivers, contaminated wells, and fears of damage to recreational resources, aquatic life, and possibly human health became a cause for concern throughout the entire United States.

In the 88th Congress I joined the distinguished Chairman of the Commerce Committee, Senator Magnuson, and several other Senators concerned with this problem in sponsoring S. 1183. This legislation, which was introduced on March 25, 1963, directed the Secretary of Health, Education, and Welfare to study the problems of detergent pollution and develop standards of decomposability which must be met by all synthetic detergents by June 30, 1965. This proposal was incorporated into S. 649, the Clean Water Act of 1963, which passed the Senate by a vote of 69–11 on October 16, 1963 but which was not acted on by the House of Representatives.

A little more of this frustrating legislative history should be detailed to the Subcommittee as the patterns of industry actions will have a familiar ring.

The soap and detergent industry reacted to the 1963 legislative proposal by denying that the mountains of foam presented any kind of a pollution problem which affected the public interest. In fact, statements were made that the foaming might even have some value in acting as a visual tracer for other sources of pollution.

While the industry admitted that detergents did cause some but not all the foaming on lakes, rivers, and at sewage plants, they argued that the problem was basically one of esthetics and denied that the detergents posed any threat to public health or aquatic life.

Claims were also made that legislation to bring detergent pollution under control would impede scientific progress, that the costs of control would exceed several hundred million dollars, and that the legislative deadline of June 30, 1965, could not be met.

In spite of these claims, on April 18, 1963, just three weeks after our bill had been introduced in the Senate, and while similar legislation was before the Wisconsin legislature, the Soap and Detergent Association announced at a public hearing before a committee of the Wisconsin State Legislature that the industry would (quote) "voluntarily" (unquote) undertake to change over to a new kind of detergent by December 31, 1965.

The Soap and Detergent Association was to later inform me that the changeover which earlier had been strenuously opposed as unnecessary and impossible could be achieved by June 30, 1965—the date set in the original Senate bill and the deadline which the industry itself had opposed as unrealistic.

Unfortunately, the detergent pollution problem was not solved by the rapid substitution of the "hard" original component of synthetic detergents known as ABS with a new "soft" detergent chemical known as LAS. While this new formulation was accompanied by impressive claims as to its biodegradability, by March of 1965, when a substantial portion of the changeover from the AMS formulation to the LAS formulation had already taken place, there was growing evidence that the new LAS formulation did not live up to its advertised pollution-free biodegradability.

Thus, on March 10, 1965, I introduced an updated detergent control bill in the Senate, S. 1479. This legislation called for a national advisory committee of experts, including representatives of the detergent industry, to recommend national standards of biodegradability to be met by the cleaning component of all detergents. The express intent of the legislative approach enunciated in S. 1479 was to establish a principle of thoroughly considering the environmental and health implications of a new chemical formulation before it is mass produced and introduced into our environment and to avoid the costly belated reactions after the damage has been done.

As Senator Spong, the sponsor of Amendment No. 338 to the Administration's proposed Toxic Substances Control Act, well

knows, we are still fighting in the Congress, and particularly with the Senator's efforts here in this Subcommittee legislatively establish the principle of thorough premarket testing of environmental and health aspects of chemicals and products which enter commerce at an ever-expanding rate. I refer to this concept as "First Time Safe".

As we discovered in our experience with the first generation of "hard" synthetic detergents in the early 1960's, an environmental or health protection system that is unable to look prospectively but merely allows the substitution of new problems to pose as the solution for old ones is no system at all.

In the last five years of the 1960's attention became focused upon the role of phosphate based detergents in the over-fertilization and accelerated eutrophication of our waterways. And now, as we fumble into the 1970's with the problem of phosphates, we also stumble into the known and unknown dangers of replacing phosphates with chemicals or compounds which have not been thoroughly considered for their health effects or long range impact upon the environment. And still there is no comprehensive or coordinated national effort to bring a systematics scientific approach to the problem of formulating laundry products which are safe and do not harm the environment.

When research published in 1966 by scientists of the U.S. Public Health Service and the report of the Lake Erie Enforcement Conference Technical Committee early the next year confirmed in my mind the critical role of detergent phosphates in water pollution and the accelerated eutrophication of lakes and other standing bodies of water, the legislation which had been introduced in the preceding two Congresses was expanded and strengthened.

S. 1343, which was introduced March 21, 1967, would have directed the development of national detergent standards to describe the biodegradability, decomposability and water eutrophication ability that must be met by all the constituents of synthetic detergents regardless of their chemical nature or function in the detergent. Once again, these standards would have governed the composition of detergents before they entered the public market place and are introduced into the national water system.

Furthermore, this legislation would have involved the cooperative efforts of the detergent industry in helping to develop the systematic and orderly progression of test protocols and procedures necessary to any rational and fair system of standards and regulations.

Recognizing the serious national need for safe non-polluting detergents this 1967 proposal would have also provided financial assistance to the public and private research efforts to develop synthetic detergents which will break down readily and will not impair the efficiency of any sewage treatment processes and whose residues will not be toxic or harmful to humans, fish, or plant life. The research program would also have been directed toward finding methods of improving existing sewage treatment processes so as to remove nutrients and developing new methods of control.

Needless to say, two Congresses and two more pieces of legislation later, the country still needs a systematic coordinated federal effort of research into the development of safe non-polluting detergent ingredients and formulations, backed up by a system of standards and regulations which must be met by all detergents before they enter the market place.

National annual detergent sales now exceed some 5.5 billion pounds or approximately 27.5 pounds for every man, woman, and child in this country. The detergent builder is usually sodium tripolyphosphate and this compound amounts to some 2.2 billion pounds annually. This is a $1.5 billion sales market that involves some degree of competition between over 50 nationally marketed brands and an uncounted number of locally packaged and marketed brands.

The point which must be stressed, Mr. Chairman, is that with a business this large and widespread, touching every home and corner of this country, we cannot begin our experimentation on health and environmental safety in the market place, and expect to have other than chaos. Chaos for the consumer who must try and wend his way through rows of supermarket shelves informally blindfolded and trying to balance health interests, against environmental interests, against cost interests, against cleaning efficiency interests. Chaos for the business community which has no idea which detergent ingredient or product is going to be on the market for how long. And chaos for the governmental administrators who must continually prepare a new press statement, or a clarification of a previous statement, as another problem in the continuing detergent debate emerges.

Mr. Chairman, it is time that we take the experimentation on the safety and environmental impact of detergents out of the marketplace and put it in the laboratory.

A "First Time Safe" philosophy for detergents sold in this country implemented by a national program of subjecting all ingredients and formulations to standards and regulations based on thorough laboratory testing before national marketing is a reasonable goal. This policy, backed by a major development program to find safe substitutes for phosphates, would end the present market, consumer, governmental, and environmental chaos.

In large measure, this situation derives from the absence of strong coordinated authority in one federal agency to deal with this issue. At the present time, federal authority to deal with detergents is almost nonexistent, and what mandate exists is scattered among a variety of agencies.

At this point in my testimony, Mr. Chairman, I would like to submit for the hearing record a study which was prepared at my request earlier this year by the Library of Congress on the authority of certain agencies to regulate detergents:

THE LIBRARY OF CONGRESS,
CONGRESSIONAL RESEARCH SERVICE,
Washington, D.C., March 31, 1977.

To: Honorable Gaylord Nelson.
From: Harold Berkson, Specialist in Environmental Policy, Environmental Policy Division.
Subject: Authority of certain agencies to regulate detergents.

In response to your request concerning the regulation of detergents the following is submitted.

There appears to be constitutional basis for such legislation in the commerce clause, art, I, sec. 8, cl. 3.

The report "Phosphates in Detergents and the Eutrophication of America's Waters" (House Report 91–1004) indicates that the Fair Packaging and Labeling Act already authorizes the Federal Trade Commission to require package labels of consumer products containing two or more ingredients to bear the names of the ingredients. The F.T.C. may require this listing of ingredients after first finding such regulation "necessary to prevent the deception of consumers or to facilitate value comparisons as to any consumer commodity." 15 U.S.C. 1454(c). That section might be utilized to require that detergent labels reveal the presence of phosphates and other ingredients, but does not appear to authorize a requirement that the amount or percentage of ingredients be listed.

The report on phosphates in detergents (House Report No. 91–1004) indicates at page 65, footnote 51, that the definition of "cosmetic" found in the Federal Food, Drug, and Cosmetic Act, 21 U.S.C. 321 (i), and incorporated in the Fair Packaging and Labeling Act, 15 U.S.C. 1459, includes products "intended for cleansing the human body and which are not soap." The footnote then concludes that "products labeled as 'detergents' are covered by the Federal Food, Drug and Cosmetic Act, and therefore, by the Fair Packaging and Labeling Act." It would appear, however, that detergents are "cosmetics" only if "intended for cleansing the human body" and that those detergents intended for use as laundry or dishwashing cleaners only would not fall within the definition. The distinction may have some importance because 21 U.S.C. 362 (a) defines as "misbranded" a cosmetic with labeling which is "false or misleading in any particular." The act prohibits the introduction into interstate commerce of "misbranded" cosmetics. As the report on phosphates in detergents points out, much of the labeling on laundry and dishwashing detergents can be considered "misleading" in the characterization of ingredients. If the Federal Food, Drug and Cosmetic Act were applicable to Laundry and dishwasher detergents, then the Federal Trade Commission might be able to issue regulations which go beyond those authorized by the Fair Packaging and Labeling Act.

Laundry and dishwashing detergents are apparently covered by the Fair Packaging and Labeling Act, because the definition of "consumer Commodity" continues, after incorporation of the definition from the Food Drug and Cosmetic Act, to include:

"Any other . . . product . . . of any kind . . . which is customarily produced . . . for use by individuals . . . or in the performance of services ordinarily rendered within the household, and which usually is . . . expended in the course of such . . . use."

The Federal Hazardous Substances Labeling Act, 15 U.S.C. 1261, might also be invoked to require a labeling warning of the polluting effect of commodities such as detergents. That law defines as "hazardous" any substance which is "toxic," "corrosive," or an "irritant," if such substance may cause substantial personal injury or substantial illness during or as a proximate result of any customary or reasonably foreseeable handling or use.

Excepted are foods, drugs and cosmetics as defined by the Federal Food, Drug and Cosmetic Act. Detergents could be considered "toxic" within the meaning of the law:

"Any substance . . . which has the capacity to produce personal injury or illness to man through ingestion, inhalation, or absorption through any body surface."

Although it is questionable whether such toxicity could often be considered to proximately cause substantial personal injury or illness through pollution of waters from which drinking water is taken and treated, Suffolk County, Long Island, has recently found a threat to the public health in the presence of detergents in the ground water supply. See p. 5, *infra*. It may be that a detergent could be found "hazardous" because of its corrosive or irritating effect on human skin, but that water pollution would not be considered a "principal hazard" requiring specific mention on the label. If a substance is "hazardous" within the meaning of the act, then its label must contain the word "Warning" or the word "Caution", and "an affirmative statement of the principal hazard or hazards."

The above summary of existing laws possibly related to a pollution warning on labels of consumer products reveals no clear authorization for any federal agency to require such a warning. Any of the three laws noted—the Fair Packaging and Labeling Act, the Food, Drug and Cosmetic Act, and the Hazardous Substances Labeling Act—might be appropriate sections of the code to amend to require a labeling warning of the polluting effects of products.

The Environmental Protection Agency has

authority and jurisdiction over detergents only as water quality might be degraded to below that existing or as their presence may prevent improvement of water quality to comply with established standards. The EPA may also take action if it can be demonstrated that the presence of detergents degrades or damages the water resource. In most cases EPA jurisdiction is restricted to interstate waters and their tributaries (standards violation) or to navigable waters (damage). The more effective role of EPA in regulating detergents might be manifested in the approval and awarding of various grants for treatment facilities or for state and local programs. To the best of my knowledge, there currently is no Federal legislation specifically regulating detergents.

Several bills were introduced in the 91st Congress to regulate pollution by packaging and by detergents, but it appears that no bill was introduced to require a warning on the labels of detergent packages. These bills were:

H.R. 12435, a copy of which appears in Appendix I of the *Hearings on Phosphates in Detergents and the Eutrophication of America's Waters*, would amend the Water Pollution Control Act to require that detergents manufactured or imported into the United States contain no phosphorus.

H.R. 19278 would amend the Water Pollution Control Act to prohibit discharge into the navigable waters of substances listed by the Secretary of Interior as "hazardous" to public health or welfare.

H.R. 6751 the "Detergent Pollution Control Act of 1969" would amend the Water Pollution Control Act to establish standards of "bio-degradability, decomposability, and water eutrophication ability which must be met by all synthetic detergents."

State and local governments have also passed legislation to control pollution caused by detergents.

New York State law now requires that labeling of soaps and detergents plainly reveal the phosphate content.

After finding detergents in ground water at public-supply well fields, Suffolk County, Long Island, has recently passed an ordinance barring the sale and exchange of detergents on and after March 1, 1971.

Wisconsin has banned the sale and use of nondegradable detergents containing alkyl benzene sulfonate. Wisc. Stats. Ann. § 144.14.

Chicago has enacted a municipal ordinance requiring all detergents to be limited to 8.7% phosphorous by February 1, 1971 and prohibits all phosphorous by June 1972.

In Akron, a local ordinance requires labeling as to content by February 1, 1971 and complete ban on all phosphorous by June 30, 1972. This law is currently being contested by the Association of Soap and Detergent Manufacturers who have recently won an injunction against the city enforcing the law.

The city of Duluth, Minnesota, is considering an ordinance which would require retail merchants to post a list of the phosphate content of detergents offered for sale in their stores.

These and other state and local laws which may be enacted to attempt to control pollution caused by detergents raise the question of whether federal legislation proposed to regulate detergents should pre-empt the field or whether state and local regulations should be permitted to impose standards different from those of federal law. It was in order to prevent "chaotic marketing conditions and consumer confusion" which might be caused by a "multiplicity of state and local regulations" that Congress inserted a pre-emption clause in the Federal Cigarette Labeling and Advertising Act. House Report No. 449, 89th Congress, 1st Session (1965). Any pre-emption clause should precisely specify what is pre-empted; the cigarette labeling preemption clause states:

"No statement relating to smoking and health, other than the statement required by section 1333 of this title shall be required on any cigarette package." 15 U.S.C. 1334.

A similar clause pre-empting state and local regulation of detergent labeling would not prohibit ordinances such as Suffolk County's banning sale of detergents altogether.

The result of this diluted and scattered authority to deal with detergent pollution has been a continued reliance on the "voluntary" efforts of the soap and detergent industry to make costly investments that are sure to disrupt a lucrative market, a "pass-the-buck" attitude within the federal structure as they attempt to deal with a difficult subject involving powerful interests with only partial administrative tools and a weak Congressional mandate, a growing number of state and local government actions as they respond to a rising public demand for an end to water pollution from this source.

The role of detergent phosphates in water pollution and the need for their removal was firmly established by the end of 1970. The Twenty-third Report of the House Committee on Government Operations, issued April 14, 1970, and entitled "Phosphates in Detergents and the Eutrophication of America's Waters" (House Report 91–1004), recommanded an eight point program concentrated upon the removal of phosphates in detergents.

As a result of studies of the eutrophication in the lower Great Lakes carried out by the Advisory Boards to the International Joint Commission, the IJC confirmed in their interim report in April and in their final report of December 1970 the recommendations of the Advisory Boards for effective phosphate controls: a) phosphates in detergents would be replaced by environmentally less harmful substances by 1972; b) a nutrient removal program would be implemented at sewage treatment plants in all large cities discharging into the Great Lakes; and c) the input of agricultural phosphates from the drainage basins would be brought under control.

The IJC recommendations were paralleled in the First Annual Report of the President's Council on Environmental Quality in August 1970. At that time CEQ considered eutrophication as perhaps the single-most difficult water pollution control problem; they concluded that phosphates are the most important nutrient to control if eutrophication is to be successfully attacked, and recommended three actions: 1) Phase phosphates out of detergents as soon as possible; 2) Find better methods to control agricultural runoff; and 3) Remove more of the nutrients from wastes generated by towns and cities, particularly in urban centers and in critical areas such as the Great Lakes.

Now let's us take a quick look at the vagaries of government and industry's actions with regard to detergent pollution in the last two years. Let us measure what has been said with what has been done.

When attention was given to finding substitutes for detergent phosphates, NTA (nitrilotriacetic acid) was considered the most likely replacement. By May of 1970, Procter and Gamble was making public announcements that they would be replacing 25% of the phosphates (by weight) in its detergents with NTA.

This industry effort was communicated later in the year directly to the Administration in the October 1970 Report of the Detergent Sub-Council of the National Industrial Pollution Control Council. Chaired by Howard J. Morgens, President of Procter and Gamble, the nation's largest detergent maker, the Sub-Council reported to the Department of Commerce in their summary: "The detergent industry has undertaken a massive voluntary program to reduce the phosphate content of its laundry products." . . . and "This reduction is being achieved by the substitution of new ingredients for phosphates."

Unfortunately for the public, the substitution was made without the thorough public testing which could give assurances as to the safety of NTA. During hearings before the Subcommittee on Air and Water Pollution of the Senate Public Works Committee, Dr. Samuel Epstein presented testimony on "Potential Biological Hazards Due to Nitrates in Water and Due to Proposed Use of Nitrilotriacetic acid (N.T.A.) Detergents".

The initial questions by Dr. Epstein in May 1970 sent the Federal Water Quality Administration scrambling to do some testing. FWQA (now the Federal Water Quality Office under the Environmental Protection Agency) requested studies on NTA to be conducted by the National Institute of Environmental Health Sciences.

On December 19, 1970, at the urging of the Environmental Protection Agency and following a joint statement that previous day the EPA Administrator and the Surgeon General, the major detergent manufacturers "voluntarily" agreed to discontinue the use and production of NTA as a detergent builder pending further study.

In a Staff Report to the Public Works Committee released at the same time as the NTA announcement and resulting from his May testimony raising questions about the degree of testing conducted on NTA, Dr. Epstein recommended: "The present use of high-level phosphate detergents should be disallowed to prevent further eutrophication and to reverse existing eutrophication." In referring to the experience with NTA replacement, however, the report said: "Concern for the protection of environmental quality is no reason to replace a relatively defined and otherwise controllable ecologic problem by a solution posing potential hazards to human health and environmental safety or undefined and unpredictable dimension."

The methods by which industry was forced to halt the replacement of phosphates with NTA in 1970 are under a great deal of criticism, and the NTA controversy is not yet ended. In particular, the criticism focuses on the experimental design and significance of the statistical data obtained by the admittedly rapid governmental tests.

One thing is certain from this experience. The situation with NTA replacement of phosphates is exemplary of the continuing problem in detergent pollution control and the marketing of a safe, efficient and economical detergent which is not harmful to health or does not degrade the environment:

(1) detergents are marketed without the date and knowledge as to its impact upon human health and environmental safety;

(2) neither the industry nor the federal government has an established on-going coordinated public program to test detergent ingredients;

(3) the rapid replacement of phosphates with NTA or any other ingredient does not automatically assure the reduction of the rate of eutrophication; and

(4) the costs of rapid replacement of phosphates with unknown, untested ingredients may greatly exceed the benefits—environmentally, financially, and in the loss of public confidence in industry and government capability or desire to solve the problem.

Despite the experience with NTA, we seem to be repeaating the same industry-government merry-go-round this year. Following the discontinuance of NTA as a replacement there has been a rush of detergent products upon the market claiming to be "non-polluting" alternatives to phosphate detergents. In many instances, these new detergents have played upon environmental themes in their advertising and in their brand names. As with NTA, however, these alternatives are being suggested as replace-

ments for phosphate detergents without comparable knowledge of their potential environmental or public health effects.

Thus, on March 8, 1971, the Food and Drug Administration seized two detergents manufactured by the Ecolo-G Corporation of America because tests showed them to be highly alkaline and toxic and corrosive to the skin and the cause of severe eye irritation. The FDA authority, however, is restricted to the requirements of the Federal Hazardous Substances Act. These requirements were satisfied by the manufacturer with the labeling of the products to warn of the hazardous nature of the product.

Even labeling requirements as a means of promulgating information about detergent formulations have produced controversy between federal agencies, and confusion among the public. On January 25, 1971, the Federal Trade Commission proposed a trade regulation rule which would require manufacturers of detergents to list all ingredients on packages, and to disclose clearly that their phosphate-containing products contribute to water pollution and should not be used excessively and that it is unnecessary to use phosphates in soft water areas.

When Administration witnesses appeared at a hearing on the FTC proposal on April 26, 1971, they asked the Commission to defer action pending further studies. The officials agreed that "We must continue and intensify our efforts to obtain reduction or elimination of phosphates in detergents as soon as assurance is available that the material or materials to be used as a substitute will not cause equal or worse problems and will not endanger human health" (Russell Train, Chairman of CEQ). Still, they argued, no labeling action should be taken presently by the FTC because the present alternatives to phosphate detergents, the growing number of nonphosphate detergents may not be safe.

The Surgeon General concluded his testimony on April 26, 1971 by saying: "Finally, because scientifically much is still unknown, we must conduct additional research on phosphate substitutes to ascertain their place and the place of labelling in an affective overall program."

"The U.S. Public Health Service therefore urges the Federal Trade Commission to defer making a decision regarding labeling at this time."

The Chairman of the President's Council on Environmental Quality echoed the Surgeon General's comments about the rethinking going on in the Administration on detergents: ". . . We are also in the process of developing legislative and administrative proposals which would limit the use of phoshates in detergents and ensure protection of public health."

"Once this review is completed which will be prior to the scheduled conclusion of these proceedings, we will be in a position to advise the Commission both on the Administration's program to deal with environmental and health problems from detergents and to indicate how labeling requirements fit into the overall program."

"Accordingly we recommend that the Commission not make a decision on its proposed rule at this time."

If the right hand washes the left hand in this Administration, it apparently does not do so with detergents, for eleven days after the Administration spokesman testified for no action on the Federal Trade Commission's proposed phosphate labeling ruling, I received a written response from the Environmental Protection Agency to a question regarding EPA's discontinuance of listing phosphate contents of detergents. Let me quote the May 7, 1971 letter from the Environmental Protection Agency:

"At one time such a listing was published. However, because of this industry's continuing awareness of consumer interest, and the introduction of new research into the products, it became impossible to keep such a listing current and thus accurate."

"A far better approach is one which requires clear labeling on detergent products and we understand that the Federal Trade Commission has had a great deal of success in achieving voluntary labeling among various manufacturers of these detergents . . ."

Well, that "far better approach which requires clear labeling" was opposed by spokesmen for two offices of the federal government less than two weeks previously, and it appears that the FTC was having such a success with the "voluntary" efforts of the industry that they proposed a mandatory program.

Mr. Chairman, at this point in the record let me submit the full text of the May 7, 1971, letter from the Environmental Protection Agency:

ENVIRONMENTAL PROTECTION AGENCY,
Washington, D.C., May 7, 1971.

Hon. GAYLORD NELSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NELSON: This is in response to a telephone request from Miss Anderson of your office concerning the questions of EPA's failure to publish a listing of phosphate contents of detergents.

At one time such a listing was published. However, because of this industry's continuing awareness of consumer interest, and the introduction of new research into the products, it became impossible to keep such a listing current and thus accurate.

A far better approach is one which requires clear labeling on detergent products and we understand that the Federal Trade Commission has had a great deal of success in achieving voluntary labeling among the various manufacturers of these detergents. Should you have additional questions on this subject, you will want to contact the FTC about them.

Thank you for your interest.

Sincerely yours,

GRAHAM W. MCGOWAN,
Director of Congressional Affairs.

Mr. Chairman, the strong stance on the labeling of phosphate detergents of this Administration was also the subject of editorials in the May 1st edition of the Minneapolis Tribune and the May 8th edition of the Milwaukee Journal and I would like to submit the text of the two editorials for the record at this point:

[From the Minneapolis Tribune, May 1, 1971]

WHY WAIT TO LABEL DETERGENTS?

Representatives of the Nixon administration appearing before the Federal Trade Commission this week set up a straw man. The FTC was conducting hearings on a proposal to require detergent manufacturers to tell consumers the phosphate levels of their products and to warn them that phosphates contribute to water pollution. The information would be printed on the products' labels.

Jesse L. Steinfeld, the surgeon general, and Russell E. Train, chairman of the Council on Environmental Quality, agreed that phosphates are a major cause of the rapid aging of lakes. "It has also been generally agreed," Steinfeld said, "that the principal controllable source of those phosphates is sewage, and that the principal source of phosphates in sewage is detergents."

Yet the two administration spokesmen asked the FTC to delay action on the labeling proposal. Why? Because some phosphate substitutes have been found to be potentially harmful to humans. And, as the president of Procter & Gamble, the nation's largest detergent maker, told the FTC. "The industry would have to replace the phosphates with other materials before those other materials have been proved to be safe for people and the environment."

There's only one thing wrong with that argument: It's directed at something other than the proposal under consideration. The regulation the FTC is considering wouldn't require manufacturers to halt the use of phosphates, thus forcing them to use untested substitutes. All it would do is to have them tell consumers the amounts of phosphates in their products and remind them of the substance's role in water pollution. Consumers concerned about water pollution could use the information to help them select a detergent with a low phosphate level. Those who were unconcerned could ignore the warning.

If, after all, phosphates contribute to pollution, but no satisfactory substitutes have been found, then it would seem desirable for the government to encourage the use of detergents with low levels of phosphates as an interim measure, at the same time encouraging the industry to continue its search for safe alternatives. That's all the proposed labeling requirement would do. By asking the FTC to delay action on it, the administration, in effect, is seeking to postpone efforts to cut back on the use of phosphates and is reducing the industry's incentive to eliminate them entirely.

[From the Milwaukee Journal, May 8, 1971]

STRANGE STANCE ON DETERGENTS

The Nixon administration puts itself in an untenable position in opposing a proposed Federal Trade Commission rule requiring manufacturers to warn consumers that phosphate detergents speed water pollution.

Russell Train, chairman of the Council on Environmental Quality, and Surgeon General Jesse Steinfeld said at recent FTC hearings that phosphate substitutes not in themselves dangerous to health should be found first. They agreed that phosphates are a serious factor in water pollution.

In fact, Train's agency last August pointed out that most phosphates speeding eutrophication of lakes and streams come from municipal sources, and 50% of that amount comes from phosphate detergents. It then recommended phasing out phosphates, a step that Canada, Chicago and some other places have since ordered.

The FTC is not proposing an outright ban on phosphate detergents. It is only proposing that each package carry this message: "Warning: Each recommended use level of this product contains (whatever number of) grams of phosphorus, which contributes to water pollution. Do not use in excess. In soft water areas use of phosphates is not necessary."

Detergent makers don't like this because printing new labels would be costly. And it might lead to consumers' using less detergent, as some experts say they should do, and could do without any adverse effect on their laundry. Raising the specter of untested phosphate substitutes in an effort to block a sensible warning to housewives about excess phosphate detergent use is a scare tactic. The administration should have no part of it.

Then, a little more than one month later, the Food and Drug Administration announced on June 28, 1971 that it ". . . will require a number (25) of manufacturers to improve labeling on household laundry and dishwashing detergents to warn against eye and skin irritations and injury from ingestion . . ." The press release went on to say that the need for this labeling was confirmed by FDA on the basis of tests performed by Agency scientists on 39 detergent products, out of the 200 or so in common use in this country.

The exact nature of the harmful ingredients, however, or whether it was just nonphosphate detergents which needed additional labeling because of hazards was not revealed in the June 28th release. The public had to wait for another three months

to find out any more information about the relative merits of the 39 detergents tested by FDA.

On September 15, 1971, one month ago, the Council on Environmental Quality, the Department of Health, Education, and Welfare and the Environmental Protection Agency jointly announced a number of conclusions with respect to health and environmental problems associated with detergents.

These three agencies concluded that the NTA controversy remains unresolved and therefore it was not a suitable substitute at the present time, that there was cause for serious concern about the health hazards of caustic substitutes for phosphates, and that EPA was launching an extensive study to identify bodies of water in the country subject to eutrophication problems and will assist local governments in reducing phosphates through municipal waste treatment.

Apparently this was intended to clarify the Administration's position on phosphates and detergents. I doubt if that modest goal was obtained, or if the position was indeed clear, it was certainly not accepted without opposition.

Mr. Chairman, at this point in the record I should like to submit three editorial comments on the Agencies' September 15, 1971 announcement: (1) an editorial in the September 22, 1971 New York Times entitled "Whitewash for Phosphates"; (2) an editorial from the October 2, 1971 Washington Post entitled "Ring Around the Government's Collar"; and (3) an opinion page article by Peter Vanderpoel from the October 7, 1971, issue of the Minneapolis Tribune entitled "Washington's Poor Advice":

[From the New York Times, Sept. 22, 1971]

WHITEWASH FOR PHOSPHATES

The Federal Government succeeded last week in undoing several years of public education on the harm that detergents do to the nation's waters. In an act as unnecessary as it was sudden and confusing, four of its top health and environmental officials urged a return to phosphate detergents on the ground that alternative cleansers were worse.

Nothing in the Government's explanation justified its panicky reversal. Its explanation, it may be pointed out, followed closely the line of reasoning advanced by leading elements in the soap and detergent lobby. Whether or not it was industry pressure that accounted for the change, people who have been accurately warned of how much damage phosphates can do to lakes and streams will find it difficult to take on faith the next warning that issues from the guardians of the environment.

Admittedly, a dilemma has been building up in the matter of how America should wash its clothes. With the spreading knowledge that phosphates can choke the life out of a lake by nourishing destructive algae and vegetation, alternative cleansers came into use—but they, too, presented problems.

Some contained NTA, a chemical compound that might possibly cause cancer. Other detergents, including some of the biggest sellers at the supermarket, contained caustic soda, though not in its free form; these pose just enough threat of damage to the eyes, nose and throat, not to mention the innards of children, for the Surgeon General to talk of having them banned, though he has so far refrained from directly recommending that course. Old-fashioned soap, it might be added, is not adapted to dishwashers, leaves a scum in laundry machines and is impractical for use on synthetic fabrics designed to be cleaned only by the chemical action of detergents.

The Environmental Protection Agency suggests now that the solution must lie in the building of special sewage treatment facilities, or the adaptation of existing plants, with a view to ridding effluents of all harmful phosphates, not just those from detergents. Such a program, if carried out immediately, would be ideal, since phosphate detergents account for only part of the phosphorus which induces eutrophication in our waters. The rest comes from agricultural fertilizers, animal feeds and industrial products. Phosphorus can be precipiated at a treatment plant without difficulty. The trouble is that governments move at the pace of a leisurely snail; by the time essential equipment is installed, untold damage may be done.

The question, then, is what to do in the meantime. And here the Government's position is untenable. Instead of rescinding bans on phosphate detergents, as the Federal officials now urge, states and localities that have such bans should keep them in force—at least until the E.P.A. completes a proposed study that will identify those endangered waters that might be saved from decay by appropriate sewage treatment.

Less harm would be done for the time being if housewives continued, with reasonable care, to use so-called caustic sodas, especially in combination with regular soap. A nation that suffers the lethal automobile and allows handguns is not likely to be overwhelmed by the presence of washing sodas in the home—along with a dozen other potentially risky substances such as drain cleansers, dangerous drugs or even kitchen matches. Time, moreover, gives promise of producing really harmless detergents, several of which are reported to be well on the way.

A holding pattern of this sort, rather than the implausible course the Government has chosen, would allow a continuing effort to save the nation's waters without causing more than a minimal risk to health. There would perhaps be some social risk in wearing clothes with a touch of tattle-tale grey. But then again, that just might be viewed as a badge of honor.

[From the Washington Post, Oct. 2, 1971]

RING AROUND THE GOVERNMENT'S COLLAR

Choosing between the lesser of two evils is always, like the daily washload, messy business. Especially so when the choice involves detergents. The federal government's recent reversal of environmental policy—go back to phosphates, they are safe for human health, said the Surgeon General to houseworkers—may have delighted the detergent industry (Procter & Gamble, Lever Brothers, Stauffer Chemical, Monsanto, among others), but it has only confused the women and men who load the wash. If anything useful has resulted from this policy shift, it is another lesson in the hard truth that caring for the environment at this late date is an enormous complexity involving politics, vested interests, profits and social customs.

The government's original stricture against phosphates was correct. Lakes and waterways were being choked to lifelessness when phosphates—fresh from the washing machine—flowed into them. When the detergent industry saw both public and legal sentiment awakening to the danger of this touted cleaner, it cleared away the phosphate suds and came up with substitutes. The government examined these substitutes—alkaline compounds known as caustics—and found them less desirable than the original product; instead of harming the nation's waterways, they could harm the nation's human beings. The caustics are health hazards to the eyes, nose and throat, and are especially dangerous to children: officials reported the death of an infant who swallowed a mouthful of caustics.

The logic of the government's latest decision is, much like many of the vanishing streams it once worried about, clear but shallow. Instead of reversing its original phosphate decision—and thereby confusing the public, which is awash with enough confusion about cyclamates, tuna fish, swordfish, vichyssoise—why not inform the houseworker that caustics are dangerous, to be kept away from children and to be used with great care, like iodine, matches, sharp knives, the automobile? The government's concern for children who might ingest caustics is fine; it is a strangely sudden concern, though, if you examine the government's careless record on protecting children from such proven and often deadly threats as flammable nightwear, lead poison or dangerous toys. Or is the concern really for the detergent industry? At any rate, the latter assuredly has a warm feeling for the government, now that the latter has come around to the industry view. Instead of away with phosphates, it is now phosphates away.

Looking back to the days of clear water and clear thinking, much of this wash problem could have been avoided if the advertising agencies had not over-rinsed the public with whiter-than-white pitches. To achieve a washday miracle, powerful phosphates were introduced. So, mistakenly conned, we became a nation of super-clean shirts but super-dirty lakes. What is needed now is a return to the reality that clean, not super-clean garments are just fine, and your neighbor or boss won't mind if your shirt or dress is merely white rather than whiter-than-white. The detergent industry should have no trouble supplying us with cleaners for that modest goal, and spare us our lakes and our health. If they don't there is the advice Jerome Kretchmer, New York City's Environmental Protection Administrator, gave to New Yorkers; use a combination of soap and washing soda instead of detergents. "Your clothes," he said, "may not glow in the dark, but they will be clean and fresh at lower cost and without adding phosphates to our waters."

[From the Minneapolis Tribune, Oct. 7, 1971]

WASHINGTON'S POOR ADVICE

(By Peter Vanderpoel)

Federal officials dealing with environment, food and health offered some poor, and surprisingly short-sighted, advice to Americans in the last several weeks.

First came the about-face on phosphate detergents. The government has discouraged their use for several years because phosphates feed algal growth, which contributes to the stagnation and death of lakes. Detergents contribute the largest share of phosphorus from man-made sources to water in the country—between 1.5 and 1.8 billion pounds a year. In 1970, a U.S. House Government Operations Committee report recommended that all phosphates be ordered removed from detergents by 1972.

Soap-makers, as a result of the government position, had begun to replace phosphates in their detergents with a chemical, NTA, or caustic soda. But NTA may have harmful effects on both the environment and human health, and caustic soda (which is harmful to the eyes, nose and throat) can be fatal if ingested.

So federal officials, in what Rep. Reuss of Wisconsin termed as "capitulation to soap and detergent-makers" (who had been exerting heavy pressure in Washington), urged housewives to return to phosphate detergents as the least harmful alternative.

Maybe, they suggested, the water-pollution problem could be solved by spending between $1 billion and $1.5 billion on sewage-treatment plants capable of removing phosphates. (That kind of treatment can double the capital and operating costs of such plants.)

The government had at least three better options:

Require that detergents containing caustic soda be marked with a warning that they

are potentially harmful and should be kept out of the reach of children—the procedure used with countless household products now allowed on the market. As Edward B. Osborn, president of Economics Laboratory, Inc., said at the company's annual stockholders meeting Tuesday in St. Paul, "literally dozens of common household products are dangerous if ingested.

Return to the use of soap. Detergents are the most effective product in automatic washers, but they don't get clothes much cleaner—only "whiter and brighter"—than old-fashioned soap.

Allow only low-phosphate detergents on the market. The amount of phosphates in some products now reaches above 70 percent, up to perhaps 10 times as much as necessary.

The second example of poor advice came last week, when officials criticized public concern about PCBs, the DDT-related chemicals recently found in large amounts in chickens, eggs, turkeys, salmon and fish meal. The government position was based on findings that PCBs pose only a "potential, but not immediate, (human) health hazard," said Dr. Charles Edwards, head of the federal Food and Drug Administration.

It's reassuring to hear this. But Edwards was short-sighted in concentrating on the public health question to the exclusion of advocating a more balanced, long-term concern for the environment. Until such a traditional "public health" approach ("It's no problem until someone becomes sick or dies") was superseded in this country by a broader ecological view, very little progress was made against pollution.

A panel of Nobel laureates, meeting in Sweden, concluded recently that PCB concentrations may "damage ecosystems irreversibly on a worldwide scale before the damage is recognized." It recommended that "their entry into the environment be curtailed to every practical extent, even if this requires constrictions on production and use." England has baned PCBs.

The lesson in both cases is that far too many new chemicals are being manufactured and introduced into the environment without regard for, or knowledge of, their ultimate effects on people or the environment.

William Ruckelshaus, head of the federal Environmental Protection Agency, said in a recent speech: "Each year thousands of new chemical compounds are put into use. The way we consume and dispose of these goods has become a major environmental problem and a potential threat to the health and comfort of the human race, if not to its survival."

He recommended much stricter government control of new chemical products—a position shared by members of the President's Council on Environmental Quality.

If Ruckelshaus and the council are right—and the evidence indicates they are—then the ultimate threat to humans posed by products such as phosphate detergents and PCBs is far too "potential" (Dr. Edwards' word). And it's Ruckelshaus' perspective that the government should have reflected in its two announcements.

Part of the confusion created by the September 15th announcement stems from the fact that simultaneously the Food and Drug Administration made public the list of 39 detergents it had analyzed and assessed for potential health hazards in June. The FDA also revealed a health safety rating system for these 39 detergents which ranges from "(1) Caution, harmful if swallowed" to "(5) Danger, may cause burns to skin and eyes, harmful if swallowed".

Mr. Chairman, I ask that a listing of the FDA's list of 39 detergents and their ratings according to the FDA's assessment of their safety as reported in the September 16, 1971 issue of the New York Times be printed at this point in the RECORD:

[From the New York Times, Sept. 16, 1971]

THIRTY-NINE DETERGENTS ASSESSED

WASHINGTON, September 16.—Following is a list made public today by the Food and Drug Administration of 39 detergents it has analyzed and assessed for potential health hazards:

The rating system is: 1. Caution, harmful if swallowed. 2. Caution, harmful if swallowed, eye irritant. 2A. Caution, eye irritant. 3. Warning, injurious to eyes, harmful if swallowed. 4. Warning, injurious to skin and eyes, harmful if swallowed. 5. Danger, may cause burns to skin and eyes, harmful if swallowed.

The 39 products, which are only a sampling of some 200 detergents in common use, are:

[Product, phosphate content and rating]

Par, none	3
M-W Lo Suds, none	1
B-70, none	4
Crystal Clear, yes	2
Concern, none	4
Amway SA-8, yes	2
T-Rif, none	1
Pure Water, none	3
Giant OW, yes	5
Phosphate Free, none	3
Klean, yes	5
Miracle White, none	3
Kink Kullen, none	3
Arm and Hammer, none	2
Basic L, none	3
Control, none	3
Burst, yes	2A
Cascade, yes	2
All, yes	2
Tide XK, yes	*
Drive, yes	**
Phos-Free, none	†
Bio-D, none	3
Amway SA-8, none	2
Sears, none	4
Fab, yes	4
Breeze, yes	2
Cheer, yes	2
Logic, none	4
Cold Power, low	#
Ecolo-G, none	4
Triumph, none	3
Acme, none	4
Balance, none	5
Un-Polluter, none	3
Trend, none	2
Cold Water, low	2
PFD, none	4
Spring Clean, none	2

*Eye and skin irritant.
**Toxic, eye and skin.
†Eye and skin.
#Eye, skin.

The F.D.A. list contains one duplicate name, that of Amway SA-8. In the two references it was said, without explanation, that the product both contained phosphate and was free of it.

On the one hand, three agencies were stating "Certain of the non-phosphate detergents now on the market contain ingredients that, if accidentally ingested, aspirated, or introduced into the eyes, may be extremely injurious to humans, particularly to children. These particular products utilize materials as a substitute for phosphates that are highly caustic and that clearly consitute a health hazard, *which phosphates do not* (emphasis mine)."

At the same time, the FDA listing of detergents gave the non-phosphate product M-W Lo Suds a (1) rating, that is the least harmful in a rating system of (1) to (5). At the same time the phosphate-containing product Giant OW was rated (5), that is the most dangerous in the FDA's testing system. Other phosphate-containing products in the FDA's list scored (5) (the product called Klean) and (4) (Fab), yet the Surgeon General was quoted as generally recommending phosphate detergents for families with small children precisely because of the caustic dangers that could be associated with some non-phosphate detergents.

Unfortunately, the term "caustic" was made the equivalent of "non-phosphate" in statements about the announcement by some Administration officials while others were announcing that the problem is not quite that simple. In an attempt to simplify a compliicated scientific concept—that is explaining about alkalinity and pH, as well as the effects of concentration upon causticity—understanding and clarity were lost.

There is also some confusion as to the alternate solutions proposed by the agencies and amplified by the Administrator of EPA in his testimony here two weeks ago. In particular, the Administrator of EPA mentioned that instead of wringing the phosphates out of detergents before they enter the laundry water, EPA would be supporting programs for the construction of municipal waste treatment facilities which will remove phosphates at the 80% level or above.

Now, there is no argument about the need to remove nutrients from waste water at the sewage treatment stage. What is arguable is that this has never been viewed by anyone other than the soap and detergent indusutry as a substitute for the removal of phosphates from detergents. As the Council on Environmental Quality stated in their First Annual Report in August of 1970, nutrient removal at the sewage treatment plant stage is only one part of a three-pronged program which also includes phosphate replacement in detergents and control of agricultural runoff.

Thus, it is not the enunciation of the goal which is important, it is the amount of commitment in hard dollars that counts. When viewed in this way, a $500 million phosphate removal program in this Administration's $12 billion national program for waste treatment facilities soon becomes glaringly inadequate when it is unsupported by the other two prongs of the CEQ program.

That $12 billion program really is only a $6 billion Federal program and this is to be spread over 3 years. With the National League of Cities and the U.S. Conference of Mayors estimating that the country's water pollution control needs over the next 5 years will be between $33 billion and $37 billion, with a Federal program of $3 to $4 billion required each year to meet these needs, construction of nutrient control facilities appears to be a long distance away.

The program for rescuing the Great Lakes alone is estimated to cost the United States $1.5 billion for treating the sewage that goes into the lakes and the St. Lawrence River. And there the chief culprit is phosphates.

Mr. Chairman, at this point I should like to include in the record an editorial from the January 28, 1971 issue of the Washington Evening Star entitled "Rescue Mission" which comments on the control of phosphates entering the Great Lakes:

[From the Washington Star, Jan. 28, 1971]

RESCUE MISSION

The proposal by a joint United States-Canadian commission for rescuing the Great Lakes offers a shocking clue of what man is up against in the struggle to cleanse the environment of the poisons he has put there.

The proposed expenditure—$1.5 billion for the United States, $250 million for Canada—just for treatment of the sewage that goes into the lakes and the St. Lawrence River, gives an indication of the tab for the total environment. And the difficulty entailed in trying to save the lakes offers a hint of the overwhelming obstacles that face a planetary rescue mission.

The Great Lakes is the right place to start, for it is there that the deep wounds inflicted by man's thoughtless ravagement of the environment are most obvious. Lake Erie is moribund. Lake Ontario is on the critical list. Throughout the lower lakes and the St. Lawrence, the complex system of aquatic and animal life has been poisoned and is dying.

The commission identifies the chief culprit as the phosphates that form an important part of modern detergents. It is not the only villain; the lakes have long been used as a dumping ground for a variety of poisons. But the phosphate problem is the place to start.

Phosphates, it is now known, do their deadly work by promoting the wild-fire growth of algae. This primitive plant life is produced in quantities greater than the lake can naturally support. It dies and decays, and the process of eutrophication—the elimination of oxygen from the water—sets in. Finally the water is unable to support life and the lake, quite literally, dies.

Canada has announced that phosphates must be eliminated totally from all detergents used in that country by the end of 1972. The Nixon administration has let it be known that it will neither recommend nor support such an action until a suitable replacement for phosphates can be found.

The administration's position is economically sound and ecologically outrageous. The ban should be imposed by Congress—over a presidential veto if necessary—to take effect no later than 1972. If a safe substitute can be found before the deadline, everyone will be happy. If not the detergent industry will be hurt and the rest of us will have to get along with less-white whites and less snap in our colors. But it is time for us all to face the fact that the environmental crisis cannot be overcome by talk, that survival is going to require some real sacrifices, a lot of money and an infinite determination.

That the current situation concerning the control of detergent pollution is in a state of muddled confusion is an understatement. The soap and detergent industry still promotes phosphate detergents as highly desirable to the maintenance of health safety and laundering, yet these products are recognized as a major contributor to the eutrophication of our waters and are considered unnecessarily in soft water regions of our country.

At the same time, questionable substitutes for these phosphate detergents are being introduced into the market and promoted as environmentally safe nonpolluting laundry agents. However, none of these product claims can be supported by an accepted program of pre-market testing for the ingredients' impact upon health and environment.

Much has been said about the research drive by industry and the government into the development of safe substitutes for phosphates. Two weeks ago the Administrator of the Environmental Protection Agency said to this Subcommittee ". . . we will continue our efforts to stimulate the detergent industry to increase its research on the development of a safe non-phosphate detergent. We will also continue our research on substitutes for phosphates." When asked by this Subcommittee to give a dollar estimate of industry's research efforts into the development of phosphate replacements, the EPA spokesmen said that the industry figures were unavailable. When asked by this Subcommittee about the level of federal government effort into the development of phosphate replacements, the EPA spokesmen quoted one contract with the Gillette Company Research Institute. This contract was awarded in June of last year and involves a mighty research effort of $250,000 this year.

Finally, even though effective control of eutrophication is recognized to require not only the eliminattion of phosphates and other nutrients from municipal and industrial effluent, little is being done to upgrade sewage treatment plants. More than a paper commitment to nutrient removal is necessary. This is a bricks and mortar program that requires hard cash and which must compete with programs to obtain the most basic forms of treatment in some metropolitan areas.

In this murky situation, it is the public that is losing. They are receiving little assistance from either the soap and detergent industry or the government, yet they are expected to make important informed consumer decisions about complex matters of health, environment, and economics.

It is in this situation that it is appropriate and necessary for the Congress to offer some sensible leadership and, instead of throwing up its hands, map out a reasoned program for attacking the problem.

First of all, let the Congress put some financial muscle into the program for catching up with the backlog of waste treatment plant construction in this country. We are not going to take care of the backlog and achieve any acceptable level of nutrient removal—no matter how extensive the technology which is available—if we are unwilling to commit the funds required to construct and operate the equipment. $2 billion of Federal funding a year for three years is not adequate. I have suggested a $25 billion program covering five years and involving a Federal-State sharing ratio that is the same as the Highway program, 90–10. It is not known for sure what will emerge from the Senate Public Works Committee when it reports its Clean Water legislation, but it is expected that the Senate will soon be voting on a construction grant program for municipal treatment facilities which more closely approaches the needed level of financial commitment.

This Administration must be commended for offering S. 1478, the proposed Toxic Substances Control Act. The recognition of the need for pre-market testing of chemicals entering the environment—that is, a First Time Safe philosophy—is vitally important. I believe, however, that Senator Spong's amendment #338 to S. 1478, is a necessary improvement for any meaningful First Time Safe legislation. The concept of pre-market testing must be broadly applied, not only to any new chemicals, but as Senator Spong's amendment directs, to "potentially hazardous existing chemical substances" as well.

This coverage also cannot just be limited to those substances which are *found* to be toxic, which is merely taking retrospective action, but should apply prospectively to those substances which may be harmful to human health and the environment.

While a broad program of pre-market testing of all chemicals which may be harmful to health or the environment is a desirable legislative goal, this legislation should specifically focus on the chemicals in detergents. As a singular national problem which has existed unabated for over ten years, legislative attention to this issue is long overdue.

Both goals certainly could be achieved in a Toxic Substances bill. By directing attention to the issue of replacing phosphates with safe substitutes an exemplary program would be established for the broader range of substances which may prove harmful to health or the environment.

To achieve this specific goal, the replacement of phosphates in detergents with safe substitutes, a limitation should be placed upon the phosphate content in detergents. While a program of development of phosphate substitutes continues, while these substitutes are being tested, and while municipal treatment plants capable of removing a broad range of nutrients are being constructed, it is perfectly reasonable to set a ceiling upon the phosphate content in detergents. The City of Chicago and Canada have recognized that we cannot wait until the ultimate solution is found to take action. The phosphate problem exists now and the restriction against high-phosphate detergents will provide some measure of relief, yet not unduly inhibit laundry efficiency, or pose a danger to health.

I personally feel that a legislative deadline should be placed on the removal of *all* phosphates from detergents. Considering the amount of damage which is occuring to our waterways, this must remain our goal. After ten years of frustration and industry foot-dragging, the message should be spelled out loud and clear. However, the complete removal of phosphates from detergents should not be required unless *all* ingredients including the phosphate replacement are subjected to adequate testing and an agreed system of standards and regulations.

The establishment of standards of water eutrophication ability, biodegradability, toxicity and effects upon public health and welfare which must be met by *all* synthetic detergents was the first step in the legislative proposal, S. 75, which I offered this past January.

In addition to the establishment of standards and regulations covering all detergent ingredients, S. 75 called for a specific program of federal assistance to accelerate the development and manufacture of detergents that are free of phosphorus and whose other ingredients, including the phosphorus substitute, are pollution free. The safe detergent R & D program in S. 75 calls for a $10,000,000 effort for each of six years. If the Congress is going to exercise a greater degree of control in calling for the elimination of phosphates in detergents and subjecting all ingredients to testing protocols, standards, and regulations, then in all fairness to the industry it should complete its commitment by a much greater federal participation in the research and development of pollution free safe phosphate substitutes.

A specific federal detergent program containing these three elements: (1) a limitation for the present time on the phosphate content with a clear mandate for their eventual total removal, (2) establishment of test protocols, standards, and regulations for *all* detergent ingredients; and (3) an intensified federal program for the development of safe substitutes for phosphates—would be a firm and decisive step in ending the confusion and the environmental and health insults that we continue to suffer as a direct cause of phosphate detergents.

S. 1478 is, I believe, an appropriate legislative vehicle for implementing the federal detergent program which was enunciated in S. 75. In directly applying a measured First Time Safe program to the known and chronic hazards of detergents, a strong precedent would be achieved for the type of anticipatory approach to all chemicals which may be harmful which is stated in amendment No. 38 to S. 1478.

Mr. Chairman, I would like to conclude my remarks by offering three editorial comments for the record from the Minneapolis Tribune, the Capital Times of Madison, Wisconsin, and television station WITI–TV, Milwaukee, Wisconsin, which discuss the need for a First Time Safe program for detergents and other chemicals entering the environment:

[From the Madison (Wis.) Capital Times, Mar. 13, 1971]

PRICE OF "WHITER THAN WHITE"

The continuing controversy over phosphates in detergents—which peaked here in Wisconsin last week at legislative hearings on a number of phosphate-ban bills—is a symptom of a larger problem. It is one that goes far beyond a housewife's vexation over grey wash.

The real issue, it seems to us, is how long this country can continue to revere such meaningless symbols of affluence as "whiter than white" laundry, at the expense of a clean environment.

Housewives have been brainwashed into thinking they will be social misfits if their laundry is not at least as white as that of the woman next door. Meanwhile, the phosphates which produces that whiteness go into our

lakes and streams, and nourish the growth of oxygen-consuming algae.

Many of those who testified at last week's hearings indicated that, if forced to choose between whiter-than-white laundry and a clean lake, they'd choose the latter.

That they are prepared to make that choice indicates that people are becoming more and more concerned about the quality of their lives and their surroundings. They are questioning whether our population and Gross National Product can continue to soar, while the resources which support us all are being depleted by our gluttonous, wasteful consumption patterns.

The soap and detergent manufacturers are a part of the industrial complex which stimulates those consumption patterns by creating an artificial "need" (in this case, whiter-than-white laundry) in the minds of consumers, and then proceeding to satisfy it.

We need whiter-than-white wash about as much as we need electric can openers.

[From the Minneapolis Tribune, Oct. 7, 1971]

REGULATING NEW PRODUCTS

Federal officials concerned about the environment warn that far too many new substances are put on the market in this country without any assessment of their ultimate effects.

An article on this page discusses some examples. No one considered the possible damage to lakes when soapmakers began producing phosphate detergents in the 1940s, although phosphorous had been identified before 1900 as a cause of dying lakes. The effects on humans and the environment of the chemical NTA, a phosphate substitute in detergents, are still unknown, although it was introduced commercially five years ago.

PCBs, which closely resemble DDT, came into use in 1929; until a few years ago, scientists were unable even to distinguish them from DDT in laboratory samples. Now, some researchers have found that PCBs act as do DDT and "hard" (long-lasting) pesticides—they accumulate in wildlife, move up the food chain in increasing concentrations and are harmful to birds and other wildlife. (DDT and pesticides are themselves examples of products introduced without full knowledge of their effects).

The President's Council on Environmental Quality pointed out last year that the nation became aware of mercury pollution only after "it had become critical in some areas." Add cadmium and lead to the list. Add, too, the "large and rapidly increasing number of harmful and potentially harmful chemicals that are commercially used and eventually enter the environment," as the council said in August.

William Ruckelshaus, head of the federal Environmental Protection Agency (EPA), and council members are correct, we believe, in calling for federal controls over new substances put on the market. "People," Ruckelshaus says, "no longer want benefits promised without due regard to the detriments they may produce . . ."

The risks and benefits should be weighed *before* a decision is made to market new products that may harm the environment. Manufacturers should be required to provide EPA with information on the makeup and expected effects of new chemical products; the agency should have authority to test and to hold questionable products off the market.

A government procedure requiring the careful assessment of all new chemicals would not impinge harshly on technological development, as some fear. But it would result in a better understanding of the ultimate impact of technology. And, as Ruckelshaus points out, in the long run this promises to be far cheaper than undoing mistakes after the fact.

BE SURE PHOSPHATES NOT REPLACED WITH DANGEROUS INGREDIENTS

There's little doubt that scientific investigation has proved that phosphorus can bring rapid deterioration to our lakes, rivers and streams. So one would suppose the only logical step would be to ban all phosphorous from our waters. Order all detergent makers who insist on using phosphates to take their product off the market. Apparently, though, it's not quite that simple. Most of us are willing to give up our "whiter than white" shirts and bed sheets . . . but we find now that may not be the only sacrifice we could be forced to make.

At a public hearing in Madison last week, Milwaukee Health Commissioner, Dr. E. R. Krumbiegel, said that 64% of the phosphate detergents sold are for home laundry and could be safely banned. But, detergents with special uses, particularly in food processing and health institutions, could not be banned immediately. So, we could be faced with serious problems in some areas if we move too quickly.

An interesting moment occurred during the Madison public hearing. A woman produced a box of widely advertised non-phosphate detergent as "proof" that suitable substitutes are already available. At the same time, the federal food and drug administration was ordering the withdrawal of the product from the market, because lab tests showed that it is "highly dangerous, toxic, corrosive and upon contact, it creates severe eye irritation, open wounds and sores on the skin." She wanted that product to replace phosphate detergents.

TV6 feels it is extremely important that both sides know what they're talking about. Much of the argument in this battle against phosphate detergents is based more on emotion than on solid fact. We're as anxious as anyone to clean our rivers, lakes and streams of damaging phosphates. But, let's follow the advice of unemotional, unbiased experts . . . like Milwaukee's Dr. Krumbiegel whose only interest is the health and welfare of the people of the state. He stresses caution. Before we ban phosphates in detergents, let's be absolutely sure we're not replacing them with even more dangerous ingredients.

[From the Congressional Record, Feb. 26, 1970]

THE DETERGENT POLLUTION CONTROL ACT OF 1970

Mr. NELSON. Mr. President, I have introduced proposed legislation to ban polyphosphates in detergents in the United States by June 30, 1972, and to set and implement national pollution control standards on all detergent ingredients by the same date. The bill is entitled "The Detergent Pollution Control Act of 1970."

Such legislation is essential to put a halt once and for all to the massive pollution of our rivers and lakes by detergents, which are now being used in this country at the incredible rate of 5.5 billion pounds per year, 27.5 pounds for every man, woman, and child.

The continuing pollution of our environment from detergents is a classic example of industry's reluctance to accept environmental responsibilities for its products beyond the end of the production line. And it is evident that the detergent industry has no intention of moving expeditiously on its own to meet the problem. This is a situation that America can no longer tolerate, if it is really to make an effective national commitment to halting the tide of environmental destruction.

Seven years ago, I introduced a bill which would have brought Federal action on the detergent pollution problem. The bill, which passed the Senate, would have created a commission to study and make recommendations that would lead to effective controls.

Today, we still delay, while the detergent pollution accelerates, just as we have delayed action on toxic-persistent pesticides until they have brought on an environmental disaster of worldwide proportions.

There is no doubt we will soon reach the same sorry state with detergents, unless Congress acts now to eliminate the pollution from this source once and for all.

With its provisions requiring the elimination of the polyphosphates in detergents, and requiring the establishment of national environmental standards on all detergent ingredients, the Detergent Pollution Control Act would be a major step forward in accomplishing this.

For at least 18 years, scientists and the detergent industries have known that the polyphosphate ingredients—which comprise up to 50 percent of almost every pound of laundry detergent and up to 90 percent of mechanical dishwashing compounds—were concentrating to ever higher levels in the Nation's waters, contributing to an environmental disaster of staggering proportions.

Research published in 1966 by scientists of the U.S. Public Health Service; the report of the Lake Erie Enforcement Conference Technical Committee, March 1967 and the report of the Technical and Advisory Boards to the U.S.-Canada International Joint Commission of September 1969, as well as other scientific studies in the United States and abroad demonstrate that polyphosphates in detergents are an undeniable major cause of algae water pollution.

The detergent polyphosphates pass through all but the most advanced sewage treatment systems into our waterways, where they feed tiny, green plants—algae—which then multiply until they become a large green mass called an algae mat. When the algae mats die off, their decay depletes the water of its life-giving oxygen, choking other forms of more desirable aquatic life, including fish, and algae masses drift up on miles of beaches, destroying all recreation values with their stench and slime. This whole process also can give drinking water both a bad taste and an unpleasant odor.

The algae growth also contributes to "eutrophication," the process by which our lakes fill and die. Normally, eutrophication is a centuries-long process, but algae and other pollution can cut it to a few decades.

Algae pollution has already taken a tragic toll on our Great Lakes and on other major U.S. lakes such as Douglas Lake in Michigan, Green Lake in Washington, Upper Klamath Lake in Oregon, Lake Mendota in Wisconsin and Lake Zoar in Connecticut, in addition to affecting hundreds of smaller lakes and rivers across the country. During the summer time, the western part of Lake Erie, a dying lake, contains algae mats that sometimes cover 800 square miles and are two feet thick.

Although there are other sources, detergents are the major contributor of polluting polyphosphates into our environment. According to the U.S.-Canadian International Joint Commission, 50 to 70 percent of the total input of phosphorus from all municipal and industrial wastes into Lake Erie and other lower Great Lakes stems from detergents. If the polyphosphates in detergents are not controlled, the commission predicted that in 16 years the input would top 70 percent.

On Lake Erie alone, two thirds of the huge phosphate input from municipal sewage comes ultimately from synthetic detergents. Altogether, 26 million pounds of phosphates from detergents are going into already polluted Lake Erie every year.

On a national scale, 2.6 billion pounds of phosphates used in detergents ultimately end in our waterways.

Unless we are to continue the difficult, if not impossible, effort to deal with these and other persistent, polluting compounds after

they get into the environment, the only real solution will be requiring a substitute in detergents for the polyphosphates. Otherwise, these compounds will continue to accumulate and persist in our waters, catalyzing massive algae growths, further degrading the quality of our waters, and depriving our citizens of priceless recreation assets.

Fortunately, there are non-polluting substitutes within reach now for this polluting ingredient, substitutes which are capable of doing the polyphosphates job of softening water and preventing soil from redepositing on clothes in the washing machine.

The most recent dramatic instance of this was testimony before House Subcommittee on Conservation and Natural Resources last December in a hearing on detergent pollution chaired by Congressman REUSS of Wisconsin.

Dr. I. A. Eldib, president of Eldib Engineering and Research, Inc., said that one substitute that he has developed for the polyphosphates are organic polyelectrolytes chemicals containing only carbon, hydrogen, and oxygen. Dr. Eldib said practical washing tests have shown that the polyelectrolytes are feasible as substitutes for the polyphosphates in both household and industrial detergents, and added that the polyelectrolytes can be derived from natural resources such as starch as well as from petroleum chemicals.

Dr. John J. Singer, Jr., president of Hamshire Chemical Division, W. R. Grace and Company, testified before the same subcommittee that NTA—a nitrogen-based compound known as nitriolotriacetic acid—could also be effective in alleviating the polyphosphate pollution. Dr. Singer said that NTA could act as an effective partial substitute for the polyphosphates, in combination with the phosphate ingredient.

Polyphosphate substitutes made from corn and potato starch have also been reported by Eldib Engineering.

And in Sweden, AB Helios, which makes detergents sold in consumer cooperative supermarket outlets, has removed most of the phosphate builder from its products and has substituted an organic nitrogen compound.

Yet at the December hearing, the Soap and Detergent Association, representing the major U.S. detergent manufacturers, continued to deny that the polyphosphates are a major contributor to pollution. Further, even in the face of the rapidly growing evidence of feasible substitutes, the association in its testimony continued to deny even the need for a polyphosphate replacement, or even for a reduction in the pholyphosphates, which as noted earlier, comprise up to 50 percent of each pound of detergents.

Though industry continues to drag its heels, the public recognition of the detergent pollution is increasing at a dramatic rate. Just recently, the Canadian Government announced that it plans to make detergent phosphate pollution a criminal offense under the water pollution control legislation now before Parliament, and further, that it would outlaw the phosphates in detergents in two years. I ask unanimous consent that the article reporting this highly significant move be printed in the CONGRESSIONAL RECORD at the end of these remarks.

Grave concern over the future of the Great Lakes brought similar recommendations recently from technical advisory boards to the U.S.-Canadian International Joint Commission. The boards urged immediate reduction in the phosphorus content of detergents to minimum practical levels, and by 1972, complete replacement with substitutes less harmful to the environment.

And while the U.S. Department of the Interior showed reluctance at the House hearing in December to support phosphorus elimination or reduction now, more recent statements indicate a firmer position urging elimination of the compound.

The history is clear. The detergent industry has not, and apparently does not intend to act on the phosphates unless it is evident there is no other choice. This was also the case in the early 1960's with another detergent pollution problem. Then, only when it became obvious that Congress was deeply concerned about the massive mountains of suds that were building up on our rivers and lakes because of another detergent ingredient, did the industry move to modify its products and cut the foaming problem.

The important first section of the bill I have introduced this week would bring the necessary first step in ending current detergent pollution by declaring that phosphorus would be banned in detergents by June 30, 1972, under the enforcement of the Secretary of the Interior.

The second part of the legislation is designed to eliminate other current and potential detergent pollution by establishing national environmental standards on all detergent ingredients, which industry must meet by June 30, 1972.

Although the attention is now focused on the phosphates, other detergent ingredients also are posing environmental dangers. Although the detergent industry several years ago replaced the branch chain of poorly biodegradable wetting agents by a new compound called LAS—linear alkylbenzene sulphonate—there is evidence that even the LAS does not decompose adequately, especially in septic tanks. Further, reports from Europe in 1966 gave evidence that LAS byproducts of decomposition after entering the waters are toxic to fish and lower forms of aquatic life.

Enzymes are another present detergent ingredient over which there is cause for environmental and health concern. Enzymes are now being put into practically every type of household detergent, even though we have not even begun to understand their possible environmental effects. For instance, reports from England indicate that some workers manufacturing enzymes may have suffered severe asthmatic attacks, possibly as a result of exposure to the enzymes. Even now, the Federal Trade Commission is investigating these possible enzyme dangers. Also, if enzymes are not completely free from live spores, which can be a byproduct of their production, scientists point out that they have a potential as carriers of disease.

As I pointed out January 19 in a speech on the Senate floor, a fundamental step in achieving an effective national policy to protect our environment must be the establishment of national performance standards, so that products will be tested and environmental and health protections built in before, not after, they reach the marketplace.

It is on this concept that the portion of my bill establishing national standards for all ingredients in detergents, including whatever substitute is made for the phosphates, is based. This approach to the detergent program was first proposed in the legislation I introduced in 1963. I believe it is increasingly evident that action is needed now to establish and implement such standards.

A section-by-section analysis of the Detergent Pollution Control Act of 1970 follows:

Section 1 is the short title of the act—the Detergent Pollution Control Act of 1970.

Section 2 is the declaration of policy and purpose.

Section 3 amends the Federal Water Pollution Control Act to add four sections as follows:

A new section 19 which adds definitions essential for the purpose of this act;

A new section 20 which will make it unlawful after June 30, 1972, for any person to import into the United States or manufacture in the United States any detergent containing phosphorous. The remainder of this section establishes the procedures by which the ban will be implemented and enforced;

A new section 21 which directs the Secretary of the Interior to establish standards of ability, biodegradability, toxicity, and of effects on the public health and welfare which must be met by all synthetic detergents.

Under this section, the Secretary will prescribe and publish the standards in the Federal Register on or before June 30, 1971. Detergents will be required to be in compliance with the standards a year later, after June 30, 1972. Violators will be guilty of a misdemeanor and upon conviction of such will be subject to a first offense fine of up to $5,000 and a fine of up to $20,000 for subsequent violations.

The standards shall be designed to insure that synthetic detergents will not encourage the growth of algae, will decompose in sewage treatment processes, will not pollute surface or ground waters receiving effluent from these processes, will not be toxic to fish and wildlife, and will not pose hazards to human health.

A new section 22 which authorizes a $10 million a year Federal assistance program for the next 5 years to accelerate the development and manufacture of near-pollution-free detergents. Under this section, the Secretary of the Interior would inventory and report existing technology and assist in the research and development of ingredient formulations which would eliminate pollution from detergents.

In carrying out the purposes of sections 21 and 22, the Secretary is authorized to make grants and contracts.

Mr. President, I ask unanimous consent that the Detergent Pollution Control Act, which was numbered S. 3507 and referred to the Committee on Public Works, be printed in the RECORD at the end of these remarks.

Also, I ask unanimous consent that a column written by Art Buchwald and published in today's Washington Post be printed in the RECORD, along with the New York Times story reporting Canada's recent moves against detergent pollution. Mr. Buchwald's column makes the point about pollution from detergents with devastating effectiveness.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

S. 3507

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Detergent Pollution Control Act of 1970".

DECLARATION OF POLICY AND PURPOSE

SEC. 2. The Congress finds and declares that:

(a) The surface and groundwaters in the United States are being seriously polluted and degraded by the continuing discharge into such waters of synthetic detergents whose ingredients feed polluting green algae, deprive lakes and rivers of life-giving oxygen, decompose slowly or not at all, and can be toxic to fish and wildlife and pose human health hazards;

(b) To abate and control the pollution and degradation of surface and groundwaters in the public interest, it is necessary to insure that the components of synthetic detergents which are offered for introduction or delivery into interstate commerce in the United States, or imported into the United States, and which may eventually be discharged into such waters, not cause or contribute to the pollution or degradation of such waters;

(c) Research published in 1966 by scientists of the U.S. Public Health Service; the report of the Lake Erie Enforcement Conference Technical Committee, March, 1967 and the report of the Technical and Advisory Boards to the U.S.-Canada International Joint Commission of September, 1969, as well as other scientific studies in the

United States and abroad demonstrate that polyphosphates in detergents are an undeniable major cause of water pollution, accelerating beyond control the growth of algae which interfere with fishing, navigation, recreational use of water, and degrade the water to the detriment of our water resources and the environment generally;

(d) Published findings in the patent and scientific literature and recent public scientific testimony before Congress confirm that non-phosphorus based ingredients have been found which perform at least as well as the present polyphosphate ingredients in synthetic detergents and soaps;

(e) Congress must require the use of non-polluting substitutes for deterrent polyphosphates in order to protect our lakes and rivers from further degradation from this pollution source;

(f) There are strong indications that the wetting agents in detergents such as the linear alkylbenzene sulfonates (LAS) and alkylphenone derivatives are not adequately degradable in septic tanks and continuously operated biological treatment units and that they are toxic to a degree which affects lower forms of aquatic life; and that the recently added enzyme ingredients in pre-soak compounds and laundry detergents have been found to pose health hazards to humans on direct exposure, and may also act as disease carriers if they are not free from live spores;

(g) In order to eliminate wherever possible massive damage to the environment from unforeseen or ignored consequences of the products and byproducts of our society, and to minimize public expenditures frequently required to restore the damaged environment, it is necessary that national standards be established that require all ingredients, present and proposed, in detergents be tested for environment and health protection before they enter the environment;

(h) Congress must direct the establishment of standards of detergents biodegradability, water eutrophication ability, toxicity, and effects on the public health and welfare, to achieve pollution free detergents;

(i) To accelerate the development of manufacture of detergents that are free of phosphorus and whose other ingredients, including the phosphorus substitutes, are pollution-free, there is a need for the Federal government to inventory and report on the presently available technology on the substitutes for polyphosphates in detergents and other technology relating to the development of pollution-free detergents, and to provide assistance for research and development of new technology where needed.

SEC. 3. The Federal Water Pollution Control Act is amended by redesignating section 19 as Section 23 and by inserting after section 18 new sections as follows:

DEFINITIONS

"SEC. 19. For the purposes of this section and sections 20, 21, and 22.

"(a) The term 'synthetic detergent' or 'detergent' means a cleaning compound composed of inorganic and organic components, including surface active agents, soaps, water, softening agents, builders, dispersing agents, corrosion inhibitors, foaming agents, buffering agents, brighteners, fabric softeners, dyes, perfumes, enzymes, and fillers, which is available for household, personal, laundry, industrial and other uses in liquid, bar, spray, tablet, flake, powder, or other form.

"(b) The term 'polyphosphate builder' or 'phosphorus' means a detergent ingredient used principally as a water softening and soil spending agent made from condensed phosphates, including the pyrophosphates, the triphosphates (frequently called tripolyphosphates) and the glossy phosphates or metaphosphates.

"(c) The term 'Secretary' means the Secretary of the Interior.

"BAN OF PHOSPHORUS IN DETERGENTS

"SEC. 20. (a) It shall be unlawful after June 30, 1972, for any person to import into the United States or manufacture in the United States any detergent containing phosphorus.

"(b)(1) Any detergent containing phosphorus imported or manufactured in violation of this section shall be liable to be proceeded against on libel of information and condemned in any district court in the United States within the jurisdiction of which such detergent is found.

"(2) Such detergent shall be liable to seizure by process pursuant to the libel, and the procedure in cases under this subsection shall conform, as nearly as may be, to the procedure in admiralty; except that on demand of either party any issue of fact joined in any such case shall be tried by jury. When libel for condemnation proceedings under this subsection, involving the same claimant and the same issues, are pending in two or more jurisdictions, such pending proceedings, upon application of the United States or the claimant seasonably made to the court of one such jurisdiction, shall be consolidated for trial by order of such court, and tried in (A) any district selected by the applicant where one of such proceedings is pending; or (B) a district agreed upon by stipulation between the parties. If no order for consolidation is so made within a reasonable time, the United States or the claimant may apply to the court of one such jurisdiction, and such court (after giving the other party, the claimant, or the United States attorney for such district, reasonable notice and opportunity to be heard) shall by order, unless good cause to the contrary is shown, specify a district of reasonable proximity to the claimant's principal place of business, in which all such pending proceedings shall be consolidated for trial and tried. Such order of consolidation shall not apply so as to require the removal of any case the date for trial of which has been fixed. The court granting such order shall give prompt notification thereof to the other courts having jurisdiction of the cases covered thereby.

"(3) Any detergent condemned under this subsection shall, after entry of the decree, be disposed of by destruction or sale as the court may, in accordance with the provisions of this subsection, direct and the proceeds thereof, if sold, less the legal costs and charges, shall be paid into the Treasury of the United States; but such detergent shall not be sold under such decree for a use which would result in the pollution of the navigable waters of the United States; except that after entry of the decree and upon the payment of the costs of such proceedings and the execution of a good and sufficient bond conditioned that such detergent shall not be sold or disposed of contrary to the provisions of this section, the court may by order direct that such detergent be delivered to the owner thereof to be destroyed or brought into compliance with the provisions of this section under the supervision of an officer or employee duly designated by the Secretary, and the expenses of such supervision shall be paid by the person obtaining release of the detergent under bond.

"(4) When a decree of condemnation is entered against the detergent, court costs and fees, and storage and other proper expenses, shall be awarded against the person, if any, intervening as claimant of the detergent

"(5) In the case of removal for trial of any case as provided by paragraph (2) of this subsection—

"(A) the clerk of the court from which removal is made shall promptly transmit to the court in which the case is to be tried all records in the case necessary in order that such court may exercise jurisdiction; and

"(B) the court to which such case is removed shall have the powers and be subject to the duties, for purposes of such case, which the court from which removal was made would have had, or to which such court would have been subject, if such case had not been removed.

"(c)(1) The United States district courts shall have jurisdiction, for cause shown and subject to the provisions of rule 65 (a) and (b) of the Federal Rules of Civil Procedure, to restrain violations of this section.

"(2) In any proceeding for criminal contempt for violation of an injunction or restraining order issued under this subsection, which violation also constitutes a violation of this section, trial shall be by the court or, upon demand of the accused, by a jury Such trial shall be conducted in accordance with the practice and procedure applicable in the case of proceedings subject to the provisions of rule 42(b) of the Federal Rules of Criminal Procedure.

"(d) All libel or injunction procedings for the enforcement, or to restrain violations, of this section shall be by and in the name of the United States. Subpenas for witnesses who are required to attend a court of the United States in any district may run into any other district in any such proceeding.

"(e) The Secretary of the Treasury and the Secretary shall jointly prescribe regulations for the efficient enforcement of the provisions of subsection (g) of this section, except as otherwise provided therein. Such regulations shall be promulgated in such manner and take effect at such time, after due notice, as the Secretary shall determine.

"(f)(1) The Secretary is authorized to conduct examinations, inspections, and investigations for the purposes of this section.

"(2) For purposes of enforcement of this section, officers or employees duly designated by the Secretary, upon presenting appropriate credentials and a written notice to the owner, operator, or agent in charge, are authorized (A) to enter, at reasonable times, any factory, warehouse, or establishment in which detergents are manufactured, processed, packed, or held, or to enter any vehicle being used to transport or hold such detergents; (B) to inspect, at reasonable times and within reasonable limits and in a reasonable manner, such factory, warehouse, establishment, or vehicle, and all pertinent equipment, finished and unfinished materials; and (C) to obtain samples of such materials. A separate notice shall be given for each such inspection, but a notice shall not be required for each entry made during the period covered by the inspection. Each such inspection shall be commenced and completed with reasonable promptness. If the officer or employee obtains any sample, prior to leaving the premises, he shall give it to the owner, operator, or agent in charge a receipt describing the samples obtained. If an analysis is made of such sample, a copy of the results of such analysis shall be furnished promptly to the owner, operator, or agent in charge. If the owner, operator, or agent in charge of the factory, warehouse, establishment or vehicle refuses to permit the Secretary's designee to enter, inspect or obtain samples as authorized by this subsection, the Secretary's designee may seek a warrant from any court or magistrate to enter, request or obtain samples as authorized by the subsection, and such warrant shall be granted if the court or magistrate finds probable cause to believe that detergents containing phosphorus which were imported or manufactured in violation of this section are in the factory, warehouse, establishment or vehicle.

"(g)(1) The Secretary of the Treasury shall deliver to the Secretary, upon his request, samples of detergents which are being imported or offered for import into the United States, giving notice thereof to the owner or consignee, who may appear before the Secretary and have the right to introduce testimony. If it appears from the examination, of such samples or otherwise that such detergent contains phosphorus, such detergent shall be refused admission, except as provided in paragraph (2) of this subsection. The Secretary of the Treasury shall cause the destruction of any such detergent refused

admission unless such detergent is exported, under regulations prescribed by the Secretary of the Treasury, within ninety days of the date of notice of such refusal or within such additional time as may be permitted pursuant to such regulations.

"(2) Pending decision as to the admission of a detergent being imported or offered for import, the Secretary of the Treasury may authorize delivery of such detergent to the owner or consignee upon the execution by him of a good and sufficient bond providing for the payment of such liquidated damages in the event of default as may be required pursuant to regulations of the Secretary of the Treasury.

"DETERGENT STANDARDS

"SEC. 21 (a) The Secretary shall establish standards of water eutrophication ability, biodegradability, toxicity, and of effects on the public health and welfare which must be met by all synthetic detergents, according to the procedures prescribed herein.

"(b) The standards shall be designed to insure that synthetic detergents will not encourage the growth of algae and other undesirable aquatic plants, will substantially decompose or degrade in municipal, industrial, and other sewage treatment processes without impairing the efficiency of such processes, will not pollute surface or ground waters receiving effluent from such processes, will not be toxic to, or threaten or interfere with the conditions of the reproduction or the survival of fish and other forms of aquatic life, and will not pose hazards to human health.

"(c) The standards shall be based on studies which shall include a water eutrophication ability test in algae growth basal media containing each of the individual components of synthetic detergents, and a biodegradability test which shall truly simulate the operation of municipal and industrial sewage treatment processes employing biological treatment with practical and typical retention times in order to predict the concentration of undegraded or undecomposed components of synthetic detergents which would enter the waters receiving the effluent from such processes, and other tests which the Secretary determines may be appropriate.

"(d) The Secretary shall, on or before June 30, 1971, prescribe and publish in the Federal Register, pursuant to section 553 of title 5, United States Code, such standards and rules and regulations as are necessary to carry out the policy of this section.

"(e) Any detergent which after June 30, 1972, does not conform with standards, rules and regulations prescribed pursuant to subsection (d) of this section shall be liable to be proceeded against on libel of information and condemned in any district in the United States within the jurisdiction of which such detergent is found.

"(f) The Secretary and the Secretary of the Treasury shall jointly promulgate rules and regulations that prohibit the importation of any synthetic detergent which fails to meet the standards as established herein.

"(g) Any person who willfully violates any provision of rules and regulations established pursuant to this section shall be guilty of a misdemeanor and upon conviction thereof shall be subject for the first offense to a fine of not more than $5,000 and for any subsequent offense to a fine of not more than $20,000.

"(h) In carrying out the purposes of this section, the Secretary is authorized to make grants and contracts.

"(i) There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this section.

FEDERAL ASSISTANCE

"SEC. 22. (a) To accelerate the development and manufacture of detergents that are free of phosphorus and whose other ingredients, including the phosphorus substitute, are pollution free, the Secretary shall inventory and report existing technology on substitutes for polyphosphates in detergents and other technology relating to the development of pollution free detergents, and shall also assist in the research and development of formulations which will eliminate pollution from detergents. In carrying out the puposes of this subsection, the Secretary is authorized to make grants and contracts.

"(b) For the purposes of this section, there is authorized to be approrpiated to the Secretary for the fiscal year beginning July 1, 1970, and for each of five subsequent fiscal years, $10 million.".

CANADA TO BAN ALL PHOSPHATES IN DETERGENTS OVER 2-YEAR SPAN

(By Jay Walz)

OTTAWA.—The government, confident that it has the full backing of the 10 provinces, plans to ban phosphates in detergents in two years.

J. J. Greene, Minister of Energy, Mines and Resources, said today that phosphate pollution of water would be made a criminal offense under the Canada water control legislation now before Parliament.

Mr. Greene announced a few days ago that the Canadian Goverment would join the United States in a cooperative drive against boundary waters such as the St. Lawrence River and the Great Lakes. This week Mr. Greene discussed the problem with provincial premiers here for a conference with Federal authorities.

"There was a clear agreement—everyone said they would go for it," Mr. Greene said afterward.

Pollution control in Canada is mostly within the jurisdiction of the provinces, because they own most of the waters. Mr. Greene's pending bill would implement a Federal clean-up policy in waters that are outside provincial boundaries or are regarded as national waterways.

WOULD OFFER INCENTIVES

Under the bill, the Federal Government would offer aid and incentives to provinces undertaking antipollution projects in their own waters. It would also seek agreements with the provinces to establish specific areas of joint control where penalties under the Canada Criminal Code would be applied to violators of pollution controls.

Phosphates, used to give detergents their whitening powers, speed the growth of algae when washed into lakes or rivers. The increased algae upset the ecology and other marine life dies.

Mr. Greene said he would propose amending the pending bill to have phosphates eliminated progressively from detergents until they are completely outlawed by the end of 1972. The minister said he would notify the detergent-manufacturers that he expected the first cutbacks to begin Aug. 1.

A new concern among Canadians over the widespread use of laundry detergents resulted from a recent survey by Pollution Probe, a study group at the University of Toronto. It showed some leading brands of detergents containing more than 40 per cent phosphate. The laboratory analysis of 24 brands indicated also that some products had four times as much phosphate as others.

In Toronto, Brian Kelly, spokesman for the study, said the survey was aimed at informing consumers of the different phosphate levels in various products and to persuade them to switch to soap or low-phosphate detergents.

PRODUCTS ARE ANALYZED

The analysis showed that Whisk, a Lever Brothers product, had a phosphate content of only 10.5 percent, compared with 41.5 per cent for the same company's Drive. Colgate-Palmolive's Bio-Ad was 49 per cent phosphate compared with the same company's Ajax 2, which had 36 per cent phosphate. Procter & Gamble's Cheer showed 44.5 per cent phosphate in the analysis, while the same company's Bold had only 32.5 per cent.

Spokesmen for Procter & Gamble and Colgate-Palmolive have declined comment on the findings. However, Alan Rae, president of Lever Detergents, Ltd., (Toronto) said the company had introduced Whisk, the low-phosphate detergent, about 15 years ago without great success.

Housewives, he said, had not been attracted to it, "although it is quite usable" in washing machines and "is effective as a presoaker." As a result, he said, the company has spent little money promoting Whisk. It might now consider spending more, he indicated.

Pollution Probe said in a brief release that copies of the analysis results might be obtained by sending stamped, self-addressed envelopes to Pollution Probe, University of Toronto, Toronto 181, Ontario.

LAUNDRY FANATIC STARTED IT ALL

(By Art Buchwald)

Everyone talks about water pollution, but no one seems to know who started it. The history of modern water pollution in the United States dates back to Feb. 28, 1931, when Mrs. Frieda Murphy leaned over her backyard fence and said to Mrs. Sophie Holbrook, "You call those shirts white?"

Mrs. Holbrook blushed and said, "They're as white as I can get them with this ordinary laundry soap."

"What you should use is this Formula Cake soap which guarantees against the dull washtub gray look that the family wash has always had."

Skeptical, but adventurous, Mrs. Holbrook tried the Formula Cake Soap, which happily did take the gray out of her husband's shirts. But what Mrs. Holbrook didn't know was that after the water was drained from the tub, it emptied into the sewer, which emptied into the Blue Sky River, killing two fish.

Three years later Mrs. Murphy leaned over the fence and said to Mrs. Holbrook. "It's none of my business, but are you still using that Formula Cake Soap?"

"Yes, I am."

"No wonder your husband's shirts always look dirty around the collar."

"I can never get the dirt off the collar," Mrs. Holbrook cried.

"You can if you use Klonk Soap Chips. They were designed especially for collar dirt. Here, you can have my box."

Mrs. Holbrook used the Klonk and the next time her husband put on his shirt he remarked, "How on earth did you get the collar clean?"

"That's my secret," said Mrs. Holbrook, and then she whispered to no one in particular, "and Mrs. Murphy's."

But unbeknownst to Mrs. Holbrook, the water from Klonk Soap Chips prevented any fish downstream from hatching eggs.

Four years later, Mrs. Murphy was hanging up her shirts and Mrs. Holbrook said, "How did you ever get your cuffs so white, surely not with Klonk?"

"Not ordinary Klonk," Mrs. Murphy said. "But I did with Super Fortified Klonk with the XLP additive. You see, Super Fortified Klonk attacks dirt and destroys it. Here, try it on your shirts."

Mrs. Holbrook did and discovered that her husband's shirt cuffs turned pure white. What she couldn't possibly know was that it turned the river water pure white as well.

The years went by, and poor Mrs. Murphy died. Her daughter-in-law took over the house. Mrs. Holbrook noticed how the daughter-in-law always used to sing as she hung up her wash.

"Why do you always sing?" asked Mrs. Holbrook.

"Because of this New Dynamite detergent.

It literally dynamites my clothes clean. Here try it, and then let's go to a movie, since Dynamite detergent takes the drudgery out of washing."

Six months later the Blue Sky River was declared a health hazard.

Finally, last year Mrs. Murphy's daughter-in-law called over to Mrs. Holbrook, "Have you heard about Zap, the enzyme giant killer?"

A few days later, as Mr. Holbrook was walking home from work, he accidentally fell into the Blue Sky River, swallowed a mouthful of water and died immediately.

At the funeral services the minister said, "You can say anything you want about Holbrook, but no one can deny he had the cleanest shirts in town."

Mr. McCLURE. Mr. President, again I will say to the Senator from Wisconsin, that study is in, he has seen it, and he is satisfied. But, as I said before, he was satisfied before this study came in.

The only thing that has changed is that he now has one other bit of evidence which he has seen which has not been considered by the committee. The committee has not had the opportunity to look at it. People who disagree with the study have not had an opportunity to attempt to refute it. I do not know whether they can or not.

There has been much said in recent weeks, months, and over the last several years about openness in Government, the access to the processes of Government for the input of all of its citizens, and here we are trying at the last minute to cut out those who disagree with the position that is taken by the Senator from Wisconsin.

I think they should have their day in court, whether they are right or wrong, whether I agree with them when they are all finished or not. The legislative process that allows them the opportunity to come in and present their case should not be short circuited.

I am astonished that someone who has been as vehement in support of that principle over the years, as the Senator from Wisconsin, now finds that on the altar of expediency a point of view which he believes and has for 20 years should be sacrificed in order to get the end that he desires.

I think it is the wrong way to do it, and I hope the Senate will reject the amendment.

Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. All time is yielded back.

The question is on agreeing to the amendment of the Senator from Wisconsin. On this question the yeas and nays have been ordered and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Arkansas (Mr. MCCLELLAN), the Senator from Montana (Mr. METCALF), and the Senator from Alabama (Mr. SPARKMAN) are necessarily absent.

Mr. STEVENS. I announce that the Senator from Illinois (Mr. PERCY) is necessarily absent.

I also announce that the Senator from Rhode Island (Mr. CHAFEE) is absent due to a death in the family.

The result was announced—yeas 77, nays 17, as follows:

[Rollcall Vote No. 334 Leg.]

YEAS—77

Allen	Griffin	Metzenbaum
Anderson	Hart	Morgan
Bayh	Haskell	Moynihan

Chafee	Metcalf	Sparkman

So Mr. NELSON'S amendment was agreed to.

Mr. NELSON. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 730

Mr. KENNEDY. Mr. President, I send to the desk an amendment, on behalf of myself and the distinguished senior Senator from New York, and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Massachusetts (Mr. KENNEDY), for himself and Mr. JAVITS, proposes unprinted amendment No. 730.

Mr. KENNEDY. Mr. President, I ask that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 76, between lines 21 and 22, insert the following new section and renumber the subsequent sections accordingly:

"JUDICIAL REVIEW

"SEC. 51. Section 509 is amended by striking the existing subsection (b) and inserting in lieu thereof the following:

'(b)(1) A petition for the review of the Administrator's action in (A) promulgating any standard of performance under section 306, (B) promulgating any effluent standard, prohibition, or pretreatment standard under section 307, (C) approving or promulgating any effluent limitation or other limitation under sections 301, 302, or 306, (D) promulgating any regulation issued under sections 301 or 402, or (E) promulgating any regulation under section 311 or any standard or regulation under section 312(b) and (c), may be filed only in the United States Court of Appeals for the District of Columbia Circuit.

'(2) A petition for the review of the Administrator's action in making any determination as to a State permit program submitted under section 402(b) may be filed only in the United States Court of Appeals for the Judicial Circuit which includes the State submitting the permit program.

'(3) A petition for the review of the Administrator's action in making any determination as to a State water quality standard, or promulgating a water quality standard, under section 303 may be filed only in United States Court of Appeals having territorial jurisdiction over any waters to which the water quality standard applies.

'(4) A petition for the review of the Adminstrator's action in issuing or denying any permit under section 402 or in objecting to any permit pursuant to section 402(d)(2), may be filed only in the United States Court of Appeals having territorial jurisdiction over the facility which is the subject of the permit action being challenged.

'(5) All of the petitions described in subsections (b)(1), (b)(2), (b)(3), and b(4) of this section shall be made within ninety days from the date of such determination, approval, promulgation, issuance or denial, or after such date only if such petition is based solely on grounds arising after such ninetieth day.

'(6) Action of the Administrator with respect to which review could have been obtained under subsections (b)(1), (b)(2), (b)(3), and (b)(4) of this section shall not be subject to judicial review in any civil or criminal proceeding for enforcement.' ".

Mr. KENNEDY. Mr. President, I ask unanimous consent that Tom Sussman be granted the privileges of the floor during the consideration of the pending legislation.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KENNEDY. I ask for order in the Senate Chamber, Mr. President.

The PRESIDING OFFICER. The Senator is entitled to have order. Will the Senate please come to order? Will Senators please carry their conversations to the cloakrooms? Will the staffs please retire to the back rooms?

The Senator may proceed.

Mr. KENNEDY. Mr. President, I understand there is a time limitation. Am I correct, Mr. President?

The PRESIDING OFFICER. The Senator is correct. There is 1 hour, to be equally divided.

Mr. KENNEDY. I yield myself such time as I might use.

Mr. President, I have sent to the desk an amendment which will centralize judicial review of national regulations promulgated under the Federal Water Pollution Control Act. Under this amendment, petitions for review of the EPA Administrator's action in issuing national standards and regulations may only be reviewed in the U.S. Court of Appeals for the District of Columbia.

I stress, Mr. President, that what we are talking about in this amendment are the national standards and national regulations.

Petitions for review of State and local

issues, such as State permit programs and individual permit actions, would be reviewed in the appropriate court of appeals where the State or facility is located.

Passage of this amendment is critical to the effective implementation of the Clean Water Act.

Under the present law, the EPA's effluent standards may be challenged in any of the 11 circuits of the U.S. courts of appeals. Conflicts which may result among these courts often culminate in contradictory instructions to the EPA. The results have been differing judicial interpretations of national regulations and standards which Congress intended to be uniform. The EPA has been forced to repeatedly litigate the same issues in different circuits, thereby delaying the implementation of the act and wasting valuable and limited resources.

Furthermore, it is clear that industry will often choose to seek review in the most favorable court.

In short, Mr. President, the current system of reviewing national water standards and regulations has resulted in an unjustifiable waste of time, effort, and money. Most important, it has proved to be a roadblock to the strong intent of Congress that we move quickly and effectively toward a national program to halt the continued degradation of our rivers, streams, and oceans.

Mr. President, there is ample precedent for this amendment. Similar provisions exist in the Clean Air Act, in which all national primary and secondary air quality standards are reviewed exclusively in the U.S. Court of Appeals for the District of Columbia.

Such provisions also exist in the Safe Drinking Water Act and the Resource Conservation and Recovery Act of 1976. Basically, Mr. President, we are tracking those pieces of legislation for the same reasons that similar provisions were included in those pieces of legislation. It should also be pointed out that this type of centralized judicial review of water quality standards has been strongly recommended by the Administrative Conference of the United States and by the National Academy of Sciences.

I believe it is appropriate, Mr. President, to mention the Administrative Conference of the United States—where they are interested in the soundness and the administration of justice and actions which would be taken to expedite justice—and what the Administrative Conference of the United States says on this particular issue.

(d) This series of recommendations urges that, when Congress reconsiders the judicial review provisions of the principal pollution statutes, it rationalize, alter and clarify them, guided especially by the principle that jurisdictional provisions should draw bright lines to minimize the waste and expense of litigation over whether a case has been brought in the right court.

Then it continues on:

Thus the FWPCA provides for a decentralized review of national standards, whereas the Clean Air Act requires that analogous standards be reviewed only in the D.C. Circuit. This inconsistency in approach should be resolved; the advantages of expeditious and authoritative review of all national standards in the D.C. Circuit suggests that it is the FWPCA's venue provision which should be amended. All national standards under the FWPCA should be made reviewable in the D.C. Circuit. Review of all other regulations, standards and determinations that are reviewable in the courts of appeals under the FWPCA should be in the circuit containing the affected state or facility. These amendments would entirely supplant the present provisions for review in the circuit in which the petitioner resides or transacts business.

They understand, Mr. President, after studying this as an objective issue in terms of the issue of justice, fairness, and the implementation of the legislation what ought to be done. After considerable study, they recommend following the way that we are providing with our particular amendment.

Some might suggest that the Environmental Protection Agency is simply looking for special or favored treatment in the District of Columbia. But EPA has won and lost decisions in the District of Columbia Circuit Court as well as in other circuits. Judges in the District of Columbia Circuit Court have been divided on environmental issues. The District of Columbia Circuit Court does have, however, the important advantage of easy access by the court and all parties to EPA records here in Washington.

Mr. President, the importance of centralized judicial review to this bill cannot be overemphasized. The effective implementation of the bill depends on it.

The amendment has the strong support of the administration.

I ask unanimous consent to have printed in the RECORD, a letter from Mr. Moorman, who has written on this issue.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JULY 13, 1977.

Hon. JENNINGS RANDOLPH,
U.S. Senate, Dirksen Senate Office Building, Washington, D.C.

DEAR SENATOR RANDOLPH: One of the most important amendments to the Federal Water Pollution Control Act which has been recommended by the Administration relates to Section 509. This section presently provides for judicial review, in the U.S. Court of Appeals for any of the 11 federal circuits, of a number of actions taken under the Act by the Administrator of the Environmental Protection Agency.

Under the proposed amendment to this section, petitions for review of the Administrator's action in promulgating certain regulations of national application would be filed only in the United States Court of Appeals for the District of Columbia. These actions include the promulgation of new source performance standards under Section 306; toxic pollutant effluent standards and pretreatment standards under Section 307; approving or promulgating any effluent limitation or other limitation under Sections 301, 302, or 306; promulgating any regulation issued under Sections 301 or 402; or promulgating any regulation under Section 311 or any standard or regulation under Section 312 (b) and (c).

Review of EPA's determinations concerning state NPDES permit programs submitted under Section 402(b) could be taken only in the circuit which includes the state whose permit program is at issue. Review of EPA action concerning state water quality standards for a particular facility would be in the circuit where the state or facility is located.

This provision for centralized review of the national regulations is intended to avoid the extensive delays, duplicative litigation, and very substantial costs which have resulted over the past three years from review of national regulations in numerous different circuit courts of appeals. As you know, the Justice Department represents EPA in all of its litigation arising out of challenges to these regulations. In handling these cases we work closely with the EPA Office of General Counsel and the various program offices as well.

The multiple circuit review of national regulations which has taken place over the past three years has resulted in very substantial demands upon the time, energy, and resources of this Department as well as the Environmental Protection Agency, much of which could have been avoided by centralized single-circuit review. Furthermore, it has resulted in conflicting interpretations among the circuits of regulations of national application, with the result that frequently the Agency is given contradictory instructions by different courts of appeals in implementing essentially identical regulations. Such conflicts then persist, often for years, before they are resolved, if at all, by the U.S. Supreme Court.

We strongly support the Administration's amendment to Section 509, and urge its prompt enactment into law by Congress. As you know, there is ample precedent for this type of centralized review of national regulations in the U.S. Courts of Appeals for the District of Columbia in other federal laws relating to environmental protection. These include the provisions in Section 307(b)(1) of the Clean Air Act in which national primary and secondary air quality standards, plus a number of other regulations of nationwide impact, are reviewable exclusively in this court. Similar provisions also exist in Section 1448(a)(1) of the Safe Drinking Water Act, and Section 7006 of the Resource Conservation and Recovery Act. Centralized review as proposed by the Administration has, in addition, been strongly recommended by both the Administrative Conference of the United States and the National Academy of Sciences.

Our support for this amendment does not arise from any thought that EPA's regulations might somehow fare better in the U.S. Court of Appeals for the District of Columbia Circuit. Indeed, this Circuit has proven time and again to give EPA's regulations a searching and careful review, and has remanded regulations in the majority of cases which have come before that Circuit under the Clean Air Act and Federal Water Pollution Control Act.

Rather, our support for this amendment derives solely from our conviction that if the programs of the Federal Water Pollution Control Act are to be carried out in an orderly fashion within the general time frame mandated by Congress, it is essential that the confusion, duplication of efforts, and extensive delays which have resulted from the conflicting U.S. Court of Appeals decisions on regulations of national application be eliminated. Such a result is also very much in the interest of the taxpayers of this country, who must bear the expenses of the substantial and duplicative litigation which has already resulted and which will continue to result unless and until such an amendment is passed.

Sincerely yours,

JAMES W. MOORMAN,
Acting Assistant Attorney General, Land and Natural Resources Division.

Mr. KENNEDY. I will read the appropriate portions of that letter:

This provision for centralized review of the national regulations is intended to avoid the extensive delays, duplicative litigation, and very substantial costs which have resulted over the past three years from review of national regulations in numerous different circuit courts of appeals. As you know, the Justice Department represents EPA in all of

its litigation arising out of challenges to these regulations. In handling these cases we work closely with the EPA Office of General Counsel and the various program offices as well.

The multiple circuit review of national regulations which has taken place over the past three years has resulted in very substantial demands upon the time, energy, and resources of this Department as well as the Environmental Protection Agency, much of which could have been avoided by centralized single-circuit review. Furthermore, it has resulted in conflicting interpretations among the circuits of regulations of national application, with the result that frequently the Agency is given contradictory instructions by different courts of appeals in implementing essentially identical regulations.

What we are talking about is regulations which should apply to Massachusetts as well as the State of Washington. We have to ask ourselves, are we going to find that in 11 different circuits these issues are being challenged? The point is made by the Justice Department, by EPA, and by the Administrative Conference of the United States that it delays the whole national application of these particular questions.

So, Mr. President, I would hope that this amendment would be accepted. As I mentioned earlier, there are clear precedents in the Clean Air Act and the Safe Drinking Water Act, and the Resource Conservation Act and Recovery Act of 1976.

Mr. President, I ask unanimous consent that the letter from Mr. Costle be printed as part of my presentation at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. ENVIRONMENTAL
PROTECTION AGENCY,
Washington, D.C., July 21, 1977.

Hon. JENNINGS RANDOLPH,
Chairman, Committee on Environment and Public Works, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: I am writing to express my strong support for the Administration's proposal to amend section 509 of the Federal Water Pollution Control Act to provide that petitions for review of nationwide effluent limitations, promulgated under sections 301, 302, 304, 306, or 307, would be reviewed solely in the U.S. Court of Appeals for District of Columbia Circuit, while petitions for review of State permit programs, water quality standards and individual permit actions would be reviewed in the appropriate Court of Appeals where the State, body of water or facility is located. This balancing of national and local concerns presently exists for comparable regulations issued under the Clean Air Act, the Safe Drinking Water Act and the Resource Conservation and Recovery Act.

This amendment is critical to the effective implementation of the Act. Under the present section 509, the Agency's effluent limitations may be challenged in any of the eleven circuits of the U.S. Court of Appeals system. Inevitably, conflicts result among the various Courts of Appeals which culminate in contradictory instructions to the Agency regarding implementation of national regulatory programs under sections 301, 304, 306, and 307 of the Act. Moreover, some of the conflicts with respect to such fundamental issues are literally impossible to reconcile and comply with; hence the Agency is in the position of being under a statutory command to issue regulations which are certain to be remanded for further work by at least one court of appeals but which may be compatible with the command of another court. Industry obviously chooses to seek review in the most favorable court.

In order to avoid these conflicts and duplications, the Administrative Conference of the United States and the National Academy of Sciences have recommended that review of all national standards issued under the FWPCA should be in the U.S. Court of Appeals for the District of Columbia.

One glaring example of the serious problems caused by multiple circuit review is the history of our regulations governing slaughterhouses and packinghouses. In 1975, the Seventh Circuit largely upheld the regulations against the challenge of an industry trade association. Another industry trade association then challenged the exact regulations in the Eighth Circuit. EPA's motion to dismiss was denied, and it now appears that the Eighth Circuit is going to review the same regulations which have already been reviewed and largely upheld by the Seventh Circuit.

Contradictory opinions from as many as seven Courts of Appeals have occurred again and again on such crucial issues as the need to provide for excursions and variances from effluent limitations; EPA's ability to issue effluent limitations under section 301 of the Act; the necessity for "ranges" in effluent limitations rather than "single number" limitations; the reviewability of the 1983 BAT effluent limitations; the need for a cost-benefit analysis for BAT effluent limitations; the relative stringency of BAT effluent limitations and new source performance standards; and, significantly, over the validity of toxic pollutant effluent standards. The conflicts set forth above have resulted in major delays, substantial duplication of efforts relitigating issues in numerous forums, and wasted efforts in preparations to comply with one circuit only to be told something different by another circuit.

Although industry attorneys have suggested that EPA is simply seeking an advantageous forum in the District of Columbia, EPA has won and lost decisions in the District of Columbia Circuit as well as in other Circuits. In fact, a look at the composition of this Court makes it clear that the judges are evently divided on environmental issues. The real advantage of the District of Columbia Circuit, as opposed to any other single Circuit, is that the Court and all the parties have ready access to EPA records (which in many cases are quite voluminous) and the D.C. Circuit has a distinguished background in handling questions of administrative law.

Multiple circuit review under the FWPCA is a severe threat to the implementation of the entire program. The problem of conflicts is a continuing one, since new issues continue to surface, and any of the industries which are subject to EPA regulations are sufficiently large (with plants throughout the country) as to be able to challenge our regulations in virtually any circuit(s) they wish. The present state of the law in this area has resulted in ridiculous situations where opposing sides race to different courts and venue, which is determined by the first petition for review filed, is decided by a matter of ten seconds or less. I believe that our proposed amendment will unquestionably result in a far more efficient implementation of the Act by the Agency, in terms of avoiding delays, duplication and waste of scarce resources.

I urge your support of the Administration's proposed amendment to section 509.

Sincerely yours,

DOUGLAS M. COSTLE.

(Mr. CLARK assumed the Chair.)

Mr. KENNEDY. In the letter from Mr. Costle, there is a rather revealing example of where these duplications have taken place and how, because of the failure of national applications, a particular national regulation was delayed and delayed, compromising the effective protection of valuable resources. Perhaps during the course of debate, we shall have a chance to examine this in detail.

Before concluding, I ask the distinguished Senator from Maine whether, in the Clean Air Act, for example, this type of provision—again that applied only to national standards—has been a workable and functioning provision. I ask whether there have been inequities and injustices which have been perpetrated because of that provision, or whether it has functioned well? Perhaps he can tell us from his experience with that legislation, as well as his understanding of the broader issues which are included in the legislation, whether he thinks that this is a workable solution.

Mr. MUSKIE. Yes. I say to my good friend from Massachusetts that I do support this amendment. It was considered briefly in the committee, then put aside on a list of items which we felt we would not have time to address fully. We did not resolve those issues, so they were not decided by the committee.

My own position is favorable to it for the reasons that I think were so well set out in the letter from Mr. Costle, dated July 21, 1977. It is a provision that is found in the Clean Air Act. It is applicable to nationally applicable regulations, as it should be.

A recent example of the kind of confusion that can develop without this kind of approach is provided in this example: In January of 1977, EPA promulgated toxic effluent limitations for six toxic pollutants. EDA was sued on three of these standards in the U.S. Court of Appeals for the Third, Fourth, Fifth, Sixth, and District of Columbia circuits. Five months were wasted in motions and other procedural activities before the case was finally consolidated in the District of Columbia court.

The effect of the Senator's amendment would be to consolidate such cases, in effect, in the District of Columbia court. I think there is great merit to his proposal.

With respect to the risk that the district court may be tilted one way or another, I think the Senator has correctly stated the record. There have been 19 cases which have been decided by the district court. Ten of those upheld EPA, and nine substantially reversed EPA. It is an evenly balanced court. On most issues, there are four liberal votes and four conservative votes, with the ninth as a swing vote in case of a tie. So it seems to me the forum to which these cases would be referred under the Senator's amendment would be a balanced one. There is also the benefit of easy access to EPA records.

For those reasons and the others which Senator Kennedy has so cogently stated, I personally support the amendment. But there is no committee position on it.

Mr. KENNEDY. I would be interested whether the Senator thinks injustices would be perpetrated on interests, for example, by requiring that they come to Washington to litigate. This is an argument that will be raised and made. Will the Senator not agree with me that

most of the interests that probably would be affected, for the most part, either have offices here or, certainly, representation here?

We obviously have to be sensitive to that issue under any circumstances, but, as we have seen in legislation which has been considered previously, this has not worked much of a hardship. I wonder what the Senator from Maine thinks of that.

Mr. MUSKIE. My instinct on that question is the same as the Senator's. As I view the audiences which we have during markup sessions, I am under the very strong impression that every interest involved in every provision of the Act is effectively represented by somebody in that room, who had to get there by traveling from some other place in the country. They have no difficulty in doing so.

I think that the issues involved in regulatory legislation of this magnitude is of such importance to interests all over the country that they would be benefited by a uniformity of judicial interpretation. They would not be inconvenienced by the necessity to come to Washington.

On the other hand, they have developed a habit of coming to Washington. So I think that is not a significant argument.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. BURDICK. Will the Senator yield?

Mr. KENNEDY. If I could, I would like to yield to the cosponsor of the amendment, the Senator from New York, whatever time he would like.

Mr. JAVITS. I need 1 minute.

I wish to say to the Senator that what interested me about his amendment is that, in my own experience of practicing as a lawyer for years, forum shopping or jurisdiction shopping or even judge shopping is not unknown to practicing lawyers in the high corporate astral regions. We do want, if we can get it, to have a coordinated approach to the law. It seemed to me, therefore, that the opportunity to centralize in Washington the national legal decision, in view of the fact that appeals go to the same court—to wit, the Supreme Court—as a matter of convenience and as a matter of knowledge and experience with the law, is very valuable.

I have a whole host of cases which have come to my attention, showing that a district judge of a particular community can issue and does issue an injunction tying up a national policy. That is sometimes for me, for things I believe in, and sometimes against me. But, on the whole, it is not a desirable way to run a railroad, or to run a legal system.

It seems to me that the Kennedy amendment gave the necessary balance—to wit, resort to local fora for individuals or corporations having regional or local problems; resort to the national forum where a national issue is involved and could be judicially dealt with. For that reason, I joined Senator KENNEDY in the amendment and I hope very much that the Senate will approve it.

Mr. McCLURE. Will the Senator from New York yield?

Mr. JAVITS. Yes.

Mr. KENNEDY. May I yield to the Senator from North Dakota just for a moment? He had asked for that earlier, and I would like to yield to him.

Mr. BURDICK. Apparently, the thrust of the argument of the Senator from Massachusetts is that we have different decisions in different circuits. The Senator is well aware that that is a situation where the matter can be decided by the Supreme Court, does he not?

Mr. KENNEDY. Yes.

Mr. BURDICK. When there is a conflict in the circuits.

If we transfer all of these cases to the District of Columbia, to the circuit court there, that does not end the matter, does it? Any decision they issue is appealable to the Supreme Court.

Mr. KENNEDY. The Senator is correct, if they decide to grant certiorari.

Mr. BURDICK. How do you decide that case?

Mr. KENNEDY. Very clearly. As the Senator from Maine has pointed out, what we are having is a proliferation of different cases in different circuits around the country. That happens to be the fact today. It involves enormous duplication and replication of time and energy and judicial time and procedure. It may, eventually, under the circumstances, through the Justice Department, be consolidated, or it may eventually trickle its way on up to the Supreme Court for resolution. In the meantime, we have an enormous amount of judicial activity.

I say to the Senator from North Dakota that, in the meantime, we have recognized, for close to 30 years, the special prerogatives of the District of Columbia Court of Appeals. That is well understood in terms of administrative law and agency law.

They have developed and been recognized by the Congress to have special expertise in law affecting the administrative agency and regulatory agency.

We have, in a whole host of legislation, given to them either sole jurisdiction or concurrent jurisdiction—most recently in concurrent jurisdiction on the Freedom of Information Act, and the other acts I mentioned earlier today. And this is just in the limited area of national standards, recognizing the importance of State activities, State courts in terms of those rules and regulations and decisions that will affect the States.

But in terms of national standards, to get the final resolution and decision, we believe it justifies this action.

Mr. BURDICK. If we have a conflict in circuits, we can take an appeal to the Supreme Court, or if we have a decision by the circuit court of the District of Columbia, we can take an appeal, timewise it is the same.

What I am afraid of is, removing this from the State or areas of concern, the areas of the people concerned with this particular situation. I would be very reluctant to move it out of the areas of concern if there is not a better reason.

I do not see any time saving because, as I say, the decision of the Circuit Court of the District of Columbia is also appealable.

Mr. KENNEDY. The response I make to the Senator from North Dakota is that there may be appeal from the circuit courts around the country, but there may not be. But even if there is, cert may be granted or it may not be.

If it is not granted, we may have a variety of interpretations and leave the courts completely confused as to the state of the law.

If it is not in the circuit court, and there is refusal to take it, at least we have one refusal which will be uniform in terms of its application.

So it seems to me there is a rather clear distinction in terms of what the outcome would be.

In one instance, it is a certainty, but that if the Supreme Court does not take it or it is not appealed, very considerable uncertainty, at least, for a considerable period of time on an issue where time is of importance and consequence.

Mr. BURDICK. I say to the able Senator that I know very few instances, if any, where the court denies certiorari, if there is a conflict in the circuits on an important question.

Mr. KENNEDY. This is a question, Mr. President, that we will remedy with this particular amendment, so that there will be a resolution.

Mr. President, how much time have we used?

The PRESIDING OFFICER. The Senator has used 23 minutes.

Mr. KENNEDY. I would like to reserve the remainder of my time.

How much time has the other side used?

Mr. SCOTT. Who controls the time in opposition to the amendment?

The PRESIDING OFFICER. The Senator from Vermont has 30 minutes remaining.

Mr. KENNEDY. I would like to reserve the remainder of my time and use it to make responses to the arguments of the opponents.

Mr. McCLURE. Will the Senator from Vermont yield just 2 minutes to me?

Mr. STAFFORD. I am glad to yield 2 minutes to the Senator.

Mr. McCLURE. I thank the Senator.

The Senator from New York in a response to the Senator from Massachusetts had indicated there needed to be a balance struck between those which are not national issues and those which are national issues, reposing then in the Circuit Court for the District of Columbia, those which are national issues.

I would say that, first, somebody asked which are national issues. I assume somebody has to make that determination.

I ask the Senator from New York, Who it is that he envisages as the one who has the prerogative to make the decision which is national and which is not?

Mr. JAVITS. Every court has jurisdiction to determine whether it has jurisdiction.

Mr. McCLURE. So any circuit court could look at it and determine whether it is a national interest?

Mr. JAVITS. That is correct.

Mr. McCLURE. And if it is, they would review that question?

Mr. JAVITS. Exactly.

I assume that is correct. I ask the Senator from Massachusetts (Mr. KENNEDY)

if my interpretation of the amendment is correct.

Mr. KENNEDY. Would the Senator state it again?

Mr. JAVITS. I can state it.

The question is, Who will determine what is a national issue? And I said if the amendment becomes law, a matter of the jurisdiction, every circuit court, every district court, will determine whether it has jurisdiction, subject to the right of appeal.

The PRESIDING OFFICER. The Senator from Idaho's 2 minutes have expired.

Mr. McCLURE. May I have 2 more minutes?

Mr. STAFFORD. Yes.

Mr. McCLURE. I yield to the Senator from Massachusetts to respond.

Mr. KENNEDY. In the amendment, there are a series of sections that spell out national regulations, and they are indicated in the amendment, 301, 302, 306, and it continues on.

The areas that deal with the State are included in other sections.

So it is defined in the amendment.

Mr. McCLURE. May I say to the Senator, my concern is this, It is not just under this act we had to strike that balance. It is not just in this instance that national issues are raised.

Are we establishing the precedent, does the Senator from New York contend it would be appropriate for us in all legislation to have the issues which are national issues removed from the circuits around the United States and all national issues appealed automatically into the circuit court?

Mr. JAVITS. No. The Senate cannot and will not do that, of course, because in many cases there are matters which involve individual rights to determine national issues and national rights. That is why I said what I did, and I think I am right, that each court will have to determine whether or not under this law it has jurisdiction. If it determines it has, that is subject to appeal.

Mr. McCLURE. Let me say to the Senator from New York that I am very profoundly distressed by the idea that national issues can be settled only in the circuit court by hearing, because if they are to be certified, in the District in this instance, it would seem logical to me that if it is a national interest or national question, on any human rights, on any one of the appellate rights, on any one of the civil rights of any citizen of this country, that it would be just as logical——

The PRESIDING OFFICER. The 2 minutes have expired.

Mr. JAVITS. To concentrate on all of the appeals in all of those instances in the——

The PRESIDING OFFICER. The time has expired.

Mr. JAVITS. Will the Senator yield me 1 minute?

Mr. KENNEDY. Yes.

Mr. JAVITS. Just to clarify the legal situation, Senator KENNEDY pointed out that the specific issues to be defined as national issues—I used the generic term—are spelled out in the specific sections which are referred to here under (b) (1) of his amendment.

The only point I added to that, because, as I say, I used the generic term, was that every court has the right to determine whether it does or does not have jurisdiction.

I thank my colleague.

Mr. KENNEDY. The Senator stated, for example, section 301. This standard relates to national effluent limitations. 306, the national performance standards and then down to the 402. I should point out that State permit programs submitted under 402(b) may only be filed in the circuit court which includes that State.

So we tried to spell out the particular provisions that apply to the State and we make reference to the studies done by the Administrative Conference which does an analysis of the whole administrative and judicial process relating to this bill.

In terms of these particular standards, it gets into rather considerable elaboration in each of these areas, the reasons why some were national and some State.

They have done a very effective analysis of it. So there should not be any difficulty in terms of filling this particular requirement.

Mr. President, I ask for the yeas and nays on this amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. Who yields time?

Mr. STAFFORD. I yield 5 minutes to the distinguished Senator from Virginia.

Mr. SCOTT. Mr. President, I had not seen this amendment before coming to the floor. I notice that it is an unprinted amendment. I assume that it was not considered by the committee.

It seems to me that this is a matter that might be considered by the Judiciary Committee. The distinguished author of the amendment, the Senator from Massachusetts, is one of the senior members of that committee. I assume it has not been considered by our Judiciary Committee. I, too, serve on that committee.

I share the concerns that have been expressed by the distinguished Senator from North Dakota. It seems to me that someone who is affected by a rule that has been made by the administrator should not have to come to Washington to be heard on the matter. We have our various judicial circuits, and I think that is one of the reasons for having our circuits.

The distinguished Senator from Massachusetts spoke of the need for unanimity. That is one of the major reasons why the Supreme Court grants certiorari when there is conflict within the judiciary circuits. That is a prime reason for the granting of the writ of certiorari, so the Supreme Court can adjust or certainly review the differences between the circuits and try to arrive at a uniform rule.

I have just made a cursory examination of this; it is an unprinted amendment. I assume that various Senators did not have an opportunity to review it in advance; I did not.

As I see it, the amendment was not considered either by the Committee on Environment and Public Works or the Judiciary Committee. Yet, it seems to be quite an important amendment.

As I see it, if we are talking about a review of the Administrator's action in promulgating any standard of performance by relating to effluent standards, prohibition or pretreatment standards, then you have to come to the District of Columbia. But if we are talking about a determination as to a State permit program, then you can go to the circuit court of appeals in the judicial circuit that includes the State submitting the permit program. It seems to me that you should be able to go to the circuit court within your own circuit in all instances.

Mr. President, I am opposed to the amendment. I am glad that the distinguished Senator asked for a rollcall vote. I hope the amendment will be defeated.

I ask this question of the distinguished Senator from Massachusetts: Am I correct in assuming that this amendment was present for the first time here on the floor today?

Mr. KENNEDY. The answer to that is in the negative.

Mr. SCOTT. Has it been considered in the committee?

Mr. KENNEDY. It was discussed and considered. No final resolution was made in the committee. This issue was raised and it was discussed and it was debated, as the Senator from Maine indicated, but no final resolution was made. No votes were taken on the issue.

Mr. SCOTT. I see the distinguished chairman of the full committee on the floor. I ask him to what extent the Committee on Environment and Public Works considered the proposed amendment, the jurisdiction of the courts to hear this matter?

Mr. RANDOLPH. In response to my colleague from Virginia, who raises the question of the consideration of the proposal in the committee, I say this: This, of course, is factual, as I understand it and remember it. There was a discussion of this subject. No amendment actually was offered. There was a decision, I think, by members or a member of the committee that the discussion may have been sufficient to indicate that the committee members might vote against such a proposition.

I want to be very fair to the proponent or proponents of the idea, but I rather had the feeling, as I recall—perhaps that can be the understanding of someone else or it might not be—but I do feel that there was considerable opposition in the committee to the proposal; and on my own time, a little later, I will speak against the amendment.

Mr. SCOTT. I appreciate the response of the distinguished Senator. As I understand it, even though the matter was brought up, it was not acted upon by the Committee on Environment and Public Works, and it was not referred to the Judiciary Committee.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. SCOTT. May I have 1 additional minute?

Mr. STAFFORD. I yield 1 minute to the Senator.

Mr. SCOTT. It was not considered by the Judiciary Committee.

Mr. President, this is a matter of vital importance to the various States. We have 50 States, and it seems to me that we should not make all 50 States come to the District of Columbia to litigate a problem in which a State is vitally interested.

I appreciate very much the distinguished Senator from Vermont yielding this time to me. I again urge that the amendment be defeated.

Mr. STAFFORD. Mr. President, I yield 5 minutes to the Senator from New Mexico (Mr. DOMENICI).

Mr. DOMENICI. I thank the ranking member of the committee.

I say to the Members of the Senate that if it is relevant as to what happened in the committee, I assume we will all have different versions of what could have happened.

However, the fact is that neither the subcommittee nor the full committee considered this amendment, at least sufficiently to vote on it. So I do not believe anyone should leave the impression that the committee had enough time, considered it, and left it hanging. The truth is that we did not get around to considering it at all, in spite of the fact that we considered many other amendments to be relevant to the present modification of the Clean Air Act.

Mr. KENNEDY. Mr. President, will the Senator yield for a question?

Mr. DOMENICI. I yield.

Mr. KENNEDY. Is not this the same committee that has jurisdiction of the Clean Air Act?

Mr. DOMENICI. It is.

Mr. KENNEDY. Does the Senator realize that this is identical to the language that was included in the Clean Air Act?

Mr. DOMENICI. I do.

Mr. KENNEDY. I thank the Senator.

Mr. DOMENICI. I thank the Senator for the questions. I was going to address that in my remarks.

In my opinion, we should not, in bits and pieces, decide that the circuit court system in this country has no validity. We can do it either by abolishing jurisdiction of other circuit courts and vesting it in one national circuit court all at once, or we can come to this floor with every bill that has some national significance of a regulatory manner and we can find some precedent somewhere that they have jurisdiction, and we can nickel and dime the district courts of the United States out of business. I, for one, am not in favor of doing that, as a matter of basic principle, no more than I would be in favor of establishing one Federal district court in the District of Columbia to hear cases involving my constituents, be they individual or corporate, in trials ab initio.

I believe in the system of hearing cases as close to the people as possible in the first instance, and I believe in appealing them in the Federal system to a court as close to the people in the first instance.

Make no bones about it: All we are doing here is saying that some people do not like how the circuit courts have ruled on matters of national interest. So we are saying, "Let's bring it all here to Washington, where it's nice and convenient." For whom? For the Federal Government.

What have the people of America been saying? They do not want to accommodate the Federal Government. They want to be accommodated for a change. These cases should be heard in the circuit courts. The ultimate decider is the U.S. Supreme Court. Whether it comes from this district court on appeal or the circuit court for New Mexico or the one in the South, the U.S. Supreme Court resolves it.

I, for one, am pleased that the circuit courts disagree and that certiorari is granted and that their diverse views from regions of this country go to the one court. I think that is salutary and healthy.

I say to EPA and the National Government, "If you have got conflicting circuit court cases that make it difficult for you to enforce the law that we passed," I hate to say it this way, but "that is tough, because two very competent courts have apparently ruled differently, and you will just have to, big federal Government, take your chance and wait around for the U.S. Supreme Court to resolve it, and if they do not want to you will just have to live with the confusion created by the interpretation of our law or you will have to ask Congress to clarify the dispute. We are here for that, too."

These contrary decisions we want to get rid of are not incurable. They can be cured by the U.S. Supreme Court or by Congress which passed the law that is now patently interpreted in two different ways.

I am not prepared in a minor matter piecemeal or otherwise to conclude we need one national regulatory appeals court. And if we were, I am not so sure I would want it in Washington, but I am positive I do not want it without knowing more about whether our circuits are functioning properly.

I know I do not want it to be the appeals court here in Washington, D.C. It appears to me there is just as much justification to let it be the circuit court that has California or look at the cases that have been filed and see where most of the constituents come from and choose the one that has had the most cases, and say that circuit will have it.

I would let EPA go to that circuit and let the evidence be construed there.

I know the argument will be that we have done it in the Clean Water Act. I say they have not heard any cases under that. That is a johnny-come-lately, too, to clear up the disputes. The disputes have been cleared up without that jurisdiction in a national circuit court. We have got them cleared up one way or another, and I think we ought to consider very carefully whether now is the time to really create one national circuit court for matters as important as the ones that are going to be heard under the Clean Water Act, vital to business, vital to the consumer. I will trust the circuits out there where the people are, and ultimately trust the Supreme Court or Congress to resolve the disputes far sooner than creating only one court to resolve those appellate disputes.

I thank the Senator from Vermont for yielding.

Mr. STAFFORD. Does the Senator from South Carolina desire some time? I would be glad to yield the Senator 3 minutes?

Mr. THURMOND. Three minutes.

Mr. President, I rise in opposition to this amendment. I would like to be associated with the remarks of the distinguished gentleman from Virginia and the distinguished Senator from New Mexico in what they have had to say on this subject.

I do not know what the purpose is in trying to centralize everything in Washington. Washington has too much centralized here already. We have got too many employees of the Federal Government, and we have got too many other workers here connected with the Government one way or the other, judicial and otherwise.

Mr. President, I do not concede that the judges here have any monopoly on brains, on character, on dedication, or on courage. I do not know why the judges here can decide cases any better than they can in Richmond, Va., or the fourth circuit court of appeals, the circuit in which I live, which has jurisdiction of my State of South Carolina.

I do not know why the judges here can decide cases better than the other circuits throughout the United States.

I think it is a mistake to centralize any more power of any kind in the Capital of the United States. I think we have got to get Government back closer to the people. The closer Government is to the people, the better Government is going to be.

It seems that Congress passes laws every year more and more to bring more power to Washington. We ought to be decentralizing that power. We ought to be sending it back to the States, back to the people where the Constitution put it.

I hope after consideration the Senate will see fit to defeat this amendment.

Mr. STAFFORD. Mr. President, I yield 4 minutes to the Senator from Idaho.

Mr. McCLURE. I thank the Senator from Vermont for yielding this time, and I appreciate the comments made by my colleagues on the committee and in the Senate in opposition to the amendment.

Mr. President, you might have been able to tell from my question addressed to the distinguished senior Senator from New York in regard to the centralization of all national issues in a single circuit court of appeals that that is my ultimate concern, not this particular amendment in this particular act or in this particular way.

I think if anybody brought before this Congress the suggestion that every national issue's appeal from a Federal district court must be heard at a single Federal circuit court in the city of Washington, D.C., that outrageous suggestion would be rejected out of hand. It is an outrageous suggestion.

So rather than try to take a whole bite at once, rather than try to reveal the entire desire to destroy the diversity of the judicial system by forcing a concentration in one area, they will do it piecemeal, a little bit here, a little bit there, a little bit now, a little bit then, and accomplish the same goal over a period of time, something that they would

never dare suggest in one suggestion, in one proposition, before the Senate.

The words have been used that the circuit here has well-recognized prerogatives. What sheer nonsense. Prerogatives? The only powers the circuit has are those given by the Congress of the United States in the enactment of laws and by the rules of the Supreme Court under the laws. Prerogatives? This court has none.

It has been suggested that this court alone has the expertise. What absolute sophistry. Expertise? Is it to be said that the other circuits of the United States lack expertise? Is it to be said that the other circuit judges are not competent, that they are not capable of dealing with these problems of such great magnitude, of such great and national scope and magnitude? What nonsense.

I think this amendment is nothing more or less than the continuing pattern, as my friend from South Carolina indicated, to centralize, to concentrate, to aggrandize the power, to put it all in one place, and that in the clear light must be what is seen. It is a grasp for power to dictate uniformity, to destroy the diversity of the judicial system.

I hope this amendment is rejected. I thank the Senator from Vermont for yielding his time, and I yield back the remainder of my time.

Mr. STAFFORD. I thank the Senator for his remarks.

Mr. President, does the chairman of the committee, the Senator from West Virginia, desire some time?

Mr. RANDOLPH. If convenient.

What is the time remaining?

Mr. STAFFORD. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 7 minutes remaining.

Mr. RANDOLPH. I will take 3 minutes, if I may.

Mr. STAFFORD. I yield 3 minutes to the distinguished chairman of the committee.

Mr. RANDOLPH. I thank the Senator.

Mr. President, I can understand the logic of the able Senator from Massachusetts (Mr. KENNEDY), but it is his logic and I cannot agree with him. I know the earnest manner in which he always presents amendments to the Members of this body, and very often, as the record will indicate, I support him. But there comes a time, and now is another time, when I must oppose the amendment that is before us.

We have been for over two centuries in this country developing a judicial system. The judicial system, with all of its flaws, is certainly a bulwark of the checks and balances within the system of our form of republican government. Not party, I will say to my friend from North Carolina (Mr. HELMS) who looked to me with approval at that point, but it is a republic, of course. We work without regard to party in a partnership at times to keep the erosion which, in this instance, would be moving into the judiciary, frankly, to the distress of the public and the American system of government.

I think one of the strengths of America has always been our diversity. I have felt that. Sometimes even the differences we have are our strengths, and I think it is important always for us to realize that Jefferson told us in other words, but we can speak out today in our own language, that if we straightjacket ourselves in the processes of government, why, we do a disservice.

So we have tried, and I think we have been successful to resolve the legal issues in this country and, by and large, although there are, perhaps, the mistakes and errors and, yes, they do occur, we have done it in an orderly manner, in a fair and equitable way.

So this diversity that I have spoken of and of which I approve means to me in this case that we should not attempt to prejudge decisions or limit the opportunities for the presentation of varying viewpoints.

We have, as the able proponent of the amendment knows——

The PRESIDING OFFICER. The Senator's 3 minutes have expired.

Mr. STAFFORD. Mr. President, I yield 2 more minutes to the distinguished Senator from West Virginia.

Mr. RANDOLPH. We have, as I was beginning to indicate, 11 circuit courts in the United States of America. Each of these units of our court system has a competency to act on the issues, very frankly important issues that we are discussing in this Chamber today.

Also, and this is a further bulwark of our system, the final decision rests with the Supreme Court of the United States but coming to the Supreme Court through the processes of the districts we develop, of course, these matters that must be determined.

So, I have a confidence in the judicial system. I say to my able colleague from Vermont, who is against the amendment, and also my able colleague from North Dakota, Mr. BURDICK, who has spoken as I understand it against the amendment, I do not believe that it is wise, Mr. President, that we vest sole authority in a single circuit court because to do that would advance the development or execution of justice in the country in reverse rather than in a positive way.

I say that I think it is an important subject. We are considering it very carefully. But I do hope that the amendment will be defeated.

Mr. STAFFORD. Mr. President, how much time remains to the Senator from Vermont?

The PRESIDING OFFICER. Two minutes remain.

Mr. STAFFORD. I yield to the distinguished Senator for a unanimous-consent request.

Mr. HATCH. Mr. President, I ask unanimous consent that Randy Gruber, of my staff, be accorded the privilege of the floor during the pendency of this bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STAFFORD. Mr. President, I yield myself the remaining time on this side.

Mr. President, I say to my colleagues that my recollection of the situation in the Committee on the Environment and Public Works with respect to Mr. KENNEDY's amendment is exactly the same as that of the chairman of the committee, Senator RANDOLPH, of West Virginia.

We did discuss it. We did not vote on it. My impression, likewise, was that had it been voted on in the committee it would have been at that point defeated.

I find myself for the first time in a long time, Mr. President, on the opposite side of a discussion from that of my good friend, the distinguished Senator from Massachusetts, the chairman of our subcommittee, Senator MUSKIE, and my very distinguished friend from New York, Senator JAVITS, but that is the way it must be in this case.

In very brief, in conclusion, I agree with the argument that this is not the time to take another step in dismembering the U.S. circuit courts of appeal in this country by bringing another matter to Washington for exclusive determination.

People of this country have been indicating, at least in the opinion of this Senator, that they do not want a further concentration of power in Washington, the Nation's capital, and that through the sections of the country served by the circuit courts of appeal they would prefer to have matters affecting them and their parts of the Nation determined there and taken to Washington only if it is necessary to bring the litigation on to the U.S. Supreme Court.

So I have to find myself opposed to the Kennedy amendment and I hope, Mr. President, that the Senate will defeat it.

The PRESIDING OFFICER. Who yields time? The Senator from Massachusetts.

Mr. KENNEDY. How much time do I have remaining?

The PRESIDING OFFICER. Five minutes remain to the Senator from Massachusetts.

Mr. KENNEDY. Mr. President, I yield myself 4 minutes.

Mr. President, I address the question of the distinguished Senator from West Virginia, my good friend. He is familiar with James Mooreman, the Acting Assistant Attorney General for Lands and Natural Resources Division; is he not?

Mr. RANDOLPH. Yes, I am familiar with him and know him personally.

Mr. KENNEDY. Is he from West Virginia by any chance?

Mr. RANDOLPH. He is not from West Virginia.

Mr. KENNEDY. He is not from Logan or Mingo or Fayetteville?

Mr. RANDOLPH. Not even from McDowell.

Mr. KENNEDY. Not McDowell. Well, that is all right.

Mr. RANDOLPH. Yes.

Mr. KENNEDY. Mr. President, I thank the Senator from West Virginia.

This amendment is not an original idea of mine, Mr. President, in terms of trying to bring a sense of justice and fairness and equity in the rather limited area of the application of national standards.

I just remind the Members of this Senate what the Judicial Conference of the United States has stated about the particular provisions of this bill having studied this provision. The Administrative Conference is made up of some of the most distinguished lawyers and jurists in this country, who come from the western parts of the country, the eastern parts of the country, the northern parts

of the country, and the southern parts of the country.

And this is what they have said about the particular provisions of the current Clean Air Act which we are attempting to change:

On the current act the Congress has enacted provisions for judicial review in the Clean Air Act and the Federal Water Pollution Control Act that in some respects are inconsistent, incomplete, ambiguous, and unsound.

That is what the Administrative Conference says, and when we hear the statements and the comments of those here in the Chamber in terms of trying to get equity, fairness, and justice here is the conclusion not only of the Senator from Massachusetts, but of one of the most distinguished groups of lawyers and students of the law, who are concerned about the fairness in the application of national legislation.

It would be interesting, Mr. President, in listening to the comments of some of my colleagues and friends; if they were talking about collecting all legislation and putting it in the district, they would find myself among their lists.

But what we are talking about here are only those applications of national standards. And when you have the national standards where do you have the hearings? Do you have them in Pocatello or do you have them in Salem, Oreg., or do you have them in Ogden, Utah? No. You have them here in Washington, D.C. Hearings on national standards are held here in Washington, D.C.

Hearings on local standards are held in the local communities as it should be. But what we are talking about is an extremely narrow area of specialized administrative law, which is complex, involved, and applicable generally across the country.

Beyond that, Mr. President, one of the very important aspects of this bill is the timeliness of the different provisions of the bill. One of the reasons that we face the furor in the Clean Air Act is because of the confusion and the ambiguity in terms of understanding the provisions of the Clean Air Act, and we come back to Congress time and time again to slip the time limits. One of the most effective parts of this current legislation is the timely application of the different provisions.

Without this amendment of myself and the Senator from New York, or amendments similar to this, you might as well write off those time limitations because you are going to force them to be delayed time and time again.

The complexities in the different jurisdictions of the circuit courts are spelled out in a myriad of different cases that may be appealed or may not be appealed, but in any extent that will leave the law in a state of confusion.

I hope the amendment will be accepted.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. STEVENS. Mr. President, will the Senator yield 30 seconds?

Mr. STAFFORD. Mr. President, I yield the Senator 30 seconds.

Mr. STEVENS. I ask unanimous consent that Jon De Vore, my staff member, be granted the privilege of the floor.

The PRESIDING OFFICER (Mr. MOYNIHAN). Without objection, it is so ordered.

The PRESIDING OFFICER. All time has expired. The question is on agreeing to the amendment of the Senator from Massachusetts. The yeas and nays have been ordered.

Mr. ALLEN. Mr. President, I move that the amendment be laid on the table, and I call for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to lay on the table. The yeas and nays have been ordered and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

The PRESIDING OFFICER. The Senate will be in order. Senators will take their seats. The clerk may proceed.

The call of the roll was resumed and concluded.

Mr. CRANSTON. I announce that the Senator from Arkansas (Mr. MCCLELLAN), the Senator from Alabama (Mr. SPARKMAN), and the Senator from Montana (Mr. MELCHER) are necessarily absent.

Mr. STEVENS. I announce that the Senator from Illinois (Mr. PERCY) is necessarily absent.

I also announce that the Senator from Rhode Island (Mr. CHAFEE) is absent due to a death in the family.

The result was announced—yeas 59, nays 36, as follows:

[Rollcall Vote No. 335 Leg.]

YEAS—59

Allen	Ford	Morgan
Baker	Garn	Nunn
Bartlett	Goldwater	Packwood
Bellmon	Gravel	Pearson
Bentsen	Griffin	Randolph
Bumpers	Hansen	Roth
Burdick	Hatch	Schmitt
Byrd, Harry F., Jr.	Hatfield	Schweiker
Byrd, Robert C.	Hayakawa	Scott
Cannon	Helms	Stafford
Chiles	Hollings	Stennis
Church	Huddleston	Stevens
Curtis	Johnston	Stone
Danforth	Laxalt	Talmadge
DeConcini	Long	Thurmond
Dole	Lugar	Tower
Domenici	Magnuson	Wallop
Eagleton	Matsunaga	Weicker
Eastland	McClure	Young
	Metcalf	Zorinsky

NAYS—36

Abourezk	Haskell	Metzenbaum
Anderson	Hathaway	Moynihan
Bayh	Heinz	Muskie
Biden	Humphrey	Nelson
Brooke	Inouye	Pell
Case	Jackson	Proxmire
Clark	Javits	Ribicoff
Cranston	Kennedy	Riegle
Culver	Leahy	Sarbanes
Durkin	Mathias	Sasser
Glenn	McGovern	Stevenson
Hart	McIntyre	Williams

NOT VOTING—5

Chafee	Melcher	Sparkman
McClellan	Percy	

So the motion to lay Mr. KENNEDY's amendment on the table was agreed to.

Mr. RANDOLPH. Mr. President, I move to reconsider the vote by which the motion was agreed to.

Mr. McCLURE. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senator from Nevada.

Mr. STAFFORD. Mr. President, may we have order?

The PRESIDING OFFICER. Will Senators please take their seats.

UNANIMOUS-CONSENT AGREEMENT—S. 926

Mr. CANNON. Mr. President, I ask unanimous consent that notwithstanding the third reading, passage and reconsideration of the vote by which the bill, S. 926, was passed, that the text of the amendment by the Senator from Idaho (Mr. MCCLURE) was agreed to, unprinted amendment No. 723, be corrected to read as follows:

On page 59, between lines 2 and 3, insert the following:

(b) Section 315(a)(10) of the Act (2 U.S.C. 438(a)(10)) is amended by inserting at the end thereof the following: "In prescribing such rules and regulations, the Commission and the Internal Revenue Service shall consult and work together to promulgate rules and regulations which are mutually consistent. The Commission shall report to the Congress annually on the steps it has taken to comply with this paragraph.

Mr. President, I may say that this correction was necessary because there were two amendments pending. We acted on one of them and mistakenly the RECORD shows us as acting on the other one. It has been cleared with Senator MCCLURE.

Mr. McCLURE. Will the Senator yield?

Mr. CANNON. I yield.

Mr. McCLURE. I concur completely. Let me say that the confusion was probably engendered by the way in which I transmitted the amendment to the desk. The Senator from Nevada is exactly correct. The RECORD has the amendments reversed.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Nevada?

Without objection, it is so ordered.

Several Senators addressed the Chair.

PRIVILEGES OF THE FLOOR

Mr. THURMOND. Mr. President, I ask unanimous consent that Jim Bennett on the clean air conference report, H.R. 6161, be granted privilege of the floor; that Gene Lawrimore on the foreign assistance appropriations, H.R. 7797, be granted privilege of the floor, and John Napier on the Labor-HEW conference report, H.R. 7555, be granted privilege of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

CLEAN WATER ACT OF 1977

The Senate continued with the consideration of the bill S. 1952.

The PRESIDING OFFICER. The Senator from South Dakota.

Mr. ABOUREZK. Mr. President, I want to ask a question of the manager of the bill.

The PRESIDING OFFICER. Who yields time?

Mr. ANDERSON. Mr. President, I yield 2 minutes to the Senator from South Dakota.

Mr. ABOUREZK. On the Clean Water Act, I wanted to ask the manager if there is anything in this act which in any way alters the jurisdictional situation on the Indian reservations of the United States.

Mr. ANDERSON. No.

Mr. ABOUREZK. It neither adds nor takes away jurisdiction, whatever the situation might be?

Mr. ANDERSON. That is correct.

UP AMENDMENT NO. 731

The PRESIDING OFFICER. The Senator from Wyoming is recognized.

Mr. WALLOP. Mr. President, I send to the desk an unprinted amendment on behalf of myself and Senator HART. I ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The second assistant legislative clerk read as follows:

The Senator from Wyoming (Mr. WALLOP), for himself and Mr. HART, proposes unprinted amendment No. 731.

Mr. WALLOP. I ask unanimous consent that further reading be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 76, line 21, insert the following:

"Sec. . Section 510 of the Federal Water Pollution Control Act is amended by adding the following:

"Nothing in this Act shall be construed to supersede or abrogate or in any other way affect any authority now vested in any State to establish or operate programs for the allocation of quantities of water within its respective boundaries, or any rights to, or allocations of, quantities of water which have been established pursuant to such programs."

Mr. BUMPERS. Mr. President, I ask unanimous consent that Richard Arnold of my staff be granted the privilege of the floor during discussion and vote on this amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. WALLOP. Mr. President, this is a simple amendment and I shall not take much time on it. I have talked with the managers of the bill on both sides and I believe they will accept it.

The amendment simply states that nothing in the act shall be construed to supersede or abrogate or in any other way, affect any authority now vested in any State to establish or operate programs for the allocation of quantities of water within its respective boundaries, or any rights to or allocations of quantities of water which have been established pursuant to such program.

Mr. President, I compliment the Committee on Environment and Public Works on both sides for the understanding that they have shown to the unique problems of western water law and western water pollution problems. I think the committee's understanding in the case of irrigated agriculture was a splendid example of how people on both sides were able to come to conclusions that are logical and flexible. I thank them for that.

This simply affirms, more or less, the same notion. It is an attempt to recognize the historic allocation rights contained in State constitutions.

It is designed to protect historic rights from mischievous abrogation by those who would use an act, designed solely to protect water quality and wetlands, for other purposes. It does not interfere with the legitimate purposes for which the act was designed.

The amendment speaks only—but significantly—to the rights of States to allocate quantities of their water and to determine priority uses. It recognizes the differences in types of water law across the Nation. It recognizes patterns of use.

When Wyoming became a State and the Congress ratified our Constitution in the Act of Admission, that Constitution stated then and states today, "The water of all natural streams, springs, or lakes or other collections of still water within the boundaries of this State are hereby declared to be the property of the State."

Water quality and interstate movement is an acceptable Federal role and influence. But the States historic rights to allocate quantity, and establish priority of usage remains inviolate because of this amendment. This act remains an act to protect the quality of water and to protect critical wetlands in concert with the various States. In short a responsible Federal role.

Mr. ANDERSON. Mr. President, we accept the amendment.

Mr. WALLOP. I would just like to make two short remarks and I shall be finished.

Mr. STAFFORD. Mr. President, before I yield back what time we have, on behalf of the minority, we also accept this amendment, which is proposed by a very valued member of the Environment and Public Works Committee.

Mr. WALLOP. Mr. President, I thank the distinguished manager. I yield back my time.

Mr. ANDERSON. I yield my time.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment.

The amendment was agreed to.

UP AMENDMENT NO. 732

Mr. HASKELL. Mr. President, I ask unanimous consent that I be permitted to offer an amendment to amendment No. 728, which was previously adopted. I ask unanimous consent that I be empowered to offer it.

The PRESIDING OFFICER. Is there objection?

Without objection, it is so ordered.

Mr. HASKELL. I send my amendment to the desk and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Colorado (Mr. HASKELL) proposes unprinted amendment No. 732 to amendment No. 728.

Mr. HASKELL. I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

After the word "project" insert the words "west of the 100th principal meridian."

Mr. HASKELL. The President, this amendment to an amendment applies the amendment previously adopted only to water resources west of the 100th meridian. The distinguished Senator from Arkansas (Mr. BUMPERS) called my attention to a difference in situations between the western part of the country and the other parts of the country. For that reason, I offer this amendment to my amendment.

I understand that the distinguished Senator from Arkansas has cleared this with the managers of the bill. That is my understanding.

Mr. ANDERSON. Mr. President, we have no objection to the amendment.

Mr. STAFFORD. We have no objection.

The PRESIDING OFFICER. Is all time yielded back?

Mr. HASKELL. I yield back my time.

Mr. STAFFORD. I yield back my time.

I understand that the amendment of the Senator does not apply to Federal projects involving dredging, excavation, channelization, and other modifications of water other than impoundments of water that are specifically authorized by Congress.

Mr. HASKELL. That is correct.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

UP AMENDMENT NO. 733

Mr. BURDICK. Mr. President, I send an amendment to the desk and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from North Dakota (Mr. BURDICK) proposes unprinted amendment No. 733.

Mr. BURDICK. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 17, after line 2, insert the following:

Sec. . Section 204(a) of the Federal Water Pollution Control Act is amended by adding the following paragraph:

"(7) that the applicant has analyzed the potential recreation and open space opportunities in the design of the proposed treatment works."; and

On page 21, after line 8, insert the following:

Sec. . Section 208(b)(2)(A) of the Federal Water Pollution Control Act is amended by inserting before the semicolon a comma and the following:

"and an identification of open space and recreation opportunities that can be expected to result from improved water quality, including methods and procedures to assure public access to navigable waters for recreation purposes.".

Mr. BURDICK. Mr. President, the Federal Government's water pollution control efforts have, from the beginning, emphasized potential recreation benefits. The goal of swimmable lakes, streams, and rivers is fully embraced in the Federal Water Pollution Control Act. Yet, we have seen little actual implementation of plans to encourage the realization of direct recreation benefits in the design and construction works. For this reason, I am offering minor amendments to the act before us today to require analysis of recreation and open space

potential in the waste treatment planning process and to maximize the public recreation opportunities when they are identified.

One good example of what I am trying to accomplish appears in a letter to the Philadelphia office of the Environmental Protection Agency from the general manager of the Washington Suburban Sanitary Commission; the letter, dated June 24, 1977, described the potential multiple benefits of joint sewer line-bike trail projects.

First, lower administrative and construction costs realized by the employment of a single contractor for both the trail and sewer, rather than separate contractors for each project,

Second, lower overall restoration costs incurred by combining sewer and trail construction activities,

Third, less environmental damage to the stream valley achieved by not having to return for a second time to construct the trail, and

Four, the installation of a trial system serving both recreational and commuter needs and promoting energy conservation. In addition, the WSSC also benefits by using the trails as access roads for inspection and maintenance of the sewer lines.

Imaginative public officials have built tennis courts on top of sewer interceptor lines and have planned open space greenways along shorefronts to provide public access to waters becoming cleaner every day. However, we have only begun to realize the benefits of such planning. As the National Recreation and Park Association pointed out to the committee in a recent letter, these multiple-use examples are the exception rather than the rule. The encouragement of such multiple uses must be strengthened beyond what is provided for in Public Law 92–500 and the executive branch should be directed to actively seek out these multiple benefits. There should be, in my opinion, a relationship between waste water treatment plans and State and local recreation and open space plans. Such legislative action will not only provide additional recreation benefits to citizens in surrounding areas, but will also give the public the greatest benefit for local and Federal tax dollars spent.

The National Recreation and Park Association completed a survey last summer of planners around the country working for park and recreation agencies, 208 water quality planning agencies, and agency recipients of section 201 construction grants. The survey results were supportive of the need for these amendments in that respondents overwhelmingly indicated the desirability of linking recreation benefits to water quality improvement efforts. The theme running through all the responses was that multiple-use design principles must be incorporated into the planning processes from the very beginning. Mr. President, the effect of the amendments I am offering today is to meet that need by requiring the consideration of recreation and open space benefits prior to final approval and grant award for the construction of a treatment works.

Mr. MUSKIE. Mr. President, as I understand the amendments of the Senator from North Dakota, they would encourage the planning of related recreational projects?

Mr. BURDICK. That is correct.

Mr. MUSKIE. Is it fair to conclude that the Senator's amendments would not divert grant money away from the construction of needed treatment works, but rather would force consideration of design modifications by the grantees?

Mr. BURDICK. That is correct.

Mr. MUSKIE. I also understand that under the Senator's amendments, should recreation considerations alter the total cost of a treatment works, such alterations, to be eligible for Federal funding, could not significantly raise the total project cost.

Mr. BURDICK. Yes, that is my intent in offering this amendment.

Mr. MUSKIE. With that understanding, Mr. President, the committee accepts the Senator's amendments.

Mr. BURDICK. In summary, Mr. President, the section 204 amendment requires the addition of one factor to the EPA checkoff list prior to the final approval of a grant. That factor is that the applicant has analyzed the potential recreation opportunities of the proposed treatment works.

The section 208 amendment requires consideration of open space and recreation opportunities in the development of section 208 areawide waste treatment plans.

Mr. ANDERSON. We have no objection, Mr. President.

Mr. STAFFORD. We have no objection on this side of the aisle, Mr. President.

The PRESIDING OFFICER. Is all time yielded back?

Mr. STAFFORD. All time is yielded back.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment.

The amendment was agreed to.

UP AMENDMENT NO. 734

Mr. GRAVEL. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Alaska (Mr. GRAVEL) proposes unprinted amendment No. 734.

Mr. GRAVEL. I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 31, line 16, insert the following: and new section (3) and renumber existing sections (3) and (4), as follows:

"(3) the applicant has established a system for monitoring the impact of such discharge on a representative sample of aquatic biota, to the extent practicable;"

On page 31, line 22, insert the following: add new section (5) and renumber existing sections (5) and (6), as follows:

"(5) to the extent practicable, the applicant has established a schedule of activities designed to eliminate the entrance of toxic pollutants from non-industrial sources into such treatment works.)

Mr. GRAVEL. Mr. President, I am introducing this minor amendment today to allay some of the fears expressed that my provision for waivers from the requirement of secondary treatment for publicly owned treatment works does not sufficiently address the question of toxics and the problem of proving that water quality violations will not result from any waivers granted.

This amendment is simple, but it should provide reasonable assurances that any waivers granted from secondary treatment requirements will not create environmental problems. My original provision, appearing as section 27, was intended to take care of these concerns. Report language further explains constraints to be placed on an applicant for any waivers, but I am willing to further clarify the statutory language.

The first addition will require an applicant, to the extent practicable, to design and implement a system of monitoring which will show the impact on the environment of any discharges resulting from any waiver granted. This system does not need to be a continuous monitoring system, but must measure impacts at least periodically enough to be a meaningful indication of no water quality violations resulting from the discharge. If adequate systems for monitoring do not exist, it is my intention that some other methods be employed, if feasible, while systems are developed either by the EPA, private labs or universities, in conjunction with municipalities. This is in no way meant to delay the granting of waivers if adequate monitoring systems do not exist at this time.

The second addition requires the applicant to develop a schedule to be used in the applicant's efforts to stop the entrance of toxics into the treatment system from nonindustrial sources, primarily from street runoff. To the extent feasible the schedule should investigate and establish methods to eliminate toxics from other sources to the treatment system. This provision is included to encourage the investigation of eliminating the entrance of toxics from homes and commercial establishments. It is in no way intended to preclude the granting of waivers if it cannot be shown that elimination of toxics from home and commercial users is practicable.

One final thought: my original provision is meant to encourage the improvement of treatment works such that reduction of volume to be treated can occur over time. It is essential that water be conserved. This is why my provision allows continued Federal funding for things such as infiltration and inflow work. Any other methods of encouraging reduction should be considered, particularly with regard to climatic peculiarities of specific locales. For example, better insulation in cold climates can help reduce the use of water, which is sometimes allowed to flow for long periods of time to prevent pipes from freezing. In addition, municipalities are to be encouraged to develop techniques to recycle and reuse wastes, to the extent practicable.

I think both the majority and minority leaders and the managers of the bill are acquainted with this amendment. I shall not go into any more details.

Mr. ANDERSON. We have no objection.

Mr. STAFFORD. Mr. President, we have no objection.

The PRESIDING OFFICER. Is all time yielded back?

Mr. STAFFORD. I yield back my time.

Mr. ANDERSON. I yield back my time.

The PRESIDING OFFICER. All time is yielded back. The question is on agreeing to the amendment.

The amendment was agreed to.

UP AMENDMENT NO. 735

Mr. GRAVEL. I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Alaska (Mr. GRAVEL) proposes unprinted amendment No. 735.

Mr. GRAVEL. I ask unanimous consent that further reading be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 5, in line 17, strike out "or" and insert in lieu thereof a comma;

On page 5, in line 17, after "104" insert a comma and the following "or section 113".

Mr. GRAVEL. Mr. President, the amendment in the bill was originally intended to address a problem raised by Senator ANDERSON regarding operating and maintenance costs of demonstration projects conducted by the EPA. It was the purpose to provide local communities with the necessary funds to maintain facilities which were of an innovative nature. Such a project was conducted in two Alaska villages, Emmonak and Wainwright, under section 113 of the existing law. Once the project was completed, it was discovered that the operating and maintenance costs far surpassed that which could be reasonably assumed by the small communities. Currently the EPA is assuming these costs, but there is no assurance the EPA will continue to assume these costs.

This technical amendment would just add to the current amendment those two projects conducted under another section of the act. These projects are of the same nature as those referred to in the amendment to section 105.

I simply would like these projects being considered to have the same consideration that Senator ANDERSON's demonstration projects will. I understand the managers of the bill are favorably disposed.

Mr. ANDERSON. We have no objection.

Mr. STEVENS. Will the Senator yield so I may understand what we are doing? Does this have anything to do with seafood processing plants?

Mr. GRAVEL. No.

If I may answer my colleague, we did include in the RECORD earlier today a colloquy between the Senator from Rhode Island and myself involving seafood processors relative to an understanding we had with the committee earlier. That is the only thing that has been done thus far.

I yield back my time.

The PRESIDING OFFICER. Does the Senator from Vermont yield back his time?

Mr. STAFFORD. On this matter, the Senator from Vermont does.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment.

The amendment was agreed to.

UP AMENDMENT NO. 736

Mr. DOMENICI. Mr. President, I have an unprinted amendment. I send it to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from New Mexico (Mr. DOMENICI) proposes unprinted amendment No. 736.

Mr. DOMENICI. Mr. President, I ask unanimous consent that further reading be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 20, line 6, strike the words "two thousand five hundred", and insert in lieu thereof "three thousand five hundred".

Mr. DOMENICI. Mr. President, this is a simple amendment. There is a provision in the bill for a rural set-aside for alternative systems. It carries a figure of communities having a population of 2,500 or less. My amendment changes that 2,500 to 3,500, thus enlarging the universe against which this set-aside can be applied; thus, in my opinion, minimizing the chance that there would not be projects that could use this set-aside. It makes the availability of projects broader, thus enabling the States to use the set-aside that the Senator from Vermont and the Senator from West Virginia contemplate as a means of promoting an alternate kind of sewer system out in the rural areas.

The PRESIDING OFFICER. The Senator from Vermont.

Mr. STAFFORD. Mr. President, I have examined the amendment offered by the distinguished and very valued Senator from New Mexico. I think it will improve the bill as the committee wrote it and, for this side of the aisle, I am prepared to accept it.

Mr. DOMENICI. I thank the Senator from Vermont.

Mr. President, let me just say to the Senator from Vermont, I think we all understand that there is a need to promote this alternate kind of system. It is my understanding the Senator, who is the principal sponsor, would be interested in monitoring this on a yearly basis through EPA and then we take another look into them.

Mr. STAFFORD. Yes. The Senator from Vermont would certainly want to see how this works out over the next year and review its success.

Mr. ANDERSON. We have no objection.

Mr. DOMENICI. I yield back the remainder of my time.

Mr. McCLURE. Mr. President, will the Senator yield to me before that?

Mr. DOMENICI. I am delighted to.

Mr. McCLURE. I just want to commend the Senator for the amendment he has offered. I am a strong supporter of the amendment and the program. I think the amendment of the Senator from New Mexico improves the amendment, makes certain it will accomplish what we have in mind for this provision of the bill.

The PRESIDING OFFICER. Is all time yielded back?

Mr. DOMENICI. I yield back the remainder of my time.

Mr. ANDERSON. I yield back my time.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment of the Senator from New Mexico.

The amendment was agreed to.

Mr. STEVENS. Will the Senator yield me just enough time to make an inquiry that I think will forestall the need to consider an amendment?

Mr. STAFFORD. I am pleased to yield to the Senator from Alaska whatever time he may need off the bill.

Mr. STEVENS. At the most, 5 minutes.

Mr. STAFFORD. I am happy to yield to the Senator.

Mr. STEVENS. Mr. President, I am concerned about one provision in the report that indicates that the Environmental Protection Agency is to conduct a study that can be completed by January 1978, to ascertain if there is merit in the argument that disposal can be environmentally acceptable, or possibly beneficial in terms of certain seafood processors.

An administrator, I think, will conduct that in most areas within that timeframe, and I certainly am reflecting only the Alaska situation. But in certain Alaskan waters, particularly in the Dutch Harbor area, we have a situation where the dispersal area is required to be a radious of 30 meters from the outfall of the disposal pipe that comes from seafood processors.

Currently, the industry at Dutch Harbor, which is a growing port—as a matter of fact, it is the second largest fish processing port now in the United States—has improved the situation, has extended their outfall lines and we find that the outfalls are terminating on a slope where the radius probably cannot be met. At least, the standard set by the Administrator cannot be met if it is confined to a 30-meter radius.

We believe the dispersal location could be contained in an area equivalent to a circle with a 30-meter radius.

As it comes down the slope, the disposal material slides down and, therefore, it is more dispersed over a broader area from the outfall pipe and, obviously, it cannot flow back uphill as it goes down the slope from the disposal pipe.

I have asked the State of Alaska to conduct a study of what has happened at Finger Bay, which is located in Alaska where the seafood processing industry was previously located, to find what has occurred with regard to the material that was disposed of previously there.

We believe we can show that in Alaskan waters, particularly off the Aleutian Chain, that it is better for the total food chain to have a broader disposal than that contained within a 30-meter radius. Particularly, as I say, it would be better where there are canyons on the ocean floor, that the material can be dispersed down the slopes and, therefore, with the nutrients that come from the discharges—and this is natural fish

waste, it is not an industrial discharge involving any toxicity at all—that the growth of the fish and shellfish can be improved.

Rather than incurring a great deal of extra expenses involved in this process, we would like to have the time extended.

My question to the manager of the bill, with regard to this January 1978, is the committee willing to have any leeway? We think the State study and the EPA study could be conducted if we had an extension of a year involved there. They have just finished a study in 1975, another study in 1976. We feel that with this deadline, what will happen will be that they will just, in effect, rewrite the last study and we will not have a new study in that period of time.

I am hopeful the committee will agree with me that with regard to the study that will be necessary in the area of Dutch Harbor pertaining to the shellfish industry that that deadline of January 1978 can be considered to be January 1979, and that we are talking about a new study with regard to the shellfish industry, not——

Mr. ROBERT C. BYRD. Mr. President, may we have order in the Senate while the Senator is speaking?

The PRESIDING OFFICER. The Senator from West Virginia is correct. The Senate is not in order. Will Senators cease their conversations?

Mr. STEVENS. Mr. President, should I redirect that question to the distinguished Senator, the manager of the bill?

Mr. ANDERSON. I have been listening to two different groups.

Mr. STEVENS. I understand the problem.

Mr. ANDERSON. The staff tells me the clear intent of the study is that on issues the Senator has raised with respect to the question of whether or not they would like to allow an extra year, we would like a little time to consider it.

Mr. STEVENS. My problem is that I do not have anything to amend. I understand the EPA does listen to the committee and it is a very firm date of January 1978.

I would not want to offer an amendment to the bill to, in effect, correct the report.

I am only talking about one location in Alaska that I know of. It is the only one with a critical problem now.

As a matter of fact, both the EPA and the shellfish processing people are in town now working on the definition of the study to be completed.

As I say, I am asking my State to make a related study in Finger Bay which would not be covered by this deadline anyway. But to get that study completed in Finger Bay to show the EPA what actually occurred when the seafood processing industry worked in Finger Bay for a period of years—I believe it was in excess of 4 years.

We now will go back in and show what happened to it at Finger Bay and find whether it is better to have dispersal over a broader area and the depth of it limited, or whether the EPA is correct in limiting the circumference of the disposal area and not to consider at all the depth of the material.

On this incident in Sitka Bay where the disposal piled up year after year after year, we had a chemical reaction underneath it and the bay literally exploded by virtue of coverage there because of the depth of the material.

The EPA seems to be taking us back to the idea that the dispersal should be limited in area on the ocean floor. We take the position it should be as broad as possible on the ocean floor, and we would like the time to prove that to EPA.

But the committee has said, "Get this done by January 1978."

Now, we cannot do it in Dutch Harbor in that time, and EPA is saying to the people in the seafood processing industry at Dutch Harbor that unless they can demonstrate the EPA is wrong, they will have to start barging this material for dispersal out further into the ocean.

This is an area of extreme winds, extreme weather, extreme icing.

We believe that the safety factors of using a barge there, as opposed to using the outfall sewers, are such that we should discourage barging. The industry has indicated that it is willing to extend the outfall pipes but it wants an opportunity to demonstrate to EPA that the radius they currently require—it is a circle with a 30-meter radius—and that the dispersal from any pipe cannot exceed that area on the ocean floor are wrong, particularly where they are dispersing material on a slope, which by nature means that you are limited to half the circle for dispersal area.

Mr. MUSKIE. Mr. President, will the Senator yield?

Mr. STEVENS. I yield.

Mr. MUSKIE. I gather what the Senator is concerned about is that the time allotted for the study will not be sufficient to cover all points in which he is interested.

Mr. STEVENS. That is our point, that it cannot be done properly by the State, by the industry, and by EPA within the time frame of the committee's direction to the EPA.

Mr. MUSKIE. May I recommend this to the Senator: Every member of the committee was puzzled about this whole question of alternatives to secondary treatment for discharges into the oceans, and we all felt the lack of complete knowledge on which to base a policy. If the Senator will address a letter to me—I assume that I will be chairman of the Senate conferees, at least—I will address it specifically and undertake to stretch out the time of the study and even further refine the characteristics of the study, so that we may get into the questions that the Senator has raised, if that will be of help to the Senator.

Mr. STEVENS. My good friend from Maine makes an offer I can hardly refuse, except for the fact that—I do not refuse it yet—the direction of the committee is that the study must be completed by December of 1978.

Is the Senator indicating to me that he thinks perhaps the committee would authorize a letter that would say to the EPA, in effect, with regard to Dutch Harbor, that the deadline can be January of 1979? If the Senator is willing to consider that, I do not think that is an offer we should refuse. I do not have anything to amend.

Mr. MUSKIE. I cannot predict what the House may agree to, but I think that 6 months to a year in addition to what we have allowed is something the House would consider reasonable, and we can talk to each other before then and try to be more precise as to the scope of the study, the characteristics of the study, and the time of the study. I assure the Senator of my cooperation.

I have a similar problem in my State—not as complicated as that of the Senator—and we are all puzzled as to what the best answer is. We all need more information. The Senator's colleague, Senator GRAVEL, has communicated some of the same concerns.

Mr. GRAVEL. Mr. President, will the Senator yield on that point?

Mr. MUSKIE. I yield.

Mr. GRAVEL. This language in the report is language of Senator CHAFEE's and mine. Based on information we now have, we ask that the report be changed to reflect an extension of an additional 6 months, so that they have a full year to perform this study. I think the representations made by the Senator from Maine to go into more precise definition of this study will be helpful. I certainly want to go on record now that the study would include Dutch Harbor as one of the areas in question.

However, the area that will rise as a difficulty will be the period from June 30, and I presume my colleague would join me in extending it in the report language to June 30.

Mr. MUSKIE. Yes.

Mr. GRAVEL. That would not require an amendment. I think this is sufficient to do that. But the time element between then and the end of October, when EPA would be constrained under the law to force these people if they chose to barge, might pose a problem. The companies in question tell me that the leadtime to get the barges and to do this, if they are compelled to do this, might pose a problem.

I think we could focus on that in conference and have the staff go into that. We have been communicating with EPA on it, and we are assured that we are in a good holding pattern with what we have right now, and the next step is the conference and working with the staff to resolve it at a later time.

Mr. MUSKIE. I will work with both Senators from Alaska to try to accommodate the need for the study and the expedition of the matter, but not so much that the job does not get done.

Mr. STEVENS. I appreciate the comment of the Senator from Maine and of my colleague from Alaska.

My problem is that this fishing season is a winter season.

Mr. MUSKIE. I understand that.

Mr. STEVENS. To put the industry in a position of studying the dispersal at a time when the studies cannot be made is wrong. If this is due, it should be due at the end of the next season, which would be January of 1979.

It seems to me that we should have the ability to demonstrate to EPA our Alaska feeling that the broadest possible dispersal from a fixed pipe is much better

than trying the barges on the Aleutian chain. But that is going to take some time.

I am willing to accept the offer of both Senators with respect to their assistance, because I think we are working for the same purpose. I assume that in conference, the conference committee could modify this January 1978 provision in the conference report.

Mr. MUSKIE. I have no doubt about that.

Mr. STEVENS. On that basis, that will be my plea to the Senator, that he consider that. An amendment would not lie to change this. That would raise a ruckus here that is not necessary over this issue.

With the Senator's assurance that he is willing to consider it, I appreciate the cooperation of the Senator from Maine, and I thank the Senator from Vermont for yielding time. I am grateful for the Senators' consideration.

Mr. DOMENICI. Mr. President, will the Senator from Vermont yield me 3 minutes?

Mr. STAFFORD. Mr. President, I am glad to yield 5 minutes on the bill to the distinguised Senator from New Mexico.

Mr. DOMENICI. Mr. President, I wonder if I may get the attention of the Senator from Maine for a question.

While the Senator from Maine is returning to his desk, I want to spend a few moments discussing the user fee section of the bill. Specifically, I say to the Senator from Maine that on page 27 of the report there is a discussion under the general topic of metering with which I find no fault. It discusses what happened in our committee.

Incidentally, historically we would say that the Senator from Maine had an amendment that was adopted, indicating that metering was not a necessary approach to establish user fees; and then the junior Senator from New York, joined by the Senator from New Mexico, amended the amendment that the Senator from Maine offered, and further clarified that ad valorem taxes could be used under certain circumstances to defray the requirements of our bill that there be user fees. I just want to ask one very specific question about that.

In the last paragraph, it reads:

> Greater flexibility will be provided for the assessment of user charges among residential users. The community may use water meters, sewer meters, flat rates—

Which was one of the conclusions we had arrived at—

> or ad valorem taxes, so long as the basic requirement of proportionality in the distribution of costs among each recipient of waste treatment services is assured.

I say to the Senator from Maine that I believe that the thrust of the Moynihan-Domenici amendment permitting ad valorem taxes would be totally lost unless the word "proportionality" there means no more proportionality is required than is required of a flat fee. Otherwise, I think we are back to requiring that ad valorem taxes be either as accurate as metering or some other technique that I do not think we intended nor the committee intended in permitting ad valorems and their set-aside for O&M internally in a community.

Will the Senator discuss that with me?

Mr. MUSKIE. Let me say to the Senator that the phrase "flat fee" is subject to the same ambiguity that the Senator attributes to the word "proportionality."

By flat fee, I take it from my recollection of our discussion in committee, that the Senator did not mean that every person in the community shall be charged the same rate. You can have classes of flat rates.

Mr. DOMENICI. That is correct.

Mr. MUSKIE. And those classes of flat rates can be geared to the best evaluation that one can make of proportional use of the water upon which the sewage discharge volume is based.

Mr. DOMENICI. In the judgment of the community.

Mr. MUSKIE. In the judgment of the community.

Mr. DOMENICI. Correct.

Mr. MUSKIE. So proportionality in terms of the committee amendment means the same thing it means with respect to flat rate. We do not mean everybody is charged the same rate. The community is free to take into account the size of the household, the size of the residence, the number of facilities which draw upon water and which discharge sewage. In other words, you can classify residences upon the basis of objective tests that can be fair, that can be legitimate and that can be justified. But that is something different from the kind of precise metering of each household's use that metering implies.

I do not really think the Senator and I are apart, although our rhetoric in committee sometimes suggests we are further apart than we really are. But I think when the Senator talks about flat rate he is talking about the same thing I am talking about when I am talking about proportionality—that there must be a rational basis for distributing the costs of the system based upon some objective tests of the uses imposed or the burden imposed on the system by the users.

Mr. DOMENICI. I just want to clarify in establishing these kinds of classes, all I want to be sure of is, that they need not do it on the precise basis of consumption nor need there be a different fee for each house. It can be some general scheme that lends itself to the conclusion discussed in this report.

Mr. MUSKIE. I agree with the Senator.

May I commend to the Senator my rather extensive discussion of this subject in my prepared presentation this morning, which was at such an early hour that I would not expect anybody except the floor manager to be present. I think he will find that discussion to be consistent with this informal colloquy we have just had.

Mr. DOMENICI. I thank the Senator.

Mr. MUSKIE. I appreciate the Senator's raising the question because it is going to continue to be controversial, going to continue to be subject to interpretation. What we want to do in this is to establish some aura of certainty about what it is the committee and Congress desire, and I think the Senator's question and colloquy may have contributed to that.

Mr. DOMENICI. We also clearly intended to allow the local community as much flexibility and exercise of its own judgment with reference to the assurance we seek from them.

Mr. MUSKIE. That is exactly right.

Mr. DOMENICI. I thank the Senator.

ADDITIONAL STATEMENTS SUBMITTED

Mr. ALLEN. Mr. President, I applaud the committee's recognition in S. 1952 that everyday minor drainage activities for the production of food and forest products are worthy of an exemption from permit requirements under section 404. As I read the report of the committee I am confused, however. The report states that—

> The exemption for minor drainage is intended to deal with situations such as drainage in Northwestern forests or other upland areas. The exemption for minor drainage does not apply to the drainage of swampland or other wetlands.

In my State we have many lowland forests, both hardwood and pine, that may at times contain excess moisture. These are not wetlands as that term is normally thought of in connection with the legitimate and specific concerns of the environmentalists. Instead, they are lands that are normally used for the production of wood products which may, under some circumstances, require minor surface drainage. This drainage is done usually with small ditches, to insure satisfactory establishment of the next tree crop—that is, to practice good forest management—after a timber harvest. It is important that this type of activity is included in the exemption.

To do otherwise is to legislate against good forest management. Most of the lowland hardwood forests in my State are wet because they have excess soil moisture and a high water table at certain times of the year. This minor surface drainage is necessary to insure proper reforestation and growing conditions for the Nation's important hardwood timber resources. It is not used to convert the site to a different land use, nor is it a threat to other forest values.

Minor drainage is a normal management practice in all crop production on lands that have excessive soil moisture. It is essential to achieve optimum productivity of our important farm, ranch, and forest resources. Minor drainage removes the excess soil moisture that otherwise would drown out newly planted crops or impede good plant growth. For instance, in 1975 more than 150 million acres of lands in farm and ranch production and 92 million acres of productive forest lands had problems with excess soil water.

The wet crop and forest lands which are generally lowland or flood plain areas that fall under the corps 404 jurisdiction are where the exclusion of minor drainage is needed. It serves no purpose whatsoever to exclude activities on upland or other areas that do not fall within the scope of the section 404 permit program, as the committee report would seem to indicate, I trust then, that it is actually the committee's intent to exclude minor drainage activities on those lands such as I have described which are used for the production of food, fiber, and forest products. Am I correct?

Mr. MUSKIE. Mr. President, the drainage exemption is very clearly intended to put to rest, once and for all, the fears that permits are required for draining poorly drained farm or forest land, of which millions of acres exist. No permits are required for such drainage. Permits are required only where ditches or channels are dredged in a swamp, marsh, bog, or other truly aquatic area.

Mr. DOLE. Mr. President, among the examples of normal farming, ranching, and forestry activities which would be excluded from the 404 program under section 49 of the bill, reference is made to minor drainage. The committee report indicates an intention to limit the definition of minor drainage to the construction of drainage facilities in upland areas and in northwestern forests. The effect of the report language negates the exemption for farm and forest drainage facilities because the permit program is not applicable to upland areas in the first place.

This does not make sense for another reason. Construction of minor drainage facilities is just as typical a farming and forestry practice in the Midwest, the South, and the East.

I agree that the construction of major canals and waterways designed to modify significantly or to drain an entire swamp or marshland should not fall within the category of "minor drainage." On the other hand ditching, tiling, and the construction of related facilities for the removal of excess soil moisture incidental to planting, protecting, or harvesting crops or to improve the productivity of land devoted to agriculture, silviculture, or ranching does indeed constitute normal farming or forestry practice and is not significant in terms of water quality impact.

I should like to ask the managers whether in the event one or two farmers got together and dug small ditches or installed tiling in order to drain a low-lying area of their adjoining farmlands to improve the production of crops, would they have to obtain a permit from the Corps of Engineers?

Wetlands are defined by Corps of Engineers regulations as areas periodically inundated with water and characterized by aquatic vegetation. So, theoretically, any standing water in a field where cattails, or other weeds have grown up around it, would require a license from the corps to drain.

Mr. MUSKIE. Mr. President, I would first like to respond to your statement regarding the corps regulations. The corps definition requires a prevalence of aquatic vegetation and is intended to describe only the true swamps and marshes that are part of the aquatic ecosystem.

The type of draining you have described in many cases would not require a permit since the drainage could be performed without discharging dredged or fill material in water, or would occur in areas that are not true marshes or swamps intended to be protected by section 404.

PROJECTS ELIGIBLE FOR FEDERAL FUNDS

Mr. MOYNIHAN. I would like to ask a question with regard to section 22 of S. 1952, which amends section 211 of the Federal Water Pollution Control Act. The proposed amendment would limit the range of projects that are eligible for Federal funding. It is my understanding that the rehabilitation of a collector sewer system subject to excessive infiltration would continue to be eligible for Federal funds available under the construction grant program of the act. Is my understanding correct, Senator?

Mr. MUSKIE. Yes, the Senator from New York is correct in his interpretation of the proposed modification of section 211. In the case of sewage collecting systems, subject to excessive infiltration, the rehabilitation must be necessary for the total performance and integrity of the waste treatment works. The rehabilitation must also be the most cost-effective alternative for the elimination of the excessive infiltration.

Mr. President, during the markup of S. 1952, this committee included an amendment providing for cost sharing with farmers through the Soil Conservation Service to help them bring their land into compliance with the intent of section 208 of the Clean Water Act.

This amendment is similar in intent and objective to S. 1280, a bill by Mr. CLARK of Iowa.

Mr. CLARK's bill was referred to the Committee on Agriculture, Nutrition, and Forestry. The conservation operations programs of the U.S. Department of Agriculture are under the jurisdiction of the Committee on Agriculture, Nutrition, and Forestry.

I have been informed by Mr. CLARK that in the interest of expediting this essential legislation, the Committee on Agriculture, Nutrition, and Forestry has chosen not to delay its completion by debating the jurisdiction over this amendment, for which we are grateful to the members of that committee.

As you may know, the Committee on Environment and Public Works is concerned about the effect of nonpoint source pollution on water quality. The Environmental Pollution Subcommittee conducted field hearings in Iowa, Minnesota, and Colorado and in Washington this year on section 208 and nonprofit source problems.

But in the interest of fairness to Mr. CLARK and the other committee, I did want to make it clear that the Agriculture Committee has held two sets of hearings on S. 1286. We are grateful for their work on behalf of water quality and also for their cooperation in this matter.

The Committee on Environment and Public Works recognizes the jurisdiction of the Committee on Agriculture, Nutrition, and Forestry over most of the Soil Conservation Service responsibilities, as I am sure the Senator from Iowa recognizes the jurisdiction of the Committee on Environment and Public Works over environmental legislation.

The Committee on Environment and Public Works does not in any way intend to usurp the jurisdiction of the Agriculture Committee. We chose to use the Soil Conservation Service to get at the difficult problem of pollution from farm runoff to avoid creating a new agency and a new bureaucracy.

We know the Soil Conservation Service is experienced in doing this work and we know the farmers have confidence in the Soil Conservation Service.

INDUSTRIAL DEADLINES AND THERMAL EFFLUENTS

Mr. MOYNIHAN. I would like to ask the Senator from Maine a question with regard to the bill S. 1952. Section 309 of the Federal Water Pollution Control Act is amended by section 38 of S. 1952 to deal with those industrial dischargers that are not in compliance with the July 1, 1977 deadline.

It is my understanding that new subsection (5) of section 309(a) gives the administration of the Environmental Protection Agency several options for dealing with noncomplying industrial sources. New paragraph (A) instructs the Administrator to require compliance within 30 days in the case of an interim compliance schedule and, in the case of a final deadline, the Administrator has the authority to require compliance within a time determined by the Administrator to be reasonable.

It is also my understanding that new paragraph (B) of new subsection (5) relates to those industrial sources which are subject to permit restrictions under section 402 of the act. In such cases, the Administrator has the authority to grant an extension to the July 1, 1977 deadline which will require compliance by a date no later than January 1, 1979.

My primary concern, for the moment, is the thermal effluent from steam electric powerplants and the way in which amended section 309 will deal with such a discharge. The treatment of thermal discharges presents a special problem because of important economic and energy considerations. It costs $60 to $100 million to retrofit a cooling tower on a single powerplant. In addition, it can take 24 or more months to complete the construction, at time during which the plant must be removed from operation for 6 months. This has implications for the reliability of the impacted electrical system.

In the New York City area there are six powerplants, without cooling towers: Indian Point in Westchester County, Roseton in Dutchess County, and Bowline in Rockland County. These plants represent a significant portion of the electrical generating capacity of the region. Closing these plants simultaneously would seriously impact the ability of the local electric utilities to reliably supply energy.

The installation of cooling towers also results in a reduction of the power output from electrical generators. If cooling towers were retrofit on the six power plants mentioned above, the cost to New York residents to replace the lost capacity with an energy equivalent of oil would be $840 million per year.

The Federal Water Pollution Control Act recognizes the special nature of thermal effluents from powerplants by providing under section 316(a) for possible waivers from thermal effluent limitations. Several powerplants, including those that I have mentioned in the New York City area, are under study for possible exemption under section 316(a). Strictly speaking, these powerplants are not in compliance; so the question arises as to

how the administrator will deal with such noncomplying sources.

It is my understanding that the Environmental Protection Agency will deal with thermal effluents from powerplants under new paragraph (A) of section 309 (a)(5). That is, if a 316(a) study finds that a powerplant must comply with an effluent limitation, then the administration will require compliance within a reasonable amount of time. Furthermore, new paragraph (B) will not apply to thermal effluents from powerplants.

Is my interpretation correct, Senator?

Mr. MUSKIE. The Senator is correct in his interpretation of section 38 of S. 1952. I would, however, clarify the interpretation of section 316(a) of the Federal Water Pollution Control Act.

The Senator from New York is correct in his statement that section 316(a) provides possible waivers for federally promulgated thermal effluents limitation. In fact, this was the only waiver provision from effluent limitations required by those amendments. The intent was to allow for a limited number of waivers for federally promulgated thermal effluent limitations if the source could show that those effluent limitations are more stringent than necessary to assure protection and propagation of balanced indigenous populations of shellfish, fish, and wildlife in and on the body of water into which the discharge is made.

Another misunderstanding seems to exist with respect to section 316(a), in that the provision does not preempt State water quality standards or effluent limits for heat. With regard to all pollutants, including heat, the Act allows the States to establish standards that are more stringent than Federal standards.

The result of the delays in treating thermal effluents under section 316(a) is that today heat is an unregulated pollutant. It is the intent of the law, and my hope, that the Administrator will expedite pending 316(a) proceedings so that thermal effluent limitations may be established and so that the job of treating this pollutant can proceed.

Mr. CRANSTON. Mr. President, I want to commend the manager of the bill for his outstanding work in bringing this important measure to the floor prior to the August recess. Since June 1, the Senate Environment and Public Works Committee conducted 15 days of public hearings on the Federal Water Pollution Control program and spent 2 weeks of intensive markup sessions to complete its action on the bill.

I strongly support the Clean Water Act of 1977 as reported by the Senate Environment and Public Works Committee. The committee bill authorizes an additional $26.5 billion for the construction of municipal sewage treatment plants, extends authorizations for the Environmental Protection Agency's water cleanup programs, and makes a number of changes and refinements in the 1972 Clean Water Act based on our last 5 years of experience with the water pollution program. I am particularly pleased to see the committee's modification of the 1972 Act with regard to the secondary treatment requirements for existing publicly owned treatment plants which discharge wastes into marine waters.

I know that the Senate Environment and Public Works Committee heard from many of my constituents, California coastal cities and counties, questioning the need for costly secondary treatment for those municipalities who discharge into ocean waters. I greatly appreciate the committee's taking their testimony into account.

California has had considerable experience with discharges of municipal wastewater into deep ocean waters, and numerous scientific studies have been made of the performance of existing systems in the State. To date no evidence has been developed to demonstrate the need for secondary treatment to treat biological oxygen demand—BOD—in such deep ocean discharges. On the contrary, environmental scientists, engineers, municipal officials, and California State agencies have all concluded that BOD is not a significant pollutant when discharged through deep ocean outfalls into ocean waters.

However, under the Federal Water Pollution Control Act of 1972, all municipalities including ocean dischargers must go to secondary treatment this year. If left unchanged, this secondary treatment requirement would have resulted in large expenditures in instances where there is no measurable water quality benefit. The California Water Resources Control Board estimates that capital costs to construct marine waste disposal treatment systems in California would be $454 million to meet State ocean plan requirements, but would increase to $899 million under the 1972 Federal BOD requirement for major municipal dischargers. In addition, operation costs would almost double.

I am convinced that the best method to solve the sewage treatment problems of a city discharging into marine waters is not necessarily the best method to solve the problems of other cities situated differently in the United States. I believe the administrator of the Environmental Protection Agency should have the authority to waive the secondary treatment requirement for cities discharging into marine waters if certain requirements are met, such as demonstrating that the discharge would not affect drinking water supplies or interfere with the achievement of national water quality standards. I understand that the committee's bill amends section 301 of the 1972 Clean Water Act to give the administrator of EPA this flexibility, and grant waivers for secondary treatment on a case-by-case basis.

Mr. MUSKIE. I thank the senior Senator from California for his comments. He is correct that the bill before us grants the Administrator of EPA the authority to waive the secondary treatment requirement for existing municipal treatment plants under specific conditions. The provision is designed to provide an opportunity for communities in California and elsewhere as the Senator from California mentioned.

To make a case for something other than secondary treatment, I would hope the result of this flexibility would be a greater emphasis on reclamation and recycling of wastes rather than continued discharge of freshwater and nutrients to the oceans.

I would like also to emphasize as I did in my colloquy with Senator JACKSON, that while this amendment provides relief for the discharge of conventional pollutants, the provision is not intended to in any way relax the overall objective for publicly owned treatment works to achieve recycling of water and confined and contained disposal of pollutants. It is expected, therefore, that Seattle METRO and others qualifying for the provision will, as part of permit conditions, apply research and development resources to continue to develop systems which will achieve these objectives.

Mr. CRANSTON. I am delighted that this is the case. I had intended to offer an amendment on the floor to give the administrator of EPA flexibility with regards to ocean dischargers had this problem not been taken care of in committee. I again thank the senior Senator from Maine for his good work and his assistance in resolving this problem.

EXPEDITED DREDGE AND FILL PERMITS BY SECRETARY OF THE ARMY

Mr. MATHIAS. Mr. President, harbor dredging and filling activities are essential to maintain the flow of commerce into and out of our Nation's ports. A major problem facing the port authorities around the country is the long delay they experience in securing U.S. Army Corps of Engineers permits for these vital harbor activities.

For example, Baltimore Harbor recently suffered through a delay of 3 years to gain a permit for a minor 5 acre filling project. And it took 5 years to obtain a permit for a diked disposal area vital to maintenance and new dredging activities in Baltimore Harbor.

The lengthy permit process resulted in higher dredging and construction costs to both the State and Federal Governments. The bill before us attempts to deal with this time delay problem by encouraging, to the maximum extent practicable, that decisions on permits be made within 75 days after a public notice is issued.

I wholeheartedly concur with this proviso and hope that it will spur the Corps of Engineers and the agencies with which it must consult to adhere to a time certain for reaching decisions on section 404 dredge and fill permits.

The problem of long delays experienced in securing dredging and filling permits was recently discussed in a publication of the U.S. Department of Commerce entitled, "Untangling Dredging Regulations." The Department of Commerce concluded that:

> Shortening the time required for permit approval is the most beneficial of dredging regulation reforms.

Unquestionably, a certain amount of time is necessary to prepare environmental analyses, conduct public hearings and complete technical work on major dredge and fill applications. Presently, Corps of Engineers' decisions on appropriate levels of environmental analysis and public hearings requirements are performed or decided at the District level. Typically, for example, a staff of environmental specialists in the district office

prepares environmental assessments or environmental impact statements. By shortening the decisionmaking time frame at higher levels, we are merely forcing positive or negative decisions in a timely fashion based on information already prepared at the district level.

Upper level decisionmaking or review presently operates in an adjudicatory fashion without additional analysis being performed.

A look at the way this "bucking" process works illustrates the need for the time proviso in this bill. For example, if another Government agency objects to the application, the Corps of Engineers sends the application from the district level office to the divisional office; then to the Chief of Army Engineers, and ultimately to the Secretary of the Army. The Department of Commerce study indicates that this process gives the objecting agency an indirect "veto power" because of the very long delays that occur when a proposed project must go to the Secretary of the Army for approval.

The Corps of Engineers' division office, the Chief Engineer's office, and the Secretary of the Army only decide one way or another on a permit application which has received adverse comment. No additional environmental analysis is undertaken, nor is any other substantive technical work performed. Yet, months and even years of delay can occur while a decision is debated at higher levels. This potential for delay exists simply because there is no time limit for the final decision.

The bill before us would expedite the decisionmaking process on section 404 dredge and fill permits by setting a time certain for those decisions whenever possible.

This approach is similar to that of the Deepwater Port Act, which requires the Secretary of Transportation to approve or disapprove a proposed deepwater port site within 90 days after the last public hearing.

I ask my colleague from Vermont if the facts that I have outlined here concerning the bill's provisions for timely decisions on 404 permits are correct?

Mr. STAFFORD. Mr. President, I am pleased to report to my good friend, the distinguished Senator from Maryland: First, the committee amendment requires the corps to issue the public notice on every permit within 15 days of receipt of a completed permit application; second, the committee amendment directs all Federal agencies involved in the permit review process to speed up their coordination procedures with the goal of issuing permits within 75 days of the public notice.

The committee is concerned with the delays that some have experienced on getting decisions on their permit applications. Several approaches were considered to address this problem.

In some of the cases where delays have been excessive, the committee found that the cases were extremely controversial and the modifications of the water resources extensive. At the same time, the committee discovered that some of these cases were also delayed by disagreements between Federal agencies involved or the review of a particular project, and that these disagreements resulted in a "paralysis analysis" between these agencies.

The committee's amendment corrects this situation.

It should also be noted that the corps has just published revisions to its regulation that will streamline the review process and much of this unneeded delay in the processing.

I believe these two approaches will respond to this problem.

Mr. MOYNIHAN. Mr. President, the Committee on Environment and Public Works has today reported a bill which amends the Federal Water Pollution Control Act. These are fair and sensible amendments, which deal successfully with several issues of greatest complexity. It is particularly pleasing to me that the committee was able to strike a balance between environmental protection and economic growth, and that it recognized and attempted to resolve the local administrative problems that the 1972 laws had created. I would like to take this opportunity to elaborate on several sections of the bill to demonstrate these points.

ENVIRONMENT AND THE ECONOMY

Environmental and economic objectives conflict because environmental protection costs money—lots of it—and because environmental legislation constrains economic activity. These are facts of life which imply that one can achieve improved environmental quality only if one is willing to make some sacrifices. This tradeoff is of particular significance for large urban areas which, independent of any environmental constraints that the Federal Government chooses to place on them, face economic distress. The Committee on Environment and Public Works demonstrated admirable sensitivity to this issue in making its "mid-course corrections" to the 1972 Clean Water Amendments.

One of the major issues that the committee took up is the 1983 requirement for "best available technology"—the next round of water pollution abatement alternatives. The enormous expense of treating the next few percent of pollutants for some industries was brought to the attention of the committee. It was clear that the tradeoff between water quality and the costs of achieving it had to be carefully examined before the next control step was taken. The committee has proposed, therefore, to give the administrator of the Environmental Protection Agency—EPA—the authority to grant a waiver from the 1983 requirements for those dischargers whose treatments costs outweigh the water quality benefits to be gained from the treatment.

In the same spirit, the committee has proposed a provision which gives EPA the authority to grant extensions of the 1977 technology requirement deadline to those industrial dischargers who have acted in good faith in attempting to comply with the deadline. In passing this provision, the committee recognized the effort that the overwhelming majority of the industrial dischargers has put forth in attempting to comply with the deadlines, and that it would have been unnecessarily punitive to penalize those industrial dischargers who failed to comply with the deadline for reasons largely beyond their control.

Sensitivity to economic consequences does not imply that the environmental values of the Nation are to be ignored or abused. The committee demonstrated that it could accommodate valid economic motivations for waivers from environmental controls without abandoning a strong environmental protection program. The committee indicated that it would not tolerate a weakened control program for toxic pollutants. The wetlands program of section 404 of the 1972 act is also intact; the modifications of the program are minor, excluding only incidental agricultural and silvicultural activities from the regulatory program.

The bill that has been reported today, particularly the sections that I have cited, demonstrates that reasonable accommodations can be achieved on the most controversial issues of environmental protection. The actions of the committee, and, I anticipate, of the full Senate, augur well for a balanced approach to environmental protection.

LOCAL ADMINISTRATION OF FEDERAL PROGRAMS

Many large Federal programs necessarily impact localities, usually in ways that are intentional, but occasionally in a manner that was not intended. Such was the case with the 1972 Federal Water Pollution Control Act which, by intent, affected local water quality but, in so doing, presented many local governments with inordinately large administrative burdens. Two aspects of the local administrative burden of the 1972 act—metering and industrial cost recovery—are alleviated by the bill which the committee has reported.

The act requires that localities which receive Federal grants for the construction of a sewage treatment plant must establish a plan for collecting from the users sufficient funds for the proper operation and maintenance of the treatment plant. The 1972 act further required the collection to be based on water metering. Many localities, however, do not have water meters, and others have historically used different mechanisms for collecting operating funds. There are no compelling reasons for the Federal Government to insist on metering. There is no justification for the constraints that the 1972 act places on local governments.

The intent of Congress in 1972 was to insure that adequate funds for sewage treatment would be available. Congress did not want to create local administrative problems, but it did, inadvertently. Accordingly, the committee adopted my amendment which, by permitting other user charge plans, focuses the law on the perceived problem—adequate operating funds—without imposing unreasonable burdens on localities.

The requirement for industrial cost recovery is another provision of the 1972 act that resulted in a large, albeit unintended local administrative burden. The 1972 act requires the recipient of Federal funds to recover and repay that portion of the funds attributable to industrial users of the sewage treatment plant. For the prototypical city of average size,

characterized by a few, large industrial dischargers, the industrial cost recovery provision makes sense. The requirement, however, has caused severe administrative problems in many large, older cities which have many small industries. Industrial cost recovery also creates inequities in those very large cities which have several separate sewage treatment systems. In such urban areas, identical businesses may be required to pay very different amounts due to historical location patterns that have put the businesses in different sewage treatment systems.

The committee reacted to these local problems by adopting amendments that will alleviate the problems without modifying the intent of the 1972 act. Large cities with multiple treatment plants can now consider them as one system for the purpose of industrial cost recovery. This permits an equitable treatment of industrial dischargers.

The committee also adopted an amendment to exempt small businesses from cost recovery. This is a reasonable modification that recognizes the economic problems that small businesses are experiencing. The exemption also avoids the large administrative costs, in many cases greater than the recoverable costs themselves, that are required to collect the capital cost from small dischargers.

The committee has worked hard to improve the Water Pollution Act. A reduction in administrative complexity while providing local flexibility without altering the intent of the law constitutes a significant improvement, indeed. Streamlined Federal legislation which is easier to implement at the local level is an admirable goal that we have achieved with this bill and that we should attempt to attain in other legislative areas.

Mr. INOUYE. Mr. President, I wish to heartily commend the leadership of the Committee on Environment and Public Works for their most comprehensive review of our Nation's water pollution control program and especially for their sensitivity for responding to the unique needs of the State of Hawaii.

I understand that one of the recommended modifications proposed by the committee's Clean Water Act would permit a case-by-case waiver of the secondary treatment requirements for coastal communities which discharge wastes into areas with strong tidal action. A series of conditions are included to assure that the waiver is only available for discharges that will not interfere with the attainment or maintenance of water quality which assures protection of public water supplies and propagation of a balanced population of shellfish, fish and wildlife, and allows recreational activities, in and on the water.

Since 1973, the committee has been considering the plight of Hawaii, Guam, American Samoa and the Trust Territories of the Pacific's truly unique ecological composition and the expected adverse consequences that a strict enforcement of the secondary sewage treatment requirements would have on our ecology, coral, fishlife, et cetera. Hawaii State agencies, in conjunction with local environmental groups and the University of Hawaii, have reviewed the probable impact of deep ocean outfall off Hawaii and concluded that no deleterious effects on the receiving environment would result. A detailed study also reported that discharges with less than secondary treatment would probably provide a beneficial effect due to the availability of organic nutrients to zooplankton.

On March 18, 1974, the Subcommittee on Environmental Pollution, Senate Committee on Public Works, held extensive hearings in Honolulu on this very matter.

Accordingly, I am most pleased to see that this issue of extreme importance to the Pacific Basin area has been specifically addressed in the committee's bill and that the administration will have the authority to make those case-by-case exemptions that are deemed appropriate.

COLLOQUY

Mr. JACKSON. Would the Senator yield?

Mr. MUSKIE. I am happy to yield to the junior Senator from Washington State.

Mr. JACKSON. I was very pleased to note that the Environment and Public Works Committee addressed the important question of modifications to secondary treatment requirements, especially as it relates to discharges into marine waters.

As the Senator from Maine knows so well, Senator MAGNUSON and I have long felt that action needs to be taken to relieve Seattle Metro of the burden of moving to secondary treatment of their four treatment facilities which discharge into deep, saline waters of Puget Sound.

While there is no argument as to Seattle Metro's intent to maintain our water quality in accordance with the fishable, swimmable goals of Public Law 92–500, neither do they want to be slapped with a potential bill of $150 million—the costs of moving the secondary treatment—without there being some significant benefit in water quality. Extensive studies conducted over the last several years have suggested that the existing discharges of conventional described pollutants have no adverse impact upon water quality in the Puget Sound.

It is my understanding that to be eligible for a waiver of the secondary treatment requirements, the Administrator of EPA must make a determination that Seattle Metro meets the six stringent requirements outlined in the bill we are considering today. At a recent hearing in Seattle on June 6, and in many previously printed reports, the Metro people have put forth evidence that they should be able to satisfy these criteria.

My question to the Senator is, does the committee intend that the central basin of Puget Sound be included within the committee's definition of "marine waters"?

Mr. MUSKIE. The answer is "Yes." In fact, it was the specific instance of Seattle which prompted the committee to address the secondary treatment question. As the Senator realizes, the Administrator of EPA is responsible for defining "marine waters" in those hydrological and geological characteristics necessary to insure that the modified secondary treatment requirements would not jeopardize the goal of attaining and maintaining water quality which will provide for the protection of public water supplies and the protection of the propagation of fish, shellfish, and wildlife, and allow recreation, in and on the water. I think it is clear that the extensive research done by Seattle Metro and other west coast dischargers will assist the Administrator in defining those characteristics.

I would like to emphasize that while this amendment provides relief for the discharge of conventional pollutants, the provision is not intended to in any way relax the overall objective for publicly owned treatment works to achieve recycling of water and confined and contained disposal of pollutants. It is expected, therefore, that Seattle Metro and others qualifying for the provision will, as part of permit conditions, apply research and development resources to continue to develop systems which will achieve these objectives.

Mr. JACKSON. I wish to thank the Senator and indicate that his answers are consistent with my understanding of the committee report as well.

Mr. STONE. Mr. President, this year the committee bill provides for delegation of phase 2 and 3 permit authority under section 404 to those States with approved programs for control of discharges for dredged and fill material. As the Senator from Maine knows, my own State of Florida has been a leader in the protection of wetland areas and has established a permit program to control those discharges. Is this the kind of program the committee had in mind when they provided for this delegation?

Mr. MUSKIE. Yes; in fact the committee was impressed by the testimony of Jay Landers, secretary of the Florida Department of Environmental Regulation who requested us to authorize State delegation.

Mr. NUNN. Will the Senator from Maine yield for a few questions to clarify certain provisions of the pending measure?

Mr. MUSKIE. I am delighted to yield to the Senator from Georgia.

Mr. NUNN. I thank the distinguished Senator. It is my understanding that, under this amendment, a State may receive authority to regulate dredge or fill activities in phase II or III areas whether or not it has completed its section 208 planning and had its 208 programs approved. Is that correct?

Mr. MUSKIE. Yes, the Senator understands this correctly.

Mr. NUNN. Therefore, is it true that a State with such authority could issue a general permit for agricultural, silvicultural, mining and other nonpoint source activities described in section 208 before it has obtained approval of its section 208 program?

Mr. MUSKIE. Once again, the Senator is correct. The answer is yes.

Mr. NUNN. I believe that general permits for dredge and fill activities can help eliminate lengthy delay and administrative redtape. However, it is important that such general permits be drafted in a reasonable manner so as not to negate their usefulness. For example, the corps' proposed general permit for mining in Georgia contains a require-

ment that even though an activity is generally permitted, a person wishing to conduct such permitted activity must still give the corps notice 45 days in advance of conducting the activity. The corps then would have an unlimited time to approve or disapprove the activity. Thus, the corps in essence is requiring activities to be individually permitted even though it purports to generally permit the activities. Obviously, this procedure imposes burdensome and potentially lengthy delays which could severely disrupt normal mining activities.

For general permits to be meaningful, it seems to me that once a general permit is obtained, it should authorize activities generally without separate approval being required before undertaking each such permitted activity. Am I correct that the general permits contemplated here are intended to grant permission to conduct activities without such separate approval from the corps or a State each time that activity is to be conducted, or without any more than reasonable notice?

Mr. MUSKIE. Yes; the Senator is correct.

Mr. NUNN. I thank the Senator.

Last month, the corps issued nationwide permits with respect to certain dredge and fill activities. This amendment contemplated such permits, and I assume that your committee thought the activities now permitted in the corps' nationwide permits are within the powers of the corps by these amendments.

Mr. MUSKIE. The committee did not specifically endorse the corps' nationwide permit regulations already issued. The content of such general nationwide permits would be a matter of agency interpretation of the language of this amendment. The bill does, however, grant authority for nationwide permits as contemplated in the recent corps regulations.

Mr. NUNN. I thank the Senator from Maine for his clarification.

Mr. JACKSON. I have another question also related to the marine waters of Washington State, which I would like clarified. Washington has a number of pulp and paper mills which, while taking action to comply with the secondary treatment requirements of Public Law 92–500, are currently in court in an attempt to clarify certain BOD discharge differences between themselves and EPA with regard to secondary treatment. In the committee report there is language authorizing up to an 18 month extension of the 1977 deadline where the administrator finds that the discharger acted in good faith in an attempt to meet the best practicable technology for industrial discharges.

My concern here is the words "good faith," because I do not believe that the committee intended that just because a party or parties are in litigation necessarily serves as prima facie evidence of bad faith. Is it not true that a source could be involved in seeking available administrative or judicial relief from the requirements of this act and still be found by the administrator to be acting in good faith?

Mr. MUSKIE. Certainly, but that is something on which the administrator must make the final determination before providing any extensions.

Mr. JACKSON. The reason I am pursuing this matter is Washington State's Department of Ecology has been working with all of the mills currently in the above-mentioned court case and is now at the point of agreement with five of the six mills in question, and they will install secondary treatment facilities. So that the record will be clear I would request that the Washington Department of Ecology statement of March 1, 1977 on this matter be included in the RECORD at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

WASHINGTON DEPARTMENT OF ECOLOGY PUBLIC STATEMENT

Acting D.O.E. director Wesley A. Hunter expressed his disappointment today, March 7, on the decision by the E.P.A. to take legal action against six Pudget Sound area pulp and paper mills. Hunter said, "this is a highly technical issue complicated by legal procedures. The state has been working closely with the industries involved to bring about water quality improvement, and this action may, in fact, delay clean-up. Complicated environmental, technical, economic and legal actions are involved. Added Federal litigation can only confuse and delay.

A major problem is that E.P.A. has delayed almost 2 years after their own deadline in promulgating the national guideline. As a result, industry appeals of the guidelines have extended past the compliance dates in the state's permits.

The D.O.E. has been in litigation with all six of these mills for two years trying to achieve the secondary treatment requirements mandated by Congress. We are now at the point of agreement with five of the six mills in question, and they will install secondary treatment. EPA wants us to impose monetary penalties against these mills because they took appeals which were authorized by law.

The state has been involved with regulating waste discharges with the pulp and paper industry since 1945. In 1972, Congress passed Federal legislation authorizing the EPA to establish national guidelines covering waste discharged from industrial plants. The states were then required to issue waste discharge permits consistent with EPA guidelines.

Mr. CHAFEE. During the markup of the Clean Water Act I requested that the EPA conduct a study to determine whether certain seafood processors could safely dispose of natural wastes resulting from their operation into marine waters in an untreated state. That study is described in the report on page 82. I made the request because of my interest in helping resolve an issue that came before the committee shortly before markup. It is my understanding that several States such as Alaska could be affected. Senator GRAVEL, are there any other items that you had in mind to be included in the study when we discussed this in markup?

Mr. GRAVEL. Yes, in addition to the study of the merits of the case and the environmental effects of disposal without treatment of natural wastes, I would understand the study would cover the costs of providing additional treatment and the benefits to be derived from the additional treatment. Also, the study would include consideration of alternative methods of dispersal, alternative locations for discharging and whether the wastes could economically be used in some other product, such as in the making of fertilizer. Any discussion of costs would of course make reference to the profits of the companies. In discussing the biology of the receiving waters I would think the study would delve into the question of what organisms or other fish or mammal life feed on the wastes and at what rates of consumption. With regard to the hydrological characteristics of the receiving waters I would think the study would discuss among other things the flushing effect of tides and currents. With regard to dispersal of wastes, I would think the study would be incomplete without a thorough analysis of the plausibility and environmental effect of moving the outfall line to eliminate the problem of accumulation of wastes as well as other methods of dispersal.

Mr. CHAFEE. Yes, those are essentially the same things I had contemplated the study would address. Other than EPA and the National Marine Fisheries, I would think that university research groups well versed on the subject should be contacted.

Mr. GRAVEL. I agree. For example, the University of Alaska Institute of Marine Sciences or other universities in the locale of the problem should be asked. In addition, I would think EPA would consult with the industry and the affected State or States.

Mr. CHAFEE. Yes, and any other agencies or individuals whom the EPA felt would be able to contribute constructively to the resolution of the question. Well, I appreciate your thoughts. They are parallel to mine regarding the study. And the Environment and Public Works Committee will receive the results of the study by the first of next year.

Mr. GRAVEL. Yes, that is right. And thank you for your sponsorship of the study which will be helpful to all of us in deciding the question.

THE CONSTRUCTION GRANT FORMULA

Mr. MATHIAS. Mr. President, under the formula proposed in this bill for construction of sewage treatment facilities, Maryland's share of the national pot of money would be reduced by 48 percent. The reason for this is because the category III–B of the SPA Needs Survey has been dropped from the Senate formula for no apparent reason.

I am shocked that this proposed formula change has this effect on my home State as well as several other States. And I would hope my colleagues would see the patent unfairness of this radical difference in the construction grant formula.

Earlier today, we attempted to address this problem by approving an amendment which restricted any State's funds reduction to not more than 25 percent. This partial relief, however, does not address the longer range problem with which many States are faced—a sharp reduction in construction grant funding.

Under category III–B which contains needed major sewer rehabilitation, Maryland's need had totaled 20 percent of the total national needs in this category. The reason my State had such a high share of those needs is because a good deal of the water and sewer systems in Maryland are separate with

wastewater in one system and sewage in the other.

With the exception of New York City and a few other areas of the country, Maryland is unique in this respect. Most States have combined systems.

Much of the sewer system and water system in the Baltimore and Washington, D.C. metropolitan areas is 40 to 60 years old and in need of major rehabilitation. Without category III–B, these systems cannot be repaired and updated. The quality of water in those municipal water supplies will be threatened and economic growth and development will be further stymied due to water and sewer moratoria which the State health department is forced to impose on those areas. For example, in Prince Georges County, the Anacostia drainage basin has been under a building moratorium since 1971 due to its overloaded existing sewage system. This system cannot be upgraded and expanded without funds from this construction grant program.

Under the formula proposed in this bill, my State will experience almost a 50-percent cutback in funding. The State cannot qualify for funds under any other needs category in this formula because of the unique nature of its separate water and sewer systems.

With the funding that will be available, it will take at least 5 years to complete work on one of our highest priority projects—expanded sewer capacity in the Washington metropolitan area. This is but one of 384 projects on Maryland's priority needs list for water and sewer construction.

As a result of this severe curtailment of funds, the Maryland pollution abatement plan, one of the more stringent in the country, will not be able to be implemented. Major rehabilitation projects of sewage treatment plants needed at Back River and the Patapsco River to serve the residents of Metropolitan Baltimore, will have to be put off indefinitely. Meanwhile, those aging plants will continue to deteriorate. We will be unable to update and expand the collector system there. Water quality for the Baltimore region will not improve, and may, in fact, deteriorate.

I would like to cite for my colleagues some of the other projects in Maryland which will have to be scrapped due to this radical formula change. Four towns presently dumping raw sewage into nearby rivers will get no relief. They are Oakland, which dumps its sewage into the Youghiogheny River, and the towns of Lonacoming, Barton, and Midland which dump into Georges Creek.

Three other Maryland towns which have only primary treatment facilities will not be able to move to secondary treatment because of the funds cutback resulting from this Senate formula. They are Aberdeen, Snow Hill, and Chesapeake City.

In Anne Arundel County on the Mayo Peninsula, a sewage treatment plant exists but there is a limited collector system to get the sewage to the plant. We had hoped to remedy that situation using construction grant money.

Mr. President, I have recited this litany of projects which will not come to fruition, to point out to the Senate just how serious the omission of category III–B is. I would hope the Environment and Public Works Committee would see the error in its ways in the formula it has come up with. Or at a very minimum, I would hope that when this bill is taken to conference, the House formula will prevail or the conferees will direct EPA to allow separate water and sewer systems in another needs category.

I thank my colleagues for their attention.

COLLOQUY ON BEST MANAGEMENT PRACTICES

Mr. McCLURE. The committee's bill introduces the term "best management practices" in connection with exempting certain activities from both section 402 and section 404 discharge permit requirements. Since this important term is not defined in either the bill or the committee report, I believe it is important to make the committee's intentions known. The following definition represents the meaning intended for that term is intended by the committe to mean an effective practicable means of preventing or reducing the amount of pollution from the discharge or dredged or fill material that shall be based on problem assessment; examination of alternative abatement practices; public participation; and on technological, economic, and institutional considerations. For areas found by a Governor to require application of BMP programs, the State is encouraged to adopt the most effective approach after consideration of financial incentives, technical assistance and education programs, or regulatory programs.

Mr. MUSKIE. The committee amendment does not define best management practices because it is intended that State agencies involved in the section 404 and 208 programs should be given administrative flexibility to develop practices, techniques, methods and performance standards that can be required to prevent the pollution of the Nation's waters. I believe that your definition reflects primarily the procedure by which such practices can be identified. It is not, however, exhaustive of the factors that should be considered in developing these practies.

Mr. McCLURE. As I understand the bill, until such time as the various States develop best management practices for a program submitted for approval under the new section 208(b)(4)(C), the Corps of Engineers will provide for such activities through general permits under section 404(f). General permits for such activities can be conditioned on compliance with management practices or standards. I believe that in order for a Federal agency to develop a workable set of management practices for application across the Nation to diverse situations, they ought to be stated in simple terms. This will allow easy application of these management practices by landowners of sometimes modest technical and financial means and easy adaptation of these nationwide practies to local conditions so as to optimize their effectiveness in controlling water pollution.

In fact, the Corps of Engineers has already developed a set of management practices by regulation in connection with nationwide permits under the existing section 404. One of those permits concerns the placement of fill material to enable minor road stream crossings. While I do not pass judgment on all those lengthy regulations, I believe that the management practices found at 40 CFR section 323.4(b)(1) through (8), 42 Fed. Reg. 37146 (1977), may satisfy the committee's intention as to the substance of best management practices.

Mr. MUSKIE. The committee amendment intends that, until a State develops best management practices, the Corps of Engineers may prescribe management practices and performance standards through permit conditions in general permits the types of management practices will vary depending on the nature of the pollution problem. I agree that these practices should be stated in simple, understandable terms as they are in the corps regulations. Management practices for minor road stream crossings are certainly appropriate for general permits, and the corps regulations should continue in this regard.

Mr. CHURCH. Mr. President, would the distinguished chairman of the committee yield for a brief colloquy?

Mr. RANDOLPH. I am happy to yield to answer the questions of my able colleague from Idaho.

Mr. CHURCH. As I understand it, section 404(e)(1)(A) as proposed under the committee's bill would exempt normal silviculture activities from the dredge and fill permit requirements.

Mr. RANDOLPH. The Senator is correct.

Mr. CHURCH. On page 77 of the committee report, I noticed that the term "normal silviculture activities" is interpreted as excluding for eastern mixed hardwood forests, "clearcutting of timber or harvesting associated with even-aged management of timber."

Would the diligent Senator from West Virginia agree then, that it is the committee's intention that the term "normal silviculture activities" may include clearcutting or other even-aged management techniques, if those techniques were used on forest lands other than eastern mixed hardwood forests?

Mr. RANDOLPH. Yes, the Senator from Idaho is correct. I know that in the Pacific Northwest, and other parts of the country, clearcutting and similar even-aged management techniques are fairly standardized. It was not the intent of the committee to necessarily require a dredge and fill permit for discharges resulting from such activities, except on the eastern mixed hardwood forests.

Mr. CHURCH. As my good friend from West Virginia is well aware, Congress last year in the National Forest Management Act adopted my guidelines on clearcutting. Those guidelines, which were first developed by the Public Lands Subcommittee back in 1972, and which were endorsed by the major environmental organizations and the forest products industry, have helped lessen the abuses which have occurred from poorly planned clearcuts. These guidelines are now the law of the land, and they should assure that clearcutting can continue to be safely used on the national forests in the West.

Mr. RANDOLPH. The Senator from Idaho has demonstrated a leadership role on this issue, and I certainly appreciate having his thoughts. He knows that I have been an active advocate for selective cutting in many areas of the country.

Mr. CHURCH. I thank the distinguished chairman for yielding on this point and helping us to set forth this clarification.

KIRKWOOD COLLEGE'S ENVIRONMENTAL EDUCATION PROGRAM

Mr. CULVER. Mr. President, the Federal Water Pollution Control Act Amendments of 1972—Public Law 92–500—included an authorization of $250,000 in section 109(b) for financial assistance to States for establishing State centers for training wastewater treatment plant operators. These training centers are to help provide communities with well-qualified personnel for operating and maintaining highly technical and complex municipal treatment systems.

The first training center to be established under this provision was at Kirkwood Community College in Cedar Rapids, Iowa. In 1976, Kirkwood opened the doors of its modern facility constructed with funds from this program, and Iowa communities are eagerly taking advantage of its location in Iowa. Kirkwood's experience with this source of funding and its leadership role in environmental education have, however, highlighted several shortcomings in this section of the law.

The original authorization for this program is simply inadequate to meet the growing costs of constructing a modern, well-equipped State facility for training municipal wastewater treatment operators. The State of Iowa and Kirkwood College, for instance, had to subsidize over $100,000 of the total amount of money needed to establish Iowa's training center, and bids at this facility exceeded the $250,000 authorization by at least 50 percent.

Additional funds will be needed to install such necessary equipment as digesters, sludge drying beds, and analytical devices to complete the center, and these additional items will not be inexpensive. I understand that those other States which are developing State wastewater training centers under section 109(b), such as Maryland, New Mexico, Colorado, and Oklahoma, are having similar difficulties; and the insufficient level of authorization may be a deterrent for participation in some instances.

The $26 billion authorization for sewage treatment construction grants in the legislation before the Senate today strongly reaffirms the commitment of the Federal Government to helping cities and communities fund the sizable public investment in municipal treatment facilities. If we are going to make progress in reducing the discharge of municipal effluents into our rivers and streams, we must have the manpower to run the complicated treatment systems properly. Local officials in Iowa have indicated to me on several occasions the need for well-trained personnel, and it is clear from our experience under this provision of the Clean Water Act that the authorization must be increased in order to let States develop the most up-to-date training facilities. I am gratified that the Committee on Environment and Public Works approved an amendment which I offered to increase the authorization for training grants from $250,000 to $500,000. This new level of funding is prudent and reasonable and will encourage more States to use this source of funding for programs providing individuals with the necessary skills.

The committee also approved a provision in the bill we are now considering which would exempt applications for training grants under section 109(b) from the requirements for applications for municipal treatment construction grants. Presently, the Environmental Protection Agency, EPA, applies to those grant applications for training centers the same procedural conditions, especially State priority listings in section 204, that are now required for municipal treatment grant applications. The training facilities are not intended for "on-line" treatment of municipal discharges and are over and above the regular State allocations for wastewater treatment construction grants. This process has resulted in costly and unnecessary delays at Kirkwood Community College. The committee's amendment remedies this problem by exempting applications for training center grants from the requirements applicable to treatment plants in section 204.

Mr. President, recently the Community & Junior College Journal contained an article about Kirkwood Community College's leadership in the field of environmental education and sewage treatment training. Kirkwood began training treatment plant personnel in 1969, and it has conducted seminars on wastewater treatment for the Department of Defense and the EPA throughout the country and overseas. I believe Kirkwood should be commended for its outstanding role in meeting the growing demand for wastewater plant operators. Iowans are fortunate to have Kirkwood's far-sighted curriculum in environmental science located in our State.

I believe that article from the May 1977 issue of the Community & Junior College Journal fully describes Kirkwood Community College's landmark efforts in environmental studies, and I would like to ask unanimous consent to have it made a part of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KIRKWOOD ACCEPTS NEW LABEL AS "THE HARVARD OF THE SEWAGE WORLD"

(By Bill Duffy)

A national radio commentator recently took America's colleges and universities to task for ignoring certain essential training areas because it might tarnish their images. He should visit Kirkwood Community College in Iowa today.

The commentator used the example of sewage treatment technology in his admonition. He said that thousands of waste-water plant technicians will be needed in the coming decade. Nobody was interested in training them, he said, because sewage just isn't one of your basic glamor fields in society.

Kirkwood began training plant operators in 1969, and today the Eastern Iowa school is being praised as a leader in the field of environmental studies as well as water treatment and wastewater plant operator training.

The college used federal and state manpower grants to conduct its first training classes in 1969. In the early 1970's the school was selected by the U.S. Defense Department to sponsor overseas classes in water and wastewater treatment under "Project Transition," designed to provide U.S. GIs with preparation for careers after discharge.

The Environmental Protection Agency selected Kirkwood to conduct a workshop for municipal officials in 1972 at Annapolis, Md. The program was designed to encourage administrative support for water and wastewater plant operator training.

As manpower funds for the training were phased out, Kirkwood added wastewater technology to its own growing curriculum. The school also gained recognition for its training programs for environmental health technicians.

The college has agreements with the city of Cedar Rapids allowing student groups to use the city's facilities for laboratory purposes.

Kirkwood's willingness to take responsibility in wastewater training paid off in 1973 when the U.S. Environmental Protection Agency began doling out construction grants for state training centers for municipal treatment plant operators. Kirkwood received the first of the 50 grants, and in 1976 opened its modern pilot facility for training and upgrading of some 3,000 Iowa plant operators and technicians.

There's a new concern about efficient operation of the plants, which in turn means less pollution for the nation's rivers and streams .

The new image is appealing to different people now. A good example is Richard Marshall, who studied anthropology for three years at a state university before switching to wastewater training at Kirkwood.

"I like mechanical things, I like being outdoors and I like the chance to run my own operation," explains Marshall. He's now the wastewater plant operator for the small town of Mount Vernon, Iowa.

In addition to wastewater technology, Kirkwood offers a full-time curriculum for environmental health assistants. Many graduates are employed by city, county and state agencies.

And how does President Selby Ballantyne feel about his school's image? "Some people are calling us the Harvard of the sewage world, and I'm perfectly happy about that," he said.

FINANCIAL ASSISTANCE FOR REDUCING AGRICULTURAL RUNOFF

Mr. CULVER. Mr. President, the Federal Water Pollution Control Act Amendments of 1972 (P.L. 92–500) represented a fundamental shift in our Nation's approach to improving water quality. It strictly regulated the discharge of pollutants from point sources such as sewers and industrial discharges by a permit program. On the other hand, section 208 of Public Law 92–500 established an area-wide planning mechanism for controlling nonpoint source pollution such as silviculture and soil erosion.

Under this latter provision, the Governor of each State is required to identify each area within his State with significant water quality problems and to designate an agency for developing an effective regional water quality management plan. Among its basic tasks, the designated 208 agency must establish

procedures for controlling various nonpoint sources of water pollution at the local level.

The broad goals of the continuing planning process are to assure that the necessary arrangements are established to implement coordinated decisions to achieve our water quality goals. Under this process, guidelines for regional "Best Management Practices" have been identified by the EPA for improving water quality. Such conservation practices must be compatible with water quality goals and should be the most effective measures for preventing pollution. Because of the variability of sources and geography, no one "Best Management Practice" will be applicable to all activities. They must be tailored to local needs, and local expertise will be utilized in the final selection.

Almost one-half of the available land area of the United States is committed to some kind of agricultural activity. Routine farming operations release substantial quantities of contaminants including sediment, salts, nutrients, pesticides, organic materials, and pathogens into our waterways. It has been estimated, for instance, by the U.S. Soil Conservation Service, that cropland is responsible for 50 percent of the total sediment entering inland waterways.

The problems of nonpoint source pollution have increased significantly over the last several years, and a growing number of recent studies have demonstrated the magnitude of nonpoint water pollution. The suspended solids reaching our Nation's streams from agricultural runoff are 700 times greater than those from sewer discharges. Over 400 million acres of cropland contribute 2 billion tons of sediment annually to our streams, lakes, and rivers; and total phosphorus emissions from nonpoint sources may be as high as 800,000 tons annually.

Nonpoint source pollution may be so severe as to overshadow current water quality improvements from controls on point sources. In fact, the National Commission on Water Quality indicated last year that nonpoint source pollution may prevent the attainment of the water quality goals of the Federal Water Pollution Control Act.

Agricultural runoff represents a dual loss to our Nation. Soil erosion both depletes the productivity of our land and degrades water quality. By reducing this form of nonpoint source pollution, we conserve our topsoil and improve water quality. The investments for controlling nonpoint sources under section 208 are substantial and place a major burden on the average landowner. The National Water Quality Commission, for instance, estimates that the costs of instituting appropriate practices could be as high as $12 billion. To help landowners comply with water quality goals, a system of technical and financial assistance for instituting conservation practices for improving water quality is essential. Without such an arrangement, it will be difficult to expect farm operators and owners to implement the necessary practices for reducing soil erosion and improving water quality.

We must recognize that effective water quality-related soil conservation practices will benefit all of us. Existing soil conservation practices have simply not been effective in addressing the problem of water degradation. The General Accounting Office, for example, recently reported that existing measures are too production-oriented and not geographically related. Currently, there is no attempt to focus conservation efforts on those areas which have serious water quality problems caused by soil erosion.

Mr. President, the Environmental Pollution Subcommittee has long been concerned about the urgent need to reduce nonpoint sources of pollution, and has conducted several field hearings this year to determine what midcourse corrections regarding section 208 are needed. Hearings by the subcommittee in Iowa, which I chaired, and others in Colorado and Minnesota focused on the progress being made under the section 208 process for regulating nonpoint sources. At a hearing in LeMars, Iowa, members of various Iowa farming organizations and environmental groups strongly endorsed the concept of reducing soil erosion and the need to address many of the existing deficiencies in conservation efforts in order to improve water quality.

During the consideration of amendments to the Clean Water Act by the Committee on Environment and Public Works, I offered an amendment, which was approved, to provide technical and financial assistance to landowners and operators in rural areas for implementing area-wide management plans under section 208 of the Federal Water Pollution Control Act. In order to carry out this cost-sharing program, $200,000,000 is authorized for fiscal year 1979 and $400,000,000 for fiscal year 1980.

Financial assistance under this provision is delivered through a cost-sharing program for implementing long-term practices for improving water quality under section 208.

Acting through the Soil Conservation Service, the Secretary with the concurrence of the Administrator of the Environmental Protection Agency, would enter into contracts with farm operators and owners for the purposes of installing measures to reduce agricultural runoff. Only those soil conservation measures identified under section 208 as "Best Management Practices" would be eligible for funding. The Federal cost share may be as high as 50 percent.

These cost-sharing funds would be made available to those areas which have approved management plans under section 208. To assure that this program reduces water quality problems, the Secretary must give priority to projects in those areas which have critical nonpoint source pollution problems from agricultural runoff, and the section 208 management agencies will assure an appropriate level of participation by landowners and operators in the area before funding becomes available. These factors address a major deficiency of current soil conservation practices which have been criticized recently for not emphasizing land with the most severe soil erosion. It is important that these funds be used to reduce runoff in those areas with major nonpoint source pollution, and that they not be used for practices by one or two operators or owners when broader participation is needed in a conservation district.

The Secretary is authorized to carry out this cost-sharing program through the State soil conservation districts. Conservation districts are uniquely equipped to help plan, manage, and implement portions of the State- and area-wide water quality management plans, particularly those related to the control of nonpoint pollution from erosion and sediment. They have not only perfected working arrangements with a host of Federal and State agencies and institutions, but have also developed a widespread and effective delivery system as well.

In addition to the provision which I have just described, this legislation makes several other essential mid-course corrections in our water pollution control program. It reaffirms a strong Federal commitment to assisting communities with the construction of municipal wastewater treatment plants, and it removes the current shortcomings of the dredge-and-fill permit process under section 404. The Public Works Committee has thoroughly reviewed the necessary water quality issues and has developed a far-sighted measure.

Mr. President, I want to commend the chairman of the Committee on Environment and Public Works (Mr. RANDOLPH) and the chairman of the Environmental Pollution Subcommittee (Mr. MUSKIE) for their leadership on this vital legislation. I encourage my colleagues to approve this bill.

Mr. HUMPHREY. Third reading.

The PRESIDING OFFICER. If there be no further amendment, the question is on the engrossment and the third reading of the bill.

The bill was ordered engrossed for a third reading, and was read the third time.

Mr. HUMPHREY. I ask for the yeas and nays.

The PRESIDING OFFICER. Does the Senator wish to go to the House bill?

Mr. ANDERSON. Yes.

Mr. President, I ask unanimous consent that the Committee on Environment and Public Works be discharged from further consideration of H.R. 3199, and that the Senate proceed to its immediate consideration.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will state the bill by title.

The legislative clerk read as follows:

A bill (H.R. 3199) to amend the Federal Water Pollution Control Act to provide for additional authorizations, and for other purposes.

The PRESIDING OFFICER. Is there objection to the immediate consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. ANDERSON. Mr. President, I move to strike all after the enacting clause of H.R. 3199, and to substitute therefor

the text of S. 1952, as amended, and that the bill be considered as having been read the third time.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Minnesota.

The motion was agreed to.

The PRESIDING OFFICER. The question is on the engrossment of the amendment and the third reading of the bill.

The amendment was ordered to be engrossed and the bill to be read a third time. The bill was read the third time.

Mr. STAFFORD. Mr. President, I ask for the yeas and nays on passage of the bill.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is, Shall the bill, as amended, pass? The yeas and nays have been ordered, and the clerk will call the roll.

The second assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Arkansas (Mr. McCLELLAN), and the Senator from Alabama (Mr. SPARKMAN), are necessarily absent.

Mr. STEVENS. I announce that the Senator from Illinois (Mr. PERCY) is necessarily absent.

I also announce that the Senator from Rhode Island (Mr. CHAFEE) is absent due to a death in the family.

I further announce that, if present and voting, the Senator from Rhode Island (Mr. CHAFEE) would vote "yea."

The result was announced—yeas 96, nays 0, as follows:

[Rollcall Vote No. 336 Leg.]

So the bill (H.R. 3199), as amended, was passed, as follows:

SECTION 1. This Act may be cited as the "Clean Water Act of 1977".

SEC. 2. Section 518 of the Federal Water Pollution Control Act is amended to read as follows:

"SHORT TITLE

"SEC. 518. This Act may be cited as the 'Clean Water Act'.".

AUTHORIZATIONS

SEC. 3. (a) Section 104(u)(2) of the Clean Water Act is amended by striking out "1975" and inserting in lieu thereof "1975, $7,500,000 for each of fiscal years 1978, 1979, and 1980".

(b) Section 104(u)(3) of the Clean Water Act is amended by striking out "1975" and inserting in lieu thereof "1975, $2,500,000 for each of fiscal years 1978, 1979, and 1980,".

(c) Section 106(a)(2) of the Clean Water Act is amended by striking out "and the fiscal year ending June 30, 1975," and inserting in lieu thereof "and the fiscal year ending June 30, 1975, and $75,000,000 for each of the fiscal years ending September 30, 1978, 1979, and 1980,".

(d) Section 112(c) of the Clean Water Act is amended by inserting "$25,000,000 for each of the fiscal years ending September 30, 1978, September 30, 1979, and September 30, 1980," immediately after "June 30, 1975,".

(e) Section 208(f)(3) of the Clean Water Act is amended by striking out "and not to exceed $150,000,000 for the fiscal year ending June 30, 1975." and inserting in lieu thereof "and not to exceed $150,000,000 per fiscal year for the fiscal years ending June 30, 1975, September 30, 1978, September 30, 1979, and September 30, 1980.".

(f) Section 314(c)(2) of the Clean Water Act is amended by striking out "and $150,000,000 for the fiscal year 1975" and inserting in lieu thereof ", $150,000,000 for the fiscal year 1975; and $150,000,000 for each of fiscal years 1978, 1979, and 1980".

(g) Section 517 of the Clean Water Act is amended by striking out "and $350,000,000 for the year ending June 30, 1975," and inserting in lieu thereof ", $350,000,000 for the fiscal year ending June 30, 1975, and $350,000,000 for each of the fiscal years ending September 30, 1978, September 30, 1979, and September 30, 1980,".

ESTUARINE STUDY

SEC. 4. Section 104(n)(3) of the Clean Water Act is amended by striking the phrase "any three-year period" and adding in lieu thereof the phrase "any six-year period".

CLEARINGHOUSE FOR ALTERNATIVE TREATMENT INFORMATION

SEC. 5. Section 104(q) of the Clean Water Act is amended by adding the following:

"(3) The Administrator shall establish, through contract with an appropriate public or private non-profit organization, a national clearinghouse which shall (A) receive reports and information resulting from research, demonstrations, and other projects funded under this Act related to paragraph (1) of this subsection and to subsection (e)(2) of section 105; (B) coordinate and disseminate such reports and information for use by Federal and State agencies, municipalities, institutions and persons in developing new and improved methods pursuant to this subsection; and (C) provide for the collection and dissemination of reports and information relevant to this subsection from other Federal and State agencies, institutions, universities and persons.".

GRANTS FOR INNOVATIVE TECHNOLOGY

SEC. 6. Subsection (f) of section 105 of the Clean Water Act (33 U.S.C. 1255(f)) is amended—

(a) by striking paragraph (2) and inserting in lieu thereof the following:

"(2) The Federal grant for any project shall not exceed 75 per centum of the cost thereof as determined by the Administrator, except that in any case where a project is entitled to priority pursuant to subsection (e) of section 303 of this Act, the Administrator is authorized to utilize an amount, not to exceed one-half of 1 per centum, of the sums allotted to the State in which such project is located pursuant to section 205 of this Act, to pay the non-Federal costs of such project;"; and

(b) by striking the period following paragraph (3), inserting in lieu thereof a semicolon followed by the word "and" and adding a new paragraph (4) as follows:

"(4) In any case where the Administrator pays the non-Federal costs of a project, the State, municipal, interstate, or intermunicipal agency or agencies receiving the grant shall comply with all appropriate conditions, limitations, and requirements under title II of this Act.".

ASSISTANCE FOR RESEARCH AND DEMONSTRATION PROJECTS

SEC. 7. Section 105 of the Clean Water Act is amended by adding the following new subsection:

"(i) The Administrator is authorized to make grants to a municipality to assist in the costs of operating and maintaining a project which received a grant under this section, section 104 or section 113 of this Act in order to reduce the operation and maintenance costs born by the recipients of services from such project to costs comparable to those for projects assisted under title II of this Act.".

PRIORITY LIST REQUIREMENTS

SEC. 8. Section 106(f) of the Clean Water Act is amended by adding the following paragraph:

"(4) In approving any priority list or making any determination as to priority under this subsection or sections 204(a)(3) or 303(e) of this Act for grants for design or construction, the Administrator shall require that highest priority be given to treatment works which are necessary to comply with sections 301 (b) or 201 (b), (d), and (g)(2)(A) of this Act.".

TRAINING GRANTS

SEC. 9. (a) Section 109(b)(3) of the Clean Water Act is amended by striking "$250,000" and inserting in lieu thereof "$500,000".

(b) Section 109(b) of the Federal Water Pollution Control Act is amended by adding the following new paragraph:

"(4) The Administrator may exempt a grant under this section from any requirement under section 204 of this Act. Any grantee who received a grant under this section prior to enactment of the Clean Water Act of 1977 shall be eligible to have its grant increased by funds made available under such Act.".

(c) Section 109(b)(1) of the Clean Water Act is amended by adding before the period the following: "and for the costs of other State operator training programs, including mobile training units, classroom rental, specialized instructors, and instructional material".

RURAL VILLAGE STUDY

SEC. 10. Section 113 of the Clean Water Act is amended by adding new sections (e), (f), (g), and (h) as follows:

"(e) The Administrator is authorized to coordinate with the Secretary of the Department of Health, Education, and Welfare, the Secretary of the Department of Housing and Urban Development, the Secretary of the Department of the Interior, the Secretary of the Department of Agriculture, and the heads of any other departments or agencies he may deem appropriate to conduct a joint study with representatives of the State of Alaska and the appropriate Native organizations (as defined in Public Law 92-203) to develop a comprehensive program for achieving adequate sanitation services in Alaska villages. The Administrator shall submit a report of the results of the study, together with appropriate supporting data and such recommendations as he deems desirable, to the Committee on Environment and Public Works of the Senate and to the Committee on Public Works and Transportation of the House of Representatives not later than December 31,

1979. The Administrator shall also submit recommended administrative actions, procedures, and any proposed legislation necessary to implement the recommendations of the study no later than June 30, 1980.

"(f) The Administrator is authorized to provide technical, financial and management assistance for operation and maintenance of the demonstration projects constructed under this section, until such time as the recommendations of subsection (e) are implemented.

"(g) There are authorized to be appropriated not to exceed $200,000 for the fiscal year ending September 30, 1978, and $220,000 for the fiscal year ending September 30, 1979, to carry out this section.

"(h) For the purpose of this section, the term 'village' shall mean an incorporated or unincorporated community with a population of ten to six hundred people living within a two-mile radius. The term 'sanitation services' shall mean water supply, sewage disposal, solid waste disposal and other services necessary to maintain generally accepted standards of personal hygiene and public health.".

REALLOTMENT

SEC. 11. Subsection (b)(1) of section 205 of the Clean Water Act is amended by striking "one-year" and by inserting after the second sentence the following: "The sums first made available for obligation during fiscal year 1976 shall continue to be available for obligation until September 30, 1978.".

CONSTRUCTION GRANT PROGRAM

SEC. 12. (a) Section 207 of the Clear Water Act is amended by striking the period at the end of the sentence and adding ", for the fiscal year ending September 30, 1977, in addition to that appropriated in Public Law 95-26 and subject to such amounts as are provided in further appropriations Acts, $3,500,000,000, and, for each of the fiscal years ending September 30, 1978, September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982, subject to such amounts as are provided in appropriation Acts, not to exceed $4,500,000,000.".

(b) The first sentence of subsection (a) of section 205 of the Clear Water Act is amended by striking out "June 30, 1972," and inserting in lieu thereof "June 30, 1972, and before September 30, 1976,".

(c) Such section 205 is further amended by adding at the end thereof the following new subsection:

"(c)(1) Sums authorized to be appropriated pursuant to section 207 for each fiscal year beginning after September 30, 1976, shall be allotted by the Administrator on October 1 of the fiscal year for which authorized. Sums authorized for the fiscal year ending September 30, 1977, shall be allotted in accordance with the following table:

"State	Proportional share
Alabama	0.0110

If the sums allotted to the States for a fiscal year are made subject to a limitation on obligation by an appropriation Act, such limitation shall apply to each State in proportion to its allotment.

"(2) For the fiscal years 1977, 1978, 1979, 1980, 1981, and 1982, no State Shall receive less than one-half of 1 per centum of the total allotment under the first paragraph of this subsection, except that in the case of Guam, Virgin Islands, American Samoa, and the Trust Territories, not more than forty one-hundredths of 1 per centum in the aggregate shall be allotted to all four of these jurisdictions. For the purpose of carrying out this paragraph there are authorized to be appropriated, subject to such amounts as are provided in appropriation Acts, not to exceed $40,000,000 for the fiscal year ending September 30, 1977, and not to exceed $92,000,000 for each of fiscal years 1978, 1979, 1980, 1981, and 1982.

"(3) For the fiscal years 1978, 1979, 1980, 1981, and 1982, no State shall receive an allotment of less than the lower dollar amount it would have received under either (A) an allotment based on the ratio of its 1975 population to the 1975 population of all the States or (B) the ratio of its total needs for categories of treatment works eligible under this Act indicated in the 1976 Needs Survey to such total needs in all the States. For the purpose of carrying out this paragraph, there are authorized to be appropriated, subject to such amounts as are provided in appropriation Acts, not to exceed $60,000,000 in each of fiscal years 1978, 1979, 1980, 1981, and 1982.

"(4) For the fiscal years 1978, 1979, 1980, 1981, and 1982, no State's proportional share allotment shall be reduced by more than 25 per centum of its proportional share allotment for fiscal year 1977 under paragraph (1) of this subsection, and any State's proportional share allotment which would be reduced by more than 25 per centum of the proportional share allotment for fiscal year 1977 shall be adjusted to provide a proportional share allotment representing no more than such a 25 per centum reduction. For the purpose of carrying out this paragraph there are authorized to be appropriated such amounts as may be necessary in each of fiscal years 1978, 1979, 1980, 1981, and 1982, subject to such amounts as are provided in appropriation Acts.".

AREAWIDE PLANNING

SEC. 13. (a) Section 208(b)(1) of the Clean Water Act is amended by inserting "(A)" after "(b)(1)" and by adding the following new subparagraph:

"(B) For any agency designated after 1975 under subsection (a) of this section and for all portions of a State for which the State is required to act as the planning agency in accordance with subsection (a)(6), the initial plan prepared in accordance with such process shall be certified by the Governor and submitted to the Administrator not later than three years after the receipt of the initial grant award authorized under subsection (f) of this section.".

(b) Section 208(f)(2) of the Clean Water Act is amended to read as follows:

"(2) For the two-year period beginning on the date the first grant is made under paragraph (1) of this subsection to an agency, if such first grant is made before October 1, 1978, the amount of each such grant to such agency shall be 100 per centum of the costs of developing and operating a continuing areawide waste treatment management planning process under subsection (b) of this section, and thereafter the amount granted to such agency shall not exceed 75 per centum of such costs in each succeeding one-year period. In the case of any other grant made to an agency under such paragraph (1) of this subsection, the amount of such grant shall not exceed 75 per centum of the costs of developing and operating a continuing areawide waste treatment management planning process in any year.".

(c) The second sentence of section 208(f)(3) of the Clean Water Act is amended by striking out the period at the end thereof and inserting in lieu thereof a comma and the following: "subject to such amounts as are provided in appropriation Acts.".

INDIVIDUAL SYSTEMS

SEC. 14. Section 201 of the Clean Water Act is amended by adding the following new subsection:

"(h) A grant may be made under this section to construct a privately owned treatment works serving one or more existing individual primary residences or small commercial establishments where (1) a public body otherwise eligible for a grant under subsection (g) of this section applies on behalf of a number of such units and enters into an enforceable agreement with the Administrator to assure that such treatment works are properly operated and maintained and in compliance with all other requirements of section 204 of this Act and (2) the Administrator determines that the total cost and environmental impact of providing waste treatment services to such residences or commercial establishments will be less than with a system for collection and central treatment.".

RESERVE CAPACITY

SEC. 15. (a) Section 202 of the Clean Water Act is amended by adding at the end thereof the following new subsection:

"(c) Notwithstanding any other provision of this title, after September 30, 1977, the Administrator shall approve grants only for that portion of a treatment works directly related to the needs to be served by such works for the ten years from the time such treatment works is estimated to become operational (or twenty years in the case of interceptor sewers and associated appurtenances) as determined by the Administrator. In determining the needs to be served by treatment works during such ten-year period the Administrator shall take into account the projected population and associated commercial and industrial establishments within the the proposed service area within ten years of the time such treatment works is estimated to become operational. In determining the needs to be served by interceptor sewers and associated appurtenances during such twenty-year period the Administrator shall take into account the projected population and associated commercial and industrial establishments within the proposed service area within twenty years of the time such interceptor sewers and associated appurtenances are estimated to become operational. For purposes of this paragraph population shall be determined on the basis of the latest information available from the United States Department of Commerce or from the States as the Administrator by regulation determines to be appropriate.".

(b) Subsection (a)(5) of section 204 is amended by inserting after the material added by section 18(b) of this Act the following: "The cost of such reserve capacity eligible for a grant under this Act shall be determined in accordance with section 202(c);".

COMBINED GRANTS

SEC. 16. Section 203(a) of the Clean Water Act is amended by adding at the end thereof the following new sentence: "In the case of a treatment works that has an estimated total cost of $2,000,000 or less (as determined by the Administrator), and the population of the grantee municipality is twenty-five thousand or less (according to the most recent United States census), upon completion of an approved facility plan, a single grant may be awarded for the combined Federal share of the cost of preparing construction plans and specifications, and the building and erection of the treatment works. In the case of States found by the Administrator to have unusually high costs of construction, the Administrator may authorize a single grant under the preceding sentence where the estimated total cost does not exceed $3,000,000.".

CONTRACT ENFORCEMENT

SEC. 17. Section 203 of the Clean Water Act is amended by adding the following additional new subsection:

"(d) At the request of the grantee, the Administrator or the State may be made a party to any contract in connection with treatment works assisted under this title.".

LIMITATIONS AND CONDITIONS

SEC. 18. Section 204(a) of the Clean Water Federal Water Pollution Control Act is amended by adding the following paragraph:

"(7) that the applicant has analyzed the potential recreation and open space opportunities in the design of the proposed treatment works.".

METERING

SEC. 19. Section 204(b)(1) of the Clean Water Act is amended by adding the following sentence: "A system of charges which meets the requirement of subparagraph (A) of this paragraph may be based on something other than metering the sewage or water supply flow of residential recipients of waste treatment services, including ad valorem taxes. If the system of charges is based on something other than metering the Administrator shall require (i) the applicant to establish a system by which the necessary funds will be available for the proper operation and maintenance of the treatment works; and (ii) the applicant to establish a procedure under which the residential user will be notified as to that portion of his total payment which will be allocated to the operation and maintenance of the treatment works.".

WATER CONSERVATION

SEC. 20. (a) Section 204(b)(3) of the Clean Water Act is amended by adding: "Notwithstanding paragraph (1)(B) of this subsection, subject to the approval of the Administrator, a grantee that received a grant prior to the enactment of the Clean Water Act of 1977 may reduce the amounts required to be paid to such grantee by any industrial user of waste treatment services under such paragraph, if such grantee requires such industrial user to adopt other means of reducing the demand for waste treatment services through reduction in the total flow of sewage or unnecessary water consumption, in proportion to such reduction as determined in accordance with regulations promulgated by the Administrator.".

(b) Section 204(a)(5) of the Clean Water Act is amended by striking the semicolon at the end thereof and inserting in lieu thereof a comma and the following: "after taking into account, in accordance with regulations promulgated by the Administrator, efforts to reduce total flow of sewage and unnecessary water consumption.".

INDUSTRIAL COST RECOVERY

SEC. 21. (a) Section 204(b)(3)(B) of the Clean Water Act is amended by inserting after "necessary for" the following: "the administrative costs associated with the requirement of paragraph (1)(B) of this subsection and".

(b) Section 204(b) of the Clean Water Act is amended by adding the following new paragraph:

"(5) The Administrator is authorized to exempt from the requirement of paragraph (1)(B) of this subsection any industrial user with a flow into such treatment works of less than twenty-five hundred gallons per day if such industrial user does not introduce into such treatment works any pollutant which interferes or is incompatible with, or contaminates or reduces the utility of the sludge of, such works.".

(c) Section 204(b)(1)(B) of the Clean Water Act is amended by inserting before the semicolon the following: "(which such portion, in the discretion of the applicant, may be recovered from industrial users of the total waste treatment system as distinguished from the treatment works for which the grant is made)".

STATE MANAGEMENT ASSISTANCE

SEC. 22. Section 205 of the Clean Water Act is amended by adding after new subsection (c) the following new subsection:

"(d)(1) The Administrator may reserve an amount not to exceed 2 per centum of the allotment made to each State under this section on or after October 1, 1977, but no less than $400,000 per fiscal year. Sums so reserved shall be available for making grants to such State under paragraph (2) of this subsection for the same period as sums are available from such allotment under subsection (b) of this section, and any such grant shall be available for obligation only during such period. Any grant made from sums reserved under this subsection which has not been obligated by the end of the period for which available shall be added to the amount last allotted to such State under this section and shall be immediately available for obligation in the same manner and to the same extent as such last allotment.

"(2) The Administrator is authorized to grant to any State from amounts reserved to such State under this subsection, the reasonable costs of administering any aspects of sections 201, 203, and 204 of this Act the responsibility for administration of which the Administrator has delegated to such State. The Administrator may increase such grant to take into account the reasonable costs of administering an approved program under section 402, administering a statewide waste treatment management planning program under section 208, and managing waste treatment construction grants for small communities.".

SET ASIDE FOR ALTERNATIVE SYSTEMS FOR SMALL COMMUNITIES

SEC. 23. Section 205 of the Clean Water Act is amended by adding a new subsection (e) after new subsection (d) as follows:

"(e) The Administrator shall set aside not less than 5 nor more than 10 per centum of the sums allotted to any State with a rural population of 25 per centum or more of the total population of such State, as determined by the Bureau of the Census. The Administrator may set aside no more than 10 per centum of the sums allotted to any other State for which the Governor requests such action. Such sums shall be available only for alternative or unconventional sewage treatment works for communities having a population of three thousand five hundred or less, or for the highly dispersed sections of larger communities, as defined by the Administrator.".

AREAWIDE WASTE TREATMENT MANAGEMENT

SEC. 24. Section 208(b)(2)(A) of the Clean Water Act is amended by inserting before the semicolon a comma and the following: "and an identification of open space and recreation opportunities that can be expected to result from improved water quality, including methods and procedures to assure public access to navigable waters for recreation purposes.".

IRRIGATION RETURN FLOWS

SEC. 25. (a) Section 208(b)(2)(F) of the Clean Water Act is amended by adding after "sources of pollution, including" the following: "return flows from irrigated agriculture, and their cumulative effects,".

(b) Section 402 of the Clean Water Act is amended by adding a new subsection after that added by section 53 of this Act:

"(m) No permit under this section shall be required for discharges composed entirely of return flows from irrigated agriculture.".

AGRICULTURAL COST SHARING

SEC. 26. Section 208 of the Clean Water Act is amended by adding the following new subsection:

"(i)(1) The Secretary of Agriculture, acting through the Administrator of the Soil Conservation Service, with the concurrence of the Administrator, is authorized and directed to establish and administer a program to enter into contracts of not less than five years nor more than ten years with owners and operators having control of rural land for the purpose of installing and maintaining measures incorporating best management practices to control nonpoint source pollution for improved water quality soil conservation in those States or areas for which the Administrator has approved a plan under subsection (b) of this section where the practices to which the contracts apply are certified by the management agency designated under subsection (c)(1) of this section to be consistent with such plans and will result in improved water quality. Such contracts may be entered into during the period ending not later than September 31, 1988. Under such contracts the land owner or operator shall agree—

"(i) to effectuate a plan approved by a soil conservation district under this section for his farm, ranch, or other land substantially in accordance with the schedule outlined therein unless any requirement thereof is waived or modified by the Secretary;

"(ii) to forfeit all rights to further payments or grants under the contract and refund to the United States all payments and grants received thereunder, with interest, upon his violation of the contract at any stage during the time he has control of the land if the Secretary, after considering the recommendations of the soil conservation district board or the Administrator, determines that such violation is of such a nature as to warrant termination of the contract, or to make refunds or accept such payment adjustments as the Secretary may deem appropriate if he determines that the violation by the owner or operator does not warrant termination of the contract;

"(iii) upon transfer of his right and interest in the farm, ranch, or other land during the contract period to forfeit all rights to further payments or grants under the contract and refund to the United States all payments or grants received thereunder, with interest, unless the transferee of any such land agrees with the Secretary to assume all obligations of the contract;

"(iv) not to adopt any practice specified by the Secretary on the advice of the Administrator in the contract as a practice which would tend to defeat the purposes of the contract;

"(v) to such additional provisions as the Secretary determines are desirable and includes in the contract to effectuate the purposes of the program or to facilitate the practical administration of the program.

"(2) In return for such agreement by the landowner or operator the Secretary shall agree to provide technical assistance and share the cost of carrying out those conservation practices and measures set forth in the contract for which he determines that cost sharing is appropriate and in the public interest and which are approved for cost sharing by the agency designated to implement the plan developed under subsection (b) of this section. The portion of such cost (including labor) to be shared shall be that part which the Secretary determines is necessary and appropriate to effectuate the installation of the water quality management practices and measures under the contract, but not to exceed 50 per centum of the total cost of the measures set forth in the contract; except the Secretary may increase the matching cost share where he determines that (1) the main benefits to be derived from the measures are related to improving offsite water quality, and (2) the matching share requirement would place a burden on the landowner which would probably prevent him from participating in the program.

"(3) The Secretary may terminate any contract with a landowner or operator by mutual agreement with the owner or operator if the Secretary determines that such termination would be in the public interest, and may agree to such modification of contracts previously entered into as he may determine to be desirable to carry out the purposes of the program or facilitate the practical administration thereof or to accomplish equitable treatment with respect to other conservation, land use, or water quality programs.

"(4) In providing assistance under this subsection the Secretary will give priority to those areas and sources that have the most significant effect upon water quality. Additional investigations or plans may be made, where necessary, to supplement approved water quality management plans, in order to determine priorities.

"(5) The Secretary may enter into agreements with soil conservation districts, State soil and water conservation agencies, or State water quality agencies to administer all or part of the program established in this subsection under regulations developed by the Secretary. Such agreements shall provide for the submission of such reports as the Secretary deems necessary.

"(6) The contracts under this subsection shall be entered into only in areas where the management agency designated under subsection (c)(1) of this section assures an adequate level of participation by owners and operators having control of rural land in such areas.

"(7) The Secretary, in consultation with the Administrator and subject to section 304(k) of this Act, shall, not later than September 30, 1978, promulgate regulations for carrying out this subsection and for support and cooperation with other Federal and non-Federal agencies for implementation of this subsection.

"(8) This program shall not be used to authorize or finance projects that would otherwise be eligible for assistance under the terms of Public Law 83-566.

"(9) There are hereby authorized to be appropriated $200,000,000 for fiscal year 1979 and $400,000,000 for fiscal year 1980, to carry out this subsection. The program authorized under this subsection shall be in addition to, and not in substitution of, other programs in such area authorized by this or any other public law.".

GRANT ELIGIBLE CATEGORIES

SEC. 27. Section 211 of the Clean Water Act is amended to read as follows:

"SEC. 211. (a) No grant shall be made under this title for replacement or major rehabilitation of a sewage collection system unless such replacement or major rehabilitation is necessary (1) to the total integrity and performance of the waste treatment works serving such community, and (2) for grants made from funds authorized for any fiscal year beginning after September 30, 1977, as the most cost-effective alternative to eliminate excessive infiltration.

"(b) No grant shall be made under this title for a new collector sewer system unless (1) such grant is limited to the capacity to serve the population in such community as of the date of enactment of the Clean Water Act of 1977; (2) there is or will be sufficient existing capacity to treat such collected sewage in compliance with sections 201 and 301 of this Act at the time such collector sewer system is completed; (3) such system is necessary to correct discharges constituting a threat to ground or surface water supplies or preventing the attainment of applicable water quality standards; and (4) alternatives to central treatment with collector sewers have been evaluated for such community and demonstrated to be less cost effective than the proposed collector sewer system in protecting ground or surface water quality.

"(c) No grant shall be made under this title from funds authorized for any fiscal year beginning after September 30, 1977, for treatment works for control of pollutant discharges from separate storm sewer systems.".

COST-EFFECTIVENESS GUIDELINES

SEC. 28. Title II of the Clean Water Act is amended by adding the following new section:

"COST-EFFECTIVENESS GUIDELINES

"SEC. 213. Any guidelines for cost-effectiveness analysis published by the Administrator under this title shall provide for the identification and selection of cost effective alternatives to comply with the objective and goals of the Act and sections 201(b), 201(d), 201(g)(2)(A), and 301(b)(2)(B) of the Act.".

MODIFICATION OF BEST AVAILABLE TECHNOLOGY REQUIREMENT

SEC. 29. (a) Section 301 of the Clean Water Act is amended by inserting a new subsection (d) after subsection (c) as follows and redesignating succeeding sections accordingly:

"(d) The Administrator, with the concurrence of the State, shall modify the requirements of subsection (b)(2)(A) of this section with respect to the discharge of any pollutant from any point source upon a showing by the owner or operator of such point source satisfactory to the Administrator that—

"(1) there is an applicable water quality standard specific to the pollutant for which the modification is requested, which has been identified under section 304(a)(4) of this Act;

"(2) such modified requirements will represent that reduction in effluents for which the reduction in effluents bears a reasonable relationship to the costs of attaining such reduction;

"(3) such modified requirements will result at a minimum in compliance with the requirements of subsection (b)(1)(A) or (C) of this section, whichever is applicable;

"(4) such modified requirements will not result in any additional requirements on any other point or nonpoint source; and

"(5) such modified requirements will not interfere with the attainment or maintenance of that water quality which assures the protection of public water supplies and the protection and propagation of a balanced, indigenous population of shellfish, fish, and wildlife, and allows recreational activities, in and on the water: *Provided*, That the Administrator may not modify the re-

quirements of subsection (b)(2)(A) of this section with respect to any specific pollutant which the Administrator is charged with a duty to regulate as a toxic or hazardous pollutant under section 307 or 311 of this Act or the order of the United States District Court for the District of Columbia issued on June 8, 1976, in the case entitled Natural Resources Defense Council, Incorporated, et al., against Russell E. Train, or for which there is a primary drinking water standard under the Safe Drinking Water Act.". (b) Section 304(a) of the Clean Water Act is amended by adding the following new paragraph:

"(4) The Administrator shall, within three months after enactment of the Clean Water Act of 1977 and annually thereafter, for purposes of section 301 (d) and (e) of this Act publish and revise as appropriate information identifying each water quality standard in effect under this Act or State law, the specific pollutants associated with such water quality standard, and the particular waters to which such water quality standard applies.".

(c) Section 301(c) of the Clean Water Act is amended by striking the period and inserting a colon and the following: *"Provided,* That the Administrator may not modify the requirements of subsection (b)(2)(A) of this section with respect to any specific pollutant which the Administrator is charged with a duty to regulate as a toxic or hazardous pollutant under section 307 of this Act or the order of the United States District Court for the District of Columbia issued on June 8, 1976, in the case entitled Natural Resources Defense Council, Incorporated, et al., against Russell E. Train, or for which there is a primary drinking water standard under the Safe Drinking Water Act.".

MODIFICATION OF SECONDARY TREATMENT REQUIREMENT

SEC. 30. Section 301 of the Clean Water Act is amended by inserting a new subsection (e) as follows after new subsection (d) and redesignating succeeding subsections accordingly:

"(e) The Administrator, with the concurrence of the State, may issue a permit under section 402 which modifies the requirements of subsection (b)(1)(B) of this section with respect to the discharge of any pollutant in an existing discharge from a publicly owned treatment works into marine waters, if the applicant demonstrates to the satisfaction of the Administrator that—

"(1) there is an applicable water quality standard specific to the pollutant for which the modification is requested, which has been identified under section 304(a)(4) of this Act;

"(2) such modified requirements will not interfere with the attainment or maintenance of that water quality which assures protection of public water supplies and the protection and propagation of a balanced, indigenous population of shellfish, fish and wildlife, and allows recreational activities, in and on the water;

"(3) the applicant has established a system for monitoring the impact of such discharge on a representative sample of aquatic biota, to the extent practicable;

"(4) such modified requirements will not result in any additional requirements on any other point or non-point source;

"(5) all applicable pretreatment requirements for sources introducing waste into such treatment works will be enforced;

"(6) to the extent practicable, the applicant has established a schedule of activities designed to eliminate the entrance of toxic pollutants from non-industrial sources into such treatment works;

"(7) there will be no new or substantially increased discharges from the point source of the pollutant to which the modification applies above that volume of discharge specified in the permit;

"(8) any funds available to the owner of such treatment works under title II of this Act will be used to achieve the degree of effluent reduction required by section 201(b) and (g)(2)(A) or to carry out the requirements of this subsection.

For the purposes of this subsection the phrase 'the discharge of any pollutant into marine waters' refers to a discharge into deep waters of the territorial sea or the waters of the contiguous zone, or into saline estuarine waters where there is strong tidal movement and other hydrological and geological characteristics which the Administrator determines necessary to allow compliance with paragraph (2) of this subsection and section 101(a)(2) of this Act.".

MUNICIPAL TIME EXTENSIONS

SEC. 31. Section 301 of the Clean Water Act is amended by inserting a new subsection (f) as follows after new subsection (e) and by redesignating subsequent subsections accordingly:

"(f)(1) Where major construction is required in order for a planned or existing publicly owned treatment works to achieve limitations under subsection (b)(1)(B) or (b)(1)(C) of this section, but (i) construction cannot reasonably be completed within the time required in such subsection, or (ii) financial assistance under this Act is unavailable in time to achieve such limitations by the time specified in such subsection, the owner or operator of such treatment works may request the Administrator (or if appropriate the State) to issue a pemit pursuant to section 402 of this Act or to modify a permit issued pursuant to that section to extend such time for compliance. Any such request shall be filed with the Administrator (or if appropriate the State) within ninety days after enactment of this subsection. The Administrator (or if appropriate the State) may grant such request and issue or modify such a permit, which shall contain a schedule of compliance for the publicly owned treatment works based on the earliest date by which such financial assistance will be available and construction can be completed, but in no event later than July 1, 1983, and shall contain such other terms and conditions, including those necessary to carry out subsections (b) through (g) of section 201 of this Act, section 307 of this Act, and such interim effluent limitations as he determines are necessary to carry out the provisions of this Act.

"(2)(A) Where a point source, other than a publicly owned treatment works, will not achieve the requirements of subsections (b)(1)(A) and (b)(1)(C) of this section because a permit issued prior to July 1, 1977, to such point source contemplates a discharge into a publicly owned treatment works which is presently unable to accept such discharge without major construction, and in the case of a discharge to an existing publicly owned treatment works, such treatment works has an extension pursuant to paragraph (1) of this subsection, the owner or operator of such point source may request the Administrator (or if appropriate the State) to issue a permit issued pursuant to that section to extend such time for compliance. Any such request shall be filed with the Administrator (or if appropriate the State) within ninety days after enactment of this subsection or the filing of a request by the appropriate publicly owned works under paragraph (1) of this subsection whichever is later. If the Administrator (or if appropriate the State) finds that the owner or operator of such point source has acted in good faith, he may grant such request and issue or modify such a permit, which shall contain a schedule of compliance for the point source to achieve the requirements of subsections (b)(1)(A) and (C) of this section and shall contain such other terms and conditions, including pretreatment and interim effluent limitations and water conservation requirements, as he determines are necessary to carry out the provisions of this Act.

"(B) No time modification granted by the Administrator (or if appropriate the State) pursuant to paragraph (2)(A) of this subsection shall extend beyond the earliest date practicable for compliance or beyond the date of any extension granted to the appropriate publicly owned treatment works pursuant to paragraph (1) of this subsection, but in no event shall it extend beyond July 1, 1983; and no such time modification shall be granted unless (i) the publicly owned treatment works will be in operation and available to the point source before July 1, 1983, and will meet the requirements of subsections (b)(1)(B) and (C) of this section after receiving the discharge from that point source; and (ii) the point source and the publicly owned treatment works have entered into an enforceable contract requiring the point source to discharge into the publicly owned treatment works, the owner or operator of such point source to pay the costs required under section 204 of this Act, and the publicly owned treatment works to accept the discharge from the point source; and (iii) the permit for such point source requires it to meet all requirements under section 307 (a) and (b) during the period of such time modification.".

PROCEDURE FOR MODIFICATIONS

SEC. 32. Section 301 of the Clean Water Act is amended by adding the following new subsection:

"(j)(1) Any application filed under this section for a modification of the provisions of—

"(A) subsection (b)(1)(B) under subsection (e) of this section shall be filed within nine months after the date of enactment of the Clean Water Act of 1977;

"(B) subsection (b)(2)(A) shall be filed within nine months after the date of promulgation of an appropriate effluent guideline under section 304 or nine months after the date of enactment of the Clean Water Act of 1977, whichever is later.

"(2) Any application for a modification filed under subsection (d) or subsection (e) of this section shall not operate to stay any requirement under this Act, unless in the judgment of the Administrator there is a substantial likelihood that the applicant will succeed on the merits of such application. In the case of an application filed under subsection (b)(2)(A) the Administrator may condition any stay granted under this paragraph on requiring the filing of a bond or other appropriate security to assure timely compliance with the requirements from which a modification is sought.".

INNOVATIVE TECHNOLOGY

SEC. 33. Section 301 of the Clean Water Act is amended by adding a new subsection as follows:

"(k) In the case of any facility subject to a permit under section 402 which proposes to comply with the requirements of subsection (b)(2)(A) of this section by replacing existing production capacity with an innovative production process which will result in an effluent reduction significantly greater than that required by the limitation otherwise applicable to such facility and moves toward the national goal of eliminating the discharge of all pollutants, or with the installation of an innovative control technique that has a substantial likelihood for enabling the facility to comply with the applicable effluent limitation by achieving a significantly greater effluent reduction than that required by the applicable effluent

limitation and moves toward the national goal of eliminating the discharge of all pollutants, or by achieving the required reduction with an innovative system that has the potential for significantly lower costs than the systems which have been determined by the Administrator to be economically achievable, the Administrator (or the State with an approved program under section 402) may establish a date for compliance under subsection (b)(2)(A) of this section no later than July 1, 1985; if he also determines that such innovative system has the potential for industrywide application.".

INFORMATION AND GUIDELINES

SEC. 34. Section 304(a) of the Clean Water Act is amended by adding the following new paragraph:

"(5) The Administrator, to the extent practicable before consideration of any request under section 301 (d) and (e) of this Act and within six months after enactment of the Clean Water Act of 1977, shall develop and publish information on the factors necessary for the protection and propagation of balanced, indigenous populations of shellfish, fish, and wildlife, and to allow recreational activities, in and on the water.".

BEST MANAGEMENT PRACTICES FOR INDUSTRY

SEC. 35. Section 304 of the Clean Water Act is amended by changing subsection (e) to subsection "(f)", by redesignating subsequent subsections accordingly, and by inserting a new subsection (e) as follows:

"(e) The Administrator, after consultation with appropriate Federal and State agencies and other interested persons, may publish regulations, supplemental to any effluent limitations specified under subsections (b), (c), and (d) of this section for a category of point sources, for any specific pollutant which the Administrator is charged with a duty to regulate as a toxic or hazardous pollutant under section 307 or 311 of this Act or the order of the United States District Court for the District of Columbia issued on June 8, 1976, in the case entitled Natural Resources Defense Council, Incorporated, et al., against Russell E. Train, or for which there is a primary drinking water standard under the Safe Drinking Water Act, setting forth treatment requirements or operating techniques, processes, procedures, and methods, for measures and practices including but not limited to measures or practices affecting plant site runoff, spillage or leaks, sludge or waste disposal, and drainage from raw material storage which he determines are associated with or ancillary to the industrial manufacturing or treatment process within such category or class of point sources and may contribute significant amounts of such pollutants to navigable waters. Any applicable requirements or techniques established under this subsection shall be included as a requirement for the purposes of sections 301, 302, 307, or 403 as appropriate in any permit issued to a point source pursuant to section 402 of this Act.".

INTERAGENCY AGREEMENTS

SEC. 36. Section 304(k) of the Clean Water Act as redesignated by this Act is amended to read as follows:

"(k)(1) The Administrator shall enter into agreements with the Secretary of Agriculture, the Secretary of the Army, and the Secretary of the Interior, and other secretaries or independent agency heads, as he determines, to provide for the maximum utilization of other Federal laws and programs for the purpose of achieving and maintaining water quality through appropriate implementation of plans approved under section 208 of this Act.

"(2) The Administrator is authorized to transfer to the Secretary of Agriculture, the Secretary of the Army, and the Secretary of the Interior and to any secretary or independent agency head, as he determines, any funds appropriated under paragraph (3) of this subsection to supplement funds otherwise appropriated to programs authorized pursuant to any agreement under paragraph (1).

"(3) There is authorized to be appropriated to carry out the provisions of this subsection, $100,000,000 per fiscal year for the fiscal years 1979 through 1983.".

STATE REPORTS

SEC. 37. Subsection (b) of section 305 of the Clean Water Act is amended—

(1) by striking out "January 1, 1975, and shall bring up to date each year thereafter," in paragraph (1) and inserting in lieu thereof "April 1, 1975, and shall bring up to date by April 1, 1976, and biennially thereafter,"; and

(2) by striking out "annually" in paragraph (2) and inserting in lieu thereof the following: "October 1, 1976, and biennially".

TOXIC POLLUTANTS

SEC. 38. (a) Paragraphs (1), (2), and (3) of section 307(a) of the Clean Water Act are amended to read as follows:

"(a)(1) Whenever the Administrator determines, based upon information available to him, that an effluent standard should be established under this section for any toxic pollutant or combination of such pollutants (which standard may include a prohibition of the discharge of such pollutant or combination of such pollutants), the Administrator shall identify such pollutant or combination of pollutants by publication in the Federal Register. In making any such determination the Administrator shall take into account the toxicity of the pollutant, its persistence, degradability, the usual or potential presence of the affected organisms in any waters, the importance of the affected organisms, the nature and extent of the effect of the toxic pollutant on such organisms, and the extent to which effective control is being or may be achieved under section 301 of this Act or other regulatory authority.

"(2) Within one hundred and eighty days after the date of identification by publication of any toxic pollutant or combination of pollutants under paragraph (1) of this subsection, the Administrator, in accordance with section 553 of title 5 of the United States Code, shall publish a proposed effluent standard (or a prohibition) for such pollutant or combination of pollutants which shall take into account the toxicity of the pollutant, its persitence, degradability, the usual or potential presence of the affected organisms in any waters, the importance of the affected organisms, the nature and extent of the effect of the toxic pollutant on such organisms, and the extent to which effective control is being or may be achieved under section 301 of this Act or other regulatory authority. The Administrator shall allow a period of not less than sixty days following any such proposed effluent standard (or prohibition) for written comment by interested persons on such proposed standards. In addition, if within thirty days of publication of any such proposed effluent standard (or prohibition) any interested person so requests, the Administrator shall hold a public hearing in connection therewith. Such a public hearing shall provide an opportunity for oral and written presentations, such cross-examination as the Administrator determines is appropriate on disputed issues of material fact, and the transcription of a verbatim record which shall be available to the public. After consideration of such comments and any information and material presented at any public hearing held on such proposed standards, the Administrator shall promulgate such standards (or prohibition) with such modifications as he finds are justified. Such promulgation by the Administrator shall be made within two hundred and seventy days after publication of proposed standards.

"(3) Such standard (or prohibition) shall be reviewed and, if appropriate, revised at least every three years.".

(b) Paragraph (6) of section 307(a) of the Clean Water Act is amended by striking the period at the end thereof and inserting a colon and the following: *"Provided*, That if the Administrator determines that compliance within one year is technologically infeasible for a category of sources and the owners or operators of such sources demonstrate to the satisfaction of the Administrator that there will be no significant risk to public health, public water supplies, or the environment from an extended time for compliance, the Administrator may establish the effective date of the effluent standard (or prohibition) for such category at the earliest date upon which compliance can be feasibly attained by sources within such category, but in no event more than three years after the date of such promulgation.".

PRETREATMENT

SEC. 39. (a)(1) Section 307(b)(1) of the Clean Water Act is amended by striking the period at the end of the first sentence thereof and inserting the following: "or which would contaminate the sludge from such treatment works or otherwise reduce the utility of such sludge."; and in the third sentence thereof by inserting after "passes through," the following: "contaminates or reduces the utility of the sludge of,".

(2) Section 307(b)(1) of the Clean Water Act is amended by adding the following: "Such pretreatment standards shall require at a minimum the application of the best available technology.".

(3) The last sentence of section 307(c) of the Clean Water Act is amended by inserting after "pass through," the following: "contaminate or reduce the utility of the sludge of," and by striking the period at the end thereof and inserting a comma and the following: "and such standards shall require at a minimum the application of the best available technology.".

(4) Section 307(b) of the Clean Water Act is amended by adding the following new paragraph:

"(5) A program to assure compliance with pretreatment standards under this section shall be a condition on any grant made under title II of this Act and any permit to a publicly owned treatment works under section 402 of this Act.".

(b)(1) The second sentence of section 304(g)(1) of the Clean Water Act as redesignated by this Act is amended by inserting after "passes through," the following: "contaminates or reduces the utility of the sludge of,"; and by striking the period at the end thereof and inserting a comma and the following: "and such guidelines shall identify the degree of control attainable through the application of the best available technology.".

(2) Section 304(g)(2) of the Clean Water Act, as redesignated by this Act, is amended by inserting after "treatment works" the following: "and the classes or categories of sources potentially discharging into such treatment works,".

(c)(1) Section 402(b)(8) is amended by inserting after "includes conditions to require" the following: "the identification in terms of character and volume of pollutants of any significant source introducing pollutants subject to pretreatment standards under section 307(b) of this Act into such works and a program to assure compliance with such pertreatment standards by each such source, in addition to".

(2) Section 402(b)(8) of the Clean Water Act is amended by inserting after the first sentence the following: "Any requirement imposed on a source introducing pollutants into such treatment works by a program

under this paragraph shall be deemed a permit condition applicable to such source and enforceable against such source under section 309 or 505 of this Act.".

(d) Section 309 of the Clean Water Act is amended by adding a new subsection:

"(f) Any person who introduces or discharges any pollutant subject to a pretreatment standard under section 307(b) of this Act into a publicly owned treatment works shall immediately notify such treatment works, the State, and the Administrator. Any such person who fails to notify immediately such treatment works, the State, or the Administrator, or who fails to provide the information or notice required under section 402 (b)(8) of this Act, shall be subject to a civil penalty not to exceed $10,000.".

TECHNICAL AND CONFORMING AMENDMENTS

SEC. 40. (a) Paragraph (1) of subsection (a) of section 309 of the Clean Water Act is amended by striking "or 308" in the first sentence thereof and inserting in lieu thereof "308, 318, or 405".

(b) Paragraph (3) of subsection (a) of section 309 of the Clean Water Act is amended by striking "or 308" in the first sentence thereof and inserting in lieu thereof "308, 318, or 405".

(c) Paragraph (1) of subsection (c) of section 309 of the Clean Water Act is amended by striking "or 308" in the first sentence thereof and inserting in lieu thereof "308, 318, or 405"; and by inserting after the words "or by a State," in the first sentence thereof, the following: "or any person who willfully or negligently violates any order issued under subsection (a) of this section,".

(d) Subsection (d) of section 309 of the Clean Water Act is amended by striking "or 308" in the first sentence thereof and inserting in lieu thereof "308, 318, or 405".

1977 INDUSTRIAL DEADLINES

SEC. 41. (a) Section 309(a)(2)(A) of the Clean Water Act is amended by striking "or".

(b) Section 309(a)(2)(B) of the Clean Water Act is amended by striking the period and adding "or".

(c) Section 309(a)(2) of the Clean Water Act is amended by adding a new subparagraph as follows:

"(C) by granting an extension pursuant to paragraph (5)(B) of this subsection."

(d) Section 309(a)(4) of the Clean Water Act is amended by striking the second sentence thereof.

(e) Section 309(a) of the Clean Water Act is amended by adding a new paragraph as follows:

"(5)(A) Any order issued under this subsection shall be by personal service, shall state with reasonable specificity the nature of the violation, and shall specify a time for compliance not to exceed thirty days in the case of a violation of an interim compliance schedule or operation and maintenance requirement and not to exceed a time the Administrator determines to be reasonable in the case of a violation of a final deadline, taking into account the seriousness of the violation and any good faith efforts to comply with applicable requirements.

"(B) The Administrator may, if he determines that such violation is the result of actions or conditions outside the control of such person and (i) such person has acted in good faith; (ii) such person has made a commitment (in the form of contracts or other security) of necessary resources to achieve compliance at the earliest possible date after July 1, 1977, but in no event later than January 1, 1979; (iii) such extension will not result in imposition of any additional controls on any other point or nonpoint source; (iv) application for permits under section 402 of this Act was filed prior to December 31, 1974; and (v) the facilities necessary for compliance with such requirements are under construction, grant an extension of the date referred to in section 301(b)(1)(A) to a date which will achieve compliance at the earliest time possible but not later than January 1, 1979.".

MITIGATION COSTS

SEC. 42. Subsection (b) of section 311 of the Clean Water Act is amended by adding a new clause (v) to paragraph (2)(B), as follows:

"(v) In addition to establishing a penalty for the discharge of a hazardous substance determined not to be removable pursuant to clauses (ii) through (iv) of this subparagraph, the Administrator may act to mitigate the damage to the public health or welfare caused by such discharge. The cost of such mitigation shall be deemed a cost incurred under subsection (c) of this section for the removal of such substance by the United States Government.".

OILSPILL LIABILITY

SEC. 43. (a)(1) Section 311(b)(1) of the Clean Water Act is amended by striking the period at the end thereof and inserting in lieu thereof a comma and the following: "or into or upon the waters above the Outer Continental Shelf (as defined in the Outer Continental Shelf Lands Act) or the waters over which the United States asserts exclusive fisheries management under the Fishery Conservation and Management Act of 1976.".

(2) Section 311(b)(2)(A) of the Clean Water Act is amended by inserting after "the contiguous zone" the following: "or the waters above the Outer Continental Shelf (as defined in the Outer Continental Shelf Lands Act) or the waters over which the United States asserts exclusive fisheries management under the Fishery Conservation and Management Act of 1976".

(3) Section 311(b)(3) of the Clean Water Act is amended by inserting after the phrase "into or upon the waters of the contiguous zone" a comma and the following: "or into or upon the waters above the Outer Continental Shelf (as defined in the Outer Continental Shelf Lands Act), or into or upon the waters over which the United States asserts exclusive fisheries management under the Fishery Conservation and Management Act of 1976,".

(4) Section 311(b)(4) of the Clean Water Act is amended by striking all after "beaches" and inserting a period.

(5) Each time the phrase "subsection (b)(2)" appears in subsection (f), (g), and (i) of section 311 of the Clean Water Act it is amended by striking "(2)".

(b) Section 311(c)(1) of the Clean Water Act is amended by inserting after "discharged," the following: "or there is a substantial threat of such discharge,".

(c)(1) Section 311(c)(1) of the Clean Water Act is further amended by inserting after "contiguous zone," the following: "or into or upon the waters above the Outer Continental Shelf (as defined in the Outer Continental Shelf Lands Act), or into or upon the waters over which the United States asserts exclusive fisheries management under the Fishery Conservation and Management Act of 1976,".

(2) Section 311(d) of the Clean Water Act is amended by inserting after "the navigable waters of the United States" a comma and the following: "the waters of the contiguous zone, the waters above the Outer Continental Shelf (as defined in the Outer Continental Shelf Lands Act), or the waters over which the United States asserts exclusive fisheries management under the Fishery Conservation and Management Act of 1976".

(d)(1) Section 311(f)(1) of the Clean Water Act is amended by striking "$100 per gross ton of such vessel or $14,000,000, whichever is lesser," and inserting in lieu thereof "$150 per gross ton of such vessel (or, for a vessel carrying oil or hazardous substances as cargo, $500,000, whichever is greater)".

(2) Section 311(f)(2) of the Clean Water Act is amended by striking "$8,000,000" and inserting in lieu thereof "$50,000,000".

(3) Section 311(f)(3) of the Clean Water Act is amended by striking "$8,000,000" and inserting in lieu thereof "$50,000,000".

(4) Section 311(g) of the Clean Water Act is amended by striking "$100 per gross ton of such vessel or $14,000,000, whichever is the lesser." and inserting in lieu thereof "$150 per gross ton of such vessel (or, for a vessel carrying oil or hazardous substances as cargo, $500,000, whichever is the greater)."

(5) Section 311(p)(1) of the Clean Water Act is amended by striking "$100 per gross ton, or $14,000,000, whichever is the lesser," and inserting in lieu thereof "$150 per gross ton, (or, for a vessel carrying oil or hazardous substances as cargo, $500,000, whichever is the greater)".

(e) Section 311(c)(2)(D) of the Clean Water Act is amended by striking "to the appropriate Federal agency;" and inserting in lieu thereof "and imminent threats of such discharges to the appropriate State and Federal agencies;".

(f) Section 311(g) of the Clean Water Act is amended by inserting after "(g)" the following: "Where the owner or operator of a vessel carrying oil or hazardous substances as cargo or an onshore or offshore facility which handles or stores oil or hazardous substances in bulk; from which oil or a hazardous substance is discharged in violation of subsection (b) of this section, alleges that such discharge was caused solely by an act or omission of a third party, such owner or operator shall pay to the United States Government the actual costs incurred under subsection (c) for removal of such oil or substance and shall be entitled by subrogation to all rights of the United States Government to recover such costs from such third party under this subsection.".

(g) Section 311(f) of the Clean Water Act is amended by adding the following new paragraphs:

"(4) The costs of removal of oil or hazardous substance for which the owner or operator of a vessel or onshore or offshore facility is liable under subsection (f) of this section shall include any costs or expenses incurred by the Federal Government or any State government in the restoration or replacement of natural resources damaged or destroyed as a result of a discharge of oil or hazardous substance in violation of subsection (b) of this section.

"(5) The President, or the authorized representative of any State, shall act on behalf of the public as trustee of the natural resources to recover for the costs of replacing or restoring such resources. Sums recovered shall be used to restore, rehabilitate, or acquire the equivalent of such natural resources by the appropriate agencies of the Federal Government, or the State government.".

MARINE SANITATION DEVICES

SEC. 44. (a) Section 312(a)(6) of the Clean Water Act is amended by adding before the period at the end thereof the following: "except that, with respect to commercial vessels on the Great Lakes and the navigable waters generally (other than the territorial seas), such term shall include greywater".

(b) Section 312(c)(1) of the Clean Water Act is amended by inserting "(A)" after "(1)" and by adding a new subparagraph (B) as follows:

"(B) The Administrator shall, with respect to commercial vessels on the Great Lakes and the navigable waters generally (other than the territorial seas), establish standards and regulations which require at a minimum the equivalent of secondary treatment as defined under section 304(d) of this Act. Such

standards and regulations shall take effect for existing vessels after such time as the Administrator determines to be reasonable for the upgrading of marine sanitation devices to attain such standard.".

(c) Section 312(f)(4) of the Clean Water Act is amended by inserting "(A)" after "(4)" and by adding a new subparagraph (B) as follows:

"(B) Whenever a State requests a prohibition on the discharge of sewage from vessels in any drinking water intake zone, the Administrator shall promulgate such a prohibition for such zone.".

FEDERAL FACILITY COMPLIANCE

SEC. 45. (a) Section 313 of the Clean Water Act is amended by striking in the first sentence thereof the words "comply with Federal, State, interstate, and local requirements respecting control and abatement of pollution to the same extent that any person is subject to such requirements, including the payment of reasonable service charges." and inserting in lieu thereof the words "be subject to, and comply with, all Federal, State, interstate, and local requirements, both substantive and procedural (including any requirement for permits or reporting or any provisions for injunctive relief and such sanctions as may be imposed by a court to enforce such relief), respecting control and abatement of pollution in the same manner, and to the same extent, as any person is subject to such requirements, including the payment of reasonable service charges. Neither the United States nor any agent, employee, nor officer thereof shall be immune or exempt from any process or sanction of any State or Federal court with respect to the enforcement of such injunctive relief.".

(b) Section 401(a) of the Clean Water Act is amended by striking paragraph (6) and renumbering succeeding paragraphs accordingly.

(c) Section 404 of the Federal Water Pollution Control Act is amended by adding the following new subsection:

"(h) Nothing in this section shall preclude or deny the right of any State or political subdivision thereof or interstate agency to control the discharge of dredged or fill material in any portion of the navigable waters within the jurisdiction of such State, including any activity of any Federal agency, and each such agency shall comply with such State, local, or interstate requirements both substantive and procedural to control the discharge or dredged or fill material to the same extent that any person is subject to such requirements.".

CLEAN LAKES

SEC. 46. (a) Section 314(b) of the Clean Water Act is amended by adding: "The Administrator shall provide financial assistance to States to prepare the identification and classification surveys required in subsection (a)(1) of this section.".

(b) Section 304(j) of the Clean Water Act as redesignated by this Act, is amended to read as follows: "The Administrator shall issue information biannually on methods, procedures, and processes as may be appropriate to restore and enhance the quality of the Nation's publicly owned freshwater lakes.".

AQUACULTURE

SEC. 47. Section 318 of the Clean Water Act is amended to read as follows:

"SEC. 318. (a) The Administrator is authorized, after public hearings, to permit the discharge of a specific pollutant or pollutants under controlled conditions associated with an approved aquaculture project under Federal or State supervision pursuant to section 402 of this Act.

"(b) The Administrator shall by regulation, not later than January 1, 1974, establish any procedures and guidelines he deems necessary to carry out this section. Such regulations shall require the application to such discharge of each criterion, factor, procedure, and requirement applicable to a permit issued under section 402 of this title, as the Administrator determines necessary to carry out the objective of this Act.

"(c) Each State desiring to administer its own permit program within its jurisdiction for discharge of a specific pollutant or pollutants under controlled conditions associated with an approved aquaculture project may do so if upon submission of such program the Administrator determines such program is adequate to carry out the objectives of this Act.".

NONCOMPLIANCE FEE

SEC. 48. Title III of the Clean Water Act is amended by adding a new section as follows:

"NONCOMPLIANCE FEE

"SEC. 319. (a) A noncompliance fee established pursuant to this section shall be imposed automatically and payable to the Administrator or a State with an approved program under section 403, as appropriate, either quarterly or monthly, for any point source (other than a publicly owned treatment works) which is not in compliance on or after (1) July 1, 1979, with any effluent limitation or standard under section 301(b)(1), 306, 307, or 316 of this Act, or (2) January 1, 1984, with any effluent limitation or standard under section 301(b)(2), 302, or 307 of this Act. Any permit issued under section 402 of this Act for such source shall be amended to incorporate such fee requirements.

"(b)(1) The owner or operator of any such point source for which the Administrator or a State with an approved program under section 402 intends to impose a noncompliance fee under this section shall upon request by the Administrator or the State furnish to the Administrator or the State (with a copy to the Administrator) information containing a detailed description of the control technology or system proposed to achieve compliance with such effluent limitation or standard and the estimated cost of compliance, including capital costs, debt service costs, the estimated schedule of expenditures to comply with such limitation or standard, and the estimated annual costs of operation and maintenance of any technology or system required in order to maintain such compliance, together with such information as the State (or the Administrator) may require on the economic value which a delay in compliance beyond July 1, 1979, or January 1, 1984, as the case may be, may have for the owner or operator of such source.

"(2) The Administrator or the State shall issue specific notice to the owner or operator of a point source subject to this section requiring the information described in this subsection. If the owner or operator of any source subject to this section fails to submit a calculation of the fee assessment, a schedule for payment, and the information necessary for independent verification thereof, the State (or the Administrator, as the case may be) may enter into a contract with any person who has no financial interest in the owner or operator of the source (or in any person controlling, controlled by, or under common control with such source) to assist in determining the amount of the fee assessment or payment schedule with respect to such source. The cost of carrying out such contract may be added to the penalty to be assessed against the owner or operator of such source. In addition, the State or the Administrator, as appropriate, may use cost information developed under section 304(b) of this Act.

"(c)(1) A notice of receipt of information pursuant to subsection (b) of this section shall be published in the newspapers in general circulation in such State, and such notice shall set forth where copies of the information are available for inspection and, for a reasonable charge, copying.

"(2)(A) Within thirty days following the date of publication of the notice issued under paragraph (1) of this subsection, or at any time the Administrator or a State with an approved program under section 402 proposes to establish a noncompliance fee under this section, there shall be published in the newspapers in general circulation in such State (and, as appropriate, the Federal Register or any publication required as part of any rulemaking activity in such State) the proposed noncompliance fee applicable to the source with an announcement of an opportunity for a public hearing on such action.

"(B) A proposed noncompliance fee under this section, determined in accordance with guidelines published by the Administrator, shall be a monthly or quarterly payment in an amount no less than the monthly or quarterly equivalent of the economic value of noncompliance, including, but not limited to, planning costs, design costs, supply costs, capital costs and costs of capital over a normal amortization period not to exceed ten years, start-up costs, operation and maintenance costs, and such other factors deemed appropriate by the Administrator relating to the economic value which a delay in compliance beyond July 1, 1977, or January 1, 1984, as the case may be, or such other date required for compliance, or any other noncompliance, may have for the owner or operator of such source.

"(C) The Administrator or the State shall take final action establishing such noncompliance fee within ninety days after the date of publication of the proposed fee under subparagraph (A) of this paragraph.

"(d)(1) A noncompliance fee established by a State under this section shall apply unless the Administrator, within sixty days after the date of publication of the proposed fee under subsection (c)(2)(A) of this section, objects in writing to the amount of the fee as less than would be required to comply with guidelines established by the Administrator.

"(2) If the Administrator objects under this subsection, he shall simultaneously establish a substitute noncompliance fee applicable to such source in accordance with the requirements of subsection (c) of this section.

"(e)(1) In the event an owner or operator contests the noncompliance fee established under this section, the owner or operator may within thirty days seek review of such penalty in the appropriate United States district court.

"(2)(A) Except as provided in subparagraph (B) of this paragraph, in no event shall any challenge or review taken under this subsection operate to stay or otherwise delay the obligation of a source to commence monthly payment of the noncompliance fee as determined by the Administrator or the State on the date established to begin such payment, pending the outcome of any such review.

"(B) In any challenge of the imposition of the fee based on an allegation that the failure to comply by such date was due to reasons entirely beyond the control of the owner or operator and there is a substantial likelihood that the owner or operator will prevail in the merits, the obligation to commence monthly payment on the noncompliance fee may be stayed pending the outcome of such challenge: *Provided*, That as a condition of such stay, the owner or operator of such source shall post a bond or other surety in an amount equal to the potential liability for such fee during the period of the stay.

"(3) If an owner or operator is successful in any challenge or review proceedings under this subsection, the court may award such relief as necessary, including cancellation of the bond, rebate of any payments, or adjustment of the amount of payments required by the order.

"(f) In any case where a State does not have sufficient authority to issue a noncompliance fee, the Administrator after thirty days' notice to the State shall establish, implement, and enforce such fee.

"(g) Failure to make any payment required under this section or to submit information required under this section shall constitute a violation of this section and section 301 and shall, in addition to liability for such payments, subject the owner or operator of a source to all penalties under section 309 of this Act.

"(h) Any payments or other requirements under this section shall be in addition to any other permits, orders, payments, sanctions, or other requirements established under this Act, and shall in no way effect any civil or criminal enforcement proceedings brought under any provision of this Act or State or local law.

"(i) Upon making a determination that a source with respect to which a fee has been paid under this section is in compliance and is maintaining compliance with the applicable requirement, the State (or the Administrator as the case may be) shall review the actual expenditures made by the owner or operator of such source for the purpose of attaining and maintaining compliance, and shall within one hundred and eighty days after such source comes into compliance—

"(A) provide reimbursement with interest (to be paid by the State or Secretary of the Treasury, as the case may be) at appropriate prevailing rates (as determined by the Secretary of the Treasury) for any overpayment by such person, or

"(B) assess and collect an additional payment with interest at appropriate prevailing rates (as determined by the Secretary of the Treasury) for any underpayment by such person.".

REGULATION OF DETERGENTS IN GREAT LAKES REGION

SEC. 49. Title III of the Clean Water Act is amended by inserting at the end thereof the following:

"REGULATION OF DETERGENTS IN GREAT LAKES REGION

"SEC. 320. (a) In recognition of the particular danger to the Great Lakes and the residents of the Great Lakes region represented by the use of phosphates in cleaning agents and water-conditioning agents it is the purpose of this section to regulate such use in such region and to provide for a study to determine whether such regulation should be made nationwide.

"(b) As used in this section the term—

"(1) 'Great Lakes region' means the States of New York, Ohio, Indiana, Michigan, Illinois, Wisconsin, and Minnesota; and that portion of Pennsylvania which is in the Great Lakes drainage basin;

"(2) 'cleaning agent' means a heavy duty laundry detergent, laundry additive, dishwashing compound, household cleaner, industrial cleaner, phosphate compound, or other substance intended to be used for cleaning purposes;

"(3) 'chemical water conditioner' means a water-softening chemical, antiscale chemical, corrosion inhibitor, or other substance intended to be used to treat water;

"(4) 'dishwashing machine' means equipment manufactured for the purpose of cleaning dishes, glassware, and other utensils involved in food preparation, consumption, or use, using a combination of water agitation and high temperature; and

"(5) 'phosphorus' means elemental phosphorus as further defined by the Administrator for the purpose of this section.

"(c) The Administrator shall prescribe regulations to be effective after one hundred and eighty days following the date of enactment of this section prohibiting the sale, offering for sale, or distribution, for use within the Great Lakes region of cleaning agents or chemical water conditioners containing phosphates in excess of maximum permissible concentrations prescribed by the Administrator for the purpose of this section. Such regulations shall take into consideration—

"(1) The availability of safe, nonpolluting, and effective substitutes.

"(2) The differing needs of industrial, and household users of cleaning agents and chemical water conditioners.

The maximum amount of phosphorus allowed in the following cleaning agents or chemical water conditioners shall be as follows:

"(A) laundry detergents and built soaps for machine laundry excluding chemical water conditioners, not to exceed 0.5 per centum phosphorus, by weight;

"(B) household and commercial deterents for machine dishwashing, not to exceed 8.7 per centum phosphorus, by weight;

"(C) all household cleaning agents except those listed in clause (A) and (B) intended to be used in the home, not to exceed 0.5 per centum phosphorus, by weight; and

"(D) chemical water conditioners for machine laundry use, not to exceed 20 per centum phosphorus, by weight.

The concentration by weight of prescribed phosphates in any cleaning agent or chemical water conditioner shall be determined by the current applicable method prescribed by the American Society for Testing and Materials.

"(d) In any case where, upon application, the Administrator finds that by reason of exceptional circumstances the strict enforcement of any provision of such regulations would cause undue economic hardship on the user of a cleaning agent or chemical water conditioner; that the use of cleaning or water conditioning agents containing phosphorus in excess of the permissible levels set forth herein is necessary for the public health, safety, or welfare; or that strict conformities with these limits would be unreasonable, impractical, or not feasible under the circumstances, the Administrator may permit a variance therefrom upon such conditions as he may prescribe for prevention, control, or abatement of pollution in harmony with the general purpose of such regulations and the intent of this section.

"(e)(1) It shall be unlawful after the effective date of such regulations for any person to sell, offer for sale, or distribute for use in the Great Lakes region any cleaning agent or chemical water conditioner, unless such agent or conditioner conforms with regulations prescribed with respect to such agent or conditioner pursuant to this section.

"(2) Any person who violates paragraph (1) of this subsection shall be subject to a civil penalty of not to exceed $10,000 for each such violation.

"(f) The Administrator shall carry out a full and complete investigation and study in order to determine whether the regulations prescribed for the Great Lakes region pursuant to this section should be applied nationwide. Such investigation and study shall consider the cost to the consumer, cost to industry, benefits to be gained, and other appropriate factors. The results of such investigation and study shall be submitted to the President and the Congress, together with any legislation necessary to carry out the recommendations, not later than one year after the date of enactment of this section.

"(g) Nothing in this section shall prevent any State in the Great Lakes region from placing into, or keeping in, effect any control over the sale, distribution, or use of any cleaning agent or chemical water conditioner if such control is more stringent than that provided pursuant to this section.

"(h) Nothing in this section shall supercede or preclude the Administrator of the Environmental Protection Agency from issuing regulations under the Toxic Substances Control Act (Public Law 94-469) limiting the use of phosphates in cleaning agents and water conditioning agents.

"(i) Notwithstanding subsection (h) of this section, nothing in this section shall limit or modify the authority of the Administrator under the Toxic Substances Control Act to make an independent finding on the need to continue the prohibition under subparagraph (c) or to alter the terms of the prohibition based on studies and other evidence available to the Administrator."

COMPLIANCE WITH STATE REQUIREMENTS

SEC. 50. (a) Section 401 of the Clean Water Act is amended in each occurrence of the phrase "sections 301, 302, 306, and 307 of this Act" by inserting "303," after "302,".

ENVIRONMENTAL PROTECTION AGENCY ISSUANCE OF PERMITS

SEC. 51. Section 402(d) of the Clean Water Act is amended by adding the following new paragraph:

"(4) Where the Administrator, pursuant to paragraph (2) of this subsection, objects to the issuance of a permit, the Administrator may simultaneously issue a permit pursuant to subsection (a) of this section for such source in accordance with the guidelines and requirements of this Act. Nothing in this subsection shall modify the provisions of section 510 of this Act, and any permit issued under this paragraph shall be subject to the State's refusal to certify such permit under section 401 of this Act for a period of sixty days after such issuance.".

ENFORCEMENT OF MUNICIPAL PERMITS

SEC. 52. Section 402(h) of the Clean Water Act is amended by striking the comma after "is approved" and inserting the following: "or where the Administrator determines pursuant to section 309(a) of this Act that a State with an approved program has not commenced appropriate enforcement action with respect to such permit,".

DREDGE AND FILL PERMIT PROGRAM

SEC. 53. (a) Section 402 of the Clean Water Act is amended by adding a new subsection (l) to read as follows:

"(l)(1) At any time after the publication of guidelines under paragraph (4) of this subsection, the Governor of each State desiring to administer the permit program for controlling discharges of dredged or fill material into the navigable waters specified in paragraph (5) of this subsection may seek approval of its program in accordance with subsection (b) of this section.

"(2) The Administrator, in consultation with the Secretary of the Army and the Director of the Fish and Wildlife Service, shall approve each such program within one hundred and eighty days of submission unless he determines that (A) the State does not have adequate authority in accordance with subsection (b) of this section with respect to discharges of dredged or fill material; or (B) it does not contain guidelines comparable to or more stringent than those under section 404(b)(1) of this Act or is not in accordance with guidelines adopted pursuant to paragraph (2) of this subsection.

"(3) Any State program approved under this subsection shall be subject to provisions of subsections (c) through (k) of this section. Approval of a program otherwise submitted under subsection (b) of this section or operation of a program approved under subsection (b) shall not be delayed by submittal of a program under this paragraph.

"(4)(A) Within one hundred and eighty days after enactment of the Clean Water Act of 1977, the Administrator, in consultation with the Secretary of the Army and the heads of other appropriate Federal agencies,

shall amend the guidelines required by subsection (h)(2) of section 304 of this Act to establish minimum procedural and other elements of any State program for discharges of dredged or fill material including but not limited to guidelines for—

"(i) State review and coordination of interstate, State, regional, and local agenies which administer portions of any State program for discharges of dredged or fill material;

"(ii) program coverage of the navigable waters specified in paragraph (5) of this subsection through the use of vegetation or other appropriate criteria;

"(iii) contained coordination with Federal and Federal-State water-related planning and review requirements; and

"(iv) identification of and testing for toxic pollutants in dredge or fill material, including methods for determining whether or not any discharge requires a permit pursuant to section 307(a) or is otherwise subject to section 307(a) or 311 of this Act.

"(B) A State program for discharges of dredged or fill material may include—

"(i) designation of one or more interstate, State, regional, or local agencies with jurisdiction over a defined geographic area and with sufficient authority, expertise, and resources to administer a program for discharges of dredged or fill material;

"(ii) mapping, protective orders, standards of performance, or other techniques to assist in the review of proposed discharges of dredged or fill material.

"(5) State programs for discharges of dredged or fill material that are subject to approval under this subsection shall include all navigable waters within the State except any coastal waters of the United States subject to the ebb and flow of the tide, including any adjacent marshes, shallows, swamps, and mudflats, and any inland waters of the United States that are used, have been used or are susceptible to use for transport of interstate or foreign commerce, including any adjacent marshes, shallows, swamps, and mudflats.

"(6) Upon approval by the Administrator of a State program pursuant to this subsection, the issuance of permits under section 404(a) of this Act shall be suspended as to those discharges subject to the approved program.

"(7) In the case of a State with a program approved under this subsection, the Administrator may object to the issuance of a permit under subsection (d)(2) of this section only where such permit is clearly outside the guidelines and requirements of this section and section 404 and where the Administrator provides a written statement of the reasons for such objection.

"(8) Nothing in this subsection shall preclude or deny the right of any State or political subdivision thereof or interstate agency to regulate, pursuant to other authorities, activities in the navigable waters within the jurisdiction of such State, political subdivision, or agency.".

(b) Section 404 of the Clean Water Act is amended by adding the following new subsections:

"(d) At any time after the enactment of the Clean Water Act of 1977 a State may assume the authority of the Secretary of the Army under this section in accordance with section 402(1) for the navigable waters within such State other than as specified in section 402(1)(5).

"(e)(1) For the purposes of this section and section 402 the placement of dredged or fill material into the navigable waters shall not be required to have a permit where such placement—

"(A) results from normal farming, silviculture, and ranching activities such as plowing, seeding, cultivating, minor drainage, harvesting for the production of food, fiber, and forest products, or upland soil and water conservation practices;

"(B) involves any other activities identified in section 208(b)(2)(F) through (I) for which a State has adopted and obtained approval of a regulatory program under section 208(b)(4) for all such placement and nonpoint source activities throughout such State which applies best management practices for such activities;

"(C) involves maintenance, including emergency reconstruction of recently damaged parts, of currently servicable structures such as dikes, dams, levees, groins, rip-rap, breakwaters, causeways, and bridge abutments or approaches, and transportation structures;

"(D) involves construction or maintenance of farm or stock ponds or irrigation ditches, or the maintenance of drainage ditches;

"(E) involves construction of temporary sedimentation basins on a construction site which does not include placement of fill material into the navigable waters; or

"(F) involves construction or maintenance of farm roads or forest roads, or temporary roads for moving mining equipment, where such roads are constructed and maintained, in accordance with best management practices, to assure that flow and circulation patterns and chemical and biological characteristics of the navigable waters are not impaired, that the reach of the navigable waters is not reduced, and that any adverse effect on the aquatic environment will be otherwise minimized.

"(2) Nothing in paragraph (1) of this subsection shall be construed to limit or affect the ability of a State or designated management agency to control such activities under sections 208 and 303 (d) and (e) of this Act.

"(3) Any discharge of dredged or fill material into the navigable waters incidental to the construction of a dike or other activity for the purpose of bringing an area of the navigable waters into a use to which it was not previously subject, where the flow or circulation of navigable waters may be impaired or the reach of such waters be reduced, shall be required to have a permit under this section or section 402 of this Act.

"(4) Any placement of dredged or fill material containing toxic pollutants into the navigable waters shall be required to have a permit under this section or section 402 of the Act, and to be in compliance with sections 301, 307(a), 403, and 404 (b)(1) and (c) of this Act.

"(f)(1) Consistent with the requirements of this section and section 208, the Secretary of the Army under this section, or a State with a permit program approved under section 402(1) may, after notice and opportunity for public hearing, issue general permits on a State, regional, or nationwide basis, as appropriate, for classes or categories of discharges of dredged or fill material if the Secretary or the State determines that the discharges in the class or category are similar in nature, cause only minimal adverse environmental effects when performed separately, and will have only minimal cumulative adverse effect on the environment.

"(2) Any such general permit issued under this subsection shall be in lieu of individual permits required under this section (or section 402(1)). Such general permits shall be conditioned on compliance with (A) specific requirements or standards, including State standards or management practices for the activity authorized by such general permit, and (B) the guidelines under subsection (b)(1) of this section.

"(3) Any general permit shall be for a maximum period of three years and shall be subject to being revoked or modified, after opportunity for public hearing, if the requirements of this paragraph are not being compiled with, or if the activities authorized by such general permit may have an effect which is more appropriate for consideration in individual permits.

"(g)(1) The notice required in subsection (a) of this section shall be distributed by the Chief of Engineers not later than fifteen days following submission by an applicant of all information required to complete an application for a permit.

"(2) The Secretary shall, within six months after the date of enactment of the Clean Water Act of 1977, enter into agreements with the Administrator, and the Secretaries of Agriculture, Commerce, Interior, and Transportation and heads of other appropriate Federal agencies to minimize to the maximum extent possible duplication, needless paperwork and delays in the issuance of permits under this section. Such agreements shall be developed to insure that, to the maximum extent practicable, a decision in an application for a permit will be made not more than seventy-five days after publication of the notice specified in paragraph (1).

"(h) No permit shall be required under this section for any Federal water resource project west of the 100th principal meridian, specifically authorized by the Congress for which a final environment impact statement under section 102(2)(C) of the National Environmental Policy Act has been prepared.".

(c) Section 208(b)(4) of the Clean Water Control Act is amended to read as follows:

"(4)(A) Whenever the Governor of any State determines (and notifies the Administrator) that consistency with a statewide regulatory program under section 303 so requires, including the application of best management practices under this paragraph, the requirements of subparagraphs (F) through (K) of paragraph (2) of this subsection shall be developed and submitted by the Governor to the Administrator for approval for application to all areas and all such activities within such State.

"(B) Any such program submitted under this paragraph shall include the following:

"(i) designation of a management agency or agencies to implement the strategy for controlling the placement of dredged or fill material into the navigable waters;

"(ii) a consultation process that includes the State agency with primary jurisdiction over fish and wildlife resources;

"(iii) a process to identify and control the placement of dredged and fill material and other point and nonpoint sources of pollution that adversely affect wetlands and other critical aquatic resources;

"(iv) a process for coordination with the Fish and Wildlife Service in the Department of the Interior, including a process for using and improving the National Wetland Inventory and the information that is a part thereof.

"(C) Whenever the Governor obtains approval of a statewide regulatory program which requires best management practices for the placement and nonpoint source activities identified in subparagraphs (F) through (I) no permit, either general or specific, shall be required for such activities under section 404 or 402(1).

"(D) Whenever there is a dispute with respect to a requirement for a permit under section 402 or section 404 for any activity included under an approved State regulatory program under this paragraph, the Administrator or the Secretary, as appropriate, shall be required to demonstrate that (i) the activity is, in fact, a discharge subject to section 402 or section 404 except for the application of this paragraph; (ii) the size and location of the activity is causing or is likely to cause a significant adverse environmental impact in the affected navigable waters, as identified in guidelines promulgated pursuant to section 404; and (iii) the applicable

best management practices are insufficient to minimize any adverse environmental effect.

"(E) (i) Whenever the Administrator determines after public hearing that a State is not administering a program approved under this section in accordance with the requirements of this section, the Administrator shall so notify the State, and if appropriate corrective action is not taken within a reasonable time, not to exceed ninety days, the Administrator shall withdraw approval of such program. The Administrator shall not withdraw approval of any such program unless he shall first have notified the State, and made public, in writing, the reasons for such withdrawal.

"(ii) In the case of a State with a program submitted and approved under this paragraph, the Administrator shall withdraw approval of such program under this subparagraph only for a substantial failure of the State to administer its program in accordance with the requirements of this paragraph.".

(d) Section 208 of the Clean Water Act is further amended by adding a new subsection to read as follows:

"(j) (1) The Secretary of the Interior, acting through the Director of the Fish and Wildlife Service, is authorized and directed to consult with, and provide technical assistance to any State or agency designated under subsection (a) of this section in developing and operating a continuing areawide waste treatment management planning process under subsection (b) of this section.

"(2) There are hereby authorized to be appropriated to the Secretary of the Interior $6,000,000 beginning in fiscal year 1978 to complete the National Wetland Inventory of the United States by December 31, 1978, and to provide information from this survey to such planning agencies as it becomes available to assist in the development and operation of such plans, including those that are administered by agencies designated by a Governor pursuant to subsection 208(b) (4) (A) of this section.".

SLUDGE DISPOSAL

SEC. 54. (a) Section 405(a) of the Clean Water Act is amended by striking "under this section" and inserting in lieu thereof "under section 402 of this Act".

(b) Section 405(b) of the Clean Water Act is amended by striking the period at the end of the first sentence and inserting in lieu thereof "and section 402 of this Act.".

STATES' JURISDICTION

SEC. 55. Section 510 of the Clean Water Act is amended by adding the following: "Nothing in this Act shall be construed to supersede or abrogate or in any other way affect any authority now vested in any State to establish or operate programs for the allocation of quantites of water within its respective boundaries, or any rights to, or allocations of, quantities of water which have been established pursuant to such programs."

COMBINED SEWER OVERFLOWS

SEC. 56. Section 516 is amended by adding a new subsection as follows:

"(c) The Administrator shall submit to the Congress by October 1, 1978, a report on the status of combined sewer overflows in municipal treatment work operations. The report shall include (1) the status of any projects funded under this Act to address combined sewer overflows, (2) a listing by State of combined sewer overflow needs identified in the 1977 State priority listings, (3) an estimate for each applicable municipality of the number of years necessary, assuming an annual authorization and appropriation for the construction grants program of $4,500,000,000, to correct combined sewer overflow problems, (4) an analysis using representative municipalities faced with major combined sewer overflow needs, of the annual discharges of pollutants from overflows in comparison to treated effluent discharges, (5) an analysis of the technological alternatives available to municpalities to correct major combined sewer overflow problems, and (6) any recommendations of the Administrator for legislation to address the problem of combined sewer overflows, including whether a separate authorization and grant program should be established by the Congress to address combined sewer overflows.".

UTILIZATION OF TREATED SLUDGE

SEC. 57. Section 516 is amended by adding an additional new subsection as follows:

"(d) The Administrator shall submit to the Congress by October 1, 1978, a report on the status of the use of municipal secondary effluent and sludge for agricultural and other purposes that utilize the nutrient value of treated wastewater effluent. The report shall include (1) a summary of results to research and development programs, grants, and contracts carried out by the Environmental Protection Agency pursuant to sections 104 and 105 of this Act, regarding alternatives to disposal, landfill, or incineration of secondary effluent of sludge, (2) an estimate of the amount of sludge generated by public treatment works and its disposition, including an estimate of annual energy costs to incinerate sludge, (3) an analysis of current technologies for the utilization, reprocessing, and other uses of sludge to utilize the nutrient value of sludge, (4) legal, institutional, public health, economic, and other impediments to the greater utilization of treated sludge, and (5) any recommendations of the Administrator for legislation to encourage or require the expanded utilization of sludge for agricultural and other purposes.".

Mr. MUSKIE. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. STAFFORD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 737

Mr. ANDERSON. Mr. President, I ask unanimous consent that notwithstanding the agreement to substitute the House bill, and the third reading and passage thereof, the following amendment be in order.

The PRESIDING OFFICER (Mr. METZENBAUM). The amendment will be stated.

The legislative clerk proceeded to read the amendment.

Mr. ANDERSON. Mr. President, I move that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

(1) On page 3, strike line 4.

(2) On page 1, after line 4, insert the following new section and renumber succeeding sections accordingly:

"SEC. 2. Section 518 of the Federal Water Pollution Control Act is amended to read as follows:

SHORT TITLE

"SEC. 518. This Act may be cited as the 'Clean Water Act'."

(3) In each place the bill uses the phrase "Federal Water Pollution Control Act" strike it and insert in lieu thereof "Clean Water Act".

Mr. ANDERSON. Mr. President, this is a technical amendment that we failed to offer at the proper time.

The PRESIDING OFFICER. Is there objection to the amendment being in order at this time?

Mr. BUMPERS. Mr. President, reserving the right to object—and I hope we do not have to go through this again—is there anything on there dealing with page 73 of the bill?

Mr. ANDERSON. No.

The PRESIDING OFFICER. Without objection, the amendment is considered and agreed to.

Mr. ANDERSON. I ask unanimous consent that the Secretary of the Senate be authorized to make technical and clerical corrections in the engrossment of the Senate amendments to H.R. 3199.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ANDERSON. Mr. President, I ask unanimous consent that S. 1952 be indefinitely postponed.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ANDERSON. I ask unanimous consent that 500 copies of the bill (H.R. 3199) as passed by the Senate be printed.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ANDERSON. Mr. President, I move that the Senate insist on its amendments and request a conference with the House of Representatives on the disagreeing votes of the two Houses on H.R. 3199, and that the chair be authorized to appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. RANDOLPH, Mr. MUSKIE, Mr. GRAVEL, Mr. BURDICK, Mr. CULVER, Mr. HART, Mr. ANDERSON, Mr. STAFFORD, Mr. CHAFEE, Mr. WALLOP, Mr. MCCLURE, Mr. DOMENICI, and Mr. BAKER conferees on the part of the Senate.

CLEAN WATER ACT OF 1977

Mr. ROBERT C. BYRD. Mr. President, I ordinarily would not take the Senate's time at this point, but I think we ought to commend the manager of the bill that has just been passed, the able Senator from Minnesota (Mr. ANDERSON) for his skill in successfully guiding the water pollution legislation to passage in the Senate today. I believe this is the first legislation that Mr. ANDERSON has floor managed, and I feel it is appropriate not only to commend him for this achievement, but to point out that he chaired several of the hearings on this important legislation. In fact, Mr. ANDERSON has been deeply involved in this water polution legislation since coming to the Senate in January of this year. He has demonstrated great competence in his understanding of this important legislative field, and I congratulate him for his work.

I also wish to congratulate the distinguished chairman of the Committee on Environment and Public Works, my friend and senior colleague from West Virginia (Mr. RANDOLPH) for his continuing efforts in bringing important conservation measures to the Senate floor. Moreover, Mr. President, the able Senator from Maine (Mr. MUSKIE) continues to show his dedication to the environment by his untiring efforts on this bill and in connection with the clean air

conference, while at the same time he has been conducting hearings on the second budget resolution.

I salute him for his dedicated efforts on behalf of the environmental health of the Nation.

Mr. President, my statement would not be complete, and I would certainly be remiss in my duty to my own conscience, if I did not recognize the extremely good work and the fine cooperation and dedication that has been shown, as always, by the very distinguished Senator from Vermont (Mr. STAFFORD). He has demonstrated his usual exemplary skill in helping to floor manage that bill. From this side of the aisle, I salute him as I have saluted those on my side.

Mr. BAKER. Will the Senator yield for one moment?

Mr. ROBERT C. BYRD. I yield

Mr. BAKER. I would like to associate myself with the remarks of the distinguished majority leader, Mr. President, and particularly to congratulate our colleague (Mr. ANDERSON) for his first experience in managing a bill. This is a controversial bill and one which created substantial disagreements which were resolved on the floor of the Senate.

I commend Senator STAFFORD in particular for guiding the bill on this side of the aisle, those who offered amendments, those who succeeded and those which did not. I am pleased that the Senate has passed a piece of legislation which I believe does credit to it.

Mr. ROBERT C. BYRD. I thank the Senator.

Mr. President, I am yielding to my colleagues at the sufferance and patience of Mr. MAGNUSON, if he will allow me another minute.

Mr. MAGNUSON. I am very patient. [Laughter.]

Mr. ROBERT C. BYRD. I yield to my senior colleague, Mr. President.

Mr. RANDOLPH. Mr. President, I especially wish to underscore the commendation, which is merited, by the able majority leader of WENDELL ANDERSON and ROBERT STAFFORD, and, of course, all those persons who have been mentioned, other than myself, in connection with the matters which have been the concern of the Senate today.

I believe Senator BAKER would want to be a part of what I am now saying, that it has been the policy within the Environment and Public Works Committee to bring into active leadership on the floor the younger members of our committee. I think this is a good practice. I think they appreciate it, and the Senate profits by their work.

Mr. BAKER. If the Senator will yield for a moment, Mr. President, the distinguished chairman is right. We owe a great deal to the chairman of the Environment and Public Works Committee for his diligence in championing successful efforts to pass good legislation. I would only conclude by saying in addition to my great admiration for him for many years, I would confess to being one of those younger members, but by now I have fully recovered.

(The following proceedings occurred earlier and are printed at this point in the RECORD by unanimous consent.)

SENATOR SCOTT'S REPORT ON HIS RECENT TRIP TO PANAMA, ARGENTINA, AND CHILE

Mr. SCOTT. Mr. President, earlier today I made a report to the Committee on Armed Services on a recent trip to Panama, Argentina, and Chile to ascertain information primarily for the committee with regard to the Canal Zone and the feeling of the people in the general area regarding the proposed transfer of title, of jurisdiction, and control to the country of Panama.

I ask unanimous consent, Mr. President, that a copy of the report and the enclosures contained therein be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. SCOTT. Let me add that three volumes of material filed with the committee are too voluminous to include in the RECORD, and that further information was provided to the Committee on Armed Services in executive session which would not be appropriate to be made public.

I would hope, Mr. President, that all Members of the Senate will obtain independent information with regard to the proposed transfer of the canal in addition to what may be made available from our own State Department.

My report may be helpful to Senators, and the enclosures include a brief summary of the history of the canal, a copy of the 1903 treaty, a position paper presented by the civic councils of several American communities within the area of the Canal Zone, and a recent statement by Adm. Thomas H. Moorer who retired from the Navy after service as Chairman of the Joint Chiefs of Staff for a 4-year period. This statement by a gentleman who was our top military officer from 1970 to 1974 expresses the same concern that I heard from more than 100 individuals, both Americans and foreign nationals, during the trip last month.

The Subcommittee on Separation of Powers of the Senate Judiciary Committee has also had rather extensive hearings primarily on constitutional questions relating to the status of the canal, the authority of the executive branch of Government to negotiate for a transfer of title in view of section 3 of article IV of the Constitution which provides that—

> The Congress shall have power to dispose of and make all necessary rules and regulations respecting the territory or other property belonging to the United States . . .

Our Subcommittee on Separation of Powers also discussed the treaty power of the President under article II, section 2, of the Constitution.

Based upon the facts as I have been able to ascertain them, Mr. President, from the hearings before the Judiciary Committee, from discussions with officials and private persons, both Americans and foreign, the contemplated transfer appears to be against the best interests of the United States from an economic, political and a national defense point of view. The Supreme Court has held that we own title to the Canal Zone and the fifth circuit court of appeals has held that it is the unincorporated territory of the United States. Therefore, unless the Congress, or the American people can prevail upon the White House or the Department of State not to enter into a treaty to give away our property, the only recourse is for the Senate to refuse to ratify the treaty and for the Congress to refuse to appropriate funds specified in the proposed treaty.

EXHIBIT 1

REPORT OF SENATOR WILLIAM L. SCOTT OF VIRGINIA ON PANAMA CANAL TRIP

Mr. Conneely and I left Dulles airport near midnight on June 29th and arrived in Panama early the following morning. In order to obtain an overview we were provided with a helicopter flight over the entire Canal Zone with Lt. General Dennis McAuliffe accompanying us and explaining various details. Thereafter, we visited a set of locks on the ground and were provided with a film study of the history and the operation of the canal. Then we visited the American Ambassador William J. Jorden who discussed the proposed treaty with us. Later we visited the Governor of the Canal Zone. Governor Parfitt is a major general in the army and has general supervisory jurisdiction over the maintenance and operation of the canal, as well as executive oversight of the Zone and the Panama Railroad Company.

We arranged to have a detailed discussion with General McAuliffe and his staff, including a number of colonels and naval captains at a joint meeting. They were most cooperative in sharing their thoughts and responded freely to questions with the understanding that we were attempting to obtain general information to share with the committee and possibly with the full Senate. Each of the general's staff was asked his personal views on the future of the canal, whether it would be operated efficiently if turned over to the Panamanians; whether there was any danger of Communist influence, and whether there would be any policy changes regarding the use of the canal or the fees charged for its use.

Similar questions were put to Americans employed in the operation of the canal and later to businessmen, intelligence officials and staffs of the American Embassies in both Argentina and Chile. Argentine officials included the minister of defense, undersecretary of foreign affairs and assistant to the president. Chilean officials included the president, foreign minister, defense minister, other cabinet officials and the Chilean Ambassador to the United Nations. During the 10-day trip we obtained the views of more than 100 individuals, some American citizens and some foreign nationals.

Our Ambassador to Panama and a former Foreign Minister of Panama favored the proposed treaty. Others had a different point of view. The general consensus of these views was that the United States had constructed the canal and utilized it in the best interests of all countries of the world without profit, and with toll charges only to cover the cost of operation. In fact, it was suggested that the name "Panama Canal" should never have been used but it could better have been named the "American International Canal." Fear was expressed that the Panamanians would not have the necessary skills, or expertise to operate the canal, although they had waged a very successful propaganda effort in favor of obtaining control.

We were also told that there were Communists with important positions within the Panamanian Government and regardless of the terms of a treaty, the canal might be nationalized by the Panamanians and might come under the control of Communists domnated by Cuba and Russia. The committee

might want to obtain the views of Admiral Turner and the C.I.A. in this regard.

There was a common belief that tolls would be raised substantially and statistics were cited that 70 percent of the ships using the canal either came from, or were destined for American ports.

In Argentina we were told that the canal was not as important to it and to other Atlantic nations as it was to countries on the Pacific side of the South American continent or nations closer to the canal.

Chilean officials stated that although they could go around Cape Horn more easily than more northern countries, it was more convenient and economical for their ships to utilize the canal and 95 percent of their shipping did pass through the canal.

In both Chile and Argentina surprise was expressed that we would solicit their views on the future of the canal as State Department officials had led them to believe that the United States had lost interest in continuing its operation. They indicated, however, that the United States had always kept the canal in very good operational condition, but that it would deteriorate under the Panamanians; that Panama would have to obtain outside help to operate the canal and it would not be in the interest of other Nations for the operation or the control of the canal to be turned over to the Panamanians. We were advised that the Panamanian Government itself was inefficient and that the Government could not be expected to do any better in the operation of the canal.

Concern was expressed that terrorists' tactics might be employed if the United States did not execute a treaty under which control of the canal would be given to the Panamanians and that while our troops could successfully meet a direct threat against the canal, military personnel would probably have to board ships as they entered the canal and accompany them through the various locks and no guarantee could be made that a small group of terrorists, under cover of darkness and jungle growth, could not penetrate our defenses and plant explosives at vital spots which would make the canal inoperative. It was not believed, however, that this would happen as it would be very detrimental to the interest of the Panamanian people and their Government since their economic prosperity, to a considerable extent, depended upon uninterrupted operation of the canal.

Concern was expressed that the State Department was proceeding as if it had the full backing of the American people and without considering opposition in the Congress. We were told that Panamanians respected strength and resoluteness and in recent years our Government had shown little firmness and even encouraged Panamanians and others to believe that we intended to give up our rights to the Canal Zone. We were told it would be easier to maintain the security of the canal by continuing our control than it would be to guarantee its security in the event it was operated by Panamanians or to retain control once it was transferred to others.

Americans working and living in the Canal Zone were especially bitter about the prospects of transferring control to Panama. They indicated that all of our military ships but 13 could go through the canal; that war material of all kinds could transit it, including men and equipment; that over 96% of all ships afloat throughout the world could go through the canal; and that the fares paid by ships of any Nation flying any flag were the same with no discrimination, and in time of peace all Nations of the world are permitted to utilize the canal.

Americans living in the Canal Zone stated that the Panamanian Government was inefficient and ineffective; that it was socialistic in nature, headed by a dictator, with little freedom of the press, speech or other civil liberties. It was indicated that our government had been more than generous to the country of Panama not only with regard to the Canal Zone but in conveying to Panama American property outside the Canal Zone worth many million of dollars; property that had formally been used by our Government as quarters for U.S. employees, schools, hospitals and hotels, and for other purposes.

It might be well, Mr. Chairman, to insert, at this point in the Record, a short factual statement of the history of the canal, the American role in the establishment of the country of Panama, as well as a copy of the 1903 treaty. It is interesting to note that the width of the canal is 5 miles on each side of a center line and about 50 miles in length, containing somewhat more than 500 square miles, or more than 5 times the original size of the District of Columbia.

I would also like to make available other written material given to us but for committee use only, not to be made a part of the Record. This material was given to us by American citizens living in the Canal Zone and even a casual reading indicates the deep concern of our own citizens, who should be most familiar with conditions in Panama, about the proposed transfer. For example, a position paper to the House Subcommittee on the Panama Canal on April 12th of this year contains this statement: "The State Department is negotiating a treaty which it is willing to ratify. They make the assumption that they know what is 'in the best interest of the United States' and all other opinions are to be considered ill-informed, unenlightened, and out of step with modern times."

We were told military personnel would appear if requested by the committee and express their opinions in the same manner as they expressed them to us if the committee asked for an expression of personal opinion. My overall impression from the entire trip is that there is a variance between official opinions and private ones. Military and civilian Americans are hesitant to speak out against the transfer of the canal while our State Department is negotiating a transfer of ownership and control.

Moreover, there is little doubt that Pan American nations privately desire the United States to continue both operation and control but are hesitant to publicly oppose the Panamanian position, especially when the United States has not attempted to cultivate a contrary view: I believe it would be against the interests of our Government to transfer control of the canal; that there is evidence of communist influence and that a transfer would have an adverse effect on both American commerce, and defense posture. Since our government did pay the Panamanians for the right to construct the canal, operate it in perpetuity, exercise the rights of sovereignty, paid the French and Columbian Governments for their interests, and purchased title to the property from private owners and even squatters on the property, the claims of the Panamanians do not appear reasonable.

There is also the question the effect the transfer of the control of the canal might have upon the size and composition of our navy and the committee might want to make inquiry in this regard of the Chief of Naval Operations or Chairman of the Joint Chiefs. A former chairman of the Joint Chiefs Adm. Thomas H. Moorer in recent testimony before the Subcommittee on Separation of Powers of our Senate Judiciary Committee spoke out very strongly against the transfer and in response to questions expressed the opinion that transferring the control of the canal to Panama could very well result in Communist control of the canal. I would like to insert a copy of his direct testimony at this point in the record.

I would ask for a short closed session that would take only a few minutes to go over some sensitive information and identify its sources.

[From the Military Engineer, July–August 1974]

A Panama Summary

(By John J. Kern)

Then felt I like some watcher of the skies
When a new planet swims into his ken;
Or like stout Cortez when with eagle eyes
He star'd at the Pacific,—and all his men
Look'd at each other with a wild surmise—
Silent, upon a peak in Darien.
(John Keats, "On First Looking Into Chapman's Homer.")

In this sonnet Keats ascribes the discovery of the Pacific Ocean to Cortez. Although his sonnet is a masterpiece, Keats was historically inaccurate since it was actually Vasco Nuñez de Balboa who discovered the Pacific Ocean in 1513 while atop a mountain peak in the Darien province of eastern Panama.

EARLY EXPLORERS

Rodrigo de Bastidas of Seville discovered Panama in 1501 from the Atlantic side. Christopher Columbus explored the area on his fourth American voyage in 1502. Surprisingly, within 50 years of the discovery of Panama, all of the presently discussed possible canal routes across Central America had been identified, described, and to a certain extent surveyed. Alvaro de Saavedra Ceron, a cousin of Cortez, drafted the first plan for a transisthmian canal in 1529. In 1534, Charles V of Spain directed that a survey be made for a ship canal between the Chagres River and the Pacific Ocean.

EARLY HISTORY OF REGION

The Camino Real was in use by 1535 and over it millions of dollars worth of Peruvian and Mexican gold was transported for ocean shipment to Spain. The Panama area was subsequently incorporated into the viceroyalty of New Granada of Spain's western empire. A preliminary Spanish attempt to construct a canal in 1814 was interrupted by a revolt of her colonies. Panama severed political relations with Spain in 1821 and joined with Colombia in the Republic of Greater Colombia. In 1831, New Granada became an independent republic incorporating Panama as a state. Ten years later Panama seceded from New Granada and maintained its independence for thirteen months.

UNITED STATES INVOLVEMENT

The 1846 Treaty between the United States and New Granada gave the United States a transportation concession across the Isthmus in return for a guarantee to protect the sovereignty of New Granada. One year later the Panama Railroad Company was organized, and in 1848 gold was discovered at Sutter's Mill in California. This event soon brought to the Isthmus a tidal wave of immigrants seeking a better route to the gold fields of California rather than the arduous overland route. Congress co-operated in the same year and authorized steamship lines from New York and New Orleans to Chagres and from Panama City to California and Oregon. The economic pressure of an emerging nation was beginning to be felt on the Isthmus.

Difficulties again between Panama and New Granada resulted in Panama's temporary secession in 1853. In 1856 the United States Marines landed to protect the Panama Railroad during a riot. Thus began the military involvement of the United States.

In 1869 a diplomatic agreement between the United States and Colombia (which had changed its name from New Granada in 1861) provided for the construction of a canal. This was rejected by the Colombian Senate. This same year the opening of the Suez Canal focused international attention on a similar canal in Panama. The United States Congress, in 1872, authorized appointment of the first of many such committees—The Interoceanic Canal Commission—to de-

termine the most practical route for a waterway between the Atlantic and the Pacific. Its report recommended construction of a lock canal across Nicaragua.

FRENCH INVOLVEMENT

In 1875 Ferdinand de Lesseps, the successful builder of the Suez Canal, proposed a sea-level canal at Panama. The Société Civile International du Canal Interoceanique was organized in 1876 to make surveys and explorations. The negotiations in 1878 between Lucien Napoleon Bonaparte Wyse and the Government of Colombia for a canal concession and subsequent French proposals of de Lepiney for a lock canal, resulted in counteraction by the United States. On June 25, 1879, the United States Congress resolved that any attempt of a European power to establish a ship canal across the Isthmus would be considered "a manifestation of an unfriendly disposition towards the United States." Thus, politics and diplomacy joined previous United States economic and military pressures for action in constructing a canal across the Isthmus of Panama.

Nevertheless, in the same year, the Compagnie Universelle du Canal Interoceanique de Panama was organized with de Lesseps as president. The new company ceremoniously started digging a sea-level canal on January 1, 1880, on the Pacific side of the Isthmus. Excavation of Culebra Cut was started in ten days although it was not until one year later that sizable numbers of French construction gangs arrived at Colon. Within five months, the first deaths from yellow fever occurred among Canal employees.

FRENCH CONSTRUCTION DIFFICULTIES

In September 1882, a severe earthquake damanged the canal railroad and buildings. Internal security remained a problem and in May 1885, Colon was burned during a Panamanian revolution. The following year the status of Panama was changed from a Colombian state to a department governed by federal appointees. Corporate difficulties increased within the Compagnie Universelle. Philippe Bunau-Varilla was appointed canal engineer in 1885, only to be relieved one year later. Construction difficulties increased and it became apparent that a sea-level canal was beyond the capabilities of the French company. The plan was changed to a lock canal in 1887. In 1888, after further unsuccessful efforts, the Compagnie Universelle went into receivership.

Meanwhile, independent United States efforts to build a canal across Nicaragua continued. In 1889 the United States Congress incorporated the Maritime Canal Company which began an unsuccessful four-year effort to construct a canal over the San Juan route. These efforts coincided with the suspension of work by the French company on the Panama Canal. The latter company was replaced by the Compagnie Nouvelle du Canal de Panama, but little progress was made and efforts were further hindered by the start of a five-year revolt against Colombia by Panama in 1898.

ISTHMIAN CANAL COMMISSION

On March 3, 1899, the First Isthmian Canal Commission was created by President McKinley to examine all practicable routes across the Isthmus. A year later, this Commission determined from the engineering aspects that a Nicaraguan or a Panamanian route would be about equally feasible. With the expectation of difficulty in acquiring the assets of the French company and operating rights in Panama, the Commission recommended the Nicaragua route. In 1902 the Isthmian Canal Commission reversed its decision and favored adoption of the Panama route after the French company reduced its demands to approximate the appraisal of its assets. United States attention finally settled on Panama as the site of the canal. The Compagnie Nouvelle then agreed to a sale of its canal assets for $40,000,000. The United States Congress promptly granted broad powers to the President to construct the Panama Canal.

PANAMANIAN REVOLT AND THE HAY/BUNAU-VARILLA TREATY

On March 17, 1903, the Senate ratified the Hay-Herran Treaty which would grant construction rights in a canal zone in return for payment of $10,000,000 to Colombia and an annuity of $250,000. This treaty was rejected by Colombia on August 12, 1903, and on November 3 the final Panamian revolt against Colombia resulted in a declaration of independence. Three days later the new Government of Panama was recognized by the United States and within an additional 12 days the Hay/Bunau-Varilla Treaty was signed and ratified by both sides, granting United States occupation of the Canal Zone in perpetuity under similar financial terms as originally offered to Colombia. Relations between the United States and Panama were thus initiated, and assumed much of their later character.

In 1904 the French canal properties were transferred to United States ownership and in November of that year the first American construction effort began. Work was steadily pushed ahead for the next decade and on August 15, 1914, the SS Ancon transited the canal, officially opening the waterway to world commerce.

RECENT STUDIES

The 1929 Study.—Several years after the opening of the Panama Canal, concern that traffic demands would eventually exceed canal capacity led Congress, in 1929, to direct a survey in Panama and Nicaragua to decide the feasibility of adding additional locks to the existing canal, or of constructing another canal at some other location. The United States Army Interoceanic Canal Board of 1929–1931 was created and its report, submitted in 1931, proposed three long-term alternatives: a third set of locks for the existing canal; conversion of the existing canal to sea level; or construction of a new lock canal in Nicaragua.

The Third Locks Project Study (1936–1939).—Congress authorized the Governor of the Panama Canal to study the possibilities of increasing the capacity of the canal. The study report revised a concept which was considered in the original design of the canal and further revised in the 1929 study, and proposed a third set of locks separated from each of the existing locks. In 1939 the Congress authorized its construction, but the project was suspended in 1942 and has never been resumed.

The 1947 Report.—Congress again directed the Governor, in late 1945, to study methods of increasing canal capacity and defenses as well as to consider other alternative routes. Thirty possible routes from Mexico to Colombia were identified and numbered. The report recommended that the existing canal (Route 15) be converted to a sea-level canal by deepening and straightening the existing alignment along a new route called Route 14.

1957–1960 Ad Hoc Committee for Isthmian Canal Plans. The Board of Directors of the Panama Canal Company authorized this study in which recommendations included the first mention of nuclear excavation. The report recommended planning for construction of a sea-level canal using nucelar excavation along a route outside of the Canal Zone. If such plans were not available to implement by the early 1970's, the existing canal was to be converted to a sea-level canal.

1957–1960 Board of Consultants Study.—Concurrently with the Ad Hoc Committee's study, the House Committee on Merchant Marine and Fisheries appointed a Board of Consultants to prepare short- and long-range improvement plans. The report recommended that a sea-level conversion project should not be undertaken in the near future, but that the situation should be reviewed by 1970. In the interim, new studies should continue on conventional and nuclear construction methods.

1964 Isthmian Canal Studies.—This report was prepared by the president of the Panama Canal Company with the participation of the Atomic Energy Commission, the Corps of Engineers, and consultants. This comprehensive study summarized canal traffic projections and capacity, examined methods of improving lock canal facilities, provided a detailed analysis of the Third Locks Plan and a modification of this plan called the Terminal Lakes Plan, and proposed a sea-level canal within the Canal Zone. This report also set the number of lockages per year which could be accommodated at about 26,000. It also examined the technical feasibility of using nuclear excavation on sea-level canals in eastern Panama and northwestern Colombia.

Interoceanic Canal Studies 1970.—This Study Commission was required by Public Law 88–609 of the 88th Congress, September 22, 1964, to study the feasibility of, and the most suitable site for, a sea-level canal connecting the Atlantic and Pacific Oceans. The Commission was appointed in April 1965 and presented its report to President Nixon on December 1, 1970. Concerning nuclear excavation, the report concludes that this technology will not be available because its technical feasibility and international acceptability has not been established. Using conventional construction means, a sea-level canal is physically feasible and the most suitable site is along Route 10 in the Republic of Panama. Construction cost was estimated at $2.88 billion in 1970 dollars. A suitable treaty should be negotiated with Panama providing for a unified canal system (existing canal plus a sea-level canal on Route 10) to be operated and defended jointly by the United States and Panama. Construction should be started no later than 1985.

PRESENT LEGISLATIVE STATUS

House Resolution 1517 is pending before Congress and would authorize completion of a third lane of locks. Beyond this, there is no legislation pending which would provide for radically altering the existing canal or constructing another canal in some other location. Thus, future definitive action will apparently depend on an increase in the pressure areas (economic, military, political, and diplomatic) which originally combined to result in construction of the present canal.

ISTHMIAN CANAL CONVENTION, NOVEMBER, 18, 1903

(Convention between the United States and the Republic of Panama for the construction of a ship canal to connect the waters of the Atlantic and Pacific oceans. Signed at Washington, November 18, 1903; ratification advised by the Senate, February 23, 1904; ratified by the President, February 25, 1904; ratified by Panama, December 2, 1903; ratifications exchanged at Washington, February 26, 1904; proclaimed, February 26, 1904.)

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA

A PROCLAMATION

Whereas a Convention between the United States of America and the Republic of Panama to insure the construction of a ship canal across the Isthmus of Panama to connect the Atlantic and Pacific Oceans, was concluded and signed by their respective Plenipotentiaries at Washington, on the eighteenth day of November, one thousand nine hundred and three, the original of which Convention, being in the English language, is word for word as follows:

ISTHMIAN CANAL CONVENTION

The United States of America and the Republic of Panama being desirous to insure the construction of a ship canal across the

Isthmus of Panama to connect the Atlantic and Pacific oceans, and the Congress of the United States of America having passed an act approved June 28, 1902, in furtherance of that object, by which the President of the United States is authorized to acquire within a reasonable time the control of the necessary territory of the Republic of Colombia, and the sovereignty of such territory being actually vested in the Republic of Panama, the high contracting parties have resolved for that purpose to conclude a convention and have accordingly appointed as their plenipotentiaries,—

The President of the United States of America, JOHN HAY, Secretary of State, and

The Government of the Republic of Panama, PHILIPPE BUNAUVARILLA, Envoy Extraordinary and Minister Plenipotentiary of the Republic of Panama, thereunto specially empowered by said government, who after communicating with each other their respective full powers, found to be in good and due form, have agreed upon and concluded the following articles:

ARTICLE I

The United States guarantees and will maintain the independence of the Republic of Panama.

ARTICLE II

The Republic of Panama grants to the United States in perpetuity the use, occupation and control of a zone of land and land underwater for the construction, maintenance, operation, sanitation and protection of said Canal of the width of ten miles extending to the distance of five miles on each side of the center line of the route of the Canal to be constructed; the said zone beginning in the Caribbean Sea three marine miles from mean low water mark and extending to and across the Isthmus of Panama into the Pacific ocean to a distance of three marine miles from mean low water mark with the proviso that the cities of Panama and Colon and the harbors adjacent to said cities, which are included within the boundaries of the zone above described, shall not be included within this grant. The Republic of Panama further grants to the United States in perpetuity the use, occupation and control of any other lands and waters outside of the zone above described which may be necessary and convenient for the construction, maintenance, operation, sanitation and protection of the said Canal or of any auxiliary canals or other works necessary and convenient for the construction, maintenance, operation, sanitation and protection of the said enterprise.

The Republic of Panama further grants in like manner to the United States in perpetuity all islands within the limits of the zone above described and in addition thereto the group of small islands in the Bay of Panama, named Perico, Naos, Culebra and Flamenco.

ARTICLE III

The Republic of Panama grants to the United States all the rights, power and authority within the zone mentioned and described in Article II of this agreement and within the limits of all auxiliary lands and waters mentioned and described in said Article II which the United States would possess and exercise if it were the sovereign of the territory within which said lands and waters are located to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power or authority.

ARTICLE IV

As rights subsidiary to the above grants the Republic of Panama grants in perpetuity to the United States the right to use the rivers, streams, lakes and other bodies of water within its limits for navigation, the supply of water or water-power or other purposes, so far as the use of said rivers, streams, lakes and bodies of water and the waters thereof may be necessary and convenient for the construction, maintenance, operation, sanitation and protection of the said Canal.

ARTICLE V

The Republic of Panama grants to the United States in pereptuity a monopoly for the construction, maintenance and operation of any system of communication by means of canal or railroad across its territory between the Caribbean Sea and the Pacific ocean.

ARTICLE VI

The grants herein contained shall in no manner invalidate the titles or rights of private land holders or owners of private property in the said zone or in or to any of the lands or waters granted to the United States by the provisions of any Article of this treaty, nor shall they interfere with the rights of way over the public roads passing through the said zone or over any of the said lands or waters unless said rights of way or private rights shall conflict with rights herein granted to the United States in which case the rights of the United States shall be superior. All damages caused to the owners of private lands or private property of any kind by reason of the grants contained in this treaty or by reason of the operations of the United States, its agents or employees, or by reason of the construction, maintenance, operation, sanitation and protection of the said Canal or of the works of sanitation and protection herein provided for, shall be appraised and settled by a joint Commission appointed by the Governments of the United States and the Republic of Panama, whose decisions as to such damages shall be final and whose awards as to such damages shall be paid solely by the United States. No part of the work on said Canal or the Panama railroad or on any auxiliary works relating thereto and authorized by the terms of this treaty shall be prevented, delayed or impeded by or pending such proceedings to ascertain such damages. The appraisal of said private lands and private property and the assessment of damages to them shall be based upon their value before the date of this convention.

ARTICLE VII

The Republic of Panama grants to the United States within the limits of the cities of Panama and Colon and their adjacent harbors and within the territory adjacent thereto the right to acquire by purchase or by the exercise of the right of eminent domain, any lands, buildings, water rights or other properties necessary and convenient for the construction, maintenance, operation and protection of the Canal and of any works of sanitation, such as the collection and disposition of sewage and the distribution of water in the said cities of Panama and Colon, which, in the discretion of the United States may be necessary and convenient for the construction, maintenance, operation, sanitation and protection of the said Canal and railroad. All such works of sanitation, collection and disposition of sewage and distribution of water in the cities of Panama and Colon shall be made at the expense of the United States, and the Government of the United States, its agents or nominees shall be authorized to impose and collect water rates and sewerage rates which shall be sufficient to provide for the payment of interest and the amortization of the principal of the cost of said works within a period of fifty years and upon the expiration of said term of fifty years the system of sewers and water works shall revert to and become the properties of the cities of Panama and Colon respectively, and the use of the water shall be free to the inhabitants of Panama and Colon, except to the extent that water rates may be necessary for the operation and maintenance of said system of sewers and water.

The Republic of Panama agrees that the cities of Panama and Colon shall comply in perpetuity with the sanitary ordinances whether of a preventive or curative character prescribed by the United States and in case the Government of Panama is unable or fails in its duty to enforce this compliance of the cities of Panama and Colon with the sanitary ordinances of the United States the Republic of Panama grants to the United States the right and authority to enforce the same.

The same right and authority are granted to the United States for the maintenance of public order in the cities of Panama and Colon and the territories and harbors adjacent thereto in case the Republic of Panama should not be, in the judgment of the United States, able to maintain such order.

ARTICLES VIII

The Republic of Panama grants to the United States all rights which it now has or hereafter may acquire to the property of the New Panama Canal Company and the Panama Railroad Company as a result of the transfer of sovereignty from the Republic of Colombia to the Republic of Panama over the Isthmus of Panama and authorizes the New Panama Canal Company to sell and transfer to the United States its rights, privileges, properties and concessions as well as the Panama Railroad and all the shares or part of the shares of that company; but the public lands situated outside of the zone described in Article II of this treaty now included in the concessions to both said enterprises and not required in the construction or operation of the Canal shall revert to the Republic of Panama except any property now owned by or in the possession of said companies within Panama or Colon or the ports or terminals thereof.

ARTICLE IX

The United States agrees that the ports at either entrance of the Canal and the waters thereof, and the Republic of Panama agrees that the towns of Panama and Colon shall be free for all time so that there shall not be imposed or collected custom house tolls, tonnage, anchorage, lighthouse, wharf, pilot, or quarantine dues or any other charges or taxes of any kind upon any vessel using or passing through the Canal or belonging to or employed by the United States, directly or indirectly, in connection with the construction, maintenance, operation, sanitation and protection of the main Canal, or auxiliary works, or upon the cargo, officers, crew, or passengers of any such vessels, except such tolls and charges as may be imposed by the United States for the use of the Canal and other works, and except tolls and charges imposed by the Republic of Panama upon merchandise destined to be introduced for the consumption of the rest of the Republic of Panama, and upon vessels touching at the ports of Colon and Panama and which do not cross the Canal.

The Government of the Republic of Panama shall have the right to establish in such ports and in the towns of Panama and Colon such houses and guards as it may deem necessary to collect duties on importations destined to other portions of Panama and to prevent contraband trade. The United States shall have the right to make use of the towns and harbors of Panama and Colon as places of anchorage, and for making repairs, for loading, unloading, depositing, or transshipping cargoes either in transit or destined for the service of the Canal and for other works pertaining to the Canal.

ARTICLE X

The Republic of Panama agrees that there shall not be imposed any taxes, national, municipal, departmental, or of any other class, upon the Canal, the railways and auxiliary works, tugs and other vessels employed in the service of the Canal, store houses, work shops, offices, quarters for laborers, factories of all kinds, warehouses, wharves, machinery and other works, property, and effects appertaining to the Canal or railroad

and auxiliary works, or their officers or employees, situated within the cities of Panama and Colon, and that there shall not be imposed contributions or charges of a personal character of any kind upon officers, employees, laborers, and other individuals in the service of the Canal and railroad and auxiliary works.

ARTICLE XI

The United States agrees that the official dispatches of the Government of the Republic of Panama shall be transmitted over any telegraph and telephone lines established for canal purposes and used for public and private business at rates not higher than those required from officials in the service of the United States.

ARTICLE XII

The Government of the Republic of Panama shall permit the immigration and free access to the lands and workshops of the Canal and its auxiliary works of all employees and workmen of whatever nationality under contract to work upon or seeking employment upon or in any wise connected with the said Canal and its auxiliary works, with their respective families, and all such persons shall be free and exempt from the military service of the Republic of Panama.

ARTICLE XIII

The United States may import at any time into the said zone and auxiliary lands, free of custom duties, imports, taxes, or other charges, and without any restrictions, any and all vessels, dredges, engines, cars, machinery, tools, explosives, materials, supplies, and other articles necessary and convenient in the construction, maintenance, operation, sanitation and protection of the Canal and auxiliary works, and all provisions, medicines, clothing, supplies and other things necessary and convenient for the officers, employees, workmen and laborers in the service and employ of the United States and for their families. If any such articles are disposed of for use outside of the zone and auxiliary lands granted to the United States and within the territory of the Republic, they shall be subject to the same import or other duties as like articles imported under the laws of the Republic of Panama.

ARTICLE XIV

As the price or compensation for the rights, powers and privileges granted in this convention by the Republic of Panama to the United States, the Government of the United States agrees to pay to the Republic of Panama the sum of ten million dollars ($10,000,000) in gold coin of the United States on the exchange of the ratification of this convention and also an annual payment during the life of this convention of two hundred and fifty thousand dollars ($250,000) in like gold coin, beginning nine years after the date aforesaid.

The provisions of this Article shall be in addition to all other benefits assured to the Republic of Panama under this convention.

But no delay or difference of opinion under this Article or any other provisions of this treaty shall affect or interrupt the full operation and effect of this convention in all other respects.

ARTICLE XV

The joint commission referred to in Article VI shall be established as follows:

The President of the United States shall nominate two persons and the President of the Republic of Panama shall nominate two persons and they shall proceed to a decision; but in case of disagreement of the Commission (by reason of their being equally divided in conclusion) an umpire shall be appointed by the two Governments who shall render the decision. In the event of the death, absence, or incapacity of a Commissioner or Umpire, or of his omitting, declining or ceasing to act, his place shall be filled by the appointment of another person in the manner above indicated. All decisions by a majority of the Commission or by the umpire shall be final.

ARTICLE XVI

The two Governments shall make adequate provision by future agreement for the pursuit, capture, imprisonment, detention and delivery within said zone and auxiliary lands to the authorities of the Republic of Panama of persons charged with the commitment of crimes, felonies or misdemeanors without said zone and for the pursuit, capture, imprisonment, detention and delivery without said zone to the authorities of the United States of persons charged with the commitment of crimes, felonies and misdemeanors within said zone and auxiliary lands.

ARTICLE XVII

The Republic of Panama grants to the United States the use of all the ports of the Republic open to commerce as places of refuge for any vessels employed in the Canal enterprise, and for all vessels passing or bound to pass through the Canal which may be in distress and be driven to seek refuge in said ports. Such vessels shall be exempt from anchorage and tonnage dues on the part of the Republic of Panama.

ARTICLE XVIII

The Canal, when constructed, and the entrances thereto shall be neutral in perpetuity, and shall be opened upon the terms provided for by Section 1 of Article three of, and in conformity with all the stipulations of, the treaty entered into by the Governments of the United States and Great Britain on November 18, 1901.

ARTICLE XIX

The Government of the Republic of Panama shall have the right to transport over the Canal its vessels and its troops and munitions of war in such vessels at all times without paying charges of any kind. The exemption is to be extended to the auxiliary railway for the transportation of persons in the service of the Republic of Panama, or of the police force charged with the preservation of public order outside of said zone, as well as to their baggage, munitions of war and supplies.

ARTICLE XX

If by virtue of any existing treaty in relation to the territory of the Isthmus of Panama, whereof the obligations shall descend or be assumed by the Republic of Panama, there may be any privilege or concession in favor of the Government or the citizens and subjects of a third power relative to an interoceanic means of communication which in any of its terms may be incompatible with the terms of the present convention, the Republic of Panama agrees to cancel or modify such treaty in due form, for which purpose it shall give to the said third power the requisite notification within the term of four months from the date of the present convention, and in case the existing treaty contains no clause permitting its modifications or annulment, the Republic of Panama agrees to procure its modification or annulment in such form that there shall not exist any conflict with the stipulations of the present convention.

ARTICLE XXI

The rights and privileges granted by the Republic of Panama to the United States in the preceding Articles are understood to be free of all anterior debts, liens, trusts, or liabilities, or concessions or privileges to other Governments, corporations syndicates or individuals, and consequently, if there should arise any claims on account of the present concessions and privileges or otherwise, the claimants shall resort to the Government of the Republic of Panama and not to the United States for any indemnity or compromise which may be required.

ARTICLE XXII

The Republic of Panama renounces and grants to the United States the participation to which it might be entitled in the future earnings of the Canal under Article XV of the concessionary contract with Lucien N. B. Wyse now owned by the New Panama Canal Company and any and all other rights or claims of a pecuniary nature arising under or relating to said concession, or arising under or relating to the concessions to the Panama Railroad Company or any extension or modification thereof; and it likewise renounces, confirms and grants to the United States, now and hereafter, all the rights and property reserved in the said concessions which otherwise would belong to Panama at or before the expiration of the terms of ninety-nine years of the concessions granted to or held by the above mentioned party and companies, and all right, title and interest which it now has or may hereafter have, in and to the lands, canal, works, property and rights held by the said companies under said concessions or otherwise, and acquired or to be acquired by the United States from or through the New Panama Canal Company, including any property and rights which might or may in the future either by lapse of time, forfeiture or otherwise, revert to the Republic of Panama under any contracts or concessions, with said Wyse, the Universal Panama Canal Company, the Panama Railroad Company and the New Panama Canal Company.

The aforesaid rights and property shall be and are free and released from any present or reversionary interest in or claims of Panama and the title of the United States thereto upon consummation of the contemplated purchase by the United States from the New Panama Canal Company, shall be absolute, so far as concerns the Republic of Panama, excepting always the rights of the Republic specifically secured under this treaty.

ARTICLE XXIII

If it should become necessary at any time to employ armed forces for the safety or protection of the Canal, or of the ships that make use of the same, or the railways and auxiliary works, the United States shall have the right, at all times and in its discretion, to use its police and its land and naval forces or to establish fortifications for these purposes.

ARTICLE XXIV

No change either in the Government or in the laws and treaties of the Republic of Panama shall, without the consent of the United States, affect any right of the United States under the present convention, or under any treaty stipulation between the two countries that now exists or may hereafter exist touching the subject matter of this convention.

If the Republic of Panama shall hereafter enter as a constituent into any other Government or into any union or confederation of states, so as to merge her sovereignty or independence in such Government, union or confederation, the rights of the United States under this convention shall not be in any respect lessened or impaired.

ARTICLE XXV

For the better performance of the engagements of this convention and to the end of the efficient protection of the Canal and the preservation of its neutrality, the Government of the Republic of Panama will sell or lease to the United States lands adequate and necessary for naval or coaling stations on the Pacific coast and on the western Caribbean coast of the Republic at certain points to be agreed upon with the President of the United States.

ARTICLE XXVI

This convention when signed by the Plenipotentiaries of the Contracting Parties shall be ratified by the respective Governments and the ratifications shall be exchanged at Washington at the earliest date possible.

In faith whereof the respective Plenipotentiaries have signed the present convention in duplicate and have hereunto affixed their respective seals.

Done at the City of Washington the 18th

day of November in the year of our Lord nineteen hundred and three.

JOHN HAY,
P. BUNAU-VARILLA.

And whereas the said Convention has been duly ratified on both parts, and the ratifications of the two governments were exchanged in the City of Washington, on the twenty-sixth day of February, one thousand nine hundred and four;

Now, therefore, be it known that I, Theodore Roosevelt, President of the United States of America, have caused the said Convention to be made public, to the end that the same and every article and clause thereof, may be observed and fulfilled with good faith by the United States and the citizens thereof.

In testimony whereof, I have hereunto set my hand and caused the seal of the United States of America to be affixed.

Done at the City of Washington, this twenty-sixth day of February, in the year of our Lord one thousand nine hundred and four, and of the Independence of the United States the one hundred and twenty-eighth.

THEODORE ROOSEVELT.

By the President:
JOHN HAY, *Secretary of State.*

A POSITION PAPER, PRESENTED BY U.S. CIVIC COUNCILS TO THE HOUSE SUBCOMMITTEE ON THE PANAMA CANAL, APRIL 12, 1977

The Panama Canal was created by United States taxpayers' dollars, American ingenuity, engineering and medical expertise, and dedicated labor, transforming a sparsely populated, fever-infested jungle into the eighth wonder of the world. In fact, the Republic of Panama owes its very existence to the United States and the Panama Canal. Anyone who has seen the Nicaraguan area which was once considered for a Canal route can readily imagine what Panama would look like today had there been no Canal built here. Likewise, Panama owes its former prosperity to the United States and the Canal Zone, not just from the annual railroad annuity, but also from wages paid to Panamanian employees in the Canal Zone, from purchases made by U.S. citizens and agencies of the Canal Zone, and from the millions of dollars in foreign aid given so lavishly out of U.S. taxpayers' money.

The U.S. citizen work force in the Canal Zone is comprised largely of highly-skilled, dedicated, technical employees, who have left their homeland, not for service in a foreign country, but in the service of the United States government under the flag of the United States. Their outstanding record of accomplishments in keeping the Canal running smoothly and efficiently has been due largely to their sense of pride in their work, their sense of loyalty to the United States, and their attitude of concern for their country's welfare. These people believe strongly that the Panama Canal cannot operate effectively or efficiently without a Canal Zone which is under the jurisdiction of the United States—with U.S. laws, courts, postal system, police and fire protection, and schools with U.S. curriculum and U.S. citizen teachers. We believe that the U.S. government owes a strong legal and moral responsibility to these loyal employees to protect their job security, their lives, their property, and their families, while at the same time protecting the tremendous investment of taxpayers' money in the Canal.

For the past 3½ years, the U.S. Civic Councils in the Canal Zone have been preparing position papers and formal statements of community opinion for submission to Congressmen, Canal Zone officials, Department of Army representatives, treaty negotiators, and State Department officials. We have tried to maintain an attitude of rationality, calmness, and sensible perspective on the subject of a new Panama Canal treaty with the Republic of Panama. One of the many points we have tried to make so often, so much so that we feel like "broken records," is that the U.S. citizen in the Canal Zone feels very apprehensive about living under the type of "legal system" now in force in the Republic of Panama.

We live next-door to the Republic of Panama all year long! We use our eyes and ears to observe what is going on there and we are not naive enough to believe that the Guardia Nacional, that mistreats fellow Panamanians with arbitrary beatings, imprisonment, expatriation and murder, is going to give special treatment to those "hated colonialist gringoes" who have finally come under their jurisdiction. (This attitude of hostility is encouraged and developed by the Government-controlled news media in the Republic of Panama.) The actions of the Panamanian government during the past year-and-a-half have done nothing to sell the U.S. employee in the Canal Zone on the idea of living under Panamanian jurisdiction. Let us cite a few examples:

1 In January, 1976, a group of Panamanian businessmen and professionals were exiled, contrary to the Panamanian constitution, for their opposition to the Torrijos regime.

2. The student riots in Panama City in September, 1976, were clumsily handled by the Guardia Nacional, so much so that the disorder continued almost daily for a week-and-a-half. When the Guardia finally took decisive action, it was brutal.

3. The October bombings in the Canal Zone have been credited to members of the G–2 of the Guardia Nacional, although members of the U.S. Embassy speculated informally that Bill Drummond might have bombed his own cars and participated in bombings at other sites in order to gain sympathy for his anti-treaty stand.

4. An Air Panama pilot, officially charged with possession of bombs to be used against the Panamanian government, told people at Paitilla Medical Center that the bomb that exploded in his car was tossed in there by a passing G–2 car. According to the Panamanian government's "official version", the man's wife was holding a bomb in her lap (a somewhat incredible tale) when the bomb exploded, injuring her seriously. Incidentally, his wife was sentenced to five years in prison.

5. Guardia Nacional escorted groups of students into the Canal Zone January 9, 1977, where American flags were burned and Panamanian flags were raised. (This last ritual seemed somewhat unnecessary because Panamanian flags are already flying in the Canal Zone.)

6. William Drummond, while passing through Tooumen Airport on February 11, 1977, en route to Washington on labor union business, was detained by G–2 agents and questioned for about three hours in the downtown Panama City office. When he tried to board another plane the following day, he was detained for 15 minutes at the foot of the boarding ramp, and seven friends who accompanied him to the airport were also detained and questioned because one of them took pictures of Mr. Drummond being stopped by G–2 agents. The film was confiscated by the G–2.

It seems inconsistent with the stated refusal of our government to deal with countries who have violated human rights that any negotiations should be carried on with a government which is in power illegally, and which has a record of frequent violation of human rights. The Torrijos dictatorship has used extreme repression against political, professional, business, student and labor groups. The expatriation of what is estimated to be about 1300 Panamanians and the murder of some 500 persons in a country of only 1,700,000 inhabitants would compare to 168,000 expatriations and 65,000 murders in the United States. (Definitive, authoritative figures on expatriations and political murders are difficult to obtain in Panama because of Government secrecy and suppression of information which the Government does not want its people to have.)

What exists now in the Canal Zone, after many attempts on our part to send out warning signals and indications of problems to come, is a "seige mentality" and crisis atmosphere. Now that one of the Civic Council presidents whose signature appears at the conclusion of this paper (Harold Green of Gamboa) has had recent experience with arbitrary detention, arrest, interrogation and search in the Republic, we are having real difficulty in maintaining an attitude of composure and calm rationality.

In short, our people have told us that they are more rigidly opposed than ever to living under Panamanian jurisdiction. The list of 15 assurances, recently released by Governor Harold R. Parfitt, spelled out for them the cold hard reality that Panamanian law would go into effect when the treaty was inaugurated, and many, many of our people now tell us that "the day that the Canal Zone Police go, we go," and also, more alarmingly, "When the U.S. workers see the day getting closer when jurisdiction will be handed to Panama, you can expect to see the Canal shut down."

Last year Dr. Richard Cheville addressed your committee not long after the March sick-out, and he explained in his testimony some of the factors that led up to the closing of the Panama Canal. Morale at that time was extremely low; this year we have to say honestly that our people are so demoralized that they are ready to give up and quit—a shutdown of the Canal, if it occurs, will not happen over a labor issue. It will result from apprehensive employees, who in their fear for their physical security, will simply leave their jobsites, go home and pack their suitcases for repatriation. We do not say this lightly; we do not say it as a threat. But we must make the honest observation that our people feel so thoroughly discouraged and so exhausted after several years' worth of worry and insecurity (with nothing much to look forward to), that it would not take much to get some of them to join a job action.

In contrast to our position as year-round residents and as elected representatives of U.S. citizens living in the Panama Canal communities, the treaty negotiators and State Department officials have little at stake themselves personally, other than to successfully negotiate a treaty which will, in their minds, ease hemispheric tensions and get rid of chronic problems in our relations with Panama. When they finish their assignment, they will move on to other missions, leaving us to live with what they have arranged in treaty form. Generally, the treaty negotiators came to Panama for short periods of time, followed by journalists who become experts after a three-day tour that includes standard briefings by the Panamanian and Canal Zone governments.

These negotiators for the most part stay in isolation on the island of Contadora, and when they have consented to meet with Canal Zone labor and civic representatives, they have said relatively nothing of any significance on the treaty issue. We sincerely resent the fact that our services and the future security of our nation are being negotiated under a cloak and dagger atmosphere, particularly since the secrecy is unilateral. Secrecy, in recent years, has been closely linked with dishonest, illegal or shady dealings. We in the Canal Zone are hard pressed to accurately define the secrecy attached to the Panama Canal negotiations. (Imagine our chagrin to daily read in the Panama papers that a Panamanian government spokesman is briefing Panamanian student, professional, business or labor groups on the "progress of the negotiations." And the presidents of Costa Rica, Colombia, Venezuela seemed to be briefed regularly by General Torrijos about treaty matters. Does the U.S.

State Department believe that the American people are not mature enough to properly accept and assimilate such highly important information?)

Let us make clear that we are American citizens deeply concerned with the present and future well-being of our nation. Our opinions on what the U.S. has at stake in the negotiation of a new Canal treaty are also affected by our conversations with Panamanian friends, our reading of Spanish-language and English-language newspapers in Panama, and our understanding of the behavioral traits of the Panamanian government (something which one does not arrive at overnight or even in three days.) Because of the present situation in the Republic of Panama, many of us do not "cross the border" as often, as freely, or even as nonchalantly as we used to. Fear, apprehension, and deep concern for our personal safety brought about by a succession of events in Panama, have given us an increasing "looked-in" feeling in the Canal Zone. When Panamanians are deported, or arrested, tortured and even killed for having dissident opinions, and when even our own people are subject to arrest in Tocuman Airport, in violation of existing treaty agreements—the average U.S. citizen in the Canal Zone is not at all enthusiastic about arbitrarily being subjected to the legal jurisdiction of such a repressive government. As an additional item of evidence, we have had numerous conversations with many Panamanians that you will never be able to meet. Our impression from these conversations is that when the Panamanian government officials speak today, they are not speaking for all the people.

Let us cite a statement made recently by an educated businesswoman from Panama City. Speaking to a Civic Council president informally, she said, "The United States is a world leader and so is the Soviet Union. But the United States has the advantage of liberty and freedom. Yet your country is doing nothing to help promote the spread of liberty in Latin America today. I understand that your government cannot interfere in our internal affairs, but your government COULD withhold foreign aid and could stop giving military assistance to our government. Our people are growing in their resentment of the United States government because they see your government selling weapons, armored cars, and other equipment to this government that oppresses us." The Panamanian people seem to be overtly silent because they have no effective means that they can see with which to fight back. However, the ever increasing opposition to the dictatorial Government of Omar Terrijos became glaringly evident during the past Seprampant for months in the Canal Zone and Panama that more antigovernment riots may be imminent in the months of April and May.

What effect does all this have on the operation of the Canal? Right now it is having a disastrous effect on the quality of work being performed because workers are "uptight" constantly about physical and economic security. The pride in working on the Panama Canal that has been part of our historical heritage here since the Canal's construction is now giving way to constant preoccupation with one's personal welfare. The recent arrests of U.S. citizens at Tocumen Airport was not highly regarded by our people, many of whom wonder about their own safety in passing through this airport. The Panamanian government has not yet responded to the official protest concerning their violation of the Air Transport Service Agreement of 1949. Comments in the Panamanian press were that the Panamanian government did not like the agreement, a sentiment that does not augur well for any commitments made in a new treaty. The Panamanian government could decide, sooner or later, that they "don't like the agreement" again. On the subject of Tocumen Airport, let us add that our requests for use of Howard Air Force Base as the point of air departure and arrival from the Canal Zone were denied because "one arrest does not justify the civilian use of this military air terminal." U.S. residents who one year ago thought William Drummond was an eccentric who made his own problems, have been so jarred by events of the past year that now they identify fully with what happened to him at Tocumen Airport. The reason thusly: "If it can happen to Bill Drummond, then perhaps it can happen to me." Our people are now asking us, "How many arrests *are* needed for someone in our federal government to take steps to insure our protection in travel by air to and from the Canal Zone?"

Turning now to the subject of employee status under a new treaty with Panama, we would like to respond to the recent list of 15 items which the U.S. presumably proposes to submit at the negotiating table. In spite of the fact that the Panamanian government has said that this list of "assurances" would not be acceptable, we wish to let you know the reaction from the U.S. community in the Canal Zone. Assurances of U.S.-provided schooling and medical care, adequate housing, duty-free import and purchasing privileges and exemption from Panamanian income tax were good news to us, as you may be well aware. The language regarding job assurances was somewhat vague and left us wondering if we would be given help or if we would not. The assurances seem to promise only what we already have: "all eligible employees are *guaranteed by current regulation* reduction-in-force and reassignment rights, transfer of function rights, and discontinued service retirement following involuntary separation." We were also told that "Civil Service Commission approval will be sought to provide any present U.S. citizen employee requesting such assistance with priority placement consideration for appropriate vacancies in federal government agencies." This is still vague and uncertain, and our people have had about all they can tolerate of uncertainty.

The irony of the list of 15 assurances is that, in spite of advantages which the U.S. citizen who might consider remaining here will have over the locally-hired Panamanian citizen employee, our people have such strong objections to the fifth item in that list, that they have little interest in the other somewhat positive assurances. The item which caught the exclusive attention of the U.S. community reads like this: "In connection with offenses arising from acts of omission punishable under the laws of the Republic of Panama, United States citizen employees and their dependents will be entitled to specific procedural guarantees, such as prompt and speedy trial, specific charges, cross-examination of witnesses and legal representation of choice."

Disregarding the fact that Panamanian government officials have announced in their local newspapers that they would never allow U.S. employees in the Canal enterprise to have a SOFA-type of agreement such as the U.S. military will have, and assuming for the sake of argument that the Panamanian negotiators agree to this assurance as part of the new treaty, who will guarantee that the Panamanian government will *consistently comply* with the request to give U.S. citizen employees these "procedural guarantees"?

After reveiwing the list of assurances, we would like to hear something more specific and concrete, in language that we can understand, concerning priority transfers to government jobs in the United States. In addition, we would like to express concern for two particular job categories: teachers and policemen. At this point, teachers have no transfer rights from the Canal Zone into the U.S. Civil Service system, other than for jobs at Indian reservations. They have worked faithfully and well in educating our chidren, and we are distressed that they are left "out on a limb" when it comes to job transfers. Those who do not choose to participate in the DOD school system which will probably go into effect down here should be given first priority for employment in the U.S. and assistance in obtaining such employment. The men and women of the Canal Zone Policies Division are among those living under a "death sentence" because treaty negotiators have made it quite clear that law enforcement functions of the present Canal Zone Government will cease within three years after the new treaty goes into effect. The morale in this particular division continues daily at an all-time low because these employees only know that they will be out of a job soon; they know nothing about any future employment that will allow them to provide for their families.

In general, our people were appreciative of the attempt to give them some information about their status under a new treaty, even if that list of assurances is rejected by the Panamanian government. Nevertheless, our Personnel Bureau continues to have difficulty in recruiting pilots, doctors, nurses, marine engineers, electricians, tugboat masters, and other needed workers for the Canal enterprise. Our constituents tell us that June will witness another mass exodus from the Canal Zone, further magnifying the problem for our job recruitment specialists.

During the past three to four years, while job security has been a major concern for our people, they have been receiving an "education" from the State Department concerning the treaty. In briefings, newspaper articles, and informal discussions, the State Department officials make clear these basic premises for their argument that a new treaty is needed:

1. A Canal Zone is not necessary for the successful operation of the Canal. (They tell us that we wouldn't WANT to live in the Canal Zone if Panama did not get the treaty it desires.)

2. The countries of Latin America give full support to Panama's claims for sovereignty over the Canal Zone and eventual control of the Canal operation.

3. The turnover of the Canal to Panama is in the best interests of the United States because not to do so would possibly involve our country in another Viet Nam-style guerrilla war.

4. Panama has a sincere interest in keeping the Canal open and would not do anything to jeopardize the efficient operation of the Canal.

5. The Canal Zone is an anachronism; it is a source of irritation. Once the U.S. citizens are scattered throughout Panama City and Colon, they will no longer be identified as "Zonians," thus easing tensions and friction between the U.S. and Panama.

6. The economic growth of Panama depends on acquiring the lands in the Canal Zone so that Panama City and Colon can expand their business interests.

7. The denial of basic human rights within the Republic of Panama is not a matter that needs to be brought into the treaty negotiations. After all, Panama is one of the "developing countries of the world," and such behavior is normal for such countries.

8. The State Department would not negotiate a treaty which the U.S. Congress would not ratify.

The above concepts might be plausible to someone who has not lived here, to someone who has little or no dealings with the Panamanian government and its officials. They make the negotiation of a new treaty with Panama under the Kissinger-Tack conceptual principles as the most logical course to follow. Permit us to provide some responses to these concepts we have listed.

1. When the Canal Zone U.S.-based legal system ceases to exist, many, if not all U.S. employees will leave because they prefer to work and live under an orderly system of laws that guarantees them justice and fair play. They are becoming increasingly resistant to the thought of living under Panamanian legal system as it is now administered.

2. The countries of Latin America say one thing in public and another privately. In the newspapers they pledge full support for Panama's claims to the Canal. In private, to people such as former Under Secretary of State William Rogers, they say that they are satisfied with the course that the U.S. is taking in the Canal treaty negotiations. From observation of the political behavior and egocentrism of Latin American governments, one can safely say that Omar Torrijos could not depend on his Latin American neighbors for monetary or military support in an open conflict with the United States. Those other countries wish to preserve their own ties to the United States in foreign aid allotments and commercial ventures. They would not sacrifice their own interests for the sake of Torrijos' "just aspirations" concerning the Canal. Rhetorical support is about all that General Torrijos can expect from Central and South America.

3. Turning over the Canal to prevent "guerrilla warfare" is NOT in the best interests of the United States because:

a. construction of enough warships to provide a "two-ocean navy" would be necessary in case Panama became whimsical in permitting us access to the Canal for military vessels. The extra cost in fuel for sending these ships around the tip of South America would be astronomical.

b. The Moscow-Havana axis has been casting lustful eyes for a long time toward our Canal as well as at other straits and waterways of the world. Panama does not have the military strength (even with the armored cars new in their possession) to withstand an assault from ANY country that would choose to invade and occupy it. The Panamanian people are not "fighters" by tradition; they have never fought a war of liberation. The average campesino reasons in this way: "Why should I get myself killed for the sake of a dictator? What will it gain me or my family? Absolutely nothing. Therefore I will simply adjust to whoever is in power. One ruler is as bad as another."

c. The flow of Alaskan oil through the Panama Canal en route to eastern ports in the United States will be in serious jeopardy when Panama has control over access to the Canal and over the setting of tolls.

d. Our first line of defense in the western hemisphere would suddenly become Harlingen or McAllen, Texas (or perhaps Key West, Florida.)

e. The threat of "guerrilla warfare" amounts to nothing more than an attempt at political "blackmail" and appears to be contradictory in nature, based on the actions of the State Department. How valid is the threat if the State Department permits the sale and assists in the movement of armed personnel carriers to the Panamanian government? This military equipment was furnished in two installments, the first in October, 1976, and the second on March 5, 1977. The second installment, consisting of 12 armored vehicles, was delivered under Canal Zone police escort, to the Republic of Panama. What can justify the sale of military equipment to a potential enemy? How does one explain this situation to a U.S. soldier who may some day face his own death at the hands of an enemy who is using equipment built in the United States and delivered with the help of our own Government officials? (One rather weak explanation from the U.S. Embassy in Panama is "Well, if they don't buy from us, they'll buy from someone else. It's better that US industry gets the money and we can control the supply of replacement parts."

4. The Panamanian government is not noted for rational, logical behavior, nor for extensive attention toward preventive maintenance of government equipment. At this point, the Panamanian government, nearly bankrupt, needs money so desperately that we agree they have a sincere interest in keeping the Canal open and operating efficiently. We further believe that the Canal will remain open and operating efficiently even if the Panamanian government does not gain control of the Canal and the Canal Zone. Panama presently derives about one-third of its national income ($256,000,000 in 1976) from Canal sources and they are not about to jeopardize that income by foolishly attempting to sabotage the Canal. Any terrorist or guerrilla type action, if at all, will be aimed at targets other than the Canal. In short, U.S. taxpayers are being required to sacrifice their tax dollars, land and national security in order to protect the investment of multinational business corporations.

One of the differences between U.S. control and Panamanian control of the Canal and Canal Zone is the anticipated exorbitant increase in tolls which Panama would levy. Any such increase would seriously jeopardize the economic health of the Canal and increase the cost of products in countries that can ill afford such an increase. Sabotage and toll increases will hurt most of these Central and South American countries who are supposedly solidly behind the "just aspirations" of General Torrijos.

The lackadaisical attitude toward repairs and maintenance would contribute to the mechanical and structural breakdown of the Canal and appurtenances (unless the United States agreed to continue supplying parts and maintenance indefinitely.)

5. The "gringo" as he is often called here in Panama will continue to receive harassment, whether he lives in Panama or the present Canal Zone. The United States has been a rather convenient whipping-boy for the Republic of Panama for years and years. Criticism of the U.S. has always been used to distract the Panamanian's attention from the incompetence, graft, corruption, and poor judgment of his government. Besides, the average Panamanian (when he permits himself to talk freely,) DOES NOT want a treaty signed under the regime of Omar Torrijos. Such a treaty would reinforce the already crushing power of the Torrijos government on the Panamanian people.

6. The economic growth of Panama will need more than a Canal to restore it to health. The repressive atmosphere has inhibited consumers from visiting stores and businesses; it has inhibited investors from putting their money to work in Panamanian enterprises. The acquisition of Canal Zone lands for use by Panamanian commercial interests still requires the intelligent use and exploitation of those lands by competent businessmen. Such people are not the ones in control in the Panamanian government today. The ones in power are military men without adequate training in economics and business management. At this point we will not even attempt to explore the plight of the businessman in Panama who is weighed down by a pyramid of government taxes and fees, a labor code full of headaches for everyone, and abundant government red tape necessary in order to operate a business in the Republic.

7. The denial of basic human rights within the Republic of Panama IS a matter that should be considered in the treaty negotiations. President Carter has expressed repeated interest in the matter of human rights. If our country is to participate in a metaphorical "marriage" by means of a treaty with another country, we should know just WHO that "spouse" is. Denial of human rights is bound to make further problems for Canal employees later on, no matter WHAT nationality they are. Rather than taking an amoral stance, our country should apply its influence on the Panamanian government, to the extent that U.S. citizens (who DO come under the legitimate concern of our federal government) will not be permitted to live under such repression. We cannot rightfully interfere in the domestic policies of another nation, but we can let them know that they will not receive what they want so desperately from us until they make some changes in those policies.

8. The State Department is negotiating a treaty which IT is willing to ratify. They make the assumption that they know what is "in the best interest of the United States" and that all other opinions are to be considered ill-informed, unenlightened and out of step with modern times.

In past years, civic leaders from the Canal Zone have presented to you concerns they had about day-to-day items such as health care, commissaries, substandard housing, and schools. We continue to have such concerns, but in an important hearing such as this, when your time is at a premium, we emphasize that our concern this year is the survival of the Canal and the physical well-being of the Canal operation.

U.S. citizens in the Canal Zone have been greatly disturbed in the past year with the direction in which the treaty negotiations seem to be going. They tend to feel powerless in the writing of a major agreement between two countries, an agreement which will have far-reaching effects on these workers as well as on the United States as a nation. Because of the political unrest in Panama today as opposition to the Torrijos regime mounts because of economic and political problems, we know we live and work here with a certain amount of risk. But at the same time we are concerned with the implications that the treaty being negotiated with Omar Torrijos will have on the United States. The behavior of the Panamanian government in the past year should be testimony enough in itself to give our Senators and Representatives some serious reservations about the wisdom of a treaty with a government that runs roughshod over its citizens' human rights and that drains the national treasury to supply a comfortable lifestyle for numerous high-ranking officials. A case in point is the current trip to Libya, during which General Torrijos and 49 other dignitaries will expend government funds while their nation is on the threshhold of bankruptcy and the people at home are exhorted to make "sacrifices" for the national good.

While all these things have been going on in Panama, State Department officials have assumed that the Panama Canal worker would stay in his place and patiently await the verdict on the treaty. They can no longer make that assumption safely. If the U.S. Government wishes the Canal to continue operating efficiently for world commerce, it will need to supply employees who are willing to work under the present tense and uncertain conditions. The U.S. Government may find them, but with some difficulty and probably at great cost in financial enticements. It would seem to make more sense to respond to the needs of the current workforce and likewise to avoid any haste in ratifying a treaty with Panama that promises to bring even more headaches in the future.

For ourselves as U.S. citizens living and working thousands of miles from our homeland, we can say, "Pack us up tomorrow. We're ready to go." But for the sake of U.S. commerce and of U.S. national interests in general in the Western Hemisphere, we urge you to examine the proposed treaty (whenever it is announced) in minute detail. We urge you to visit here for more than three days, to observe the situation with your own eyes and not to depend solely on briefings by U.S. or Panamanian government officials. The new treaty with Panama will have long-range repercussions that coming generations will have to live with; we urge you not to

ratify a new treaty solely because the State Department says that a treaty is the cure-all to problems with Panama. The Russia-Cuba axis and the American electorate are waiting to see which way the treaty goes. A hasty decision on the part of our Congressmen without giving deep and thoughtful study to the question would please the former and infuriate the latter.

Mrs. Charlotte Kennedy, President, Cristobal-Margarita-Brazos Heights Civic Council; Mrs. Patricia Fulton, President, Pacific Civic Council; Mr. Harold B. Green, Jr., President, Gamboa Civic Council; Mr. Dale Windle, President, Gatun Civic Council; Dr. Melvin Boreham, President, Coco Solo-France Field Civic Council.

STATEMENT BY ADMIRAL THOMAS H. MOORER

Mr. Chairman and Distinguished Members of the Subcommittee on the Separation of Powers,

I am honored to be here as a witness. I hope my testimony will prove helpful in these hearings regarding the U.S. Canal Zone and the Panama Canal.

My military experience during the last twelve years of active duty, from 1962 to 1974, offered me some extraordinary and unique opportunities to assess the importance of the Panama Canal to the United States, as well as its value to our Allies and friends and, indeed, to all maritime nations.

My evaluation of this waterway as an invaluable possession of the United States was intensified in 1962. At that time I was Commander Seventh Fleet operating in the Western Pacific. Frequently my fleet's capabilities depended on the prompt arrival of supplies from the Atlantic seaboard, supplies loaded aboard ships which were utilizing the Panama Canal.

From the Seventh Fleet I went to Commander-in-Chief, Pacific; from there to Commander-in-Chief, Atlantic, and NATO's Supreme Allied Commander, Atlantic; from there to Chief of Naval Operations and from there to Chairman of the Joint Chiefs of Staff. Each of these commands provided unique opportunities, and sometimes urgent reasons, to evaluate the Panama Canal. I saw this strategic waterway from many vantage points and under stressful circumstances.

As Commander-in-Chief, Pacific, I recall in some detail the Tonkin Gulf era of 1964. During that period I saw the Panama Canal as a conduit for rapid reinforcement from the Atlantic Fleet should the naval forces of the Soviet Union or mainland China become involved in the Vietnamese War. The U.S. high command was never sure during those early phases of the war of the intentions of either the Soviet Union or mainland China. We knew they had the naval and air capabilities to make trouble and therefore we had to draw up contingency plans for such eventualities. In order to equalize the wartime explosure and hardship throughout the entire Navy, large numbers of Atlantic Fleet units were continuously rotated through the Canal to the combat theatre in the Pacific. In addition, as the Pacific Fleet Commander, I looked to the Atlantic side for rapid logistics support. The U.S. Army, the U.S. Air Force, the U.S. Marine Corps and the U.S. Navy all required a continuous and heavy flow of logistic support; such necessities as fuel, ammunition, spare parts and food. Our allies fighting with us in Vietnam also required considerable support from the United States. If the Panama Canal had not been open and available, the war in Vietnam would have been much more difficult and costly to conduct. This conclusion is also true for the war in Korea.

To give you some idea of the magnitude of Panama Canal usage and its relationship to the war effort, in 1963 there was a total of 300 U.S. government transits through the Panama Canal. As the war escalated, the number of government ships transiting by 1966 had almost doubled. The records show for that year—1966—a total of 591 government ships transited the Canal. Most of these ships were carrying critically needed logistics support to the forces operating under my command.

As Commander-in-Chief, Atlantic, and NATO's Supreme Allied Commander, I saw the situation at Panama in another perspective. That was for the period 1965 to 1967. The war in Vietnam was still expanding, but now I was looking at the Canal not only as a means of sending support to the Commander-in-Chief, Pacific, but also from the Atlantic perspective. I saw the possible need to reverse the flow of ships through the Canal, particularly if the situation deteriorated in the Middle East or in the Caribbean during those volatile months of tension and conflict in both these areas.

Both in our U.S. planning and in our NATO planning we envisioned contingencies calling for reinforcements from the Pacific Ocean areas. We envisioned the need for combatant tonnage, Army and Marine Divisions, and particularly we saw the need for amphibious lift.

As Chief of Naval Operations I had to look at the Panama Canal as an essential means of equalizing the strength and providing the balance between the Atlantic and Pacific fleets. The Canal made it possible to preposition certain types and tonnages, but always with the knowledge that the balance could be shifted to meet unforeseen situations. The Panama Canal gives the naval planner much flexibility and versatility that he would be deprived of without it.

As Chairman of the Joint Chiefs of Staff I became even more sensitive to the strategic value of this U.S. Canal as a means of protecting the security of the United States. My job as Chairman involved all of the Armed Forces of the United States—their collective requirements—and I was primarily responsible to the President for their ability to carry out their roles and missions as assigned by the Congress. Any Commander acting in that capacity will immediately perceive that it is vital to United States interests to retain complete ownership and control of the Panama Canal.

It was at this juncture of my command responsibility that I became concerned about the proposals to surrender the Panama Canal to a leftist oriented government allied with Cuba. There existed the potential danger for giving this U.S. advantage to a man who might allow or might be persuaded that it was in his best interest to permit Soviet power and influence to prevail by proxy over the Canal, in much the same manner as happened in Cuba. I was convinced as Chairman of the JCS—and I remain convinced today—that if the Soviet Union ever gained even proxy sovereignty and control over the U.S. Canal Zone and Canal through Cuba, U.S. security as well as U.S. prosperity would be placed in serious jeopardy.

The United States would be placed in jeopardy because interocean mobility would be threatened. The mobility of allied commercial shipping and naval forces would face the same threat. The economic lifelines of the entire Western Hemisphere would be needlessly jeopardized, and the point is: there is *no point* in surrendering this vital interest. I have yet to see any solid justification advanced as to why the United States should willingly sacrifice the strategic advantages afforded to us by our possession of the Panama Canal. Also, by relinquishing control of the Canal Zone and the Canal, we would force all those nations who depend on our power and leadership to accommodate to the adverse implications of such action on our part. The Canal Zone could become the satellite base of an adversary, and the advocates of "giveaway" do not appear to take this factor into account.

For the foregoing reasons and others not listed, I co-signed with three former Chiefs of Naval Operations a letter to President Carter. The key message in that letter was this: "Under the control of a potential adversary the Panama Canal would become an immediate crucial problem and prove a serious weakness in the overall U.S. defense with enormous potential consequences for evil."

The military and commercial considerations are obvious.

Although the large aircraft carriers and large supertankers cannot use the Canal, 97 percent of the world's commercial and naval fleets can use the Canal as it is. The Canal does need some modernization.

About two-thirds of all the current Canal traffic is bound to or from U.S. ports. When ships round the Horn instead of going through the Canal, they must travel about 8,000 extra miles, have 8,000 extra miles of wear and tear, need 8,000 extra miles of fuel. On an average it takes 31 extra days to round the Horn.

If we were denied use of the Canal, we would have to build a much larger Navy; much larger storage and harbor facilities on both the East and West Coasts of the United States, and provide more merchant ships as well as escorts.

Surrender of U.S. sovereignty over the Canal Zone would inevitably lead to the transformation of the entire friendly character of the Caribbean and the Gulf of Mexico. Everything would depend on the atitude of those who held sovereignty and ownership.

In military affairs there is no substitute for ownership of the territory and the ability to control or to deny the waters and the air space.

After having lived through three decades of conflict I don't believe it takes much imagination to envisage some of the pitfalls we might face in turning the U.S. Canal Zone and Canal over to any government that might see fit to use it against us. Mr. Chairman, I would like to include in the record the letter signed by four Chiefs of Naval Operations, including myself, and the forwarding endorsement signed by four distinguished members of the United States Senate as part of my statement.

Regarding the question of sovereignty, ownership and control of the U.S. Canal Zone and the Canal, I am not a lawyer, but I am satisfied with the Supreme Court's decision of 1907 in the famous Wilson vs. Shaw case that the United States does have legal sovereignty and ownership for the purposes enumerated in the Treaty of 1903. This ruling was reaffirmed as recently as 1972. Also, our Constitution states in Article IV, Section 3, Clause 2, that only Congress has the authority to dispose of U.S. territory and other property of the United States. The language in the Supreme Court's decision of 1907 is quite precise. It is not ambiguous. So is the language in our Constitution. Since the Supreme Court's decision of 1907 still stands—it has never been overruled—and since the Constitution, in my opinion, is still the best governing document in existence. I can only conclude that we would be well advised to abide by these documents in our negotiations with other countries.

Thank you, Mr. Chairman.

LEGAL ACTIONS OF INDIAN TRIBES—CONFERENCE REPORT

Mr. ABOUREZK. Mr. President, I submit a report of the committee of conference on S. 1377 and ask for its immediate consideration.

The PRESIDING OFFICER. The report will be stated.

The legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S.

1377) to extend the time for commencing actions on behalf of an Indian tribe, band, or group, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by all of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the RECORD of July 20, 1977.)

Mr. ABOUREZK. This has been cleared on both sides, and this is the extension of the statute of limitations on filing Indian claims. The conferees agreed to April 1, 1980 as a compromise date.

I move the adoption of the conference report.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The conference report was agreed to.

Mr. ABOUREZK. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. LEAHY. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

(This concludes proceedings which occurred earlier.)

ORDER OF PROCEDURE

Mr. ROBERT C. BYRD. Mr. President, I ask that the distinguished Senator from Washington (Mr. MAGNUSON) be recognized, and that he then be permitted to yield to me without losing his right to the floor.

The PRESIDING OFFICER. The Senator from Washington is recognized.

Mr. MAGNUSON. Mr. President, I yield to the Senator from West Virginia.

EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, there are four nominations at the desk, reported earlier in the day by the Committee on Energy and Natural Resources. I ask unanimous consent that the Senate go into executive session to consider those four nominations.

Mr. BAKER. Mr. President, reserving the right to object, and I will not object, the majority leader and I have discussed these four nominations, and I will simply say they are clear on this side and we have no objection to proceeding to their consideration and confirmation.

The PRESIDING OFFICER. Without objection, it is so ordered. The Senate will come to order. Senators will take their seats.

The clerk will state the first nomination.

DEPARTMENT OF ENERGY

The assistant legislative clerk read the nomination of James R. Schlesinger of Virginia to be Secretary of Energy.

Mr. HANSEN. Mr. President, I rise in support of the nomination of Dr. James Schlesinger to be this Nation's first Secretary of Energy. Dr. Schlesinger will head the new Department of Energy, which will be established by legislation we passed on Tuesday.

Dr. Schlesinger has served this Nation well in the nearly 10 years since he came to Washington. As a senior official in the Office of Management and Budget, the Chairman of the Atomic Energy Commission, the Secretary of Defense, and most recently as the Assistant to the President, heading the White House Office of Energy Policy and Analysis, he has devoted himself to a carefully analyzed view of the best interests of the United States and the American people. While I have not always agreed with his policy positions in those jobs, I sincerely believe that Dr. Schlesinger is motivated by the highest ideals and brings to his responsibilities a brilliant intellect and the strong courage of his convictions, once having analyzed a problem or an issue.

I want to commend the President for his nomination of Dr. Schlesinger. The nomination indicates how seriously the President views our energy situation and also his willingness to use this country's best talents in dealing with it. It certainly is no secret that I disagree with many aspects of the President's energy policy, but I am encouraged that the President is launching this new department with the strong and balanced leadership of Dr. Schlesinger. Hopefully, with Dr. Schlesinger at the helm, this country can proceed with all due dispatch, despite our current differences, to achieve a balanced and effective energy policy, with both needed energy conservation and energy production.

At this time, I would like to inform my colleagues of a series of questions I asked Dr. Schlesinger, and his answers, yesterday in his confirmation hearing before the Energy and Natural Resources Committee. All Members of this body should be aware of the questions and answers as they relate to the operations of the new Department of Energy and some of the policies of the Department. I asked these questions as one of the conferees for the Energy and Natural Resources Committee on S. 826, the bill to establish the new department. Dr. Schlesinger's answers should serve as a valuable part of the legislative history on S. 826, and an important statement of Dr. Schlesinger's commitments as he embarks in this new position and responsibility.

Dr. Schlesinger's answers will be paraphrased from his testimony yesterday, since we do not have an edited transcript available:

I. Department of Energy Act:

A. Leasing of Federal lands:

Q. The bill in section 209 mandates the establishment of a leasing liaison committee to insure required liaison between the Department of Energy and the Department of Interior. The Senate was greatly concerned about the continued development of our Federal energy resources. Is it your intention to move swiftly to get the leasing liaison committee set up and moving? Would you propose to make this a powerful instrument for carrying out our Federal leasing policies?

A. Dr. Schlesinger agreed to quickly get the leasing liaison committee established and to insure it was an effective vehicle for maintaining close liaison and coordination in leasing policy between the two departments.

Q. The bill effectively gives the Interior Department the lead role for environmental impact statements (EIS's) for most, if not all, Federal leasing actions under the National Environmental Policy Act (NEPA). Since these EIS's are often the "pacing" or "critical path" items in new leasing schedules, I am concerned that this control over EIS's could be used by the Interior Department to delay or frustrate our leasing programs. Can you assure us that your Department will be an active participant in these EIS's and insure that there are no unnecessary delays? And, can you assure us that you will inform this committee if there is any such delay or frustration of our leasing policy, so we can review the statute?

A. Dr. Schlesinger supported the lead role in EIS's for Interior, since the Department remains the actual leasing agent and manager for the Federal Government. He agreed, however, to insure that the Department of Energy closely monitors the progress of EIS's and insures that they are completed in a timely fashion. He also agreed to keep the committee informed about any EIS problem.

Q. The new split of leasing responsibilities between the Energy and Interior Departments could take a long time to sort out and get new regulations, if necessary, in place. This could introduce some serious delays in our Federal leasing? How soon do you expect to have any new regulations ready to go?

A. Dr. Schlesinger stated the regulations would be in place as soon as possible, and the Department will be functioning approximately by October 1 of this year. He agreed that it was important to provide predictability in the new leasing arrangement.

B. Regulatory transfers into the new department:

Q. The new Department will have many of the functions of the FPC and the ICC in the Federal Energy Regulatory Commission. Other FPC and ICC functions will be in your authority. It is extremely important that these authorities and functions be sorted out so that the energy industries can have a predictable and available "regulator." When will you have your regulations for the separation of these authorities and functions? Can you assure us the regulations will closely follow the legislative history we have established, including a colloquy I had with Senator Ribicoff on these transfers in the Senate floor debate on the conference report? Can you assure us we will see and be briefed on the regulations as soon as you have a draft available? I might state that Senator Ribicoff and Senator Stevens, myself, and other Senators attach great importance to those regulations.

A. Dr. Schlesinger agreed to insure that the regulations will closely follow the legislative history established, including the colloquy in the floor debate. He agreed that predictability for the regulated industries was important. He also agreed to make the draft regulations available to the committee as soon as available.

Q. The conference bill repealed section 7 (k) of the Federal Energy Administration Act. I understand you submitted a letter yesterday saying the Department would continue the policies of section 7(k) even though the mandatory requirement has been repealed. Can you assure us to that effect? (The letter was placed in the Congressional Record at page S. 13284).

A. Dr. Schlesinger assured the committee that the section 7(k) policy would be continued.

C. Energy information and planning:

Q. The D.O.E. bill sets up an energy industry profile analysis. I was concerned that this ultimately would be the first step toward divestiture actions. Do I understand that you will not necessarily move, immediately, to use this profile for divestiture planning and actions? Can you assure us that you will keep us informed of the intended uses of this energy industry information?

A. Dr. Schlesinger assured the committee that the administration now opposes divestiture and that the information would only be used for energy analysis and policy. He further stated that the profile information, in fact, may further demonstrate that there

is no compelling need for divestiture. He also agreed to keep the committee informed of the uses of this information.

Q. The bill also mandates a major, formal energy planning effort by the Department. Most parts of the provision which smacked of a Humphrey-Hawkins planned economy approach to energy planning were knocked out in conference. Can you assure us that the remaining energy planning provisions will not be used to impose a fully, Federal Government-planned, energy economy on our people.

A. Dr. Schlesinger disavowed any intention to move toward a Federal Government-planned energy economy under that mandated planning. He stated his personal convictions that no energy plan will ever succeed without the voluntary decisions and support of the American people.

D. Energy conservation:

Q. The bill gives energy conservation "the highest priority" in energy planning. There are many voluntary conservation programs now in law under the Energy Policy and Conservation Act and the Energy Conservation and Production Act. Can you assure us that you will give these voluntary programs, which in my opinion have been underfunded and underemphasized, a full chance to work? (Give American people and industry a voluntary chance before mandatory regulation takes over.)

A. Without giving up the authority, where it now or may in the future exist, for mandatory conservation measures when necessary, Dr. Schlesinger agreed to support the full implementation of voluntary programs now in law.

Q. The National Energy Extension Service Act became law this spring—it is a good example of giving our people assistance and support for voluntary conservation. Can you assure us you will vigorously pursue that concept?

A. Dr. Schlesinger agreed to vigorously pursue the energy extension service concept.

E. "Fully and currently informed":

Q. As chairman of the A.E.C., you became familiar with the requirement of the Atomic Energy Act to keep the Joint Committee on Atomic Energy "fully and currently informed". Can you assure us that you will continue to follow that requirement, as required by the Act, in the new Department?

A. Dr. Schlesinger agreed to keep the Energy and Natural Resources Committee fully and currently informed.

II. Nuclear matters:

Q. We are greatly concerned that our nuclear energy and nonproliferation policies are increasingly dominated by the State Department and the Arms Control and Disarmament Agency. For instance, under a bill reported this week, a new "international nuclear fuel authority" is being mandated—apparently with administration approval. This new authority could make major changes in our own nuclear program, including a stockpiling of enriched uranium and possibly internationalized spent fuel storage. Will you get the Department actively into these fast changing policy areas? We would hope that the Department of Energy will closely review these matters—will that occur?

A. Dr. Schlesinger indicated that the new Department will become actively involved in these matters. He also stated that he has no intention of allowing our domestic nuclear programs to be subordinated to any international authority, saying we will not allow an international authority to dictate to our programs.

Q. We also are greatly concerned that our nonproliferation policy, particularly the nonproliferation bill with its stringent and procedurally unwieldy export controls, will have a tremendous negative impact on our domestic nuclear industry. Can you assure us that the new Department will carefully monitor our policies to prevent that result? (The administration's own plan will lead to increased need for domestic nuclear power).

A. Dr. Schlesinger indicated that the Department will closely review any potential negative impacts on our industry, stating that a viable domestic industry is an important part of our energy future. (He separately indicated that legislation to streamline the nuclear power plant licensing process would be forthcoming in early September.)

Q. As you well know, we have had an unfortunate problem with the administration over the Clinch River breeder reactor project, which required us to start two GAO investigations. You and Senator Baker and Senator Jackson apparently have resolved the disagreement, so that finally the administration has agreed to keep the project alive until the final decision is made for fiscal year 1978. The conference bill mandates an annual authorization for the new Department. This committee will handle that authorization. Can you assure us that you will closely follow that annual authorization, and that we won't have a succession of "Clinch Rivers"?

A. Dr. Schlesinger, without disavowing the President's constitutional powers of veto, stated that the Department would work with the Congress to make the authorization process work.

Q. Also, there is a feeling that the administration intends to try to delay this year's ERDA authorization "to death," because of Clinch River and other controversial provisions. Can you assure us that you, as Secretary, will make a good faith effort to get this year's and following year authorization bills into law, even if we disagree on some parts? Specifically, would you commit yourself to make a good faith effort on behalf of the administration to get the ERDA authorization for F.Y. 1978 (which, of course, eventually would be for the new Department's former-ERDA programs) enacted this session—despite any differences we may have to work out.

A. Again, without disavowing the President's veto power, Dr. Schlesinger pledged himself to make a good faith effort to enact an ERDA authorization for F.Y. 1978.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the nomination was confirmed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of that nomination.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will state the second nomination.

FEDERAL POWER COMMISSION

The assistant legislative clerk read the nomination of Georgiana H. Sheldon, of Virginia, to be a member of the Federal Power Commission.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the nomination was confirmed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of the nomination.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will state the third nomination.

FEDERAL ENERGY ADMINISTRATION

The assistant legislative clerk read the nomination of Hazel R. Rollins, of the District of Columbia, to be an assistant administrator.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the nomination was confirmed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of the nomination.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will state the fourth nomination.

FEDERAL POWER COMMISSION

The assistant legislative clerk read the nomination of Charles Brent Curtis, of Maryland, to be a member.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the nomination was confirmed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of the nomination.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate return to legislative session.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished minority leader.

Will the distinguished Senator from Washington yield to me 2 minutes longer?

Mr. MAGNUSON. I yield.

PRIVILEGE OF THE FLOOR—LABOR-HEW APPROPRIATIONS CONFERENCE REPORT

Mr. BAYH. I appreciate the courtesy, Mr. President.

Mr. President, I ask unanimous consent that Barbara Dixon and Abby Reed, of my staff be granted privilege of the floor during debate and votes on the conference report on H.R. 7555.

The PRESIDING OFFICER. Without objection, it is so ordered.

LABOR–HEW APPROPRIATIONS—CONFERENCE REPORT

Mr. MAGNUSON. Mr. President, I submit a report of the committee of

conference on H.R. 7555 and ask for its immediate consideration.

The PRESIDING OFFICER. The report will be stated.

The legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 7555) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies for the fiscal year ending September 30, 1978, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by a majority of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report, on which there is a 1-hour limitation of time.

(The conference report is printed in the House proceedings of the RECORD of July 26, 1977.)

Mr. MAGNUSON. Mr. President, I have a statement regarding the conference and the agreement.

Mr. President, the Senate should be pleased with the conference agreement on the fiscal year 1978 Labor–HEW appropriations bill, totaling $60.2 billion. This is $425 million below the budget request. Overall, we retained well over 50 percent for most of the Senate priorities added to the House version of the bill, and the House accepted 90 percent of our Senate cuts. We did better in almost every area than last year, particularly in the field of health.

Far more important than percentages, however, is the fact that we have developed a good bill—one of our best—carefully selecting our priorities to hold down spending, but still providing a record level of services.

I have already discussed this bill in detail when we originally brought it to the floor on June 28. Therefore, I will now just discuss some of the key issues of the conference.

DEPARTMENT OF LABOR

SUMMER YOUTH JOBS

We have agreed to a record $693 million appropriation for approximately 1,165,000 jobs for disadvantaged youth next summer. With 40-percent unemployment among minority youth, I would like to have seen even more jobs provided. However, it appears we will be taking another look at this program in a supplemental, since more funds may be needed to cover a possible minimum wage increase.

SECRETARY'S DISCRETIONARY FUNDS

A partial restoration of the Secretary of Labor's discretionary funds was agreed to, sufficient to guarantee continuation of jobs for the elderly as well as funding drought-related emergency employment projects.

In addition to increased numbers of jobs for the elderly provided in the community services employment for older Americans appropriation, we also provided for the continuation of jobs for the elderly previously funded under the now-expired title X of the Public Works Economic Development Act. As of July 1, 1978, 47,500 jobs will be funded by the community services employment for older Americans appropriation, including 2,600 of the total 4,800 PWEDA title X jobs which can be converted to this program. In the meantime, the Secretary of Labor is directed to continue funding the 4,800 jobs with discretionary funds under title I of the Comprehensive Employment and Training Act.

OCCUPATIONAL SAFETY AND HEALTH

We ended up with the same bill language for the Occupational Safety and Health Administration that we had last year. However, the conference report directs the Secretary of Labor to develop a detailed plan for providing consultation services to small businesses and submit it to the Appropriations Committees by January 1, 1978.

HEALTH

Health programs continue to be one of our highest priorities. We have allowed over $6 billion for the prevention, research, and training programs of the Public Health Service, more than $200 million over the House allowance—a greater share of our Senate increases over the House than I can recall.

I am particularly pleased that the funding levels in this bill will make our health training, community health programs, and our Public Health Service hospitals much stronger.

In addition, I should note that the committee feels very strongly about continuing our efforts to strengthen the PHS hospitals and clinics. They are all in urban underserved areas, and we ought to be using them.

One final health initiative started by the committee is our strong emphasis on health education for young children and new research and service programs in the area of nutrition. These are all simple prevention programs. They are vital in the long run to help contain our health costs.

EDUCATION

The conferees have agreed upon a total of $10 billion for education programs, an increase of $562 million above the 1977 funding level.

I am pleased that the conferees agreed upon $20 million for the magnet schools under emergency school aid. Magnet schools can serve as an important alternative to busing and can assist in crisis prevention. A magnet school is designed to stimulate desegregation through the development of school programs which attract students of different racial backgrounds to that school.

The recommendation for basic educational opportunity grants, or BOG's, is $2.2 billion. This will provide for a maximum $1,600 grant and allow approximately $90 million to expand the BOG's eligibility so that some of the inequities, especially as they relate to middle-income students, can be eliminated.

WELFARE

In the welfare area we reduced welfare payments and medicaid costs by one and a half billion dollars before the House. This was $1.9 billion below the President's budget estimates. After 2 months of disputing our estimates, the administration recently revised their numbers to come into total agreement wtih the Senate's estimates. In conference the House agreed, too.

We came up with the lower numbers because aged people on welfare have declined by over 8 percent, and welfare families are also decreasing in size and numbers. In addition, the rate of medicaid cost increase is down about 5 percent.

We will provide $15 million out of medicaid for health projects in underserved rural areas. The conferees decided not to require a 1-year limitation on the amount of time the States have to file prior-year public assistance claims.

HEAD START

Another area where we added significantly to the budget request was for the head start program. The final $625 million conference agreement is $138 million over the woefully inadequate budget request. I certainly hope next year's budget is more realistic in requesting an adequate funding level for the head start program—this is the program's first increase in 10 years.

POVERTY PROGRAMS

For the Community Services Administration, the conference agreement provides $596 million, retaining more than 70 percent of the Senate increases. The budget request of only $442 million proposed to wipe out several antipoverty programs. This is an example of where the Congress has been forced to add well in excess of $100 million over the budget request, just to restore the Nation's antipoverty efforts back to last year's level. For local community action agencies, a modest increase was provided—the first increase in seven years—helping to counteract the impact of inflation.

SCHOOL CIVIL RIGHTS SURVEY

The conferees deleted bill language added on the Senate floor that would have prohibited HEW from requiring another civil rights survey of school year 1977–78.

In place of bill language the conferees agreed on strong wording in the conference report that any questions asked of schools last year cannot be repeated under any authority for this next school year. The one exception is for questions necessary to determine the eligibility of applicants for Emergency School Aid money. This language is a good starting point in our efforts to cut back on the mountain of required paperwork.

ABORTION

Once again the conferees are deadlocked over the language of the abortion prohibition. The House has voted 238 to 182 to offer last year's language prohibiting the Federal funding of "abortions except where the life of the mother would be endangered if the fetus were carried to term."

On the Senate side we voted 9 to 5 in conference to reject this language and 8 to 6 to stick with the language adopted on the Senate floor which allows abortions where "medically necessary" or for the "treatment of rape or incest victims."

CONCLUSION

Mr. President, I believe we have come out of conference with a bill most of my colleagues can support. It provides for

a high percentage of our Senate priority increases, but it is still more than $400 million below the President's budget request. I trust the Senate will quickly adopt this conference report and that the President will subsequently sign this bill into public law.

Mr. President, I ask unanimous consent to have printed in the RECORD a summary of the provisions of the conference report as agreed to by the conferees.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

DEPARTMENTS OF LABOR, HEALTH, EDUCATION, AND WELFARE AND RELATED AGENCIES APPROPRIATION BILL (H.R. 7555), FISCAL YEAR 1978

TITLE I—DEPARTMENT OF LABOR

	1977 comparable appropriation	1978 budget estimate	House allowance	Senate allowance	Conference agreement	Conference compared to 1977	Conference compared to 1978 estimates	Conference compared to House bill	Conference compared to Senate bill

[1] This is a 3 year advanced appropriation. The fiscal year 1977 amount was the first year under the advanced system and includes funds for 1977, 1978 and 1979. The fiscal year 1978 appropriation includes funds for 1980 only.

Mr. BROOKE. Mr. President, I am glad to join with our distinguished chairman, Senator MAGNUSON, in recommending adoption of the conference report on H.R. 7555, the fiscal year 1978 Labor-HEW appropriations bill.

This bill is of major significance to the citizens of this Nation. It provides for a wide range of human needs, from training and jobs for the unemployed, to medical care and biomedical research, education, and programs to aid the poor, elderly, and disabled—those least able to care for themselves.

In relative terms, the conferees have developed a prudent but responsible bill. As it now stands, the bill totals $60,168,561,000. This amount is $1,165,528,550 less than the House recommendation and $495,565,000 below the Senate figure. It is also noteworthy that the Labor-HEW bill is under even the President's budget request. In this case, it is under by $425,409,000. This is achieved through lower welfare requirements as a result of prior year overestimates.

Still, the Senate was able to prevail on many of its additions to the House bill. Of the 89 Senate amendments, our body receded completely on only 16. While we did not get all we wanted, I believe the bill is a reasonable compromise.

I would make only one exception to that statement. I am very displeased with the bill language limiting the use of transportation to deal with illegal school desegregation. This language is a blatant attempt to restrict HEW's responsibilities under title VI of the Civil Rights Act of 1964. It is an unconstitutional provision, and I am confident it will be challenged in the courts.

Another language amendment deals with abortion. This amendment is reported in complete disagreement and will be taken up after we complete the conference report.

Let me discuss some of the other important results of our conference.

LABOR

I am pleased to report that the Senate was able to convince the House to retain $98,000,000 of the increase we had recommended for summer youth employment. The $693,000,000 which the bill provides will support part-time summer jobs for 1,165,000 young people ages 14 through 21. The unemployment rate for black young people in this category now ranges up to 40 percent.

For older workers, the conferees agreed to a level of $190,400,000—a $10,000,000 increase over the House bill. This amount will provide funding for about 47,500 community service jobs for persons 55 years of age and older. The conferees also agreed that 80 percent of the job slots would be administered by national contractors and 20 percent by the States, according to the formula in the basic law.

In the area of occupational safety and health, the conferees provided an additional $1,500,000 for an added 100 health compliance positions.

HEALTH

For health programs, the Senate conferees were able to convince the House to accept more than half of the Senate's recommended increase in the House bill.

For the sudden infant death information and counseling program, I am pleased to report that the conferees agreed to a level of $3,000,000. This will provide for a 75-percent increase in this small but important program to aid the families of SIDS victims. The increase will allow expansion of the program to most of the 30 States and territories which do not presently have any SIDS projects available. It will provide thousands of parents of infants struck by this little-understood killer with help in coping with their loss.

For family planning, the conferees agreed to $135,000,000. This is $11,300,000 more than the House recommendation and $21,000,000 above the current year level. The increase will permit expansion of family planning services to more than a half million additional high-risk persons, particularly teenagers and low-income women who need services but cannot get them.

The conferees agreed to an additional $50,000,000 to improve the productivity of the public health service hospital and clinic system and to begin the expensive task of upgrading the existing facilities to comply with fire and safety codes and to make urgently needed repairs.

Under disease control, the conference bill provided increases for expansion of venereal disease screening projects, immunization of children, and lead-based paint poisoning prevention projects. The total for these three programs is $65,250,000.

I am pleased to report that the conferees agreed to substantial increases for all areas of biomedical research at the National Institutes of Health. The NIH total was $2,704,835,000—an increase of $82,700,000 over the House allowance and an average of 12 percent above the prior year level.

For the National Cancer Institute, the conference bill provides $867,136,000. This is an increase of $35,200,000 over the House and $48,200,000 over the budget request. Still, the conference result is well below the $920,000,000 provided by the Senate for this important research institute. With cancer claiming some 385,000 deaths a year, it is essential that we not only maintain, but also expand, our research into this most feared of all killer diseases. The increase provided by the conferees will just about take care of inflation—and no more. I earnestly hope that in fiscal 1979 it will be possible to do better for the cancer program.

For most of the other institutes the House agreed to more than half of the Senate's recommended 15-percent increase over last year. For the National Eye Institute and the Institutes on Aging and Environmental Health Sciences, the conferees agreed to the higher House figures.

I also am pleased to report that the conference allowance for the National Child Health Institute will provide a total of $12,500,000 for direct and related research on sudden infant death. This is some $4,800,000 more than provided in the budget request.

In the area of community mental health, the bill provides $26,387,000 for first year operations of about 45 new community mental health centers. The increase will bring the total number of centers to about 715 nationwide, still less than half the number set as a goal by authorizing legislation, but a significant improvement nonetheless.

For community alcoholism projects, the conferees provided $78,758,000 to expand services to high risk and underserved groups including women and teenagers.

Under health resources, I am glad to report the conferees restored the $19,000,000 cut for capitation grants to medical, osteopathic, and dental schools; accepted $5,000,000 of the proposed Senate increase in national health service scholarships, for a total of $60,000,000; and accepted the higher Senate figures of $12,000,000 for advanced nurse training and $22,500,000 for nursing student loans.

EDUCATION

For emergency school aid, I was especially pleased that the conferees accepted $3,000,000 of the Senate's proposed increase for special programs to assist additional school districts undertaking voluntary desegregation efforts, and agreed to $20,000,000 for the important new magnet schools program. The magnet schools program was initiated in fiscal year 1977 with only enough money for a few projects. Thus, it will begin its first year of full-scale operation with the 1978 funds. I believe this program has great potential for school districts seeking innovative solutions to problems of racial isolation.

For handicapped education, the conferees accepted the lower House figure of $465,000,000 for State grants. While I believe the additional $20,000,000 recommended by the Senate will be needed, the conference action makes it almost inevitable that Congress will have to appropriate supplemental amounts to assure that all eligible handicapped children will be covered as the law requires. On the other hand, I was pleased that the conferees agreed to accept the Senate's recommended 20 percent increase in the pre-school incentive grant program for the handicapped, bringing it to $15,000,000. The program will provide help to the States in identifying and serving preschool handicapped children. At present, only 25 percent of these children are served by the States.

In higher education, the conferees agreed to a figure of $2,160,000,000 for the basic grant—BOGs—program. This amount will provide for a $200 increase—to $1,600—in the maximum BOG that may be awarded. This is the first increase in the ceiling since the program's inception in 1972. It will also permit significant expansion of eligibility to middle-income families increasingly hard-pressed to meet the rising cost of a college education.

The conferees also agreed to $15,000,000 of the Senate's recommended in-

crease, to $435,000,000, for work-study, to meet wage increases and expand job slots. I was pleased that the conferees agreed to the House level of $3,250,000 for the new Minorities-in-the-Professions program. Our agreement was made possible by HEW belatedly supplying more specific information on how it planned to use the money. The program is designed to help minorities and women get graduate training for entry into fields in which they presently are woefully underrepresented.

The conference bill also provides an additional $7,500,000 above the House level, for a total of $167,500,000, for school libraries, to help meet the rising cost of instructional materials. It also added another $3,250,000 to the House level of $5,000,000 for the new teacher centers program. This provides aid to States for upgrading teachers' skills particularly in such areas as handicapped education.

WELFARE

For the public assistance and social security entitlement programs, the conferees have accepted the lower Senate estimates and have agreed to the Senate language providing for the carryover of unused fiscal 1977 funds for use in 1978.

Under human development, I am pleased to report that the conference bill provides $625,000,000 for the Headstart program. This amount will permit the first significant expansion of Headstart in several years. Although the program still serves less than one-fifth of the eligible children, the conference figure will permit a 30-percent increase over last year's level.

For multipurpose senior centers, I was pleased that the conferees concurred with my recommendation to accept the higher House level of $40,000,000. This amount will permit expansion of these centers, which provide one-stop referral services for the elderly, helping them with information to meet their health, welfare, housing, and transportation needs.

RELATED AGENCIES

For the VISTA program, the House would not accept the Senate's recommendation to increase volunteers' stipends on grounds it had received no information as to the need in this area. However, the conferees did agree to provide for an increase once the agency makes the case for it.

For local initiative under the Community Services Administration, the conferees agreed to half of the Senate's recommended $12,000,000 increase. The conference level of $369,000,000 provides the first increase for community action agencies in 7 years.

I am particularly pleased that the conferees accepted the Senate's figure of $65,000,000 for emergency energy conservation. This will permit the cost-effective weatherization of a quarter of a million homes of poor families, the elderly, and the disabled. Such weatherizing has been shown to reduce monthly fuel bills by more than a third. This will result in savings to the participants of about $136 million in fiscal year 1978, according to CSA.

AUTHORIZING LANGUAGE

As I mentioned, the conference retained the unconstitutional anti-busing language. The abortion language is reported in total disagreement and is responsible for holding up the bill. A number of other language amendments, in the areas of OSHA, civil rights, and public welfare, were not included in the conference bill.

In the particular cases of the amendments on OSHA mandatory consultation and civil rights surveys, the administration urged deletion of both. However, we have included strong report language on both items. We believe the report language will achieve the results intended by the amendments.

All-in-all, I think we have come out of conference with a supportable bill, one which is reasonable given the problems which this bill addresses. I urge the Senate to adopt the conference report.

Mr. President, again I want to assure my colleagues, as the chairman has, that he and I would be very pleased to answer any questions relative to any other portion of the conference report on which they seek information. There is only one part of it, of course, which is in real disagreement, and that will be the subject of an amendment or amendments which will be proposed on the floor of the Senate during the consideration of this conference report.

Mr. MAGNUSON. Mr. President, I move the Senate adopt the conference report.

The PRESIDING OFFICER. Do the Senators yield back their time on the report?

Mr. MAGNUSON. Yes.

Mr. BROOKE. I yield back the remainder of my time, Mr. President.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the conference report.

Mr. BROOKE. Does the Senator from Kansas seek recognition on this particular section?

Mr. DOLE. This is the HEW conference report?

Mr. BROOKE. It is.

Mr. DOLE. The Senator from Kansas offered an amendment with reference to OSHA consultations before fines were imposed on nonserious violations. We are in the process of preparing a colloquy which we would hope the distinguished Senator from Washington might agree with, which would indicate that there is in the works a study by the Secretary which will be reported to Congress by January 1, 1978.

Mr. BROOKE. I will yield to the floor manager.

Mr. MAGNUSON. I think the Senator from Kansas wants to have it cleared up by a colloquy about the conference report. I think what he wants to know is whether he can assume that the mandatory OSHA consultation plan the conferees intended to have developed by the Secretary of Labor will focus on consultation after violations have been found.

Is that correct?

Mr. DOLE. That is correct.

Mr. MAGNUSON. And that is my understanding of the intent of the conferees on this matter.

Mr. DOLE. If I could ask one additional question, Mr. President, the alternative interpretation would be language which forces employers to seek an OSHA consultation. Would the Senator agree that the Secretary of Labor should not interpret the conference report as a mandate to impose a plan forcing employers to have mandatory consultation outside of the inspection processes?

Mr. MAGNUSON. That is the way I read the language I believe the conferees intended this mandate to be interpreted in the light of the Dole amendment, which address itself to consultation after normal inspection processes.

Mr. BROOKE. That is my understanding, as well.

Mr. DOLE. In light of what happened on the floor, I might say that I understand that both the Senator from Massachusetts and the Senator from Washington did their best on the amendment. The vote was 61 to 27 in favor of the amendment.

In light of that vote, the distinguished Senator from Washington and the distinguished Senator from Massachusetts intended to put the Labor Department OSHA report on the agenda for committee consideration next year.

Mr. MAGNUSON. That is why we picked the due date that we did, the date being January 1, 1978, so that the OSHA report would be available for committee consideration next year.

Mr. DOLE. I thank the distinguished manager of the bill.

I only say that it seems to this Senator that the intent of the Senate was quite clear. Certainly, the amendment was clear and concise. For some reason, the National Federation of Independent Businesses opposed the amendment. I thought business was out trying to improve their lot, but apparently, in this particular case, they do not want it improved.

Despite their efforts to kill off the amendments, which they did, I am pleased that the report language indicates that we will have a report in January of next year that will be given committee consideration; and that there has been a recognition that OSHA is not a revenue-raising measure, it is an effort to protect the safety and health of workers, and consultation can be a good thing. I believe that, based on the vote, most Senators feel the same way.

Mr. BROOKE. That is correct.

Mr. JAVITS. Will the Senators yield?

Mr. MAGNUSON. Yes, I yield.

Mr. BROOKE. Yes.

Mr. JAVITS. I want to be sure that what they said about an OSHA report in no way short-circuited the legislative oversight jurisdiction of the Committee on Human Resources.

Mr. MAGNUSON. Not at all.

Mr. JAVITS. Of course, the Labor-HEW Committee has an interest, but the primary interest is with us.

Mr. BROOKE. That is not the intent.

Mr. JAVITS. I have already given assurances to the Senator that we are really going to dig into the OSHA picture.

Mr. DOLE. I thank my distinguished colleague.

CUBAN REFUGEE ASSISTANCE PROGRAM

Mr. CHILES. Mr. President, I would like to take this opportunity to clarify what the Labor-HEW Conference Committee agreed to concerning the Cuban Refugee Assistance program.

The House had accepted the administration's proposal for a 4-year phaseout of the entire program, beginning with 90-percent funding in 1978. Their action was presumably based on the improved economic conditions of the Cuban community.

The Senate considered the 4-year phaseout too drastic, in light of the fact that the per capita Cuban income is still 20 percent below non-Cubans, using Dade County data as an example. Most people are not aware that the United States was still encouraging Cuban refugees to immigrate as recently as 1974, so the total registration in the program has continued to increase. In particular, the House action did not take account of the large number of elderly and disabled poor in the Cuban refugee population. While Cubans only represent 30 percent of the total Dade County population, they represent 64 percent of the persons eligible for supplemental security income assistance. While Federal funds from SSI pay the income maintenance costs for these persons, the Cuban Refugee program pays their medical costs, which are quite substantial. The Senate therefore exempted the medical costs of SSI-eligible persons from the 8-year phaseout it proposed.

This special treatment of the costs associated with the elderly and disabled poor was the major point of contention in the conference. We compromised at a 6-year phaseout, beginning with 95 percent in 1978, and an appropriation of $71.95 million, as opposed to the $67.7 million in the House bill and the $76.2 million in the Senate version. After considerable discussion, we decided to remain silent on the reimbursement rate for costs for SSI-eligible persons.

I would like to clarify for the record that by remaining silent on SSI-related costs when speaking of a 6-year phaseout, we intend that HEW will continue its present practice in reimbursing these costs. I would also like to draw the chairman's attention to the final provision in the conference report, which states that:

The Conferees are agreed that the earmarking in the Senate report should be used as a guideline in allocating increases over the amounts proposed by the House, except where more explicit instructions are given in this statement.

It is my understanding that in the case of maintaining present practice in reimbursing costs for SSI-eligible persons, since the conference report was silent, the Senate instructions to continue this 100-percent funding have first claim on the $4,250,000 by which the conference appropriation exceeds the amount proposed by the House.

Does the Chairman agree with my understanding of the conference action?

Mr. MAGNUSON. Yes, you are correct in that interpretation, Senator CHILES. The act authorizing Cuban refugee assistance is permanent. If the Appropriations Committee reduces funding for certain portions of the program based on a projected phase-out, it must instruct the Department of HEW how to make reductions. By remaining silent on the issue of SSI-related costs, the Conference Committee left intact the present practice of full reimbursement as authorized and as instructed by the Senate report. I think you impressed the committee with the magnitude of the problem and the special economic burden represented by the elderly. A case can be made that the economic condition of the younger families has improved, and on that basis we agreed to phase down the reimbursement for AFDC, general assistance, social services and educational assistance. No one has yet presented any evidence to show that the elderly and disabled are going to work or pay taxes. I therefore think it is necessary for the Federal Government to continue its full support of costs for the elderly and disabled poor.

Mr. CHILES. Thank you for that assurance, Mr. Chairman. I would also like to thank you for your support in carrying this program through to a reasonable compromise. The elderly poor and disabled will be particularly grateful to you for maintaining these vital services. As we have discussed, the Cuban Refugee situation is unique, since Federal policy resulted in 475,000 Cubans—almost the population of central Boston—locating in a single county. While we welcome the Cubans as valued members of our community, it is necessary for the Federal Government to continue to recognize the financial burden imposed for providing medical, welfare, educational, and social service assistance to the disproportionate number of poor elderly and disabled who settled in Dade County, Fla.

FUNDING FOR DIABETES

Mr. SCHWEIKER. Mr. President, I am pleased to join in support of the conference report on this year's Labor-HEW appropriations bill. I think that Chairman MAGNUSON and Senator BROOKE did an excellent job of representing the Senate's positions on health research funding, and that we came out with some pretty good results. I salute them for this and for the fine job they did throughout the year.

When the Senate considered this bill, I inserted into the RECORD several tables dealing with diabetes funding. As many of my colleagues know, I strongly believe that diabetes has been a neglected health problem in this country that deserved more attention at the Federal level.

This year, I am happy to report, the story is different. For the first time, diabetes is truly receiving the kind of support at the National Institutes of Health that is appropriate for the third leading cause of death. I was especially pleased that a large portion of the funds added by the Senate for diabetes remain in the final bill approved by the conferees. The final total of over $102,000,000 for diabetes research will allow funding of a research program that should take us a long way towards solving the mystery of this disease.

Mr. President, I ask unanimous consent that a table showing diabetes funding levels at the National Institutes of Health and a table showing the breakdown of all funding at NIH by disease be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

APPROPRIATIONS FOR DIABETES RESEARCH, NATIONAL INSTITUTES OF HEALTH

	1976 actual	1977 appropriation	1978 President's budget	1978 House allowance	1978 Senate allowance	Conference allowance
National Institute of Arthritis, Metabolism and Digestive Diseases	$18,348,000	$39,826,000	$37,907,000	$43,907,000	$66,407,000	$57,204,000
National Heart, Lung, and Blood Institute	7,000,000	11,900,000	12,400,000	12,800,000	14,200,000	13,579,000
National Eye Institute:						
Diabetic retinopathy	5,008,000	6,627,000	6,563,000	7,724,000	7,724,000	7,724,000
Diabetes total NEI	5,246,000	9,065,000	9,065,000	10,565,000	11,517,000	11,517,000
Research resources	6,075,000	6,355,000	7,378,000	8,253,000	7,783,000	7,783,000
National Institute of Child Health and Human Development	2,230,000	4,619,000	4,750,000	5,750,000	5,900,000	5,838,000

[1] Includes supplemental.

[2] Includes research in the areas of epidemiology, tumor biology, diagnostic research, and preclinical treatment research and rehabilitation.

Mr. MAGNUSON. Mr. President, I ask that the Chair act on my other motion.

The PRESIDING OFFICER. Have the Senators yielded back their time?

Mr. MAGNUSON. Yes.

Mr. BROOKE. I yield back all my time.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The conference report was agreed to.

Mr. MAGNUSON. Mr. President, I ask the Chair to lay before the Senate certain amendments which are in disagreement.

The PRESIDING OFFICER. The amendments in disagreement will be stated.

The assistant legislative clerk read as follows:

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 3 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the sum proposed by said amendment, insert $152,320,000.

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 12 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the matter proposed by said amendment, insert: leprosy, and $15,000,000, to remain available until expended, shall be for construction and renovation of Public Health Service hospitals and clinics:

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 13 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the sum proposed by said amendment, insert: $211,505,000.

Resolved, That the House recede from its disagreement to the amendment of the Sen-

ate numbered 28 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the sum proposed by said amendment, insert: $2,750,000.

Resolved, that the House recede from its disagreement to the amendment of the Senate numbered 45 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the matter proposed by said amendment, insert: $622,825,000, of which $2,400,000 shall be available until expended for carrying out the programs of section 625.

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 66 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the sum proposed by said amendment, insert: $19,600,150,000

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 72 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the matter stricken and inserted by said amendment, insert: any portion of the funds provided to a State in the current fiscal year and not obligated by the State during that year shall be returned to the Treasury: *Provided further*, That funds appropriated for carrying out title XVI of the Social Security Act for fiscal year 1977 shall remain available for obligation and expenditure during fiscal year 1978.

Mr. MAGNUSON. Mr. President, I move that the Senate concur in the amendments of the House to the amendments of the Senate numbered 3, 12, 13, 28, 45, 66, and 72 en bloc.

The PRESIDING OFFICER. Without objection, the motion is in order.

The question is on agreeing to the motion.

The motion was agreed to.

The PRESIDING OFFICER. The clerk will state the last amendment in disagreement.

The legislative clerk read as follows:

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 82 to the aforesaid bill, and concur therein with an amendment as follows:

In lieu of the matter stricken and inserted by said amendment, insert:

SEC. 209. None of the funds contained in this Act shall be used to perform abortions except where the life of the mother would be endangered if the fetus were carried to term.

Mr. MAGNUSON. Mr. President, I move that the Senate disagree to the amendment of the House to the amendment of the Senate No. 82. That is the language on abortion.

Mr. HELMS addressed the Chair.

Mr. SCHWEIKER. Mr. President, in behalf of myself and the Senator from North Carolina, I move that the Senate concur in the House amendment to Senate amendment No. 82. I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

There is a sufficient second.

The yeas and nays were ordered.

Mr. SCHWEIKER. Mr. President, I am not going to make a long speech.

The PRESIDING OFFICER. Who yields time?

Mr. MAGNUSON. I yield such time as the Senator needs.

The time situation—since the Senator is offering a substitute, or another amendment—the time is in his own hands, one-half hour.

Mr. SCHWEIKER. I yield myself 3 minutes.

The PRESIDING OFFICER. The time on this amendment is equally divided between the Senator from Washington and the Senator from Tennessee or his designee.

Who yields time? The Senator from Pennsylvania, I assume, will take his time out of the time of the Senator from Tennessee.

Mr. MAGNUSON. Who, Mr. President?

The PRESIDING OFFICER. Senator BAKER. The agreement was written that the time should be equally allocated between the Senator from Washington and the minority leader or his designee.

Mr. BROOKE. Mr. President, if I may, it seems to me that the proponent of the amendment should have some time on his amendment. The Senator from Pennsylvania has an amendment.

The PRESIDING OFFICER. The Senator from Massachusetts makes a logical point, but the agreement was not written in that form and the Chair has no right to change the terms of the agreement.

Mr. MAGNUSON. Mr. President, I ask unanimous consent that the time of the Senator from Tennessee be delegated to the Senator from Pennsylvania.

The PRESIDING OFFICER. Is there objection?

Without objection, it is so ordered.

Mr. SCHWEIKER. Mr. President, I yield myself 3 minutes.

The motion before us is to accept the revision that the House has made in the abortion amendment. The House on Tuesday took action. They backed off their original position, which had no provision exempting the life of the mother and, now, by a strong vote, they support a revision in their position to include the life of the mother. This is exactly the same language which the House and Senate conferees agreed to last year. If we vote yes on this, we can conclude the issue and have the same language that we had last year. This language funds only those abortions where the life of the mother would be in danger if the fetus were carried to term.

The Senate position, of course, in contrast to the House, funds abortion wherever the doctor finds an abortion medically necessary. I am not going to make a long speech, but there are a few facts I would like to bring out.

First, I believe this language is sound public policy. I think it is wrong for the Federal taxpayers to finance hundreds of thousands of abortions each year.

We could get into a debate over whether abortion is the taking of human life or the taking of potential human life. But there can be no argument that, whichever view you take, except for outside intervention, each one of those abortions represented someone who would have breathed and laughed and cried, but never got the chance. I think that is wrong, and I think it is sad. We should encourage the reverence for life, not treat it as something casual that can be ended when somebody thinks it is convenient.

I recognize that we cannot act in this bill to stop abortions. The Supreme Court has ruled that a State cannot treat abortion as a crime, and it will take a constitutional amendment to reverse that ruling.

But there is something we can do here today. Every time Congress appropriates money, we say that this or that is such a social benefit that society's money ought to be spent to support it.

This legislation is full of programs that Congress has approved, because we want our people to be employed, we want our people to be healthy, we want them to be educated. This bill will help our communities to improve themselves, and it will help us find the cures to the diseases that kill us.

I think it would be a horrible tragedy if we also include over $50 million in this bill to assure that 300,000 children will never come into this world. This is a bill that celebrates life and hope for the future. Let us not make it a bill for death.

Therefore, I believe, on the merits, that we should adopt the same language on abortion that we approved last year.

My second argument is that the American people agree with this view.

For years, those of us on this side of the abortion question have been accused of trying to force the morality of a small group of Americans on the rest of society. I do not believe that has ever been true, but we have clear evidence now that it is false.

On July 29, 1977, the New York Times published a poll, based on interviews with over 1,300 people—the standard size sample for national surveys. They asked a series of questions about the very question now before the Senate which I would like to share with my colleagues.

First, they asked if the Government should help a poor woman with her medical bills when she has a baby; 64 percent said yes, only 26 percent said no.

Then they asked about providing the poor with contraceptives; 63 percent thought that was a good idea, only 29 percent were opposed.

But when they asked about paying a poor woman's medical bills if she wants an abortion, the answers changed radically, this time, 55 percent opposed using tax dollars for this purpose, while only 38 percent approved.

I submit this is a significant finding. Most of the national polls we are shown talk only about a woman's supposed right to have an abortion when the question is asked whether people want their tax dollars used for those abortions, though, the people respond with an overwhelming no.

I am aware that the managers of this bill, of whom I have the highest respect want a second conference. They will tell us that the Senate has already passed restrictive abortion funding language, and we should work out a compromise with the House.

I do not think we passed restrictive language at all. To be sure, we rejected an amendment which would have taken all abortion language out of this bill. But

the version we ended up with is not much better than nothing.

A leading population expert, Louis Hellman, of the respected Population Reference Bureau, was quoted in the Washington Post last month as saying that the Senate-passed language would allow 90 percent of all the abortions currently being performed. Ninety percent. That is a fraud on the American people. I have spoken with others on this matter since the Senate acted—people who oppose restrictions on abortions, not people who generally agree with me on this issue—and they confirm this. Funding abortions where "medically necessary" is the equivalent of funding abortion on demand. That is no restriction, and we should not pretend to the American people that it is.

We should adopt the House-passed language, which is the same language that the Senate and House conferees agreed to last year. We should do it because the American people want us to do it. And because it is right.

The PRESIDING OFFICER. Who yields time?

Mr. SCHWEIKER. I yield 3 minutes to the Senator from North Carolina.

Mr. HELMS. Mr. President, I call to the attention of the Senate the fact that the temporary restraining order preventing the enforcement of the present Hyde amendment limitation on the use of Federal funds to pay for the performance of abortions was lifted by Federal district court judge, John Dooling, at 1:30 p.m. today. Earlier, Judge Dooling denied several applications for an extension of the injunction.

The Hyde amendment is, for all practical effect, the subject of the Senator's motion.

In ruling that the Hyde amendment was lawful, Dooling rejected the contention of some abortionists during the hearing that a doctor would be unable to determine when the mother's life was "endangered" because of pregnancy as would be required under present law.

Mr. President, Judge Dooling stated that the matter of Government financing of elective, convenience abortions had been decided by the U.S. Supreme Court in its recent decisions regarding similar limitations by three States; and that in light of those decisions the Hyde amendment should go into effect.

Today's Federal district court decision maintains that the Hyde amendment language which was again adopted Tuesday night by the House in an effort to reach a compromise with the Senate is both constitutional and its language regarding "endangerment" sets a medically proper standard.

Mr. President, I see no purpose in further delaying the Senate on this matter. As the Senator from Pennsylvania has indicated, recent polls indicate the preponderance of the American people favor the position of the Hyde amendment which was adopted again by the House of Representatives on Tuesday night.

Therefore, I do hope that the Senate will vote in support of the motion of the Senator from Pennsylvania.

Incidentally, Mr. President, Judge Dooling's ruling, which lifted the injunction, was made on the application submitted by Representative HYDE, former Senator Buckley, and the Senator from North Carolina.

I thank the Senator from Pennsylvania.

The PRESIDING OFFICER. Who yields time?

Mr. BROOKE. Will the Senator yield?

Mr. MAGNUSON. Yes.

Mr. BROOKE. Mr. President, I ask that my colleagues reject the House language regarding the medicaid funding of abortions and to, in effect, reaffirm our Senate position on this issue. I would remind my colleagues that on June 29, they rejected the wording of the House language now before us and now introduced by the distinguished Senator from Pennsylvania by a vote of 65 to 33. And furthermore, I would remind them that the Senate language already is a compromise, developed through many long rollcall votes in this Chamber.

The House objects to funding abortions for victims of rape or incest and where medically necessary. I find this unrealistic and inhumane. Funding must be provided for abortions where the health of the woman or fetus is endangered and not just where the life of the woman is endangered, which is the only exception the House conferees would allow. The position of the Senate is reasonable. We must not in conscience say to poor women that we have no concern for their health or the health of the fetus which the House conferees would force them to bear.

And decisions about the health of patients and the medical procedures necessary to insure that health must be left where Congress has always left those decisions, with the Nation's doctors. It is not within the competence of the Senate or the House to make such decisions. There is not one doctor in the Senate and few in the House. And even if there were medical expertise in these Chambers, it would still be impossible to crystalize in bill language the thousands of medical conditions which might warrant an abortion for medical reasons. The language in the Senate bill allowing abortions "where medically necessary" is practical and the only alternative if we are to make any provision for the health as well as the life of the patient. Our leading medical organizations have gone on record to that effect.

The American Medical Association states:

> The "medical necessity" for any medical procedure is dependent upon innumerable factors bearing on the conditions of a patient as judged by the physician, on the basis of his or her training, experience and judgment. These conditions cannot be listed so as to cover every possibility nor are all conditions applicable in the same way in every situation. Each patient is different and each must be evaluated individually. Therefore, the determination of whether or not a proper medical procedure should be performed should not be defined by Congress.

The American College of Obstetricians and Gynecologists states:

> If Congress chooses to restrict federal payment for abortion, basing payment on medical necessity, the College must strenuously oppose any attempt on the part of Congress (or administrative agencies) to define in any law, report, or regulation, the circumstances under which an abortion is medically necessary. To do otherwise would countenance the interposition of a third party—the Government—without medical expertise between the patient and her attending physician. The most astute medical minds could not possibly devise a predetermined list of conditions completely including each individual patient for whom a procedure is medically necessary and excluding all others. This is because each patient presents a combination of conditions, and degrees of severity, the total weight of which can only be determined by the physician who evaluates that individual patient.
>
> In summary, I can only repeat the College policy that ". . . the final decision as to performing the abortion must be left to the medical judgment of the pregnant woman's attending physician, in consultation with the patient." That responsibility is the physician's, both ethically and by reason of his expertise. It is hoped that the conferees will reject the presumption that a law can answer a question of great medical complexity. This is quite the wrong arena for the intrusion of legislative edicts.

It would be extremely irresponsible, Mr. President, if we ignored the judgment expressed by these most respected medical organizations and our own commonsense.

The Senate voted in favor of the Senate language by an overwhelming margin of 56 to 39. We must now say again to the House that the Senate language is humane, responsible, and practical and that we reaffirm that it is the only position which protects the legitimate health concerns of poor women in this country.

Mr. President, I hope that this motion by the distinguished Senator from Pennsylvania will be rejected overwhelmingly, as it was when it came before the House on June 29.

Mr. MAGNUSON. Will the Senator yield for one observation?

Mr. BROOKE. I am very pleased to.

Mr. MAGNUSON. I have checked, and so has the Senator from Massachusetts and the rest of us, the voluminous hearings on this whole bill, hundreds of witnesses dealing with every conceivable subject, and there was not one expert witness that testified, either in the House or in the Senate, on this very important matter to give us their professional judgment on this. Not one witness.

The reason, of course, was obvious, because it is legislation on an appropriation bill.

Here we are making a decision on a most complex, emotional, and probably the most sensitive subject today in the United States, without a single bit of expert testimony on either side, House or Senate.

I think that is significant when we stand here today and try to write some law, as the Senator pointed out, on this important subject without any background or anything else—any failures or anything.

Mr. BROOKE. I agree with the distinguished chairman. He is absolutely correct. We have had no expert testimony in either House on this subject. This is not a proper subject to come before the Appropriations Committee, because, as the Senator has said time and time

again, it is legislation on an appropriations bill. It is a matter that should come up in the authorizing committees, where there would be hearings, with the kind of information that I read from letters I have received from the American Medical Association and from the American College of Obstetricians and Gynecologists. They should have appeared before the committee and testified. Every year this matter comes before us on this appropriations bill, which is wrong. We have said time and time again that this is wrong, and we hope that the proper authorizing committees some day will have the courage to stand up, hold hearings on it, vote upon it, and let us know what we should do.

We are here faced with the same issue we were faced with the year before and probably will be faced with next year.

Mr. MAGNUSON. Not if I can help it.

Mr. BROOKE. By parliamentary maneuvering and using language saying that "none of the funds shall be used for et cetera" they have been able to get their foot in the door; and hence we have been faced with it. Having been faced with it, I say again that the Senate has acted, and acted overwhelmingly, on the same language that the Senator from Pennsylvania is presenting to us at this time, because that was the House position. We know what that position is, and I hope we will reaffirm the Senate position and go back to conference with the House, where I hope we might be able to work out some language at least to assure not only that the rich or the middle-income people but also the poor will be able to have abortions if those abortions are medically necessary—but only if they are medically necessary, because that is how the Senate has said it should be.

With our bill, we do not take the extreme position. The Packwood amendment, which I voted for, and still support, was defeated by the Senate.

The other extreme position, which provided total prohibition, without even taking into consideration the life of the mother, was rejected by the Senate.

So this does represent a compromise in the Senate as to what we believe to be a very reasonable position—namely, that it is a matter that should be left to the patient and her doctor, because they are the experts. We are not the experts. We hope that the Senate will stand firm on this.

Mr. JAVITS. Mr. President, will the Senator yield me 5 minutes?

Mr. MAGNUSON. I yield such time as the Senator requires.

Mr. JAVITS. Mr. President, I am definitely on the side of the Senate voting to retain its position, which means rejecting the motion of the Senator from Pennsylvania.

Second, I pay tribute—I have been a conferee many times—to Senator MAGNUSON, Senator BROOKE, and their colleagues, who have stood by their guns and brought this amendment back in disagreement, notwithstanding that it is a matter of great heat and great emotion.

To me, this is a question of discrimination, a basic right of the Constitution that the poor shall not be discriminated against in favor of the rich.

Mr. President, I have stood on the floor and defended the rich, too, that they should not be discriminated against, either. This time, it is the turn of the poor. That is what this does.

Looking through this glass of parliamentary procedure and various legal terms, the fact is that poor women will not get abortions and middle class and wealthy women will get them. We know that to be the case from the Supreme Court's decision, and we know the result of this particular amendment. It is directly against the interests of poor women. They are the worst sufferers, because they can help themselves the least, not only for the reason of their poverty and their inability to pay for abortion or get the facilities to do it but also because they live in areas where they are the most susceptible to rape.

Our records indicate that there are probably 100,000 rapes a year and that the incident of those rapes in the cities, especially in the 58 core cities of the country, is about three times what it is in suburban or in country areas. So that they are the most exposed.

Second, they are the most subject to butchering which comes from self-inflicted abortion. They have to be pretty desperate to do that; yet they do it by the thousands. I will cite some figures.

Harlem Hospital, in New York City, which is a center of a population which is 95 percent black and 5 percent Spanish: Our figures indicate that they receive a thousand or more when there is no opportunity for the poor to have an abortion. They receive a thousand or more cases a year that involve some kind of infection or some kind of accident with the use of a homemade instrument, and so forth. The hospitalizations are for 3 or 4 weeks, if they are lucky enough not to get peritonitis. When the poor do have an opportunity for abortion, that drops down to about 300.

Think of it. It drops down to a third of the total number, and that is generally the experience of the hospitals in the major core cities.

This is no child's play that we are talking about. We are talking about life and its meaning.

One final point: We talk about welfare, and we are very outraged when a mother has 11 children, all of whom are on welfare; but when she tries to help herself not to have them, we are going to make her quit, because we say the Federal Government's money or resources cannot be used for that purpose.

Mr. President, it just does not make any sense. We are not being honest with ourselves, and we are responding to our prejudices, not to the justice which the country requires between rich and poor and not to the basic national interests of the United States.

Mr. President, I pay tribute to Senator BROOKE, Senator MAGNUSON, and their colleagues for the great fight they have put up for the Senate position, which is a compromise position. It is not the Packwood amendment, but it is not the knownothingness of the amendment we are asked to take out as a fair and reasonable ground which the Senate should stand by. We should at least have faith to believe in what we believe by having voted as we did and not throw in at the first sign of a fight.

The PRESIDING OFFICER. Who yields time

Mr. SCHWEIKER. Mr. President, I yield 5 minutes to the distinguished Senator from Oklahoma, who has been a leader in this fight.

Mr. BARTLETT. I thank the distinguished Senator from Pennsylvania.

Mr. President, I remind a distinguished Senator from New York that the first time we had an amendment similar to the Hyde amendment, it was authored by the Senator from Oklahoma and passed. It was knocked out in conference, and later an effort was made to pass it again, and it then was considered not germane. So the track record of the Senate has not always been the same.

Mr. President, a year ago, the Senate first considered the Hyde amendment, prohibiting the expenditure of Federal funds for abortion except in cases where the life of the mother is endangered. Now that issue is before us again, but in a somewhat different context. For during the past year, much has happened to validate and to vindicate the position of those who, all along, have opposed Federal funding for discretionary abortions.

The Supreme Court has made it clear to the world that the Congress has full power to decide whether Federal funds are to be used for abortions. Last year's debate on this subject was laden with emphatic declarations that the Hyde amendment was unconstitutional. We should not hear that argument repeated today. The Court has told us what no one should ever have doubted: that the power of the purse, assigned to the Congress by our Constitution, gives this body full control over its appropriations.

During the past year, the public has grown increasingly aware of the abortion issue and increasingly informed about its true implications. According to a recent poll conducted by the New York Times and CBS—neither of which can be accused of a prolife bias—the American people strongly oppose the Federal financing of abortion. Fully 55 percent disapprove of it, while 38 percent approve. At the same time, the public—by a margin of 64 to 26 percent—overwhelmingly supports the use of Federal funds for the medical expenses of poor women for pregnancy and childbirth.

That demonstrates what we should already know: That the American people are generous, compassionate, and concerned. They will give to the needy until it hurts. But they do not want their taxes used for the taking of innocent life.

Unfortunately, there are some things about the Senate's discussion of the Hyde amendment which have not changed since last year. The assertion is still made that abortion is different from the taking of life; that it is only a medical procedure; that it could not possibly be the equivalent of taking of hu-

man life because, if it were, decent people would not support it.

Yet, in all the hours and days of debate on this matter, the opponents of the Hyde amendment have failed to justify the assumptions upon which their position is based:

That the Federal Government should subsidize abortion at all.

That such a program should serve only to encourage abortion among the poor.

If the Federal Government is to remain in the abortion business, why should it discriminate against the rich? Perhaps the opponents of the Hyde amendment will next propose tax incentives to encourage abortion among the rich as well as the poor.

In a recent editorial, supporting Federal funding for abortion, the New Republic candidly admitted, in words which should stun all those who read them, that—

> Those who believe a woman should be free to have an abortion must face the consequences of their beliefs, metaphysical arguments about the beginning of life are fruitless. But there clearly is no logical or moral distinction between a fetus and a young baby; free availability of abortion cannot be reasonably distinguished from euthanasia. Nevertheless we are for it. It is too facile to say that human life is always sacred; obviously it is not, and the social cost of preserving against the mother's will the lives of fetuses who are not yet selfconscious is simply too great.

Those words should be read carefully for their frank logic and horrible implications. The most astounding thing about them is that they were not written in Hitler's Germany or Stalin's Russia, but in our free Republic, which is dedicated to human rights.

Another holdover from the debates of last year concerning the Hyde amendment is the long list of organizations, some of them religious and others merely social groups, which support Federal funding of abortions. Ironically, that list, purporting to show church support for abortion, is used by those who object to the interjection of religion into public affairs. Both this year and last, that has seemed to me to be a peculiar contradiction.

We should keep religion out of the debate on abortion. This is not a matter of denominations and theology. It is a matter of science, pure and simple.

When a brutal killer stalks the streets of New York, shooting innocent victims, we do not use theology to condemn his actions. When some Americans are abused because of the color of their skin, we do not use religious doctrines to insist that they be protected by law. And when hundreds of thousands of unborn children are killed, with the legal sanction of a tenuous majority on the Supreme Court, it is not religion that makes us demand an end to the carnage. It is our abhorrence of the destruction of human life and human rights.

Mr. President, some will argue that the issue before us is merely one of dollars and cents, of agency budgets, and Federal expenditures. If some of my colleagues find the issue easier to face with that rationale, then so be it. For my part, the issue before us is far more fundamental. In essence, we are considering whether the resources of the Federal Government should be used to deny the most basic of human rights, the right of life to unborn children—the most helpless, the most defenseless, the most innocent among us. Their lives are being taken because they are small and because they are incapable of any defense for themselves.

I yield back the remainder of my time.

The PRESIDING OFFICER (Mr. JOHNSTON). Who yields time?

Mr. MAGNUSON. Mr. President, unless there is somebody else—I do not see anyone—I yield back the remainder of my time.

Mr. SCHWEIKER. I would like to yield 5 minutes, Mr. President, to the Senator from New Mexico.

Mr. DOMENICI. I thank the Senator from Pennsylvania. I do not think I need the full 5 minutes.

However, I do want to say I really do not believe the argument made by the distinguished Senator from Massachusetts (Mr. BROOKE) has much relevance today because I was here on the floor, as were a goodly number of Senators, when the Senator from Massachusetts offered an amendment using these words for the first time in the Senate "medically necessary."

I honestly believe that Senators who have voted repeatedly for the Hyde amendment or its predecessor, the Bartlett amendment, totally misunderstood, and I am not being accusatory, I just believe the words sound wonderful "medically necessary," and I think they were misled into assuming this was really some kind of a check on abortion on demand.

I say to the Senators if they did not know then they should know now that those words of art mean absolutely nothing with reference to a restraint or anything like a restraint that is related to the life of the mother or the life of the fetus. It is so much broader that experts conclude that 90—not 9, but 90—percent of the abortions that were permitted under the abortion-on-demand concept, paid for by medicaid, will be paid for under this approach.

If the Senators want to vote for that, they ought to understand what they are doing. I do not believe many of them understood when they voted in favor of the amendment which included the words "medically necessary."

There is no doubt that "medically necessary" approaches the will of the expectant mother. If she does not feel good, if it appears she is not going to be able to afford the child, she goes to a doctor. The good Senator from Massachusetts would have the Senate believe the decision is going to be made by some medical expertise, that only the medical profession can make the decision. All the doctors are going to have to have is a lady saying, "I am uncomfortable, I am pregnant, doctor, and I am not so sure I can take care of this child," and I defy anyone to say that this is not going to be a medically necessary abortion.

If that is what we want to do, we ought to all understand we are doing it. That is no restriction at all. That is not a medical case. The medical case is if the life of the mother or the life of the fetus is involved. The Senator from Massachusetts is not willing to use those words. Those are not words of art, and everybody understands that. But "medically necessary" are words of art derived from the first Supreme Court decision which upheld a State statute that said, "Mental anguish justifies a doctor's finding that the woman needs an abortion and, therefore, it is valid under that Missouri law," and no one ought to mislead anyone. That is where it came from.

So if you think you are voting for any kind of limitation, you are not voting for any kind of limitation by the use of the words "medically necessary."

The issue is not one of relegating this to the expertise of the doctor merely because there is therapy involved in the removal of the fetus. What we are doing is saying if a woman wants an abortion, medicaid ought to pay for it if she qualifies. I think that is the issue, and it should not be diffused.

So it would be appropriate for the U.S. Senate today to say, "We have now looked into this and we did not know we were voting for 90 percent or even more of abortions-on-demand."

I wholeheartedly agree with the Senator from Oklahoma. This is no longer an issue of a right, and I am sure the good Senator from New York was not implying there was any right that we have, that there is a right that we must pay for.

We are here to determine whether or not we want to assume the responsibility for that last Supreme Court statement which said the responsibility is on us. If we want to pay for them we must decide that we want to pay for them. The right exists, but Congress does not have the responsibility to pay for those abortions on demand, and that is now clear. So nobody can get out of this issue by talking about a right because there are many rights in America we do not pay for, and we all know that. We have gone through that issue, and the Supreme Court has already said it. So the issue today is did we understand that "medically necessary" meant what we understand it to mean today.

And for those who did not, they should feel free to vote for the amendment for the Senator from Pennsylvania and go back to the position that this body maintained some 2 years ago when they voted for the Bartlett amendment and do not anyone misunderstand. Those are not even close. Anyone who says those are close, that Hyde and Bartlett are close to the Brooke amendment, just has not studied it, and that is absolutely wishful thinking, trying to get out from under a hard decision, so he can write his constituents and say, "I am against abortion, I am against using taxpayers' money, because I said it has to be 'medically necessary.' "

They are all going to soon find out what that means. That means that if you support the Senate's original language as per the Brooke amendment you are now saying we will pay for abortion-on-demand and there are not go-

ing to be any limitations, and there can be no doubt about that.

I thank the Senator from Pennsylvania.

Mr. BROOKE. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. BROOKE. Mr. President, I think the distinguished Senator from New Mexico underestimates the intelligence of his colleagues in the Senate if he thinks they have either been misled or they do not understand the significance of the Hyde language or the significance of the so-called Brooke amendment which included the words "medically necessary."

I hope that the Senator did not mean that the Senator from Massachusetts intended to mislead anyone in the Senate, because I have the highest regard for the intelligence of all of my colleagues. I think the distinguished Senator from North Carolina understood it. I think the distinguished Senator from Pennsylvania understood it. And I think the distinguished Senator from New Mexico understood it and understood it well. I will remind the Senator from New Mexico that he even had a vote on this particular issue, if he will recall it, and he discussed it at some great length. There were many Members of the Senate present at that time, and the Senate overwhelmingly rejected his position.

So let us not get into the question of the Senate not understanding what it is doing. Let us not mislead the country that the Senate does not know what it is doing when it votes on these matters, because the Senate does know what it is doing.

The motion of the Senator from Pennsylvania to go back to the House position goes back so far that we would not even include instances of rape and incest. If a child is raped, and the Senator from New York brought this out very clearly, that child cannot have an abortion. If a child is taken advantage of by her father, and that happens in this country, that child cannot have an abortion.

The Senator has said we want to open up the doors, so that anybody can have an abortion. I do not even like the term "pro abortion." I do not think there is anyone who is pro abortion. They are pro choice. And when we say "medically necessary," we mean "medically necessary."

I just want to cite to the Senator what the Supreme Court said on the Pennsylvania regulations, which is Beal against Doe. The Court said:

> Whether "an abortion is necessary" is a professional judgment, that . . . may be exercised in the light of all factors—physical, emotional, psychological, and the woman's age—relevant to the well-being of the patient. All these factors may relate to health. This allows the attending physician the room he needs to make his best medical judgment.

"Medical necessity" appears in other laws of this country. It is nothing new. We know what it means. We know what it does not mean.

I think that it is mischievous to suggest that any woman can walk in and say that she has a cough and that a doctor who is qualified is going to say: "Therefore, yes, my dear young lady, you are entitled to an abortion."

That is not it at all. We are concerned about the life of the mother.

We are also concerned about the health of the mother.

We are also concerned about the health of the fetus.

There are some things worse than death. There are some things in life that are worse than death. There are some diseases——

Mr. BARTLETT. Mr. President, will the Senator yield?

Mr. BROOKE. I will after a moment.

There are some diseases that are worse than death. Take the Tay-Sachs disease, for example. When a child is afflicted with it, that child will live at most 3 or 4 years, and while that child is living that child is going to be in pain and is going to be suffering. Abortion is the only humane thing to do to avoid such an instance. If the judgment is made by a physician that that pregnancy should be aborted, then it should be aborted.

That is what we are saying. So we admit that it is a question of health as well as life, and as I said before there are many health conditions that are even worse than death itself. So let us not say we are misleading anyone. We are not trying to mislead anyone. What we are saying by rejecting the amendment of the Senator from Pennsylvania is that we are too humane, we are too wise to go back to the position where we do not even include rape and incest and where, if it is medically necessary to save the life of that patient, to save the health of that patient and the health of that fetus, we will not do so. We are saying that we will leave it up to doctors, not to the Senator from New Mexico, nor to the Senator from Massachusetts, neither of whom, in my opinion, are competent to make that judgment.

Mr. BARTLETT. Mr. President, will the Senator yield?

Mr. BROOKE. Yes, I am very pleased to yield.

Mr. BARTLETT. The Senator said he is equally interested in the life of the fetus and the life of the mother.

Mr. BROOKE. I meant the health of the fetus and the mother.

Mr. BARTLETT. Of the thousands and thousands of abortions that have taken place, could the Senator tell me what percentage of fetuses have lived and what percentage of fetus lives have been saved?

Mr. BROOKE. The key point that I make is not a percentage of how many have been saved. When there is an abortion, I presume there are none that are going to be saved. But what I am saying, there is abortion to preserve the life of that mother or that that child will not be born, as I said, with Tay-Sachs disease or sickle cell anemia or that if the child lives after the mother has had breast cancer and has to take chemotherapy, for example, and the fetus is injured thereby. There are many, many situations, but we are getting into medical questions. I say rather than the Senator from Oklahoma and the Senator from Massachusetts getting into medical questions, which I presume the Senator from Oklahoma is not much more prepared to make judgment on than I, then I say let us leave it to the doctors, and that is what the Senate said.

Mr. BARTLETT. No. The point I am making, though, is I do not think the life of the fetus is considered at all in the matter of abortion, and I was taking issue with the Senator.

Mr. BROOKE. I see.

Mr. BARTLETT. He was saying that it was, because clearly it is not. The life of the fetus is certainly not considered at all. I do not think that the Senator——

Mr. BROOKE. In the general term of what life would that fetus have, that is what I am talking about. What kind of life would that fetus have if that fetus is going to be born with Tay-Sachs disease. I gave that example, and I think it is a very important example. It is going to be a life of pain and suffering and that child is not going to last 4 years at the most. It is not only going to be a life of pain and suffering for that child, but it is going to be a life of suffering for the mother, the father, the family, and the friends of the child who is born.

Mr. BARTLETT. I think, if the Senator will yield further, that the Senator is misleading because there is no finding by the doctor that the fetus is diseased or the fetus is in any way impaired, or that the fetus is not healthy. This is not a finding. It is based on the fact that the fetus is small, 6 months or less.

Mr. BROOKE. Medical science has made the determination that if the mother has a certain disease or is being treated by certain drugs it will have a certain effect upon a fetus. That is the medical determination. But again we are getting into medical science. I do not think the Senator from Oklahoma—and I am not being facetious—is a doctor. I assure him I am not a doctor.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. BARTLETT. This is not a general determination.

Mr. MAGNUSON. I want to add another thing that happened in conference. It shows how incompetent we are to be judging this matter. The Senator asked the question. We do not have any statistics on that which he asked. We will have no chance to get them until a proper committee does it. But three Members of the House suggested that we add language that an abortion could be performed by a doctor if he looked at the situation for anyone who became pregnant under 15 years of age—a woman. Does the Senator think we are competent to make that decision? Under 15, a child; and the House language would not allow that.

Mr. BARTLETT. I think we are incompetent under this bill.

Mr. MAGNUSON. A child, and they wanted to drop it to 13, and in the House the conference would not take 13 years. What kind of a competency do we have to make a decision like that? Thirteen years old, a child, and some accident happened.

Mr. BARTLETT. I agree with the Senator that this competency does not exist.

Mr. MAGNUSON. I point out the problem that we have, and I know how emotional this thing is on both sides.

Mr. BARTLETT. I agree with the Senator the competency does not exist in the committee, but what is being proposed is that the fetus of a 15-year-old, 14-year-old, 13-year-old, or whatever age mother, will be taken if the mother and the doctor agree that it is to be taken.

There is no problem in getting that agreement. So I think it is wholesale abortion that is taking place, and thousands and thousands——

Mr. MAGNUSON. I do not want to make the decision. If I have a girl 12 or 13 years old, I do not want the U.S. Senate to have to make a decision. If that young child became pregnant, I just do not think we are competent. This is my problem with this whole matter. I just do not know.

I just want to take 30 seconds to say that the HEW appropriation bill is getting to be the repository of every single tough problem in the United States that should belong to a legislative committee. It is a standing joke around here. When we finished the bill, the next day several Senators asked me, "When are we going to move to reconsider and bring it up again? We forgot to put gun control on, and we forgot to put on recognition of Cuba and recognition of Red China, and a lot of things."

I guess next, the Palestinian question will be put on it, too. The Senator from South Dakota was ready to do that. The door was wide open.

This is why we are so incompetent to make this decision on cold, hard, factual matters. This is my problem.

Mr. BROOKE. I think the Senator from Oklahoma knows that there are thousands of genetic diseases, all kinds of diseases that could have an adverse effect upon the life of the mother, the health of the mother, and the health of the fetus.

As the Senator knows, in the conference report language of the 1977 appropriation bill, we listed renal disease and multiple sclerosis. The report language excluded other diseases far more dangerous, perhaps, than renal disease and multiple sclerosis. Again, that shows the incompetence of Congress to sit in judgment on such matters.

I want to make one further remark to the Senator from New Mexico.

Mr. BARTLETT. Will the Senator yield——

Mr. BROOKE. The Supreme Court, in 1973, said that abortion is a personal and private matter between a woman patient and her doctor, and that she has a constitutional right to abortion. The case was reviewed, and the distinguished Senator from North Carolina cited it. It did not in any way change that opinion of the Supreme Court

What the Supreme Court said in the case it recently decided was that as far as medicaid is concerned, this matter is best left up to the courage and the justice of Congress and the State legislatures to make the decision.

I think the Supreme Court is getting a little tired of taking all the important issues on by itself. They are saying to us, in short, "Stand up and be counted; act on these things yourselves." But it did not take away the constitutional right.

What good is a constitutional right if there is no remedy? When that statement was made—and I trust it was made inadvertently—the other day that women can go and get an abortion if they want it, it should also be stated that poor women cannot go to a hospital and get an abortion.

Mr. DOMENICI. I did not make that statement.

Mr. BROOKE. Not you. I did not attribute it to you. Rich women can do so, because they do have the money to pay. You know this is unfair, that there is inequity in this country and unfairness in this country. I pray to God we will never accept that as a national policy. We have always got to strive for equality, fairness, and equity in this country, and I cannot see how we can discriminate against the poor.

That is what the distinguished Senator from New York is saying. We are not stopping abortions by this bill. If we want to do that, do it someplace else. All we are saying by this bill is that women who are raped, children who have been violated by incest, or if it is medically necessary, can get an abortion if they are too poor to pay for it.

We are saying to you we hope the Senate will stand firm in its position, and reject the House position.

Mr. DOMENICI. Mr. President, will the Senator yield for one point?

Mr. BROOKE. If I may yield on the Senator from Pennsylvania's time.

Mr. SCHWEIKER. Mr. President, how much time does the Senator from Pennsylvania have?

The PRESIDING OFFICER. Ten minutes.

Mr. SCHWEIKER. One minute.

Mr. DOMENICI. I just want to clarify for the Senator from Massachusetts that I in no way said he misled anyone, but I did maintain and still do that there were many Members of the U.S. Senate who did not understand the significance of the words "medically necessary." That is all I was saying, and I hope no one feels that that is an accusation or an insinuation on my fellow Senators in this institution. It is just that those words came up here in an argument late in the afternoon, in the heat of an abortion debate, and we were talking about limiting abortions.

All I am saying, as of this point, is that it will not limit abortions. I think the Senator from Pennsylvania will address that issue, and I thank him for yielding 1 minute to the Senator from New Mexico.

Mr. BAYH. Mr. President, will the Senator from New Mexico or the Senator from Pennsylvania yield?

The PRESIDING OFFICER. Who yields time?

Mr. SCHWEIKER. I cannot yield any.

Mr. BAYH. I would like to have something to say on this matter.

Mr. MAGNUSON. I yield whatever time I have left to the Senator from Indiana.

The PRESIDING OFFICER. The Senator has 1 minute.

Mr. BAYH. I think the Senator from Pennsylvania described that he had 10 minutes.

Mr. SCHWEIKER. I yield the Senator 1 minute, to go along with the other minute yielded by the Senator from Washington.

Mr. BAYH. Is that 2 whole minutes?

Mr. BROOKE. Mr. President, was all that time that the Senator from Oklahoma was talking on the Senator from Washington's time, or was it on the time of the Senator from Pennsylvania?

The PRESIDING OFFICER. No, it was on the time of the Senator from Pennsylvania.

Mr. MAGNUSON. Mr. President, I ask unanimous consent that the Senator from Indiana be allowed 5 minutes.

The PRESIDING OFFICER. Is there objection?

Mr. HELMS. Mr. President, reserving the right to object, I shall not object provided our side gets an additional 5 minutes.

Mr. MAGNUSON. I ask unanimous consent that an additional 10 minutes be added to the unanimous-consent agreement, 5 minutes to the Senator from Indiana and 5 minutes to the Senator from North Carolina.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. BAYH. Mr. President, I appreciate the courtesy of our chairman. Before I say just a few words on this matter, I would like to say that I think the Senate, regardless of where we stand on this issue, owes the chairman a great debt for the perseverance and patience he has brought to one of the most tedious jobs in the U.S. Senate, working out the difficult questions in conference. I say the same thing with regard to our distinguished colleague from Massachusetts, who has worked in cooperation with the Senator from Washington.

Mr. President, I do not think we have ever had a problem, and I have said this before, that involves a combination of deeper and more sincere feelings. They are religious and moral feelings and decisions. They are also medical decisions.

It has been said before, and I think accurately so, that we are not qualified to make medical decisions. Personally speaking, I do not feel qualified to make such moral decisions or religious decisions.

It has been said that the Senate of the United States really did not know what we were voting on. Anyone who bothered to read last year's conference report saw that medical necessity was in there before. This is not the first time we have been confronted with the language of "medical necessity." It is right in here in the conference report we voted on.

It says:

> It is the intent of the conferees to limit the financing of abortions under the Medicaid program to instances where the performance of an abortion is deemed by a physician to be of medical necessity.

Do not tell us we have not done this before. You may disagree with us, but we have done it before.

When we voted on the conference report last year, I think every Member of this Senate had reason to believe that the stricter Hyde language would be modified by the report language which clearly said "medical necessity." The Attorney General's memorandum to Secretary Califano has, however, made it clear that this is not how the Justice Department will interpret this language.

I must say to the Senator from New Mexico I share his concern for the abortion of convenience. That really worries me. But we are talking about placenta tumors, heart disease, narrowing of the aorta, arterioaneurysms, malignant hypertension, pulmonary tuberculosis, cancer of the ovary, cystic fibrosis, brain tumors, right down the list.

Maybe Members of this body are prepared to make a decision that if there is a rape or incestuous pregnancy, abortion should be prohibited. I am not. I think we need to understand.

The Senator from Washington, I believe, touched on one of the most sensitive and compelling concerns I have where we are talking about a significant number of teenage pregnancies.

If we accept the Senate language, we are not saying to a daughter, to a granddaughter, to a sister who becomes pregnant and is 14, or to someone we do not even know who is pregnant as a result of a rape, to whip out and have an abortion.

What we are saying is that that ought to be a decision made personally within the heart and mind of the woman involved and not have 100 men here make that decision. Let the doctors make the medical decision, but, more importantly, it seems to me, give the human being, the mother involved with that pregnancy, the right in consultation with her doctor to make the personal decision that she and only she can make.

Let us not kid ourselves. This is not a question where we are going to vote it away. I held hearings on this matter for nearly 2 years. We are not going to vote it away. If we can say in our conscience it would disappear if we vote one way or another, we might have one thing. But we are not. We are talking about somewhere between 200,000 and 300,000 abortions. That is my best judgment. Senators may not like it, but that is a fact.

Here, in very practical terms, we are determining where those abortions are going to be conducted, under what kind of conditions they are going to be conducted, and whether they are going to have a professional do a job, one who is a medical doctor, or whether it is going to be performed by some butcher with a coat hanger, when, out of desperation, a mother, a child, resorts to something to save herself from a kind of condition that threatens her.

Let us have everybody make that decision for themselves. I have told this Senate how I came to a decision on abortion, but I am not prepared to force my decision on everyone else. Let them make that decision personally. Let us not make it for them.

I thank the distinguished Senator from Washington and my colleagues for giving me the chance to be heard.

Mr. SCHWEIKER. Mr. President, I yield myself 3 minutes.

Mr. President, much has been made of the argument about what "medical necessity" means. The distinguished Senator from New Mexico pointed out that in his opinion it was a loophole, it was a barn door, it was an exemption that would allow virtually all abortions. I do not think there is any question about that.

I am a little surprised that the other side argues that there is any question about it.

Here is a story in the Washington Post dated July 8, entitled "Senate Measure Found To Permit Most Abortions."

It is written by a very distinguished writer who is now sitting in the Senate gallery. It says:

A leading population expert, Louis Hellman, of the respected Population Reference Bureau, estimated yesterday that under a Senate-passed restriction on the Federal financing of abortions—

And, of course, that is the medical necessity we are talking about here today—

90 percent of those now performed could still be done. That is because of a number of exceptions written into the Senate legislation and especially a very broad exception permitting any abortion medically necessary, Hellman told a reporter.

Who is Louis Hellman? He is the former Deputy Assistant Secretary of HEW for Population Affairs. He is a pro-choice person, and he is saying that with the words "medically necessary," 90 percent of the abortions can be performed.

Let us not deceive ourselves about what this means. If someone on the other side of the issue, not on our side, who headed the Department of HEW's efforts in population affairs, and who is an advocate of the pro-choice viewpoint says that 90 percent of the abortions shall continue, there is no doubt in my mind that he means it and that he is right, and that it is very clear this is a barn door loophole and a very clever one.

Mr. BAYH. Will the Senator yield? Does the Senator really want to know all that Dr. Hellman said? Is he interested that Dr. Hellman pointed out this statement was really a guess, and it was not based on an understanding of the Senate language but rather a definition used by the World Health Organization which allowed for social abortions. This, of course, is a far broader definition than any of of us have in mind here? I just wanted to point that out to the Senator.

Mr. SCHWEIKER. I am pleased to have that information. I do not think it subtracts one iota from the fact that here is the leading population expert in the country, who just presided over the government program, who says "medical necessary" means 90 percent of the abortions can continue. I think in all fairness the Senators who voted last time should be aware that that is what the Senate language does. It does not just take care of this situation or that situation.

Mr. JAVITS. Will the Senator yield?

Mr. SCHWEIKER. Yes.

Mr. JAVITS. Is it true that even with 60 or 70 or 40 percent, the Senator would still be taking the position he is taking? The Senator is against it altogether. It is not just the 90 percent.

Mr. SCHWEIKER. I thank the distinguished Senator for the observation. That is certainly true. But I was responding to the argument being made by the Senator from Massachusetts about what "medical necessity" was. My point was that an expert in the field says it is a loophole, it is a barn door, it is wide open, it is "no holds barred."

I think that is relevant.

I think it is also relevant to point out that we have a very interesting poll compiled by CBS News and the New York Times, certainly no advocates of my particular position, which asked three very important questions on this issue. First they asked the question:

Do you think the government should help a poor woman with her medical bills when she has a baby?

Yes, 64 percent; no, 26 percent.

Do you think the government should help a poor woman with the cost of contraceptives to prevent pregnancy?

Yes, 63 percent; no, 29 percent.

Do you think the government should help a poor woman with her medical bills if she wants an abortion?

Yes, 38 percent; no, 55 percent.

That ought to lay to rest the argument which has been used against us on this floor time and time again that a few people, a tiny minority, are imposing their views and their wills on the American public.

The truth is just the opposite. It is the group who is opposite our position which is really imposing their views. The majority, the overwhelming majority, of the American people, by a poll that was just taken a few days ago and released on July 29 of this year, do not think it should be public policy to pay for abortions.

They do think it should be public policy to pay medical bills when she has a baby, and the cost of contraceptives to prevent pregnancy, but they believe abortion is not a Government function.

The Court has said we have the right to make that decision. That is what the judge ruled today.

My point is that where tax dollars go, social approval goes, and public policy goes. All this argument that we are imposing our views here, is hogwash, because the American people overwhelmingly support the position I have.

This poll makes it very clear that there are certain limits to public financing, public support, and social policy where the public believes we should draw the line. That is the position that we are taking here today.

Mr. BROOKE. Will the Senator yield?

Mr. SCHWEIKER. Yes.

Mr. BROOKE. The Senator knows polls. He has used polls in his campaign. He uses them very well, obviously, because the Senator has been elected and reelected. He understands polling. He also understands the significance of how questions are framed.

In the poll the Senator mentioned, was there a question whether the public would favor medicaid abortions for poor women, if it is medically necessary?

Mr. SCHWEIKER. Let me say that the CBS News and New York Times, in

their composite wisdom, made up this poll.

Mr. BROOKE. Will the Senator answer that question?

Mr. SCHWEIKER. I am trying to answer it.

I read very specifically the three questions that they posed. They posed questions on paying for having a baby, paying to prevent pregnancy, and paying for abortions. Those are the only three questions they asked.

Mr. BROOKE. Wherever they say using public funds for abortion, I am amazed they got 38 percent, with what that means. I think that is a very high percentage. I think the Senator is using polls to support his position, rather than the other way. I do not think that is overwhelming, when we consider the question that was asked of the public.

Actually, we do not even get into the question of whether it would save the life of the mother, whether it was rape or incest, whether it is medically necessary. We do not get into any of these things. Once that question is put to the public, I am certain the public would see the significance of that as distinct from what the Senator read.

The Senator knows polls come out depending on how the question is framed. I suggest most respectfully to the Senator from Pennsylvania that, with the question framed as it was, that 38 percent is a very high percentage, not a very low percentage, as the Senator from Pennsylvania suggested.

Mr. SCHWEIKER. Let me thank the Senator for his observation and say that the people who took this poll, the New York Times and CBS News, are not known as advocates of right wing causes. They framed the question in a way that they thought was fair and even-handed. So what is wrong with that? How fair can it be?

I am surprised, a little bit, that the Senator from Massachusetts is amazed about these figures. I have heard arguments, in the last few debates we had on this issue, that a few people were dictating the rights of the majority on this issue and we were imposing our views on other people; they were saying, in essence, that we are judging everybody.

The fact is that the people have made the judgment and they made their judgment 55 to 38, so the shoe is now on the other foot.

Mr. DOMENICI. Will the Senator yield for an observation?

Mr. BROOKE. May I first correct the quote? It is a misquote. I never said "dictating" at all. I think, in the heat of the argument, the Senator may have mistaken me for somebody else.

Mr. DOMENICI. Will the Senator yield 1 minute for observation?

Mr. SCHWEIKER. Yes.

Mr. DOMENICI. I say to the Senator from Massachusetts, whoever took that poll with reference to the use of words "medically necessary," in this Senator's opinion, were extremely prudent not to use the words, because the words do not mean anything, so the poll would not mean anything.

They put it right on the nose when they asked about using public tax dollars to pay for abortions. If they had said to the people of this country, if they are medically necessary, then they would not know what that meant, just as no one here knows what that means.

Mr. BROOKE. Will the Senator yield?

Mr. DOMENICI. I do not have the time.

Mr. BROOKE. Does the Senator realize that "medically necessary" is contained in a number of laws?

The PRESIDING OFFICER. Who yields time?

Mr. SCHWEIKER. We have how much time left, Mr. President?

The PRESIDING OFFICER. The Senator from Pennsylvania has 2½ minutes left.

Mr. SCHWEIKER. I yield that to the Senator from North Carolina.

Mr. HELMS. Mr. President, perhaps in the closing minutes of this debate we had better get our perspective back on the track. The issue here is the use of taxpayers' funds to terminate innocent human lives or, put it more bluntly, using the taxpayers' money to kill the babies. That is as blunt as it can be put.

Not long ago I visited the Duke University Medical Center, and I went to the Children's Hospital of that great institution in my State. I went to the intensive care ward, where the latest in medical technology was being used by some of the best trained medical personnel in the world were struggling to save the lives of tiny little infants no bigger than my hand. And across the hall from that intensive care facility is a waiting room where young parents, some of them on their knees, were praying that the Lord would spare the lives of the fragile little ones who had been born prematurely. The following day, when I returned to Washington, I was appalled at the contradiction of those 2 days. At Duke Hospital, there was a dedicated effort to save lives. The next day, the Senate debated the question of using tax funds to finance abortions.

That is all we are talking about, Mr. President. We are talking about the deliberate termination of innocent human life, using tax funds to do it, in the face of the fact that the vast majority of American people are opposed to it.

Just so that the record will be clear, Mr. President, those who favor the deliberate termination of innocent human life will vote against the pending motion of the Senator from Pennsylvania and the Senator from North Carolina.

Mr. BROOKE. Will the Senator from North Carolina yield for a question?

Mr. HELMS. How much time remains, Mr. President?

The PRESIDING OFFICER. One minute.

Mr. HELMS. I yield 30 seconds to the able Senator.

Mr. BROOKE. Does the Senator from North Carolina believe that a child who has been abused by a father and becomes pregnant, and is poor, should be entitled to a medicaid abortion?

Mr. HELMS. I say to the Senator that he knows as well as I do that the incidence of this is so infinitesimal as to be ridiculous as a defensive argument by those who favor abortion on demand. It is a red herring that is dragged across the path.

Mr. BROOKE. If there is one case, does the Senator believe that one case should be entitled to a medicaid abortion?

Mr. HELMS. There is no problem about that, as the Senator knows.

Mr. BROOKE. There is a problem. There are some of these cases. I ask the Senator, if it is only one case in the country——

Mr. HELMS. I wish the Senator would put any specific case that he knows of personally in the record, and I would be willing to pay for the treatment.

Mr. BROOKE. Does the Senator believe that, in the case of the rape of a 13-year-old girl, that child, if she is poor, should be entitled to a medicaid abortion?

Mr. HELMS. I say again, the Senator knows that the statistics on that are so infinitesimal that that is a red herring.

Mr. BROOKE. Did the Senator hear the number of rape cases in New York alone?

Mr. HELMS. The Senator did not say how many are pregnant. As a result of proven or demonstrable rape. I imagine he would have difficulty in producing even one such instance. I repeat, this is a red herring to obscure the real issue.

Mr. BROOKE. They have to be pregnant to get an abortion.

Mr. HELMS. Here comes the red herring again.

Mr. BROOKE. They are not red herrings at all.

Mr. HELMS. Of course they are.

Mr. BROOKE. The reason I asked the Senator that question is, if he believes they are entitled to an abortion, he cannot support the language of the Senator from Pennsylvania, because the language the Senator from Pennsylvania is trying to impose upon the Senate does not even include rape and incest. It does not even include it.

Mr. HELMS. I say, Mr. President, that this is a red herring that is used by the very people who know that those statistics are so infinitesimal as to be impossible of serious consideration in a discussion of such magnitude.

Mr. THURMOND. Mr. President, I heretofore have taken the position that Federal funds for abortions should be restricted to situations where the life of the mother is endangered, or in the case of rape, incest, or dread disease.

Language which permits Federal funds "where medically necessary" is too broad, and, in my view, unacceptable.

Under the current parliamentary situation, it is impossible for my vote to accurately reflect my views on this complicated issue. A "yea" vote will not take into account my feeling that we should allow funds for rape, incest, and dread disease. A "nay" vote will be interpreted as a vote in favor of a more liberalized approach.

With these considerations in mind, I shall vote "yea," as I believe there is less danger in restricting Federal funds than in opening the door to abortions under unwarranted circumstances.

Ideally, Mr. President, the matter of abortions should be settled once and for all by the people through the constitutional amendment process. Accordingly, Mr. President, I favor a constitutional amendment to leave the question of abortions to the States.

The PRESIDING OFFICER. All time has expired.

Mr. MAGNUSON. Mr. President, the yeas and nays have been ordered?

The PRESIDING OFFICER. The yeas and nays have been ordered. The question is on agreeing to the motion of the Senator from Pennsylvania to concur in the House amendment to Senate amendment No. 82. The clerk will call the roll.

Mr. MAGNUSON. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. MAGNUSON. A vote "yes" on the motion of the Senator from Pennsylvania will be to concur with the House language; a vote "no" will be not to concur, and we then go back to the Senate language.

Is that the motion? I want everybody to understand.

The PRESIDING OFFICER. A vote "no" brings back the motion of the Senator from Washington to disagree with the House language.

The question is on agreeing to the motion of the Senator from Pennsylvania to concur in the House amendment to Senate amendment No. 82. The yeas and nays have been ordered. The clerk will call the roll.

The legislative clerk called the roll.

(Mr. DECONCINI assumed the Chair.)

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Arkansas (Mr. MCCLELLAN), the Senator from Montana (Mr. METCALF), and the Senator from Alabama (Mr. SPARKMAN) are necessarily absent.

Mr. STEVENS. I announce that the Senator from Oklahoma (Mr. BELLMON) and the Senator from Illinois (Mr. PERCY) are necessarily absent.

I also announce that the Senator from Rhode Island (Mr. CHAFEE) is absent due to a death in the family.

I further announce that, if present and voting, the Senator from Rhode Island (Mr. CHAFEE) would vote "nay."

The result was announced—yeas 34, nays 59, as follows:

[Rollcall Vote No. 337 Leg.]

YEAS—34

Allen	Eastland	Melcher
Bartlett	Ford	Proxmire
Biden	Garn	Randolph
Byrd, Harry F., Jr.	Griffin	Roth
Curtis	Hatch	Schweiker

NOT VOTING—7

Abourezk	McClellan	Sparkman
Bellmon	Metcalf	
Chafee	Percy	

So the motion to concur in the House amendment to Senate amendment No. 82 was rejected.

Mr. BROOKE. Mr. President, I move to reconsider the vote by which the motion was rejected.

Mr. MAGNUSON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. MAGNUSON. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. LEAHY. May we have order, Mr. President?

The PRESIDING OFFICER. The Senate will be in order.

Mr. MAGNUSON. Mr. President, the question now recurs on my original motion, in which I move that the Senate disagree with the amendment of the House to the amendment of the Senate numbered 82, the abortion language.

The PRESIDING OFFICER. The Senator in correct.

Mr. MAGNUSON. A vote "aye" would be in disagreement. Is that correct?

The PRESIDING OFFICER. The Senator is correct.

The question is on agreeing to the motion.

Mr. MAGNUSON. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Washington. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Arkansas (Mr. MCCLELLAN), the Senator from Montana (Mr. METCALF), and the Senator from Alabama (Mr. SPARKMAN) are necessarily absent.

Mr. STEVENS. I announce that the Senator from Oklahoma (Mr. BELLMON), and the Senator from Illinois (Mr. PERCY) are necessarily absent.

I also announce that the Senator from Rhode Island (Mr. CHAFEE) is absent due to a death in the family.

I further announce that, if present and voting, the Senator from Rhode Island (Mr. CHAFEE) would vote "yea."

The result was announced—yeas 60, nays 33, as follows:

[Rollcall Vote No. 338 Leg.]

YEAS—60

NOT VOTING—7

Abourezk	McClellan	Sparkman
Bellmon	Metcalf	
Chafee	Percy	

So, the motion that the Senate disagree to the amendment of the House to the amendment of the Senate (No. 82) was agreed to.

Mr. BROOKE. Mr. President, I move to reconsider the vote by which the motion was agreed to.

Mr. MAGNUSON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. MAGNUSON. Mr. President, I move that the Senate request a further conference with the House on the disagreement to the amendment of the House to Senate amendment No. 82 and that the Chair be authorized to appoint the conferees on the part of the Senate.

Mr. HEINZ addressed the Chair.

The PRESIDING OFFICER. The question is on agreeing to the motion.

The motion was agreed to.

Mr. HEINZ. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. HEINZ. Mr. President, the Senator from Washington has made a motion to go back to conference. Is that correct?

The PRESIDING OFFICER. On this one matter, that is correct, and that motion has been agreed to.

Mr. HEINZ. I understand that he is about to ask the specific conferees be appointed. Is that correct?

The PRESIDING OFFICER. That is correct, and it has not been accomplished yet.

Mr. HEINZ. Mr. President, I ask unanimous consent that I might be permitted to proceed for 1 minute.

Mr. ROBERT C. BYRD. Mr. President, reserving the right to object, for what purpose?

Mr. HEINZ. I wish to discuss the question of instructing the conferees.

Mr. ROBERT C. BYRD. Does the Senator from Pennslyvania merely wish to make a statement?

Mr. HEINZ. Yes.

Mr. ROBERT C. BYRD. I have no objection.

The PRESIDING OFFICER. Without objection, the Senator is recognized for 1 minute.

Mr. HEINZ. Mr. President, I thank the Senators for their indulgence.

I take this time because I am concerned about the direction in which we are heading on this question.

Frankly, I am concerned that the language in the Senate bill is—or at least could be construed to be—too broad on the question of when we will permit abortions to be federally funded. Were it in order at this time, I would seek to instruct the conferees to modify the Senate language so it would read as follows: "None of the funds in this act shall be used to perform abortions except in cases where carrying the fetus to term would endanger the mother's life or cause her grave bodily harm by reason of a physical maternal disease or condition." I would seek to further clarify the Senate position by adding: "The preceding sentence shall not be construed to prohibit the use of funds in this act for the performance of medical procedures necessary for the termination of an ectopic pregnancy or for the treatment of rape or incest victims, and nor shall it be construed to prohibit the use of funds in this act for drugs or devices to prevent the implantation of the fertilized ovum."

Mr. President, I am aware that a motion to instruct, such as I have just stated, would be subject to a valid point of order, so I do not make that as a motion to instruct. But I want to commend my proposal to the conferees' consideration. I hope the conferees will take this suggestion into account, and I hope it may serve as a useful direction to them.

I again stress that it is my concern that the term "medically necessary" may be construed to permit greater use of Federal funds for abortions than I myself would wish, and that is why, Mr. President, I have taken the time of my colleagues.

I yield back the remainder of my time.

The PRESIDING OFFICER. The Chair appoints the following conferees:

Mr. MAGNUSON, Mr. ROBERT C. BYRD, Mr. PROXMIRE, Mr. HOLLINGS, Mr. EAGLETON, Mr. BAYH, Mr. CHILES, Mr. BURDICK, Mr. MCCLELLAN, Mr. BROOKE, Mr. CASE, Mr. SCHWEIKER, Mr. MATHIAS, and Mr. YOUNG.

Mr. HEINZ. I thank the Senator for his indulgence.

Mr. ROBERT C. BYRD. Mr. President, I ask for the regular order.

FOREIGN ASSISTANCE APPROPRIATIONS, 1978

The PRESIDING OFFICER. Under the previous order, the Senate will now proceed to the consideration of H.R. 7797, which the clerk will state.

The assistant legislative clerk read as follows:

A bill (H.R. 7797) making appropriations for foreign assistance and related programs for the fiscal year ending September 30, 1978, and for other purposes.

The Senate proceeded to the consideration of the bill, which had been reported from the Committee on Appropriations with amendments.

The PRESIDING OFFICER. Time for debate on this bill is limited to 5 hours, with 1 hour each for the Senator from Hawaii (Mr. INOUYE) and the Senator from Pennsylvania (Mr. SCHWEIKER), and with 3 hours for the Senator from Virginia (Mr. HARRY F. BYRD); with 1 hour on any amendment in the first degree, except three amendments by the Senator from Alabama (Mr. ALLEN), on which there shall be no time limitation and no tabling motions thereto in order; with 30 minutes on any amendment in the second degree; and with 20 minutes on any debatable motion, appeal, or point of order.

The Senator from Hawaii is recognized.

Mr. ROBERT C. BYRD. Mr. President, will the distinguished Senator from Hawaii, the manager of the bill, yield to me briefly?

Mr. INOUYE. I am very happy to yield.

Mr. ROBERT C. BYRD. Mr. President, may we have order in the Senate?

The PRESIDING OFFICER. The Senate will come to order. Senators will clear the well and retire to their seats or cloakrooms. The Senate is not in order. The Senator from West Virginia is entitled to be heard. Senators will retire to their seats.

The Senator from West Virginia.

Mr. ROBERT C. BYRD. Mr. President, for the information of the Senate, the other body has just adopted the clean air conference report by a voice vote. That conference report should be over to the Senate Chamber by 8 o'clock, I should think. The Senate will proceed with the foreign assistance appropriation bill until such time as Mr. MUSKIE, following the receipt of the clean air conference report in this Chamber, determines to call it up. He has that right under the rules, it being a privileged matter, and I have discussed the matter also with the distinguished manager of the foreign assistance appropriation bill, who understands that that will be the procedure. He very patiently has waited for several days now for the calling up of the foreign assistance appropriation bill, but is very agreeable to proceeding in that fashion.

I think I should say to Senators that in view of the extreme importance of the adoption of the clean air conference report before the Senate goes out, by virtue of the adverse impact that failure to do that would have upon the automobile plants, the economy of the country, and the jobs of workmen in those auto factories and associated industries, it is the intention of the leadership to stay on the clean air conference report until action thereon is completed.

The Senate has already adopted the concurrent resolution which was initiated in the House of Representatives adjourning at the close of business Saturday. I entered a motion to reconsider that vote the day before yesterday. The Senate, by unanimous vote, supported my motion to request return of the papers. The papers have been returned by the Speaker of the House of Representatives, and if it is necessary—I hope it will not be, and I do not believe it will be necessary—to amend that resolution, then, of course, I would have no alternative but to attempt to do that. But I think Senators should be aware of the fact that this will be a late evening. I hope the confernce report on the Clean Air Act will not require too long, but in any event, it is my intention at the moment to stay in session until it is adopted.

I thank the distinguished Senator from Hawaii for yielding.

Mr. INOUYE. I yield to the Senator from Maine.

Mr. MUSKIE. Mr. President, I wish to echo the majority leader's views on the importance of the Clean Air Act, and as soon as the papers are here and we are ready to go to work on it, we will do so, and undertake to discuss any aspects of it which may be of interest to Senators.

In the meantime, Mr. President, I ask unanimous consent that Madeleine Albright of my staff be given the privileges of the floor during the debate on H.R. 7797.

The PRESIDING OFFICER (Mr. RIEGLE). Without objection, it is so ordered.

The following Senators requested and, by unanimous consent, the privilege of the floor was granted on behalf of the following staff members: Mr. CLARK: Pauline Baker; Mr. DECONCINI: Romano Romani and Jerry Bonham; Mr. HARRY F. BYRD, Jr.: Christopher Lehman; Mr. HEINZ: Bill Reinsch and Stewart Lanholtz; Mr. LUGAR: Mark Lubbers.

Mr. INOUYE. Mr. President, I am pleased to report H.R. 7797, the foreign assistance and related programs appropriations bill for fiscal year 1978. Although the Appropriations Committee has once again been delayed by the tardy passage of authorizing legislation, I still have hopes that we can enact a timely appropriations bill. The legislative calendar is crowded and the time we have is short. I would hope, therefore, that we can have responsible action on this bill and move quickly to insure that it will be enacted before the start of the fiscal year.

The House passed this bill on June 23; in the Senate, the Appropriations Subcommittee on Foreign Operations marked up the bill on July 15; the Appropriations Committee marked up the bill and ordered it reported on July 18. We have acted expeditiously because of the requirements of the Budget and Impoundment Control Act of 1974. To meet the statutory requirements of that act, we had no choice but to act, and to act with dispatch. The Appropriations Committee has made every effort to meet its responsibilities. And yet, Mr. President, we have had to act without the benefit of approved authorizing legislation.

Delay in the enactment of authorizing legislation immeasurably compli-

cates the work of the Appropriations Committee. Today, I will offer a number of amendments to the bill reported by the Appropriations Committee—amendments which will be offered only because they are necessary to bring our bill within limits established by the authorizing committees. Because of the requirements of the Budget and Impoundment Control Act, we could not afford to wait for authorizing legislation. Now we find that we must make adjustments to carefully considered recommendations for appropriations. In other words, because of the delay in passage of authorizing legislation, we have to do again what we did before reporting this bill. This redundancy of effort could easily be avoided, if only the authorizing committees would move their legislation: There are six separate pieces of authorizing legislation which affect this appropriations bill; not one of them is, at this moment, public law.

It is my hope that in the coming fiscal year there will be early enactment of authorizing legislation. If there is, the Appropriations Committee will be able to do its work in a more orderly manner.

Now, if I may, I would like to discuss the bill.

Mr. President, the bill recommended by the committee for fiscal year 1978 totals $7,074,372,763. This amount is $1,477,875,763 more than the fiscal year 1977 appropriation and $380,241,463 above the amount provided in the House bill. It is, however, $524,588,373 below the President's fiscal year 1978 budget request.

Mr. President, I will not discuss each item in the bill in detail. I will limit my remarks to several specific committee recommendations which, I believe, may be of particular interest. I would note that the report which accompanies this bill (No. 95–352) provides a detailed commentary on the programs in the bill and a framework of understanding for the recommendations of the committee. I hope that it will be widely read, both by those within this Chamber and by those who are charged with the responsibility of carrying out our foreign assistance policies.

I believe that the bill brought forward by the committee demonstrates our concern for the world's poor while responding to the need for fiscal responsibility in our programs. It is a balanced bill, a good bill, and one which we can ask the American taxpayer to support. There can be no doubt that the taxpayers of this country have been generous in their support of foreign assistance programs. Since the end of the Second World War the United States has supported a vast program of foreign assistance which has directly benefited most of the nations of the World. It is estimated that through fiscal year 1977, the United States will have provided well over $231 billion in assistance to foreign nations.

The record is there, Mr. President. The United States has been generous. This country has given much, and in doing so we have given truth to the ideals we live by. We must continue to uphold this humanitarian tradition. We must also take care to insure that our assistance programs meet the stringent economic requirements of our time. Without a just proportion between humanitarian concern and prudent economic management our assistance efforts will be doomed to failure. I believe that the bill recommended by the committee effects such a balance.

The bill recommended by the committee provides a total of $930 million for the five so-called functional categories of assistance: food and nutrition. population planning, health, education, and technical assistance. This amount is $74 million greater than the amount provided in fiscal year 1977, but is some $76 million less than the President requested. The committee has given careful consideration to these programs and has recommended funding levels which are larger than those provided last year and which will enable the Agency for International Development to make an effective and manageable response to the needs of the poor for assistance. It is our judgment that any further increases in funding for these programs would not be productive.

As you know, Mr. President, these programs provide foreign countries either loans or grants to assist them in their economic development. Obviously, the countries receiving our assistance differ greatly in their prospects for economic growth. The committee believes that the terms of our assistance should reflect this diversity. We have, therefore, recommended a limitation on the terms of development loans, similar to that which was incorporated into the fiscal year 1977 Foreign Assistance Appropriations Act.

It may be of interest to some Senators that even today Venezuela has an outstanding balance of more than $27 million on earlier U.S. development loans which carry interest rates of only 0.75 percent, and Iran has an outstanding balance on similar loans totaling about $38 million at interest rates between 0.75 and 3.5 percent. It is entirely likely that other countries now receiving development assistance loans will experience, within the next several years, an improvement in their economic standing similar to that recently experienced by Venezuela and Iran. In anticipation of this improvement, the committee recommends that of the $310,500,000 provided in new budget authority for loans, $37,000,000 should be repayable within 30 years and $98,500,000 should be repayable within 20 years.

A similar limitation has been proposed for loans which are made under the security supporting assistance program.

For voluntary contributions to international organizations and programs, the committee has recommended $243,850,000. In a moment, I will offer an amendment to reduce this amount to $234,350,000; the reduction being necessary because of action taken by the authorizing committee.

Included in the committee's recommendation is full funding of the administration's request for the U.N. environment program, the U.N. Children's Fund, and the U.N. Decade for Women. We have recommended $110,000,000 for the United Nations development program, an amount which is less than the administration's request but which represents a 10-percent increase over the amount provided last year. I should note, Mr. President, that after thorough discussion in the committee markup, a proposal to increase the U.S. contribution to the UNDP by $10 million was defeated by a vote of 18 to 4.

Further recommendations made by the committee with regard to the international organizations and programs account include a recommendation that the administration's request for contributions to the United Nations University be denied; and at the request of the new U.S. Ambassador to the Organization of American States, Ambassador McGee, we have earmarked $2.5 million of the U.S. contribution to the OAS for special development purposes.

It will also be noted that the committee has recommended the deletion of a line item appropriation for United Nations forces in Cyprus. In keeping with our effort to fund all U.S. contributions to U.N. activities under one account, the committee has transferred funding of the U.N. force in Cyprus to the International Organizations and Programs account.

Mr. President, I have long believed that our assistance programs have not adequately provided for the very real needs for development assistance in Africa. I am particlularly pleased to report that the committee has recommended an appropriation of $50 million for the Sahel development program. We have, to be sure, been very generous in the past in meeting the drought emergency in the Sahel, but this program is forward looking; it seeks to avert the recurrence of the terrible drought conditions which held the Sahel in a state of desolation and despair for more than 5 years.

It is my urgent hope that the Senate will approve this recommendation. The Sahel development program is a long term and comprehensive effort which is being undertaken by several donor countries on a coordinated basis. The committee recognizes that the program may ultimately entail the expenditure of large amounts of U.S. assistance, but we have taken steps to insure that the United States will not bear a disproportionate share of the burden. The committee has recommended bill language which will limit the U.S. contribution to no more than 10 percent of total cash contributions to the program, and I can assure the Senate that we will closely review U.S. participation in the program as we consider requests for further appropriations.

For security supporting assistance, Mr. President, the committee recommended the appropriation of $2,222,200,000. Again, because of action taken by the authorizing committee, I will offer an amendment to reduce the amount recommended by the Appropriations Committee. Because the Southern Africa Special Requirements Fund is only authorized $80 million for fiscal year 1978, I will ask for a $20 million reduction in the amount recommended by the committee.

This year the overwhelming share of security supporting assistance, some $1,730,200,000, is again to go to the Middle East region, with the bulk of this amount going to Israel, Egypt, Jordan, and Syria. A second major item is a special $300 million balance-of-payments loan to Portugal. The committee recognizes that the strength and vitality of democracy in Portugal is of considerable importance to our national interests. We have recommended the appropriation of the full amount requested by the administration because we believe these funds will ease Portugal's temporary and unusual balance-of-payments deficit.

With regard to the Southern Africa Special Requirements Fund, the committee has noted that political change has engendered economic change as the nations of the region have become engaged in the effort to bring about a transition to majority rule in Rhodesia and in southwest Africa. A particularly urgent problem is the need in the emerging countries of Zimbabwe and Namibia for skilled manpower. The program proposed by the administration for the Southern Africa Special Requirements Fund addresses a broad spectrum of economic difficulties which range from refugees to balance-of-payments problems and disruptions of transport systems. It provides, as well, funds to support manpower programs for black African participants from both majority and minority ruled countries. The committee shares the administration's belief that the United States has a unique opportunity to bring a stabilizing influence to the volatile processes of political change in Southern Africa.

Mr. President, the committee has also provided, within the security supporting assistance account, relief and rehabilitation assistance to Cyprus—$15 million—and Lebanon—$20 million. Following the administration's request and action taken by the House, the Appropriations Committee has provided $12.2 million to fund the Sinai support mission in fiscal year 1978. These funds were transferred from the Middle East Special Requirements Fund.

Under the international security assistance accounts, that is under the accounts: Military assistance, international military education and training, and foreign military credit sales, the committee has proposed modest reductions. We have recommended the deletion of specific country references from the House passed bill, but have made reductions for those countries which have publicly announced that they will not participate in these programs: Argentina, Brazil, El Salvador, and Guatemala. In addition, I will soon offer an amendment to further reduce the amount the committee recommended for foreign military credit sales to the level authorized. This will be a reduction from $688,350,000 to $677,000,000.

We come now, Mr. President, to the largest item in this bill: appropriations for international financial institutions. The committee recommends:

For the Asian Development Bank, $263,571,563;

For the International Finance Corporation, $44,597,200; and

For the African Development Fund, $10,000,000.

These amounts are equivalent to the President's budget request. For the remaining institutions, the committee recommends to the Senate the amounts provided in the House-passed bill:

For the Inter-American Development Bank, $523,000,000;

For the International Bank for Reconstruction and Development, $400,000,000; and

For the International Development Association, $950,000,000.

Mr. President, these are the dollar amounts which the committee has recommended for U.S. contributions to the international financial institutions. They are contributions to the current replenishments of resources of the international development banks. The committee considers the current U.S. share of current replenishments to be too high and not reflective of the worldwide shift in capital resources over the last 30 years.

To give guidance to those who will be charged with negotiating future replenishments the committee recomends that the Senate adopt language in the bill which conveys the "sense of the Senate" and specifies maximum percentage shares for accounts in each of the international financial institutions. I believe that it is very important for the Senate to make its views known. All too often we are told that U.S. negotiators have not had clear guidance, and did not know what the Congress considers a "fair share" for the United States. This language will remove all doubt.

Mr. President, the issue of what is a fair share for the United States is not the only issue which concerns the committee. We have seen these international financial institutions become more and more divorced from the legitimate development assistance concerns of their primary contributors. The committee report details a number of excesses in the management and personnel practices of the international banks. I urge every Member of the Senate to read that section of the report which deals with salaries and personnel practices, lending patterns, and secrecy within the banks. I ask unanimous consent, Mr. President, that that section of the report be printed in the RECORD at this point. I refer to pages 121 through 130 of report No. 95-352.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

COMMITTEE CONCERNS REGARDING THE OPERATIONS AND MANAGEMENT OF THE INTERNATIONAL FINANCIAL INSTITUTIONS

For more than thirty years, the United States has been a leading participant in international financial institutions. Indeed, in most instances, the United States played a formative role in the creation of these institutions. When they first appeared on the international economic scene, the development banks were met with enthusiasm. They were to be truly international lending institutions which would stand above the parochial political concerns and narrow policy interests of their member nations. They held the promise of a new wave of multilateral development assistance, guided by a fraternity of international civil servants who were dedicated to the social and economic enrichment of the impoverished peoples of the world.

Today, enthusiasm has given way to increasing disenchantment, as the interests of the banks become more and more divorced from the legitimate development assistance concerns of their primary contributors. The pattern of their lending services not the impoverished peoples of the world but the rich of developing and developed countries alike. They have become the banks of banks, protecting the international financial community from the ravages of inflation, often at the expense of the poor. Rather than strengthening economic development, they strengthen the development of government control over national and international economies.

The much heralded cadre of international civil servants has become the aristocracy of development finance, jealous guardians of privilege and position. Facing no threat of removal from office by a voting public incensed by excesses, those who have been entrusted with the oversight of public funds have awarded themselves extraordinary salaries, travel allowances, and benefits. Somewhere, lost in their rhetoric of global internationalism, is the fact that these public funds are contributions, made by ordinary taxpayers through their governments, to provide assistance to the poor.

Excesses in the management and personnel practices of the international banks have attracted attention in many quarters. Prominent newspapers, government investigators, and citizens' groups in this country have chided the banks for their excesses and have called for basic reforms. In his foreign assistance message to the Congress, the President of the United States said, "We recognize that salaries and living styles of some employees have been too lavish, and we will insist that the international programs we support will do more to control their administrative overhead."

The excesses of the banks hang like storm clouds over future contributions. This Committee was among the first to see the gathering storm. For more than five years, we have articulated our concerns. We have raised these issues time and again—in our hearings, in our reports, and in direct communications with the U.S. Executive Directors to the various banks. The Committee had hoped that the banks would respond to these concerns and take action to correct the abuses which we had identified. Instead, our concerns have been met with a studied indifference, an arrogance which is both an assault on reason and an affront to all who have generously contributed to the banks. Indeed, recent actions by certain of these institutions are, in the words of the Secretary of the Treasury, Mr. Blumenthal, "unworthy of organizations dedicated to monetary stability and aid to the world's neediest peoples."

In the following paragraphs the Committee will chart several points of excess or abuse in the management and personnel practices of the banks and in the policies they have adopted. We deal with the banks here in collective fashion, because the abuses we have found occur in the several international financial institutions but are particularly acute in the Inter-American Development Bank, the International Bank for Reconstruction and Development, and the International Monetary Fund (there are no appropriations for the IMF in the bill before us). We will treat the specific requests for approrpiations for each of the banks under separate sections, but here the Committee wishes to set forth those matters which offend our concept of what international financial institutions ought to be.

Salary Levels in International Financial Institutions.—The most egregious of all excesses in the international development banks is the salaries which are paid to their employees.

The U.S. Executive Director to the International Bank for Reconstruction and Development receives a gross annual salary of $83,830; in the Inter-American Development Bank the U.S. Executive Director receives a gross annual salary of $78,820. These salaries, which are set by the Banks, are far in excess of the salaries paid Cabinet officers in the United States ($66,000).

In May of this year, plans were being made to raise the salaries of Executive Directors of the Inter-American Development Bank. Facing strong opposition by the Congress and the President of the United States, the IDB abandoned, for the time, its salary push. On the other hand, at the time this Report went into publication, the World Bank and the International Monetary Fund were considering proposals to increase the gross compensation of the Executive Directors in both institutions by over nine percent. If they are provided, these raises would increase the taxable income of an Executive Director at the IMF and the IBRD to over $90,000.

Professional staff salaries in the international financial institutions are also extraordinarily high. The Assistant Secretary of the Conference Service Sector of the Inter-American Development Bank, for example, is three grades below the top professional rank and ninth from the top of the bank salary structure. The Assistant Secretary of the Conference Service Sector, according to the IDB's description of duties, "Prepares and organizes meetings sponsored by the Bank such as those of the Board of Governors and its committees. Processes special votings of the Board of Directors. Handles the appointments, resignations, and other matters related to the Governors of the Bank." The Assistant Secretary of the Conference Service Sector is paid $69,680.

There are many other examples which the Committee could recite to demonstrate excessive salary levels in the international financial institutions which the United States supports through its contributions. The people of this country would be outraged, and rightly so, if they were called upon to pay salaries at these levels to employees of their government. But, because the true salaries of the employees of the international financial institutions are not widely known, the "governments" of the international development banks continue to pay their employees exorbitant salaries.

In our hearings, the Treasury Department provided the Committee with information having more than a tangential bearing on the subject at hand. We quote it in full:

Currently, the number of people that can be categorized as "have nots" is almost 75 percent of the world's population. Almost three billion people out of the current global population of 3.9 billion have a per capita GNP of less than $300 (using constant 1972 dollars) according to the most recently published World Bank figures.

When it is considered that almost three billion people in the world today have a per capita GNP of less than $300, the exorbitant salaries which are paid to employees of the international development banks cannot be regarded as mere excesses; reflected in the mirror of world poverty, they are unconscionable offenses to humanity. That the employees of these institutions would continue in their insatiable demands for even greater remuneration is but one measure of the distance between the aristocracy of development and those whom they are supposed to serve. New meaning is given to the often repeated phrase "the gap between the rich and the poor of the world is growing wider."

It is true that the Congress of the United States cannot control the salaries of the employees of the International Financial Institutions. We do believe, however, that it is within our jurisdiction to require readjustment of the excessive salaries being paid the United States Executive Directors and their alternates who are charged with representing the interests of the United States within the Banks. We, therefore, recommend bill language which would limit the payment of U.S. fiscal year 1978 contributions to the banks until the compensation of these individuals is adjusted to a level not exceeding their superiors at the Department of the Treasury of the United States.

Frankly, we hope that this action on the part of the United States will begin to bring about a public awareness of this issue in other nations. Once this happens we know that necessary across-the-board adjustments will take place and these institutions can return to the high calling for which they were created.

Hiring of Retired United States Government Personnel by the International Financial Institutions.—Not only have the international banks adopted salary schedules and other benefits which are higher than United States government salaries but they have attracted at least 39 retired United States government employees who enjoy not only the high salaries and benefits of the banks but in addition draw full retirement benefits from the banks' largest contributor. From limited checks we have learned that at least one employee has passed the $100,000 mark in combined annual compensation from both systems. As an issue "double dipping" is one on which honest men can disagree but there can be little argument that the banks should not be allowed to recruit from those Federal employees who have held policymaking positions relative to United States participation in these same institutions.

Disclosure and Public Access to Information Regarding IFI Operations.—Again, for more than five years the Committee has pressed the banks to open their doors and encourage both their supporters and the media to make informed judgments as to how well and how efficiently they are carrying out their international mandate. It is apparent that our exhortations have fallen on deaf ears for:

As of December 31, 1976 (January 31, 1977 for the IBRD) well over $10 billion in liquid assets of the banks were held in various securities and in sundry commercial and governmental financial institutions throughout the world. It is true that a large portion of these funds, which are surplus to current needs, earn interest, but we see no reason why the location of depositories and the rates of interest should not be made public. Indeed, most of our own state and local money managers have learned that when such funds have been openly and competitively placed there is a substantial increase in return. We believe the same result could be achieved by the International Financial Institutions.

All working sessions of the boards of the banks are closed to outside observers and loan documents and supporting materials are classified.

Information regarding salaries, travel costs, and other benefits of individual employees of the IFIs is closely held in institutional channels. When requested by the Committee, related information was only reluctantly provided and after numbers had been assigned to individual records. An extreme illustration of the aura of secrecy surrounding the operations of these institutions was the unwillingness of officials of one of the institutions, over a period of several months, to provide the Committee with a copy of its telephone directory.

IFI Development Assistance Through the Private Sector.—The Committee believes that there can be little development without fully exploiting the initiative, the efficiency and the competitive spirit of the private sector in each of the developing nations of the world. We are, therefore, greatly concerned that only 5.3 percent of the lending by the International Financial Institutions is made directly to the private sector. We note that an additional 16.8 percent is made to the private sector, but this is only indirectly through intermediate credit institutions. We believe there is much to be gained by encouraging development of the non-governmental capacity of developing nations and strongly urge that this be done by the IFIs as a matter of primary importance. The following table reflects present lending patterns:

TABLE I.—IFI LENDING TO THE PRIVATE SECTOR FOR 1976

[Dollar amounts in millions]

	IBRD	IDA	IFC	ADB	IDB	AFDF	Total	Percent of total
I. Loans direct to private sector	$171.2	$8.0	$170.9	$70.0	$54.9	----------	$475.0	5.3
II. Loans through official intermediate credit institutions	898.0	72.6	34.1	123.5	385.5	$0.2	1,513.9	16.8
Subtotal	1,069.2	80.6	205.0	193.5	440.5	.2	1,988.9	22.1
III. Total loans	5,288.6	1,206.7	205.0	776.0	1,443.9	79.0	8,999.2	100.0
IV. Private as a percent of total lending	20.2	6.7	100.0	24.9	30.5	----------	22.1	----------

Note: International Bank for Reconstruction and Development (IBRD), International Development Association (IDA), International Finance Corporation (IFC), Asian Development Bank (ADB), Inter-American Development Bank (IDB) and African Development Fund (AFDF). Source: OIDB/Department of Treasury.

Support of Mutual Credit Institutions.—The Committee believes that the International Development Banks have afforded meager support and encouragement to mutual credit institutions, particularly credit unions, savings and loan associations, and cooperatives which are independent of government control. We believe that there is extensive justification for extending support to such institutions and that much leverage can be gained for development dollars in doing so. We request a detailed report on this matter from the United States Department of the Treasury. When it comes before the Committee to justify fiscal year 1978 contributions to the International Financial Institutions it should be prepared to speak to this issue.

Control of Administrative Costs.—Over the years, we have documented many expenditures by the IFIs which lead us to the conclusion that there are substantial sums to be saved by a tightening of administrative practices and an encouragement of cost consciousness among bank officials and employees. It is our understanding that an extensive review of these costs is now under-

way. We welcome this initiative and hope that it will give priority to such items as:

The justification for first class and SST travel;

The propriety of spouse travel at bank expense;

Subsidies which are provided for dining and recreational facilities;

Retirement costs and benefits.

Use of limousines.

FUTURE CONTRIBUTIONS TO THE INTERNATIONAL FINANCIAL INSTITUTIONS

The Committee is aware of the difficulty of negotiating international replenishments of the resources of the International Financial Institutions without clear guidance as to what the Congress considers to be a "fair share" for the United States.

The committee considers the current "U.S. share" of current replenishments to be too high and not reflective of the worldwide shift in capital resources over the last 30 years. To give expression to our views and in an effort to provide advance guidance to those who will be charged with negotiating future replenishments we recommend "sense of the Senate" language specifying maximum percentage shares for accounts in each of the International Financial Institutions. This language is set forth below and is followed by a table indicating the U.S. share as a percentage of both cumulative and current replenishments:

Future United States Contributions to the International Financial Institutions

It is the sense of the Senate that the United States share of contributions to future replenishments of the International Financial Institutions should not exceed the percentages enumerated below for each of the respective accounts within these institutions:

Asian Development Bank:

Paid-in capital, 16.3 percent;

Callable capital, 16.3 percent;

Asian Development Fund, 22.2 percent.

African Development Bank: Special Fund, 10.6 percent.

Inter-American Development Bank:

Paid-in ordinary capital, 34.5 percent;

Callable ordinary capital, 34.5 percent;

Paid-in interregional capital, 34.5 percent.

Callable interregional capital, 34.5 percent.

Fund for Special Operations, 40 percent.

International Bank for Reconstruction and Development:

Paid-in capital, 18.7 percent;

Callable capital, 18.7 percent;

International Development Association, 25 percent;

International Finance Corporation, 23 percent.

CUMULATIVE CONTRIBUTIONS BY THE UNITED STATES RELATIVE TO TOTAL CONTRIBUTIONS TO THE INTERNATIONAL FINANCIAL INSTITUTIONS AND THE U.S. SHARE OF THE CURRENT AND PREVIOUS REPLENISHMENTS

[In percent]

Institution	Cumulative U.S. share of total contributions	U.S. share or previous replenishment	U.S. share of current replenishment
World Bank:[1]			
International Bank for Reconstruction and Development	25.3	[2] 34.0	18.7
International Development Association	[3] 31.4	33.3	31.4
International Finance Corporation	32.5	[4] 32.5	23.0
Inter-American Development Bank:[5]			
Ordinary capital	34.9	41.2	32.3
Fund for special operations	63.9	66.7	57.4
Asian Development Bank:[5]			
Ordinary capital	16.4	18.2	16.3
Asian Development Fund[6]	[6] 13.1	28.6	22.2
African Development Fund:[5]			
Special fund	3.7	(7)	(8)

[1] Data as of Mar. 31, 1977.

[2] Represents original subscription; subsequent capital increases are not considered comparable to current replenishment.

[3] Includes only funds actually contributed and paid-in; it does not include commitments.

[4] Original subscription, the current replenishments is the 1st replenishment.

[5] Data as of June 30, 1977.

[6] The 13.1 percent cummulative share is due to the slower schedule of contributions by the United States relative to the other donors.

[7] United States did not participate in the previous replenishment.

[8] The 2d general replenishment is expected to commence in November 1977; the proposed U.S. share is still to be determined.

INTERNATIONAL FINANCIAL INSTITUTIONS SALARY LEVELS AND RELATED BENEFITS

ASIAN DEVELOPMENT BANK SALARIES.[1]

[In U.S. dollars]

Level	Minimum	Maximum
Management:[2]		
President[3]		$54,500
Vice President[3]		49,050
Executive Directors[4]		42,350
Alternate Executive Directors		36,550
Professionals:[2]		
VII	$36,630	42,170
VI	34,440	41,110
V	30,740	38,630
IV	26,850	34,440
III	22,820	30,740
II	19,950	26,850
I	9,990	22,820
Nonprofessionals:[5]

7	3,207	5,375
6	2,669	4,357
5	2,254	3,581
4	1,952	2,961
3	1,677	2,427
2	1,476	2,047
1	1,725	1,776

[1] U.S. nationals are not reimbursed for U.S. Federal tax payments. If IRS requirements are met individuals can reduce income taxes owed by a $3,010 credit for foreign source income. U.S. nationals' taxes will be increased by the taxable value of home leave and other fringe benefits.

[2] These individuals may also receive a dependency allowance, for presentation purposes we have included $1,550 per annum for a family of 4.

[3] Residence provided by ADB.

[4] Under the provisions of sec. 3-B of the Asian Development Bank Act, the USED is entitled to compensation and allowances equal to those authorized for a Chief of Mission, class 2, within the meaning of the Foreign Service Act of 1946. The USED is entitled to receive the difference between the $52,500 salary of a Chief of Mission, and the ADB's salary for an Executive Director ($40,800). He also has a residence provided by the U.S. Treasury Department.

[5] Assuming no dependency allowance. No U.S. citizens are involved.

THE WORLD BANK SALARIES

[In U.S. dollars]

Position	Net salaries[1][2]		Taxable gross equivalent[3]	
	Minimum	Maximum	Minimum	Maximum
President		$60,000		$111,570
Senior Vice President	58,030			106,950

[1] Assuming District of Columbia residence, 4 exemptions, standard deductions. Dependency allowance of $1,475 unless noted otherwise is included in both net and grossed-up salaries.

[2] Positions held by non-Americans not subject to U.S. tax schedule.

[3] Included in the Manager, and Deputy Manager range are 2 individuals with the titles of Senior Manager and Senior Deputy Manager.

[4] Assuming District of Columbia residence, 1 exemption, standard deductions, and no dependency allowance.

Mr. INOUYE. Mr. President, I will not take time now to review all of the abuses which we have found in the banks, but let me speak for a moment on the subject of salaries.

Professional staff salaries in the international financial institutions are extraordinarily high. The assistant secretary of the conference service sector of the Inter-American Development Bank, for example, is three grades below the top professional rank and ninth from the top of the bank salary structure. The assistant secretary of the conference service sector, according to the IDB's description of duties, prepares and organizes meetings sponsored by the bank such as those of the board of governors and its committees. Processes special votings of the board of directors. Handles the appointments, resignations, and other matters related to the governors of the bank. The assistant secretary of the conference service sector is paid $69,680—which, incidentally, is more than the Secretary of the Treasury.

The deputy manager of the administrative department assists the department manager in the planning, coordination and control of all technical and administrative activities related to budget and management accounting, personnel, systems analysis, data processing and administrative services for the bank. For this, the deputy manager is paid a gross annual salary of $76,613.

I shall not go on, Mr. President, but I ask unanimous consent that a table of selected Inter-American Development Bank positions be printed in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Position	Grade	Net salary range [1]	Gross salary [2] of incumbent	Description of duties
Adviser: Office of External Relations	EX	$43,665–$44,965	$75,220	Serves as the principal staff adviser to the President for assuring that the publics of the member countries are kept adequately informed of the Bank's activities. Assists management in working with the communications media and groups in all the member countries.
Representative: Field Office in Brazil	A	27,618– 42,769	69,680	Acts as Bank's chief officer in the designated country. Represents the Bank in its relations with government authorities, institutions, and borrowers. Assists borrowers in the preparation of loan and technical cooperation applications and cooperates in the administration of projects in execution.
Representative: Field Office in Jamaica	A	27,618– 42,769		Acts as Bank's chief officer in the designated country. Represents the Bank in its relations with government authorities, institutions, and borrowers. Assists borrowers in the preparation of loan and technical cooperation applications and cooperates in the administration of projects in execution.
Secretary: Pension Committee	Ex-officio Bank.	Secretary of the		Provides secretariat services to the Pension Committee, which has overall responsibility for the Administration of the Staff Retirement Plan, with authority to decide all matters of policy and to develop and establish rules and procedures for the plan.
Chief: Management Services Office	II	31,305– 41,143		Coordinates the development of recommendations related to the Bank's organization, manpower, management, reporting system, manuals, and procedures.
Chief: Organization and Manuals Section	III	27,618– 39,269		Supervises studies to recommend the optimum organization and manpower allocation for the Bank. Administers the program for the preparation and maintenance of the system of manuals and regulations of the Bank. Recommends the establishment of policies on the above mentioned areas.
Adviser: Office of the Controller	II	31,305– 41,143	54,644	Provides technical advice to the Controller on basic policy issues regarding the responsibility of the Controller to assure that the Bank's activities conform to the provisions governing the Bank and its programs. Assists the Controller on special projects.
Representative: Field Office in Venezuela	A	27,618– 42,769		Acts as the Bank's chief officer in the designated country. Represents the Bank in its relations with government authorities, institutions, and borrowers. Assists borrowers in the preparation of loan and technical cooperation applications and cooperates in the administration of projects in execution.
Chief: Technical Cooperation Information Unit	IV	24,290– 34,887		Develops and prepares system specifications of computerized statistical information for management, on the activities of Technical Cooperation. Maintains updated information on progress of all Technical Cooperation activities.
Chief: Infrastructure Division	I	35,316– 42,769	73,230	To administer the activities of a professional multidisciplinary group, in analyzing requests for loans in the fields of energy, transportation, and telecommunications as well as the related technical cooperation activities. Technically advises and leads the Bank's personnel and the borrowers during the phases of project's identification, study, formulation, design, financing and operation.
Chief: Energy Section	III	27,618– 39,269	59,625	Supervises the promotion and analysis of loan applications in the energy sector, including execution and evaluation of projects and related technical assistance activities.
Member: Group of Controllers of the Review and Evaluation System.	T/C	35,225– 35,665	56,720	Under the direct supervision of the Board of Executive Directors, examines selected areas of significant Bank activities to determine if they are conducted in a manner designed (a) to attain Bank objectives in an effective and efficient way at the lowest possible cost and (b) to assure the most beneficial results to the member countries. Conducts analytical studies, reviews, evaluations and appraisals of Bank policies, systems, procedures, and operations with a view toward (a) identifying any significant problem areas that may exist and (b) offering suggested changes and improvements that might enhance the Bank's ability to accomplish its mission.
Chief: Payroll, Tax and Retirement Section	IV	24,290– 34,887		Supervises the development of payroll system, income tax reimbursement and the Retirement Plan as well as its control, accounting and disbursement. Makes sure that all payments are made on time and in accordance with the Bank's policies and procedures.
Chief: Salary Administration Section	IV	24,290– 34,887		Administers the planning, organization and execution of all activities related with the Bank's program on remuneration, job classification and performance evaluation. These activities comprise development of policies, regulations and procedures; provides advice on these matters to all levels of supervision. Administers the established programs, for both headquarters and the Representations.
Chief: Agricultural Economics Section	III	27,618– 39,269		Orient and prepare basic, sectoral and subsectoral studies for use in determining priorities and identifying investment opportunities in the member countries in the assigned area of responsibility, as well as recommendations for Bank policy in the respective sectors.
Coordinator: Methodology Unit	III	27,618– 39,369	57,881	Supervises the development of methodological techniques to be used for the economic analysis of countries and economic evaluation of projects. Prepare policy documents.
Manager: Finance Department	EX	43,665– 44,965	78,150	Serves as the principal adviser to the President on capital requirements, sources of funds, borrowings in the capital markets and other financial matters. He is responsible for the management of the Bank's funds and resources and the maintenance of the accounting and financial records of its operations.
Chief: Library	III	27,618– 39,269		Has the full technical and administrative responsibility of the Library. Conducts library research and manages the acquisition, cataloging and classification of books, periodicals, publications and daily newspapers.
Deputy Manager: Integration Sub-Department	EX	43,665– 44,965		Directs the activities to provide the Banks and member countries with technical advice on economic integration. This includes supervising studies and the development of proposals on operating policies, standards, and procedures concerning loans and technical cooperation operations of the Bank in the field of economic integration.
Director: INTAL	I	35,316– 42,169		Manages the activities of the Institute for the Integration of Latin America. Coordinates the working relationship between INTAL and IDB headquarters. Plans and coordinates research studies, training activities, and advisory assistance to governments and national organizations in the fields of economics, law, and social affairs in the context of integration.
Chief: Professional Services Firms Office	III	27,618– 39,269	63,729	Supervises and coordinates the activities of the professionals in charge of analyzing the work performed by consulting firms and external audit firms utilized by the borrowers, beneficiaries and the Bank during the different phases of the operations.
Chief: Social Projects Division	I	35,316– 42,769		To administer the activities of a professional multidisciplinary group, in analyzing requests for loans in the fields of urban development, sanitary engineering, education, science and technology and public health, as well as the related technical cooperation activities. Technically advises and leads the Bank's personnel and the borrowers during the phases of project's indentification, study, formulation, design, financing and operation.
Deputy Manager: Administrative Department	EX	43,665– 44,965	76,613	Assists the Department Manager in the planning, coordination and control of all technical and administrative activities related to Budget and Management Accounting, Personnel, Systems Analysis, Data Processing and Administrative Services for the Bank.
Chief: Division of Administrative Services	I	35,316– 42,769	58,711	Supervises the planning and execution of all the administrative services required by the Bank's activities. Performs as a principal adviser to the Administrative Manager in matters related to administrative services.
Assistant Secretary: Conference Service Sector	III	27,618– 39,269	69,680	Prepares and organizes meetings sponsored by the Bank such as those of the Board of Governors and its committees. Processes special votings of the Board of Governors. Handles the appointments, resignations, and other matters related to the Governors of the Bank.
Chief: Documents Section	VI	19,001– 27,242	34,788	Supervises the classification, numbering, cataloging and maintenance of the official documents of the Bank and preparation of the indices for registered documents. Handles requests for official documents.
Manager: Plans and Programs	EX	43,665– 44,965		Serves as the principal adviser to the President on the formulation, coordination and analysis of the plans, programs and proposed policies related to all activities of the Bank.
Chairman: Compensation Policy Committee	Ex-officio Bank, Exec. Vice President.			Presides the periodic meetings of the Committee whose function is to oversee the application of the Position Classification and Remuneration policies of the Bank and to review or establish systems guidelines and criteria under which actions are to be taken within established policy.
Secretary to Compensation Policy Committee	Ex-officio Bank, Chief Personnel Division.			Advises the Committee on Position Classification and Remuneration matters and provides secretariat services.

[1] Salary ranges include a dependency allowance of $1,475.

[2] Gross salary estimates are given only when incumbent is U.S. citizen. For most but not all employees of other nationalities the gross and net salaries are the same.

Mr. INOUYE. Mr. President, the Appropriations Committee has tried for more than 5 years to encourage the banks to correct abuses in their management and personnel practices. We have articulated our concerns in hearings, in our reports, and in direct communications with the U.S. executive directors to the banks. The committee had hoped that the banks would respond to these concerns and take action to correct the abuses which we had identified. Instead, our concerns have been met with what we termed in our report "a studied indifference, an arrogance * * *"

I note, Mr. President, that some have suggested that the committee's report may have been too harsh in using the word "arrogance." I read in the July 23 edition of the Washington Post, after the committee's report had been made public, that a World Bank spokesman had said, "We reserve the right to determine how to operate the World Bank and our salary structure is part of that." If that is not an arrogant attitude, I do not know what is.

The Washington Post is not the only newspaper which has highlighted the excessive salaries and benefits provided to employees of international financial institutions. I ask unanimous consent that an article from Fortune magazine entitled "The Good Life at the IMF" and an article from The Christian Science Monitor entitled "Are Global Bureaucrats Overpaid?" be printed in the RECORD at this point.

(Mr. STONE assumed the chair.)

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

THE GOOD LIFE AT THE IMF

The pay is great, the perquisites are marvelous, and many of the jobs confer on their holders the heady sense of importance that comes from dealing with chiefs of state. The 1,400 employees who work at IMF headquarters in Washington, D.C., have, in short, a good deal—despite which many of them went on strike last year.

Take salaries. A new Ph.D. with no work experience can make $19,140, a senior department head up to $51,680. Over 40 percent of the professional staff (which numbers 800) earn $30,000 a year or more. Furthermore, that's *tax free*. Most non-U.S. staffers come from countries that don't levy income taxes on employees of international organizations when they are abroad. Americans are expected to pay their own taxes, but their salaries are calculated so as to give them after-tax incomes equal to those of their non-U.S. colleagues at similar levels. And even that's not the end of the tax break. In figuring what those Americans' salaries should be, the IMF assumes that they all take the standard deduction. If in fact they have expenses that can be itemized, U.S.-employees can realize substantial windfall gains.

A non-American can also do quite nicely by the U.S. tax code. If, for example, he has investment income, it's taxed as if it were his *only* income—and not at the marginal rates that would apply above his salary. (An American with investment income would pay at those higher rates.)

SURROUNDED BY SUBSIDIES

The perquisites that come with IMF employment are equally impressive. Staffers park their cars in a subsidized garage, eat in a subsidized cafeteria, and, if they come from abroad, have home leave for themselves and their families once every two years. Foreigners also receive a tidy education allowance; the Fund will pay up to $2,000 a year of the cost of sending a child to a U.S. primary or secondary school.

Expatriates may elect to send their kids back home or to a third country for their education; in that case, the allowance rises to a maximum of $2,500 plus two round-trip air fares to Washington each year. And while it will not help out with college education in the U.S., the Fund will pick up $2,500 of the tab for overseas college costs.

The most visible manifestation of the good life is Bretton Woods, the IMF's own country club, or "recreation center," as the Fund stoutly insists on calling it. It was built in 1968, in part because of the bias of neighboring clubs against the IMF's African and Asian employees.

The club, which is open to employees of the World Bank and other international organizations, is set on 282 acres of rolling Maryland countryside, about forty minutes northwest of the city. It includes such amenities as an eighteen-hole golf course, a swimming pool, a soccer field, and fourteen tennis courts, twelve of them lighted. The locker rooms and clubhouse are relatively austere; even so, the low level of dues makes the club a fantastic bargain for most staffers. An IMF messenger can pay as little as $2.20 a month, and a department head pays no more than $42. At Chevy Chase, a private club, the going rate is $83.33 a month plus a $5,000 initiation fee.

The psychic rewards of working at the IMF also seem to be considerable. "I've been present at the birth and collapse of governments," says a Fund economist with obvious enthusiasm. "I can't think of any other place where, at my age, I could be dealing with the top people in so many different countries. This job lets me see how the world really works."

It sounds hard to believe, but some IMF staffers have registered unhappiness with their lot. There was a flare-up in April, 1976, after U.S. Secretary of the Treasury William E. Simon decided to resist a proposed pay increase for Fund employees. Perhaps because he had learned that more than ninety people at the Fund had higher after-tax incomes than U.S. Cabinet officers, Simon persuaded his fellow finance ministers to hold the pay hike to a cost-of-living increase—which was some three percentage points less than the Fund's management had originally requested.

THE BUREAUCRATS AND THE BEAST

Simon's behavior did not sit well with the IMF staff. Contending that they had not received a real increase in three years, about half the staff staked a one-day strike, during which they received expressions of support from many colleagues on assignment overseas. In Washington, some staffers were said to be calling Simon the "Beast of the Hour"—and he retorted, in an official press release: "I hope I get to pick the type of animal because I guarantee you it will be carnivorous."

Tensions about compensation have persisted at the IMF, particularly among some non-U.S. staffers. Many of them argue that they should receive separate allowances. They complain that their spouses are not allowed to work in the U.S. and they cite the fact—or presumption—that they could earn even more themselves if they had other jobs back home.

Right now the controversy is relatively quiescent. In April, Managing Director H. Johannes Witteveen, along with World Bank President Robert McNamara, established a joint study group that will broadly review compensation at both institutions. The group is supposed to report in November.

In the meantime, however, a small group of staffers, concerned about employees' lack of "contractual rights," is examining the legal basis for a bona fide employment contract covering all staff members. If that should come to pass, the Fund would, in effect, have a union shop—a development its founders could hardly have envisaged back in 1944.—ALEXANDER STUART.

[From the Chrisitian Science Monitor, June 24, 1977]

ARE GLOBAL BUREAUCRATS OVERPAID?

(By John Dillin)

WASHINGTON.—High salaries at world organizations supported in part by U.S. taxpayers are causing growing concern in Congress and the White House.

Pay scales of the World Bank, the United Nations, and other organizations such as the Inter-American Development Bank far exceed those for similar jobs in the U.S. government.

For example, a U.S. federal employee with a GS–18 rank earns $47,500 as a result of this year's pay hike. But at the World Bank, pay for the same type of job is $74,100, and at the United Nations it is $85,500.

Bureaucrats drawing salaries of $40,000 and up have become commonplace. Figures compiled here show that at the World Bank, the average salary for more than 2,000 members of the "professional" staff—administrators, educators, economists, agriculturalists, and others—is $48,050 a year.

Such salaries in world organizations often are supplemented by fringe benefits such as country club privileges, education allowances, subsidized cafeterias, and free trips around the world.

Salary levels run ahead of federal scales at every grade, but are most pronounced at the upper end.

This strikes some members of Congress as ironic. Speaking on the Senate floor, Sen. Jesse Helms (R) of North Carolina said:

"If these international organizations are truly set up to help the poor, as is so often proclaimed, let us at least see to it that the funds of the taxpayers of the United States going into these organizations in fact go to the poor, and not to line the pockets of international bureaucrats."

A report on international banks by the Committee on Appropriations put it bluntly:

"Our investigations have led us to the distressing conclusions that, rather than the rewards of a career of service, there is found in the banks a broad policy of personal enrichment. The personnel management practices of the banks are suggestive of an institutionalized granting of lifetime sinecures where extraordinarily high salaries are commonplace and the pursuit of fringe benefits has been raised to a form of art."

CARTER: I AGREE

President Carter shares some of these concerns. At a recent Cabinet meeting, the President is reported to have scrawled, "I agree with the Congress—JC," on a memo about World Bank salaries.

But there is some question about how hard the United States can push to change the salary structure—and how far U.S. officials will go by pushing for change.

In response to criticism, various world bodies defend themselves by observing that they must compete for the most talented professionals. That requires, they say, competitive salaries.

At the World Bank, most professionals are recruited when they are about 40 years of age, near the high point of their careers. Without adequate salaries, the quality of recruits for the bank could diminish, it is argued.

The U.S. Treasury, which oversees agencies such as the World Bank, has conducted a

quiet effort to control salaries since the Ford administration. For example in 1976, former Treasury head William Simon won the title, "beast of the hour" from striking employees of the International Monetary Fund. Mr. Simon had lobbied successfully to block a 16 percent pay hike. He held it to 5.8 percent.

The new Assistant Secretary for International Affairs at the Treasury, C. Fred Bergsten, says: "We think we have made a lot of progress."

SOME SUCCESS NOTED

Mr. Bergsten cites successful efforts last month to kill a move by the Inter-American Development Bank to raise the $74,750 annual salaries of the executive directors. However, other staffers won a 6.8 percent raise.

The Treasury is making hold-the-line appeals to other nations to bring salaries of world bodies into line with civil service pay in member countries.

But chances for substantial change appear slim. For the most part, influential nations such as West Germany, Japan, and Brazil want even higher salaries.

For example, West Germans tell the U.S. Treasury that World Bank salaries are too low to attract their citizens away from high-paying jobs at home. Japan uses the same argument.

As a result, those two nations have very little representation among the staffs of key agencies.

Congress has acted, somewhat tentatively, to send the world organizations a message. Capitol Hill, of course, controls the purse strings.

In a vote June 14, the Senate adopted a proposal by Mr. Helms directing the President to take all appropriate action to keep salaries and benefits of world banking organizations comparable to those in "private business and the United States Government."

COMPARISON CITED

However, the note about "private business" confused some observers. They said that private industry often pays higher wages than government. Mr. Bergsten, noting that section, said:

"The inference would be that things aren't too badly out of line."

Senator Helms, however, retorts: "I certainly do not agree with Mr. Bergsten's view. . . . I think they are out of line, or else there would be no great difference between U.S. Civil Service and the international financial institutions."

The notation about private industry was inserted only to give the banks some "flexibility," Mr. Helms notes. "I construe my amendment this way: the international financial institutions are on notice. If the great disparity continues to exist, surely Congress will not sit idly by."

A report by the General Accounting Office, Mr. Helms says, found that the average World Bank salary was 57 percent higher than U.S. Civil Service.

World Bank officials note that while they pay more than private industry for some lower-level positions, they still trail private industry badly at upper levels, where recruitment can be most difficult.

Similar jobs—different pay

U.S. Civil Service (GS–18)	$47,500
World Bank	74,100
United Nations	85,500
Organization for Economic Cooperation and Development (OECD)	86,450
European Community	92,600

Average figures, not adjusted for cost-of-living differences between Washington, New York, Paris, and Brussels.—U.S. Treasury Department.

Mr. INOUYE. Mr. President, the committee recognizes that the Congress of the United States cannot control the salaries of the employees of the international financial institutions. We do believe, however, that it is within our jurisdiction to require readjustment of the excessive salaries being paid the U.S. executive directors and their alternates who are charged with representing the interests of the United States within the banks. We, therefore, recommend bill language which would limit the payment of U.S. fiscal year 1978 contributions to the banks until the compensation of these individuals is adjusted to a level not exceeding their superiors at the Department of the Treasury of the United States.

Frankly, we hope that this action on the part of the United States will begin to bring about a public awareness of this issue in other nations. Once this happens, we know that necessary across-the-board adjustments will take place and these institutions can return to the high calling for which they were created.

Mr. President, I conclude my remarks by reporting on the efforts of the committee to resolve a long-standing difficulty relating to the reprograming of funds. As you know, for many years, the foreign assistance program was presented on an "illustrative basis." Program presentations made to the Congress were not inclusive of all projects and purposes for which funds were to be obligated. The Congress, therefore, had incomplete knowledge of the ultimate purpose for which it was being requested to appropriate funds.

Moreover, the agencies and departments which administer foreign assistance could, under the procedure which then prevailed, reprogram funds at will, without even informing Congress. Projects and proposals which had never been scrutinized or approved by the Congress could be funded without the knowledge of Congress.

In an effort to improve oversight of foreign assistance programs, the Congress, beginning in fiscal year 1975, requested the agencies and departments concerned to detail the specifics of individual items for which funds were to be obligated. Furthermore, once specific items and specific amounts had been justified, approval of any proposal to fund a new item was to be sought by notifying the Appropriations Committees 15 days in advance.

Early in 1977, the committee sought to obtain reaffirmation that the agencies concerned would honor any committee objection which might be raised to a new item not previously presented to the Congress or to an increase in the level of obligations for items approved by the Congress at lesser amounts. When the committee did not receive this reaffirmation, an atmosphere of uncertainty was created as to the extent to which certain agencies were willing to submit reprogramings on other than an informational basis. Under these unfortunate circumstances the committee saw no alternative other than to propose bill language restricting fiscal year 1978 funding only to those particular items and amounts which had been formally justified in the annual congressional presentation.

Mr. President, I urge the Senate to support the committee on this issue. If the Congress is to retain the right to object to departures from programs approved by and funded by the Congress, this language must stand until the committee obtains satisfactory agreements which will preserve these rights for the Congress. If the Congress is to be assured that the programs it funds are carried out, and alternatively, if the Congress is to be certain that programs it does not choose to fund are not funded, this language must, for the present, be kept intact. The Committee on Appropriations is striving to reach an agreement with the executive branch which will preserve these rights. I hope that the Senate will support us in our efforts.

U.P. AMENDMENT NO. 738

Mr. INOUYE. Mr. President, as authorized by the Senate Committee on Appropriations, I send to the desk modifications of the bill as reported by the committee.

The conference report on several related authorization bills had not been filed at the time the committee made its report and these modifications are responsive to actions taken by the authorizing committee.

The PRESIDING OFFICER. The committee amendments will be so modified.

Mr. ALLEN. Will the Senator yield?

Mr. INOUYE. I am happy to.

Mr. ALLEN. These modifications may cut back to the authorization figure the amount of certain of the appropriations contained in the appropriation bill. Is that correct?

Mr. INOUYE. The Senator is correct.

Mr. ALLEN. Would the Senator state what the modifications are?

The PRESIDING OFFICER. The clerk will state the modifications.

The assistant legislative clerk read as follows:

On page 4, line 3, strike out "$243,850,000" and insert in lieu thereof "$234,350,000".

On page 9, line 2, before the period, insert a colon and the following: "*Provided further*, That none of the funds appropriated under this heading may be used to carry out those provisions of section 903 of the Foreign Assistance Act of 1961 which pertain to the Sinai support mission".

On page 9, line 5, strike out "531" and insert in lieu thereof "497, 531, and 533".

On page 9, line 6, immediately after the second comma insert the following: "and those provisions of section 903 of the Foreign Assistance Act of 1961 which pertain to the Sinai support mission,".

On page 9, line 7, strike out "$2,222,200,000" and insert in lieu thereof "$2,202,200,000".

On page 16, line 14, strike out "$688,350,000" and insert in lieu thereof "$677,000,000".

Mr. ALLEN. Mr. President, I called attention last night on the floor, as reported in the RECORD, to an instance of $20 million where the appropriation exceeded the authorization.

I believe it was on the African fund. That was $20 million.

What other adjustments are being made and what are the amounts of the adjustments?

Mr INOUYE. The reduction of $9.5 million in UNRWA.

Mr. ALLEN. That is where the appropriation exceeded the authorization?

Mr. INOUYE. The Senator is correct.

And a reduction in security supporting assistance of $20 million. This was part

of the Southern Africa Special Requirements Fund.

Mr. ALLEN. Is that the $20 million to which I alluded a moment ago?

Mr. INOUYE. And the correct reference numbers in the authorization bill.

Mr. ALLEN. In other words, some $50 million by which the appropriation bill inadvertently exceeded the authorization?

Mr. INOUYE. I will not say "inadvertently," because of the——

Mr. ALLEN. I said it to be charitable to the committee.

Mr. INOUYE. We did this with great deliberation, but we could not wait for the authorizing bill, because if we waited for the authorizing bill we would not be standing here today.

Mr. ALLEN. I see.

Mr. INOUYE. But in order to insure that there would be some appropriation measure before the beginning of the fiscal year, we are taking this unusual step.

Mr. ALLEN. I thank the distinguished Senator. He is always gracious and kind.

Mr. INOUYE. Mr. President, I ask unanimous consent that Mr. Doug Racine of Senator LEAHY's staff and Miss Allyn Kreps of Senator CRANSTON's staff be granted privilege of the floor during consideration of this measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. INOUYE. Mr. President, I ask unanimous consent that the committee amendments be considered and agreed to en bloc and that the bill as thus amended be regarded for purposes of amendment as an original text, provided that no point of order shall be considered to have been waived by reason of agreement to this order.

Mr. ALLEN. I object.

The PRESIDING OFFICER. Objection is heard.

Several Senators addressed the Chair.

Mr. ALLEN. Did the Chair understand that an objection was raised?

The PRESIDING OFFICER. The Chair has announced that an objection was heard.

Mr. ALLEN. I thank the Chair.

Mr. INOUYE. Mr. President, may I inquire of the Senators from Virginia and Alabama, would they object to considering those sections that are not in controversy as far as they are concerned?

Mr. ALLEN. I have no objection to considering them, assuming we could locate some that we have no objection to. I think it would take a little while. I am not trying to be facetious.

A number of amendments we would not object to. As a matter of fact, the first amendment to consider would be one on page 3 having to do with allocating certain funds for 40-, 30-, and 20-year loans.

I have an amendment I would like to offer to that at the proper time which would not change the dollar amount, but take $100 million that is being set aside for 40-year loans, no payment on the principal for 10 years, and move that number over to the 30- and 20-year category.

I would hope that distinguished Senator might accept that amendment. But that is the first amendment I would like to have consideration on.

Mr. HARRY F. BYRD, JR. I might say, if the Senator will yield, I have six or seven amendments which I would like to have removed from any unanimous-consent arrangement and have those amendments accepted.

Mr. INOUYE. I thank the Senator.

Mr. HARRY F. BYRD, JR. I think if we move along, there may be others.

I might say, not just the Senator from Alabama and the Senator from Virginia have some reluctance to have the committee amendments agreed to en bloc, but there are others also, I understand, who have some reluctance. But as we move on, I think we can work it out.

Mr. INOUYE. I am certain we can.

Mr. SCHWEIKER. I yield myself 6 minutes.

Mr. President, at the outset of my remarks on this measure, I express my appreciation to the distinguished chairman of the Foreign Operations Subcommittee. Throughout the consideration of this bill he has been fair and considerate, and I dare say that no other subcommittee chairman has examined his responsibility in more depth than has the senior Senator from Hawaii. I appreciate the thoughtful consideration he has given to my views; and although we occasionally disagreed, for the most part we were able to come to a position that we both could support.

The task given us in considering the budget request covered in this bill was a difficult one. At a time when the administration was calling for less spending for health, farm, and water resource programs, the request for new budget authority in this bill is nearly $2 billion more than enacted last year, a whopping 35-percent increase. Our westerners are being told that water projects, whose costs are directly repaid by users or whose benefits save millions of dollars in flood damage, are too expensive. Our farmers, presently getting prices for their crops that are below production costs, are being asked to wait another year before adequate farm legislation is enacted. Health costs are way up, but the administration is opposing funding increases some of us feel are desperately needed. Against this background, the administration is asking for substantial increases in virtually every account contained in this bill, with an especially large increase being asked for international financial institutions.

Mr. President, I do not see how we can ask the American people to sacrifice on important domestic programs, and at the same time ask them to pay for substantial increases in foreign assistance programs. Therefore, the recommendations the committee has made in reducing the request by $524 million is, I believe, a justifiable position. The level of spending recommended by the committee will insure the continuation of a strong foreign assistance program. The cuts we recommend will not adversely affect any of our foreign aid programs, but it will surely be a strong message to the administration that so long as belt tightening is necessary in domestic programs, that belt tightening must also apply to foreign aid.

While the committee received pressure to uphold the budget request, it was confronted by just the opposite pressure from the House of Representatives. Although the House Appropriations Committee reported a bill calling for $7.046 billion, just under the $7.074 billion recommended by the Senate Appropriations Committee, in action on the floor of the House a provision was added to the bill which mandated an additional 5 percent cut. This action further reduced the total by $352 million, making the Senate Appropriations Committee's recommendation $380 million over the amount passed by the House. Mr. President, as in the past, the committee did not accept the percentage cut passed by the House. Instead, we went over each of the line items and today we bring to the Senate recommendations which the committee feels are both dollar prudent and program wise. Parenthetically, Mr. President, I should emphasize that I believe we will have to resist any sizeable dollar increases here on the floor if we are going to persuade the House that its 5 percent cut is unwise.

Mr President, of great concern to the committee, as well as Congress and the administration, were questions of providing aid to various countries which are human rights violators. While the committee sympathizes with those who would cut aid to various countries on human rights grounds, it did not feel that this appropriations bill was a good vehicle to rationally develop human rights policy. Therefore, the committee calls upon the President to develop and apply such a policy, and I strongly suggest that those Senators interested in this matter read the section in our report dealing with this subject.

I call the attention of the Senate to the recommendations the committee has made with respect to the Sahel development program. This program is an effort to bring about major development assistance to the area of the Sahel which has suffered the results of severe drought during the last several years. This effort will be a coordinated program of bilateral assistance from various countries, and it is anticipated that it will take 10 years and cost between $10 to $15 billion. This bill provides $50 million for the United States' first contribution to the program. At the hearings held earlier this year, administration witnesses indicated that the U.S. share of the entire program would be about 10 percent, for a total of $1 to $1½ billion over the life of the program. It was my strong feeling that we should not commit ourselves to a level any higher than 10 percent, and therefore I offered an amendment which would so limit our contribution. This amendment was accepted by the committee as an indication to the administration and the other countries participating in this program that, while the United States supports this effort, it will not provide the 30 percent to 50 percent of the funding that has heretofore been the practice in many development programs.

It puts people on notice, before the project starts, as to what our percent share is, what we are going to contribute, and what the other countries must do if this project is going to succeed, and that

is 90 percent. That is a departure from our past policy of normally starting projects and hitting the United States for 20, 30, or 40 percent of the bill and asking us to swallow it because, in effect, we have agreed to it, even though Congress had no say on what that agreement was.

This is an attempt to give Congress a say before the spending starts and to put all the parties on notice that this is our share and that this is the ceiling of our share.

Mr. President, a matter of particular concern to me is the amount of funds which we provide to the various international financial institutions. When the legislation authorizing contributions to various IFI's was before the Senate, I offered an amendment which would have made it the Sense of the Congress that such contributions be no more than 25 percent of the total funds contributed by all donors, which is not the case now. While my amendment was accepted by the Senate, it was greatly watered down and made meaningless in conference action. Therefore, this legislation contains a sense of the Senate provision that contributions to future replenishments of the IFI's should not exceed the percentages enumerated in the provision.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. SCHWEIKER. I yield myself 3 additional minutes.

We want to put the administration on notice that they cannot write a blank check for Congress and spend money we have not yet appropriated. I think this is an equitable way to proceed, and we cover that by a sense of the Senate provision.

Mr. President, the time has come for the Congress to play a role in the commitment of U.S. taxpayer funds to these banks. With a limit on the percentage of our contribution, the administration will have a guideline above which it can not go and then come back to Congress and declare that if its commitment is not met, the prestige of the United States will suffer, which is often the case and often the way Congress is put in a bind to cough up the blank check. Too often, Congress has been told that a certain amount of money must be provided for these purposes without having played a role in determining the level of such commitments. The most recent example of this is the fifth replenishment of the International Development Association. This bill contains $800 million for IDA V, which is one-third of the total commitment. Congress was told by the administration that providing even $1 less than this amount would all but destroy our international financial relations. It is exactly this type of situation which will be avoided by providing a limit to the commitment of our taxpayers' money. To emphasize that position, the committee did not provide the full budget request for the IDA IV replenishment which, ironically, has not been paid off, even though we are committing ourselves to IDA V. I think this cutback in the IDA IV replenishment will give notice that we are taking very seriously any commitments made carte blanche or without consulting the proper authorities in making financial obligations for the legislative branch.

I hope this action and what I have just said will be taken very seriously by the administration.

Mr. President, while I am talking about the international financial institutions, I think that it should be pointed out that this area is one I believe needs thorough study, both by Congress and the administration. Should the mammoth debts developing countries hold go bad, the United States would stand to lose billions of dollars because we are the major shore upon which these institutions rest. It is my strong belief that we must be extremely cautious about getting more involved with these institutions. I fully intend to look into this matter thoroughly, and I urge the other committees of Congress that have jurisdiction to do likewise; because in many cases, while we have not put up actual dollars, we have promised them callable capital, which means that if they get into a panic situation, and if the less developed countries cannot pay their bills and go to those financial institutions, those financial institutions can then come to us and say we are committed to pay x amount of dollars that the IFI's need. That is a pretty bad way to run a railroad.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. SCHWEIKER. I yield myself 3 additional minutes.

If we are going to avert a panic situation that could be triggered by one of the less developed countries running on one of the institutions, we had better look carefully at these financial obligations.

Mr. President, before closing I would like to discuss one further recommendation the committee has made. That is the recommendation that the U.S. contribution to the U.N. development program be $110 million, $20 million below the President's budget, but an increase of $10 million over that appropriated last year. In earlier action, the Senate approved the State-Justice-Commerce and Judiciary appropriations bill excluding approximately $20 million for technical assistance for developing countries which was contained in the assessed budgets of various U.N. specialized agencies. The committee felt that technical assistance should be provided as a voluntary contribution through UNDP. Unfortunately, this position was lost in conference, despite five GAO reports, a report by the Government Operations Committee, and stated U.S. policy that such assistance should go through UNDP as the sole development agency of the United Nations. This approach not only makes good managerial sense, but it makes good commonsense. Until the administration succeeds in getting the various specialized U.N. agencies away from ballooning their own development assistance programs, the committee did not feel it prudent to substantially increase our contribution to the U.N. development program.

Mr. President, I believe the committee has reported a balanced bill and I urge my colleagues to support it.

The PRESIDING OFFICER. Who yields time? The clerk will report the first committee amendment.

The assistant legislative clerk read as follows:

On page 2, line 11, strike "$535,000,000" and insert "$515,000,000";

The PRESIDING OFFICER. Do the Senators yield back their time?

Mr. ALLEN. Mr. President, no one has been assigned to control the time in opposition to the committee amendments.

The PRESIDING OFFICER. In that situation the time in opposition will be controlled by the minority manager of the bill or his designee, the majority leader.

Mr. ALLEN. I do not care to discuss that amendment. The amendment I care to discuss is on page 3, line 17.

Mr. INOUYE. Mr. President, if there is no objection to the amendment set forth on page 2, line 11, I am willing to yield back the remainder of my time.

Mr. SCHWEIKER. I yield back my time.

Mr. ALLEN. May I make this suggestion to expedite matters, that we approve en bloc all committee amendments down through line 16 on page 3.

The PRESIDING OFFICER. Is there objection? If not, all committee amendments through and including page 3, line 16, are agreed to en bloc.

The amendments agreed to en bloc are as follows:

On page 2, line 11, strike "$535,000,000" and insert "$515,000,000";

On page 2, line 11, beginning with the colon, strike through and including line 13;

On page 2, line 16, strike "$160,600,000" and insert "$155,000,000";

On page 2, line 16, beginning with the colon, strike through and including line 18;

On page 2, line 21, strike "$100,000,000" and insert "$95,000,000";

On page 2, line 16, beginning with the colon, strike through and including line 25;

On page 3, line 3, strike "$80,000,000" and insert "$75,000,000";

On page 3, line 3, beginning with the colon, strike through and including line 6;

On page 3, line 10, strike "$95,000,000" and insert "$90,000,000";

On page 3, line 10, beginning with the colon, strike through and including line 12.

The PRESIDING OFFICER. The clerk will report the next committee amendment.

The assistant legislative clerk read as follows:

On page 3, line 17, following "1978" insert a colon and "Provided, That of this amount $175,000,000 shall be available for loans repayable within forty years following the date on which the funds were initially made available under such loans; $37,000,000 shall be available for loans repayable within thirty years following such date; and $98,500,000 of such amount shall be available for loans repayable within twenty years following such date";

The PRESIDING OFFICER. Who yields time?

Mr. SCHWEIKER. Does the Senator want time?

Mr. ALLEN. Yes. Inasmuch as the Senator from Pennsylvania seems to be for these amendments, I wonder if he would agree that someone else might control the time?

Mr. INOUYE. Let the Senator from Alabama control the time.

Mr. SCHWEIKER. I would like to reserve that on some individual amendments. In this case I would be glad to do that.

Mr. ALLEN. Mr. President, will the Senator yield me 15 minutes?

Mr. SCHWEIKER. Which amendment is the Senator discussing?

The PRESIDING OFFICER. There are 30 minutes allotted in opposition.

Mr. SCHWEIKER. Parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. SCHWEIKER. Does he not have that time then if he is in opposition?

The PRESIDING OFFICER. Not unless it is yielded.

Mr. SCHWEIKER. I yield him 30 minutes.

Mr. ALLEN. I thank the distinguished Senator.

The PRESIDING OFFICER. The Senator from Alabama.

Mr. ALLEN. Mr. President, I wish to discuss this amendment, and at the end of the time set aside for the consideration of amendments, I have an amendment to the amendment that I would like to offer.

What this amendment does is to take the sum of $310,500,000 for loan allocation and development assistance and it stipulates that $175 million of this amount shall be available for loans repayable within 40 years following the date on which the funds were initially made available under such loans.

We do not have any such loans available to Alabama citizens, Alabama companies, Alabama municipalities, counties or the State. It is provided that these loans, I believe these particular loans, require no payment of principal for 10 years, and in some cases the interest is 1 percent—I think it gets up as high as 3 percent possibly. It would seem to me that there at least ought to be a reallocation of this money.

The Appropriations Committee has set the sum of $310,500,000 as the amount available for this purpose. I am not quarreling at this time with that tremendous amount of money which is going to be loaned as soft loans, loans where there is very little hope of their ever being repaid.

To set aside of that amount $175 million for 40-year loans, with nothing paid on the principal for 10 years, and an interest rate of a very small figure—I am not absolutely sure, it could be as much as 3 percent, and I think actually it is around three-quarters of 1 percent, with a quarter of 1 percent service charge, something in this area—and a little later on I am going to offer an amendment to reallocate that and move $100 million—I am not quarreling with the amount set by the Appropriations Committee, although I disagree with this practice, but accepting that as a sound judgment, questioning the judgment of setting aside well over half of this money for 40-year loans, my amendment I will later offer, after the time has expired on this amendment, would take $100 million of the $175 million and divide that between the 30-year loans and the 20-year loans, which would raise the 30-year loan figure to $87 million, and would raise the 20-year loan-figure to $148 million, leaving the 40-year loan figure at $75 million, which is still too high. It ought to be none. They ought not to make 40-year loans, in my judgment, on this giveaway basis.

(Mr. SARBANES assumed the chair.)

Mr. ALLEN. All through the reading of these reports, reading about the activities of these various international banks, international financial institutions, it seems all of them have a soft loan window, I will say to the distinguished Senator from Virginia (Mr. HARRY F. BYRD, Jr.). They have got a front window there where they make pretty decent sort of loans that have some chance of getting the money back. But at the back door they have a soft loan window where countries can come and apply for the soft loans. A soft loan means just like its name would imply. It is not a hard business deal. It is a soft loan. It is going to, in effect, be given away in all likelihood.

That is the way, I believe, the International Development Agency, if I am not mistaken, is the soft loan window. I am not expert in this window, but I am outraged at this foreign aid program, and this giveaway program, and at some time during the night I am going to point out the very fine work of the Senate Appropriations Committee in analyzing this whole foreign aid program.

I believe this appropriation is some $7 billion, but the committee is frank and candid enough to point out other billions tucked away in other items adding up to some $15 billion this year in foreign aid. At a time, Mr. President, when we are running a trade deficit of around $25 billion this year, how should we be expected to dump billions of dollars overseas in the form of outright gifts in these soft loans?

I do not believe the Senate should approve this particular item, and they are all through the bill. This is just one little spot that we are calling attention to at this time. I do not believe we should set aside this $310 million. If we have $310 million in this spot in the bill—and there are billions in other pages here—but if we have $310,500,000 to loan for development assistance, let us have a little better allocation of it than over half of it going to a 40-year loan.

So my amendment which I am going to offer later would not change the amount at all but it would say cut down a little bit, gentlemen, than the 40-year loan. Let us move that over into a somewhat more businesslike approach. Thirty years is a long time. Move the $50 million over to the 30-year soft loan window.

I guess they have a window there where you apply for soft loans at 40 years and another window probably a soft loan for 30 years and 20 years.

I just believe it should be reallocated.

Mr. HARRY F. BYRD, JR. Mr. President, will the Senator yield?

Mr. ALLEN. Yes; I am delighted to yield.

Mr. HARRY F. BYRD, JR. I support the position of the Senator from Alabama and I think it is a sound one. The Senator from Alabama speaking of the low-interest 40-year loans, the first 10 years no payment on the principal, brings to mind that yesterday our Treasury Department sold a few billion dollars in Government paper and paid 7.2 percent to get that money. That was relatively short-term money.

Mr. ALLEN. Yes.

Mr. HARRY F. BYRD, JR. I think it was for 3 years. They paid 7.2 percent to borrow the money. That money that has been borrowed at 7.2 percent will be going to these international financial institutions to be loaned, you might say even given away, to the heads of foreign governments at an interest rate of something around 1 percent, between 1 and 3 percent. That does not seem reasonable or fair to taxpayers of our country.

I think the Senator from Alabama has a good amendment and I would hope that the committee would accept it.

Mr. ALLEN. I thank the distinguished Senator from Virginia who has taken the lead so many times in trying to have some degree of fiscal responsibility in our Government and fiscal responsibility in our foreign assistance program. I appreciate the comments that he has made.

Possibly this will not be the time to inject this item into the proceedings, but all Senators are in receipt or will soon be in receipt of a letter dated August 4, 1977, from our distinguished colleague over in the House, Mr. C. W. (BILL) YOUNG from the State of Florida. He has a pretty much of a scare story here, but he is able to back it up with a Xerox copy of what you might call the docket of the International Development Association and International Bank for Reconstruction and Development. It gives their pending docket of application for loans, and he points out that contrary to the intent of Congress, as expressed in both Houses of Congress, the World Bank through its soft loan agency, the IDA, seems to have on the docket of loans under consideration a loan to Vietnam, of all places, and it is interesting here, and at the proper time I am going to offer this document for the RECORD if there be no objections. But Mr. YOUNG says:

> How would your constituents feel if they knew that the World Bank through IDA, International Development Association, its soft loan window, is planning to send American money to Vietnam?

That is right. The Vietnamese will pay no interest, will pay no interest for 50 years, according to Mr. YOUNG, who is a very distinguished Member of the House, and I feel that his investigation has convinced him that that is the correct statement.

In our foreign aid appropriation bill this year Americans will be contributing $950 million hard-earned dollars to the same IDA of the World Bank, and this is one of the projects that they are going to fund.

I remember reading in the newspapers long before I came to the Senate where President Johnson was talking about the Mekong Delta over in Vietnam. He was going to put in dams and going to develop that river system there sort of like the TVA.

I see the Mekong Delta is coming into

play here on this loan application, being considered there right now.

Mr. HARRY F. BYRD, JR. Mr. President, will the Senator yield?

Mr. ALLEN. Yes.

Mr. HARRY F. BYRD, JR. Does the Senator think it will be named the Ho Chi Minh Dam?

Mr. ALLEN. I imagine it would. He is sort of a local hero over there, but not much of a hero over in this country, I will say to the distinguished Senator. That will probably be what it is named.

As to this project, and they are a little close-lipped about the amount here, just for example they specify the first country on the docket is Botswana and they say about $10 billion for livestock development to Botswana and they have the Botswana Development Corp.—BDC—and there they have about $5 million, and then the Ministry of Local Government and Land, and they are down on an application that the World Bank is considering and put it on the docket, and I am sure if they had not put it on the docket they would not be considered. But they put in on the docket. Then the Minister of Education is coming in for $10 million there in Botswana and then there is another project here, PAL one project to be defined. They have not even defined it, and I guess they will let the money out before they even define what the project is.

They say that is going to be determined, the amount is.

Then they provide $20 million to Thailand. I might say this: It is interesting here that one column says "amount and probable lender," and if you see one that sounds like it might be fair to construct that there might be some chance of getting it back for the lender, they put in parentheses "bank." That is the World Bank that is going to make that loan. But these other loans that there is no chance of ever getting back, for instance Bangladesh here, the lender there is IDA.

India is down for multiple millions. They start off with marine fisheries. This is where our money is going. This is not just fancy, this is hard-earned dollars, contributed in large degree, in substantial degree, by the American taxpayer.

India is down initially for $25 million for marine fisheries, development of harbors and shore facilities, provision of credit for fishing vessels.

You know, it is hard for a man down on the gulf who has a little boat to get financing, but here they are going to finance fishing vessels over in India.

Mr. HARRY F. BYRD, JR. Mr. President, in that connection, it might be well for the record to show that up to this point the United States has given to India $9,494,800,000, according to page 10 of the committee report.

Mr. ALLEN. That is certainly interesting. It looks like the ones we do the most for, I say to the distinguished Senator from Virginia, respect us the least and are the least friendly to us—proving the old adage, of course, that you cannot buy friendship. A country cannot buy friendship; an individual cannot buy friends. Here we are, I assume, trying to influence people and win friends, but I submit we are not doing it.

Mr. HARRY F. BYRD, JR. Would the Senator from Alabama not feel that after the expenditure of $231 billion in foreign aid, and our country having less friends today than probably at any time in the past, we should have learned by this point, if not many years earlier, that we cannot buy friendship? And yet we continue to do that.

Mr. ALLEN. It looks like we would learn our lesson some day, but we are hard to teach, it seems to me.

Of course, it has been said that those who do not profit by the lessons of history are destined to make the same mistakes again; and apparently we are continuing duplicating the mistakes we have been making through the years.

Here is $120 million, still in India. This is on a 500 MW thermal station at Trombay. That may be a typographical error; it may be Bombay, but it says Trombay.

I am not very familiar with India; I have not been making many of these junkets over there, and I am not very familiar with that. That may be Trombay, or it could be Bombay, but at any rate, $120 million to India; and significantly, parenthetically it states "bank." So the World Bank is going to make that loan. And what is the comment of IDA here? "Appraisal mission in the field."

The appraisal mission has already gone out. I do not know what they would see out there, because they have not got the money yet to build a power installation; but the appraisal mission is out there in the field.

Now, here is $200 million from the IDA for India. A soft loan, Mr. President. A soft loan, not a hard loan. Not one that has got any chance of being paid back. Two hundred million dollars, Agricultural Refinance and Development Corporation.

Our farmers are in desperate plight, and they are calling on their Government and their elected representatives in Congress to give them some assistance to avoid bankruptcy as a result of the worst drought in the history of this country. And what are we doing with our money? Two hundred million dollars, by IDA, for agricultural refinance.

I bet you there are a lot of farmers down in Mississippi and Alabama and Virginia who would like to have their loans refinanced, because they are in serious danger of losing their farms as a result of their economic plight. But here we are, through the IDA, which does have participation by other countries, providing $200 million for agricultural refinance development, and they do not even call it a hard loan. It is done by IDA, indicating there is little chance of getting it back.

Then here is rural electrification. All of this is in India, for developing India. Rural electrification, $70 million by the bank, $80 million by IDA.

Now, the next item, $100 million, IDA, water supply, Bombay II. I did suspect a typographical error higher up in the column, where it said $120 million to Trombay. I would have thought they would be able to spell correctly the name of the city to which they were lending $120 million, but they get it right on the $100 million loan. But $300 million to Bombay, from IDA.

Another $100 million project, the BEMA irrigation project.

You know, some of these projects that we are financing around the world, halfway around the world, it seems to me are somewhat similar to the projects that we see cancelled here in our country. But here we are, through the IDA, lending money by the hundreds of millions of dollars in India. That is what we are appropriating money for in this tremendous bill, a $7 billion bill, give or take a few hundred million. Or give a few hundred million; it would not be take a few hundred million. And that is only part of our foreign aid program, as the committee points out. The total that they have been able to find and report on is over $15 billion for foreign aid. It is in the report; I am not making the figure up.

So this is what we are doing under the foreign aid bill.

Here is Nepal, up to $15 million, by IDA, for rural development. I have been on the Agriculture Committee for over 8 years, and we always talk about rural development, going to do something in the interest of rural development, rural development.

We have a fine program on paper, but they do not get around to funding it a great deal. But through the IDA we can lend $15 million to Nepal and not worry about it at all.

Let us consider Mr. YOUNG's statement further.

At this very moment—

And this letter was written today, August 4, 1977—

an official from the World Bank is in Hanoi negotiating with the Vietnamese, and how much would you bet that the negotiations do not include any discussion about Americans still listed as missing in action.

Every time they want concessions out of the United States they somehow or other are able to locate a few more bodies of American soldiers to return to us in black bags. They will keep dribbling those bodies out as long as they think there is any chance of getting millions and billions of dollars from the American taxpayer.

According to World Bank officials the loans are only in the "preliminary" stages but I would respectfully suggest that the stage of the loans is more than just preliminary because already they have determined the locations and types of projects that they intend to fund. In one case, they plan to rehabilitate and expand some coal mines in Quang Ninh Province.

We have a lot of coal mines here in this country. With our tremendous energy crisis and our need for more production from our coal mines, we need to rehabilitate some of our mines, to make them safer for the miners, to enable the mines to give greater production. But here we are, through the IDA, consideraing a loan to Vietnam to enable it to rehabilitate and expand some coal mines in that country.

I just do not believe the American taxpayer looks with favor on these foreign aid giveaways. It is beginning to dawn on the American taxpayer that, in many

cases, we do for people in foreign countries what we are unwilling to do to assist our own citizens.

In another project in Vietnam, they are planning on improving and expanding an irrigation and drainage facility in the Mekong Delta. That is right, a water project.

They talk about judging these water projects on a cost-benefit ratio. I wonder what benefits we are going to get from this irrigation project, this water project, in the Mekong Delta. I ask that question of the Senator from Virginia. I believe that cost-benefit ratio would not be very favorable to the American taxpayers. The benefits would be zero.

The PRESIDING OFFICER. The time of the Senator from Alabama has expired.

Mr. ALLEN. I thank the Chair. I was wondering when the Chair was going to end my time. I appreciate the Chair calling my attention to the expiration of my time.

The PRESIDING OFFICER. The Senator from Hawaii.

Mr. INOUYE. Mr. President, what is the pending business?

Mr. ALLEN. Is all time yielded back, Mr. President?

The PRESIDING OFFICER. The pending business is the committee amendment on page 3 of the bill, line 17.

Mr. INOUYE. Mr. President, I move the adoption——

Mr. ALLEN. Mr. President, has the time been yielded back? My time has expired. Has the other side yielded back their time? If so, I have an amendment to offer.

Mr. INOUYE. I have not yielded back my time.

The PRESIDING OFFICER. The time of the Senator from Alabama has expired. The time of the manager of the bill, the Senator from Hawaii, has not expired.

Mr. INOUYE. How much time have I remaining, Mr. President?

The PRESIDING OFFICER. The Senator has 29 minutes.

Mr. INOUYE. May I inquire of the Senator from Alabama what is his wish?

Mr. ALLEN. Sir?

Mr. INOUYE. What does the Senator wish to do?

Mr. ALLEN. As soon as the Senator yields back his time, I have an amendment which I discussed somewhat, reallocating this 40-year loan money.

Mr. INOUYE. May I yield to the Senator to submit his amendment at this point?

Mr. ALLEN. If the Senator will yield back his time, the amendment would be in order. Otherwise, it would not be in order. I am ready to offer the amendment as soon as the Senator yields back his time. I am not permitted to do so until he does so.

Mr. INOUYE. Mr. President, the discussions for the past 30 minutes spoke of loans to the Mekong Delta, projects in Hanoi, a $150 million grant to the city of Bombay, and on and on. I am certain the Senator from Alabama was referring to the International Development Association or the World Bank. The section which he wishes to amend, Mr. President, has nothing to do with the World Bank or the International Development Association. In fact, the section he proposes to amend relates to bilateral loans provided by the United States to certain selected countries.

So that I may carry on a discussion, will the Senator from Alabama yield for a few questions?

Mr. ALLEN. Yes.

Mr. INOUYE. What does the Senator wish to change between line 17 and line 23? I am in a quandary because there is nothing before us.

Mr. ALLEN. I am not able to offer my amendment until the time on the committee amendment has expired. I sought to explain——

Mr. INOUYE. I realize that. As the Senator knows, he was speaking of the banks in his discussion.

Mr. ALLEN. I stated it might not be the appropriate time to mention that, but I was speaking about the overall program generally of which this is a part.

Mr. INOUYE. On line 17——

Mr. ALLEN. As I stated, what I seek to do by the amendment is to reduce the $175 million in 40-year loans, to cut that down to $75 million, and move that $100 million in 40-year loans and divide it equally between 30-year loans and 20-year loans. That is the purpose of the amendment. It does not change the figures set by the distinguished Senator's committee.

Mr. INOUYE. Mr. President, I wish to point out that since the Senator from Hawaii has been chairman of this subcommittee, we have made diligent attempts to reallocate the loan portfolio under development assistance. Last year, for example, AID proposed that every dollar proposed for loans be for 40 years. As the Senator from Alabama is well aware, we made changes to that, setting aside a certain portion for 40 years and another portion for 30, and 20 years respectively.

This year, once again the proposal made by AID was quite liberal. For example, for 40-year loans they have provided $234.5 million. This we reduced to $175 million. We increased the 20-year loans from $53.5 million to $98.5 million.

I would like the Senator from Alabama to know this committee has been rather diligent in this area in protesting and insisting that not all loans be on a 40-year basis.

Because of the Senator's discussion on the IDA and the World Bank, I think it should be emphasized once again that these are bilateral loans, and these are not multilateral international financial institution loans.

Mr. President, throughout this debate we will be speaking of the providing of assistance to so-called developing countries, the poor nations of this world.

It is true that by providing this assistance we will be fulfilling a tradition of the United States, the humanitarian tradition.

Although the committee report does not suggest otherwise, there is also a practical motive on the part of the United States in providing these loans, these grants, and these assistance programs.

This Nation of ours is affluent; this Nation of ours is powerful; and this Nation of ours is influential throughout the world because we have been blessed with technical know-how, with the skills in manufacturing, and with the ability to sell our products.

Mr. President, in order to sell our products, we must have raw materials made available to us. For example, if some of the southern African countries should decide tomorrow that they have no desire to deal with the United States, we may find ourselves being denied certain materials that are essential to the industries of the United States. Detroit will be out of business in a week. Most of our steel plants will be out of business in a month.

Consider, in addition, the most important weapons system we have in the defense of the United States, the Minuteman missile, the intercontinental ballistics missile. In the development and production of this ICBM, the weapon that we hope will save democracy for posterity, we can provide only about 15 percent of the material required. Eighty-five percent of all the parts, all the raw material, has to come from foreign suppliers.

We are not self-sufficient. We have very little aluminum in the United States, almost no bauxite whatsoever. If the countries with bauxite should decide that they will have an embargo, we can count on Detroit going out of business in short order.

We have almost no manganese in the United States. We have no platinum. All of these exotic minerals that are necessary, that provide the raw material for technology, are presently found in most of the underdeveloped, poor countries. If we should decide to divorce ourselves completely from these underdeveloped countries and decide to live on our own, the affluence we enjoy today will soon be a thing of the past. The influence we enjoy in the nations will soon be a thing of the past. The power that we have will be soon minimized.

It is not only the goodness of our heart; it is not only the humanitarian aspect of the foreign assistance program that leads us to set aside $7 billion. We do have self-interest in this. We are hoping, first, to create markets for our products. We cannot sell to countries without money. The only way they will have money is for us to assist them to develop themselves.

(Mr. ZORINSKY assumed the chair.)

Mr. INOUYE. Second, in order to keep our factories running, in order to keep our smokestacks billowing, in order to keep our assembly lines running, we need bauxite, we need manganese, we need titanium, we need chromium, we need copper, we need platinum. There is not an adequate supply of any of these materials in the United States.

Not too long ago, the citizens of the United States were coming close to hysteria when, as a result of the Yom Kippur war in the Middle East, we suddenly came face to face with an oil embargo. Men and women found themselves lined up in front of gas stations 12 hours before they opened, guarding their positions with shotguns, just to get that tank of gas. We thought that our economy was

coming to a complete halt. Imagine what would happen if the countries that are presently selling us bauxite—a very simple commodity—decided not to sell us any more bauxite. That one item alone would just about shut down the so-called industry of the United States.

This foreign assistance bill is not just a gift; it is, in many ways, an investment. The committee report points out correctly that, since the end of World War II, the United States, in its great generosity, has provided the many nations of this world an amount in excess of $231 billion. The largest sum was the initial amount we contributed in the Marshall plan. Oh, there was a little ulterior motive on our part. We could have, if we wanted to, let our European allies and friends die on the vine and be consumed by the Communists. We could have done that. But we knew that for our economy to exist, for our position of power to exist, and for democracy to continue, our European friends had to be assisted. So we poured in billions of dollars.

As a result, today, we have free countries serving, if I may use the word, as a barrier between us and the Eastern Socialist countries.

It has cost many dollars—many, many tax dollars. But I doubt that any Senator would come up and say it was not well spent. I think it was a good investment. In many ways, the dollars that we are passing out, may be a crucial investment, an investment that may be the difference between dealing with us, trading with us, or not trading with us.

So, Mr. President, I hope that, as we consider this bill, we keep in mind that, while we are fulfilling our humanitarian desires, we are, at the same time, investing in the future—not just of the Africans or the Latin Americans or the Asians, but in the future of Americans.

I hope that we consider this measure calmly, and, if I may use the word, with calculation, because, believe me, Mr. President, what we are proposing here is in the best interest of the people of the United States. It is in the best interest of the future of our country. I hope that the Senate will support the committee amendment.

We have studied this bill very carefully. We have considered all consequences, and we feel that the adjustments we have made are reasonable, workable, and will serve the best interests of our country.

Mr. President, how much time do I have left?

The PRESIDING OFFICER. The Senator from Hawaii has 16 minutes remaining.

Mr. INOUYE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Is there objection?

Mr. ALLEN. I object.

The PRESIDING OFFICER. Objection is heard.

The assistant legislative clerk proceeded to call the roll.

Mr. INOUYE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Is there objection?

Without objection, it is so ordered.

Mr. INOUYE. Mr. President, I am prepared to yield back the remainder of my time.

Does the Senator wish some time?

Mr. SCHWEIKER. No.

Mr. INOUYE. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on——

UP AMENDMENT NO. 739

Mr. ALLEN. Mr. President, I send an amendment to the desk.

Mr. ROBERT C. BYRD addressed the Chair.

The PRESIDING OFFICER. The clerk will state the amendment.

The legislative clerk read as follows:

The Senator from Alabama (Mr. ALLEN) proposes unprinted amendment No. 739.

The amendment is as follows:

On page 3 line 17 strike "$175,000,000" and insert in lieu thereof the following "$75,000,000."

On page 3 line 20 strike "$37,000,000" and insert in lieu thereof the following "$87,000,000"

On page 3 lines 21 and 22 strike "$98,500,000" and insert in lieu thereof "$148,500,000"

Mr. ROBERT C. BYRD addressed the Chair.

The PRESIDING OFFICER. Who yields time?

Mr. ALLEN. Mr. President, I yield such time as the Senator from West Virginia may require.

ORDER TO CALL UP CONFERENCE REPORT ON CLEAN AIR

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at any time after 9:30 p.m. today Mr. MUSKIE be recognized to call up the conference report on clean air.

Mr. ALLEN. Reserving the right to object, and I shall not object, that does not give any indication as to when it might come up. I wonder if he might be willing to state that he would bring it up sometime between 9:30 and 10, would that be satisfactory?

Mr. ROBERT C. BYRD. Yes.

Mr. ALLEN. It hangs over us without knowing when it is coming up.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at any time between 9:30 and 9:45—the reason I say 9:45, that will allow the Senator, if he wishes——

Mr. ALLEN. Yes. Of course, he could bring it up at any time without this permission, of course, on getting recognized.

Mr. ROBERT C. BYRD. The Senator did not yield the floor. We could not take the Senator off his feet.

Mr. ALLEN. Yes.

Well, these amendments are limited to 15 minutes.

Mr. ROBERT C. BYRD. Yes, the Senator from Alabama told me that.

Mr. ALLEN. I have no objection to the clean air conference report coming up.

Mr. ROBERT C. BYRD. At any time between 9:30 and 9:45?

Mr. ALLEN. That is perfectly all right.

Mr. ROBERT C. BYRD. Or thereafter, Mr. MUSKIE be recognized to call up the clean air conference report?

Mr ALLEN. Well, that gets back to the original request.

Mr. President, I have no objection.

Mr. MUSKIE. If the Senator will yield, it might be a good time to clear the air.

Mr. ALLEN. I agree.

The PRESIDING OFFICER. Is there objection?

Without objection, it is so ordered.

FOREIGN ASSISTANCE APPROPRIATIONS, 1978

The Senate continued with the consideration of H.R. 7797.

The PRESIDING OFFICER. Who yields time?

Mr. ALLEN. Mr. President, I yield such time as I may require.

Mr. President, this amendment does not take issue with the amount made available for this item of appropriation under the heading, "Loan Allocation Development Assistance," and this is just one of many such appropriations throughout the bill.

On this particular allocation, the Senate committee added an amendment to the language of the House which had merely set the amount that could be lent at $310.5 million. Then the Senate committee divides that money up on the basis of length of term of the loan and somewhat over half of the $310 million is allocated to making 40-year loans, with the first 10 years nothing on the principal being paid and very small interest.

I do not know the exact figure. I could ask the distinguished manager of the bill. Somewhere between 1 and 3 percent.

The distinguished Senator from Virginia just pointed out the Treasury sold some bills or notes just the other day paying over 7 percent interest.

They set aside $175 million for 40-year loans, $37 million for 30-year loans, and $98 million for 20-year loans.

All this amendment respectfully requests is that not such a large concentration of loans be made in the 40-year classification. That loan is unheard of in the United States, a 40-year loan to an individual.

I read in the paper that homeowners—I am always paying on my mortgage of many years ago—new home purchasers, are paying, American citizens are paying, 9.5 percent for home loans, and here we are lending $175 million for 40 years at little or no interest.

Now, is that fair to the American taxpayer? I submit it is not.

My amendment does not change the $310 million set aside for this purpose. But it does say, "Please cut down this $175 million in 40-year loans and make it $75 million and take that $100 million and divide it between the 30-year loans and the 20-year loans."

That is all it does. It still leaves $75

million for making 40-year loans. That should be enough.

I note here they slight the 30-year loan category anyhow. Instead of putting $175 million in that area, they just have $37 million in 30-year loans.

So this amendment would move $50 million from the 40-year basis, put it over in the 30-year basis, and it would take $50 million, not new money but money moved from the other item, and put it in the 20-year loans.

So when we got through, we would have this money available for loan on these giveaway terms. $75 million for 40-year loans, $87 million for 30-year loans, and $148 million, almost half, for 20-year loans.

It would seem to me, Mr. President, that would be fair and more equitable, fairer to the American taxpayer than having such a high concentration of 40-year loan money.

That is all the amendment does, Mr. President, and I hope that the Senate will agree to the amendment.

Mr. INOUYE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. INOUYE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. INOUYE. Mr. President, I have discussed this amendment with the ranking minority member of the subcommittee.

As the Senate is well aware, it was the Foreign Operations Subcommittee that took the initiative 2 years ago to bring about this type of allocation. As the Senate is well aware, the House bill provides that all the loans be on a 40-year basis.

Although I could spend 30 minutes now to argue over differences in the numbers and suggest that instead of $75 million, it go up to $100 million, I do not think that type of discussion would serve any good purpose.

In principle, following the subcommittee's actions, I agree with the amendment submitted by the Senator from Alabama.

However, in order that the record be clear, and since during the debate much was said about IDA and the World Bank, I hope Senators will note that these loans are bilateral loans, loans that are made directly by the U.S. Government to recipient countries.

It also should be noted that a study of the project requests would indicate that there are no large dams, no large infrastructure projects here. These are moneys to provide food. These are moneys to provide nutrition.

These are moneys to bring about population planning, so that we can cut down the dangerous growth we are now experiencing in the world, whereby in less than 40 years we will find the world's population being doubled; and most conservative estimates indicate that, if nothing were done, in 5 years we will be experiencing one of the worst famines in the history of mankind.

That is what we have in here—moneys for population planning, moneys to assist people in setting up farms so that they can feed themselves, money to improve their diet.

Mr. President, this is very important. If we do not assist these people in improving their diets, we may find the next generations of this world made up of men and women whose brain cells have not fully developed because of a lack of adequate nutrition.

It also should be noted that at the present time there is the so-called ratio between "haves" and "have-nots." By "haves" I am talking about countries with a per capita income of $500 a year or more. Those are the "haves" people. Those with less than $500—$150 a year per capita income, $200 a year—are the "have-nots." On that basis, the "have-nots" constitute more than 65 percent of the world's population and the "haves" constitute 35 percent.

If we let the present trend continue without any change in the growth in the world's population, if we permit young children to grow without proper nutrition, we will soon reach the stage—rather shortly—when that ratio will no longer be the acceptable ratio of 35 percent to 65 percent. It may become 10 percent "haves," much of it in the United States, and 90 percent "have-nots." That is a dangerous division. That is a volatile division. This program hopes somehow to bring about a resolution of that problem.

The economic assistance program that these loans speak of also covers health. There are today millions of Africans who are suffering from river blindness. In the United States, if 10,000 Americans were to become blind in a year, we would become concerned, and we should be concerned. But there are parts of Africa where in 1 year hundreds of thousands of people become blind. We hope to bring adequate health care to these people.

We are also spending some money for education and human resources. The safeguard of democracy is an educated population. A population that would be susceptible to dictatorship is an illiterate one. We hope to bring about an educated population in the world.

Also, we are providing technical assistance to those countries that need such assistance.

So I hope the Senate will not think these are loans to build huge dams, that these are loans for Hanoi and for the Mekong Delta. These are very basic loans. This is the heart and soul of the foreign assistance program.

With this in mind, I hope the Senate will approve the whole bill as we get to the end of it, because this section speaks of the spirit of this bill. As I said earlier, I do not wish to get into a colloquy as to whether it should be $37 million or $87 million or $98 million or $148.5 million. So long as the spirit remains here, the Senator's amendment does not diminish the gross amount; and because of that, I am prepared to accept the amendment and take it to conference.

I have been advised that the amendments relating to $37 million and $98 million have not been called up yet. May the clerk read the pending amendment, so that we will make certain that we know what we are dealing with?

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

On page 3, line 17, strike $175 million and insert in lieu thereof $75 million.

On page 3, line 20, strike $37 million and insert in lieu thereof $87 million.

On page 3, lines 21 and 22, strike $98.5 million and insert in lieu thereof $148.5 million.

Mr. INOUYE. Mr. President, as manager of the bill, with the concurrence of the ranking minority member, I am prepared to accept the amendment.

Mr. ALLEN. Mr. President, I yield myself such time as I may require.

I appreciate the courtesy of the distinguished manager of the bill and the distinguished ranking minority member of the committee for agreeing to accept this amendment.

Commenting on the distinguished manager of the bill's statement about this having nothing to do with IDA and other programs that the Senator from Alabama discussed, the Senator from Alabama sought to make clear that in addition to addressing his remarks to the amendment itself that he was going to try to discuss the impact of the entire foreign aid bill package.

He has no time on the bill allocated to him. He had no opportunity to make an opening statement. The only opportunity he has to discuss the bill itself is on time allotted on the amendments. So it is true the Senator from Alabama discussed the soft loans, the loans in prospect for Vietnam from the International Development Association, because he was using this time so as not to be required to request time on the bill, using such time as he had on the amendment to discuss not only the pending amendment but the whole scope of the bill, the whole scope of the program.

As I pointed out, later this evening, if I have the opportunity, I will discuss the whole range of the foreign aid appropriations we are making.

Later I will have an opportunity when I bring up one of the amendments on which there is no time limit, I will be able to discuss the bill fully and completely at that time, I imagine. But at this time, I am just using such segments as I have allotted to me on the amendments that we will discuss.

I appreciate the acceptance of the amendment, and we have a number of other amendments we will offer after the committee amendments have been approved. But we are still working on the committee amendments. We want to scrutinize them to see why they left out some of the provisions of the House bill and why they added amendments to this bill, and we want the committee to justify some of these amendments. That is the reason we are asking that they be considered separately.

I yield back the remainder of my time.

Mr. INOUYE. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Alabama.

The amendment was agreed to.

The PRESIDING OFFICER. Who yields time?

Mr. INOUYE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. INOUYE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. INOUYE. Mr. President, I ask unanimous consent that the amendment, the committee amendment, as amended by the Allen amendment, be agreed to.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment, as amended.

The amendment was agreed to.

The PRESIDING OFFICER. The clerk will report the next committee amendment.

The assistant legislative clerk read as follows:

On page 4, line 3, strike out "$243,850,000" and insert in lieu thereof "$234,350,000".

The PRESIDING OFFICER. That is a committee modification.

There is 1 hour equally divided on this amendment. Who yields time?

Mr. HARRY F. BYRD, JR. If I have time, I yield it back.

Mr. INOUYE. Does this amendment cover down to line 8?

The PRESIDING OFFICER. Time is equally divided between the Senator from Pennsylvania and the Senator from Hawaii.

The assistant legislative clerk read as follows:

"$234,350,000, of which amount "$500,000 shall be for the Organization of American States Special Cultural Account, $500,000 shall be for the Organization of American States Special Development Assistance Fund, and $1,500,000 shall be for the Organization of American States Special Multilateral Fund:";

Mr. SCHWEIKER. I would like to ask the distinguished Senator from Virginia how much time he would like?

Mr. HARRY F. BYRD, JR. Up to that point through page 4, line 10, the Senator from Virginia would need no time.

Mr. SCHWEIKER. How much time would the Senator like?

Mr. HARRY F. BYRD, JR. I beg pardon?

Mr. SCHWEIKER. I will be glad to yield the Senator time.

Mr. HARRY F. BYRD, JR. The Senator from Virginia will need no time until you finish the amendment up to and including line 10.

Mr. INOUYE. Would the Senator accept those two amendments?

Mr. HARRY F. BYRD, JR. Accept the amendments up through line 10.

Mr. INOUYE. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

The PRESIDING OFFICER. The clerk will report the next committee amendment.

The assistant legislative clerk read as follows:

On page 4, line 9, strike "$120,000,000" and insert "$110,000,000";

The PRESIDING OFFICER. Who yields time?

Mr. SCHWEIKER. I yield back the remainder of my time.

Mr. INOUYE. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

The PRESIDING OFFICER. The clerk will report the next committee amendment.

The assistant legislative clerk read as follows:

On page 4, line 10, following "Program" insert a colon, and *"Provided further*, That no part of any such appropriation for "International organizations and programs" may be available to make any contribution of the United States to the United Nations University";

Mr. HARRY F. BYRD, JR. Mr. President, will the Senator yield me 2 minutes?

Mr. INOUYE. I am very happy to yield, sir.

Mr. HARRY F. BYRD, JR. I want to commend the committee on this amendment. The Senate in a previous year approved a similar amendment, knocking out funds for a United Nations University in Tokyo.

I especially commend the distinguished Senator from Arizona, Mr. DECONCINI, for the effective work he has done in leading opposition to using American tax dollars to fund such a project.

I commend the committee on this amendment. I move its adoption and I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. Who yields time?

Mr. INOUYE. Mr. President, I suggest the absence of a quorum.

The assistant legislative clerk proceeded to call the roll.

Mr. INOUYE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. INOUYE. Mr. President, I ask unanimous consent that consideration of the committee amendment appearing on page 4, lines 11 through 14, be temporarily set aside for not more than 15 minutes to consider the following amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will state the next committee amendment.

The assistant legislative clerk read as follows:

On page 4, line 14, after the word University, strike through and including line 25.

Mr. INOUYE. I yield back the remainder of my time.

Mr. ALLEN. Mr. President, I yield myself such time as I may require.

On the surface, Mr. President, this looks like it might be a good amendment, but it is not. I would say that if the House language had appropriated these funds to these various organizations and then been stricken out that would be fine, but it does just the reverse of that. The striking out of the amendment would make the sky the limit within the limitation of the appropriation.

The House very wisely put a cap on how much could be given to the United Nations Children's Fund, $25 million. They put a cap of $1 million, that is a ceiling of not more than $1 million to be available for the United Nations educational and training program for Southern Africa. Not more than $500,000 shall be available for the United Nations Namibia Institute. Not more than, which is certainly the greatest amount, but without a ceiling they could give them whatever they wanted to out of this appropriation of $110 million.

So the House language is very constructive and what the committee amendment would do in striking this section out would be to lift the ceiling on these recipients. Instead of Namibia Institute being limited to $500,000, they could raise it whatever they wanted to if the Senate committee amendment is allowed to stand. This language is good language that the committee seeks to strike out.

Let us go on. Not more than $3 million shall be available for the United Nations Decade for Women. What in the shall be available to United Nations Decade for Women, $3 million. That would seem to me to be a pretty good sum for the Decade for Women, though it is a highly worthy organization, I am sure. But I would think the $3 million should be an adequate limit.

But if you go along with the Senate committee you are going to lift that ceiling, and it appears they could give them anything they wanted within the $110 million appropriation because these are words of limitation. These are words of limitation .

Let us go on: Not more than $2 million shall be available to United Nations Capital Development Fund. Without that they could raise it. Let us keep these words of limitation.

Not more than $5,600,000 shall be available to strengthen the International Atomic Energy Agency's safeguard program out of the total contribution made available to the agency.

So, they could shift these figures around, double pet projects in here, take from a worthy cause if they wanted to, but the House language is good and the Senate committee seeks to strike out that language.

I hope that these words of limitation will not be stricken out, that they will be retained in the bill.

I reserve the remainder of my time.

Mr. INOUYE. Mr. President, the subcommittee recommended to the full committee and the full committee agreed that we should cross out this total section for the following reasons: The United Nations Namibia Institute and the United Nations Capital Development Fund were not discussed by the committee, were not presented to the committee, and were not part of the President's budget request.

Therefore, we decided that, in order

to learn from the House their rationale and justification for including such items, we thought that we would put the entire section in conference. That was our purpose.

It was not to give an open door, because there is a gross limitation on this, but we wanted to know why the House had included the United Nations Namibia Institute, when the President has not requested it, and the same for the United Nations Capital Development Fund. These are not provided for in our gross figures.

So I would hope the Senator would accept that, and give the conferees an opportunity to get together with the House conferees and learn from them why they included these items. Then, if they are not justified, arrangements can be made on the other funds.

Mr. ALLEN. I disagree with the reasoning of the distinguished Senator. I feel that these limitations are good, and if the language is allowed to stand, these items would not be in conference. The House has seen fit to impose a ceiling on these items.

Take, for instance, the Namibia Institute. That is located in Zambia, and it is limited in the bill to $500,000.

What is the Namibia Institute? It is an institute in Lusaka, Zambia, operates on a $17 million United Nations budget intended to span the next 5 years, is admitting only Namibians to its courses. This information is from the Christian Science Monitor, a leading nonpartisan publication.

Politically, it seems closely allied to the SWAPO, the Southwest Africa Peoples Organization, the leading liberation movement in Namibia.

Mr. Geingob, the director of the Institute, a former SWAPO representative in the United States at the United Nations, said 80 percent of this year's intake of students comes from that organization.

If we knock out these limitations, it would be possible to give this institute as much of the $110 million as they wanted to. I would think that a half million dollar gift from the American taxpayers would be a pretty nice little gift for the Namibia Institute. But without this ceiling, they could give anything they wanted to, the United Nations could.

Mr. INOUYE. Mr. President, will the Senator yield?

Mr. ALLEN. Yes.

Mr. INOUYE. As manager of this bill, I would be very pleased to accept an amendment on line 17, beginning after the last word, to read as follows:

None of the funds made available by this section shall be for the Namibia Institute.

And on line 20, for the last two words, "not more," to substitute therefor:

None of the funds made available by this section shall be for the United Nations Capital Development Fund.

And restore the rest of the House language.

Mr. ALLEN. What about the United Nations Decade for Women? You keep that in?

Mr. INOUYE. Yes; that has been justified, and was requested by the administration.

Mr. ALLEN. You keep the $3 million ceiling in?

Mr. INOUYE. Yes, that would remain unchanged.

Mr. ALLEN. In other words, you would leave the cap on the Namibia Institute, the cap on the United Nations Decade for Women——

Mr. INOUYE. Will the Senator yield?

Mr. ALLEN. Yes.

Mr. INOUYE. No, just delete that. None of the funds to be spent for the Namibia Institute or for the United Nations Capital Development Fund.

Mr. ALLEN. I am talking about the United Nations Decade for Women.

Mr. INOUYE. No, I would rather that was left in there, because that was justified before the committee, and requested by the administration.

Mr. ALLEN. What about the cap of $3 million?

Mr. INOUYE. We will have the cap; not more than $3 million.

Mr. ALLEN. Very well. In other words, we would request the parliamentarian or the staff to draft an amendment that would limit the United Nations Decade for Women to $3 million, to say that the Namibia Institute would get nothing, and the Capital Development Fund would get nothing; is that correct?

Mr. INOUYE. The Senator is correct.

Mr. ALLEN. I would certainly agree to that. I wonder if we could have a short quorum call while we draft the amendment.

THE SENATE IS MAKING A MISTAKE ON THE UNITED NATIONS UNIVERSITY

Mr. HUMPHREY. Mr. President, I want to take this opportunity to express my concern over the action of the Appropriations Committee in prohibiting the use of funds in H.R. 7797 for our contribution to the United Nations University.

I appreciate the concerns raised by my distinguished friend and colleague, Senator DECONCINI, during our discussion of this matter in the authorizing legislation.

However, I want to briefly recapsulize my reasons for attaching importance to U.S. participation in this endeavor.

Our Government has made very strong representations to the Government of Japan in support of the United Nations University.

When the Vice President of the United States visited Japan shortly after taking office, he discussed this matter with Japanese officials and indicated the strong support of the Carter administration for a $10 million U.S. contribution to UNU.

A number of nations already have made substantial contributions to the endowment fund that will provide the resources for UNU. That fund, hopefully, will reach $500 million.

Austria, a very little country, has already pledged $470,000, Ghana, in Africa, $2.5 million, Saudi Arabia $5 million, Sudan, $5 million, Venezuela $10 million and Japan $100 million.

These are just examples of what has been pledged thus far. A total of $123.2 million has been pledged of which an actual $63.4 million has been paid.

Mr. President, the United Nations University was created as an autonomous body under U.N. General Assembly auspices in 1972. It became operational in 1975 with the appointment of a rector and the establishment of the University Center in Tokyo.

It provided a new mechanism on a technical, nonpolitical level to promote collaborative research and intellectual cooperation in seeking practical solutions to pressing global problems. The United Nations University is not a traditional university, but rather consists of worldwide networks of advanced research and training institutions. Financed entirely by voluntary contributions, the university relies almost entirely upon income derived from its endowment fund. It is giving special attention to research program priorities of developing countries. Today, agreements have been reached with three institutes engaged in applied research programs in nutrition and postharvest food conservation to enable them to serve as centers for establishing networks for collaborative research with other facilities in Africa, Asia, and Latin America.

Mr. President, from the outset Japan has taken the lead in supporting and promoting the United Nations University. Since we have long encouraged Japan to take on greater responsibility in multilateral affairs, as it is now doing with the UNU, a U.S. contribution would demonstrate our active interest in the University and our endorsement of Japan's leadership role in its program.

To place the philosophy behind the need for a United Nations University in its proper perspective, I would like to quote from a lecture delivered on May 13, 1976 by Dr. James M. Hester, an American, who is rector of the university. In his remarks to the fifth Sir David Owen memorial lecture given at University College in Cardiff, Wales in the United Kingdom, Dr. Hester pointed out:

Let me begin by placing the establishment of the University in the context of the times in which we live. It is no exaggeration to say that our world is in the midst of one of its greatest metamorphases. A concatenation of crises—political, social, economic and environmental—has contributed to the dissolution of the post-World War II international order and the creation of a global condition in which new uncertainties, new attitudes and new possibilities abound. These crises are caused by a multitude of forces at work in the world, three of which are particularly significant.

The first of these is the pressure of sheer numbers of people that the planet is being called upon to feed, shelter, clothe, and provide employment. In a short 25 years there may be close to seven billion people on the planet, all seeking a fair share of what may well be finite resources for survival. Eighty percent of these will be living in Third World countries where resources are already in short supply.

A second force is that of industrialization that not only brings material progress but also despoils the environment, consumes staggering quantities of dwindling resources, and also causes massive migrations of peoples to cities that cannot provide them decent lives. Here again, it is the Third World that is feeling the major deleterious effects. In 1959, there were only 70 cities in the world with a population of a million or more. By the year 2000, it is projected that there will be 276 cities of a million or more in the Third World alone. The industrial revolution has brought extreme affluence to some nations, but to others it has brought staggering social problems and human misery.

A third pressure, "the revolution of rising expectations," is the outcome of miracles in communications and travel that enable people everywhere to see how others live and encourage them to want some or all of "the good life." Unless some accommodations are made to this aspiration, massive confrontations between the poor and the rich are not surprising prospects for the future.

These transformations are results of man's activities. Ultimately, it will also be human beings whose actions will determine whether the future these forces affect holds improved existence of chaos. So profound and far-reaching are these changes that it would seem most improvident to rely solely on traditional concepts and institutions designed for other conditions to cope with them.

It is for this reason that the United Nations University has been established as an instrument through which scholars can seek to achieve more genuinely international perspectives on problems of survival and development than national institutions can provide. The creation of the United Nations University is a response to the recognition that the major problems confronting humanity are not the problems and responsibilities of single nations, however rich or poor, but the entire interdependent world.

Mr. President, I believe Dr. Hester's remarks place the university, and the need for such a mechanism in its proper perspective.

Today, we are debating a foreign aid bill that attempts to address pressing needs which not only impact on our own quality of life but also, if not resolved, can threaten the United States as a viable society.

Foreign aid is like an insurance policy. You do not like to put out the money, but you know if you do not the future disaster you are insuring against will be much more costly had not you made the prudent and wise investment earlier.

We are attempting to invest in the future of this world. We are trying to insure our children and our children's children against the prospects of disaster.

How many times must we learn the bitter lesson that we cannot exist in this world as an island of wealth in a sea of poverty. Every time the American consumer fills up his car, clothes his children, buys food for his table and heats his home we are repeatedly reminded of the interdependent nature of our world.

How many disasters do we have to endure before we realize that it is much cheaper to practice a little preventive medicine is always much cheaper than treating a disease which has grown out of control—grown out of control only because we failed or refused to take preventive measures.

Mr. President, I believe the United Nations University and U.S. support for the institution is in our national interest. The world will not go away because Congress hides its head in the sand.

Unfortunately, I regret that we may be seeing the demise of UNU because of congressional action—because we were not willing to make a little investment in our future and our children's future.

While I will not attempt to restore funds for the United Nations University, I did want to express my concern over this action taken by the Appropriations Committee.

The PRESIDING OFFICER. The question recurs on the previous committee amendment on which the yeas and nays have been ordered.

The clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Arkansas (Mr. McCLELLAN), the Senator from South Dakota (Mr. ABOUREZK), the Senator from Alabama (Mr. SPARKMAN), the Senator from Mississippi (Mr. EASTLAND), the Senator from Montana (Mr. METCALF), and the Senator from Mississippi (Mr. STENNIS), are necessarily absent.

Mr. STEVENS. I announce that the Senator from Oklahoma (Mr. BELLMON), the Senator from New Jersey (Mr. CASE), the Senator from Nebraska (Mr. CURTIS), the Senator from Arizona (Mr. GOLDWATER), the Senator from Nevada (Mr. LAXALT), the Senator from Illinois (Mr. PERCY), the Senator from Connecticut (Mr. WEICKER), and the Senator from North Dakota (Mr. YOUNG) are necessarily absent.

I also announce that the Senator from Rhode Island (Mr. CHAFEE) is absent due to a death in the family.

The result was announced—yeas 50, nays 35, as follows:

[Rollcall Vote No. 339 Leg.]

YEAS—50

Allen	Glenn	Morgan
Bartlett	Hansen	Moynihan
Bayh	Hatch	Nelson
Bentsen	Hayakawa	Nunn
Biden	Heinz	Proxmire
Bumpers	Helms	Roth
Burdick	Huddleston	Sasser
Byrd, Harry F., Jr.	Inouye	Schweiker
Byrd, Robert C.	Jackson	Scott
Cannon	Johnston	Stafford
Church	Leahy	Stevens
DeConcini	Long	Stone
Dole	Magnuson	Talmadge
Domenici	Matsunaga	Thurmond
Eagleton	McClure	Tower
Garn	McIntyre	Wallop
	Melcher	Zorinsky

NAYS—35

Anderson	Hart	Muskie
Baker	Haskell	Packwood
Brooke	Hatfield	Pearson
Chiles	Hathaway	Pell
Clark	Hollings	Randolph
Cranston	Humphrey	Ribicoff
Culver	Javits	Riegle
Danforth	Kennedy	Sarbanes
Durkin	Lugar	Schmitt
Ford	Mathias	Stevenson
Gravel	McGovern	Williams
Griffin	Metzenbaum	

NOT VOTING—15

Abourezk	Eastland	Percy
Bellmon	Goldwater	Sparkman
Case	Laxalt	Stennis
Chafee	McClellan	Weicker
Curtis	Metcalf	Young

So the committee amendment on page 4, line 10, was agreed to.

Mr. INOUYE. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. ROBERT C. BYRD. I move to lay that motion on the table. The motion to lay on the table was agreed to.

CLEAN AIR ACT—CONFERENCE REPORT

Mr. MUSKIE. Mr. President I submit a report of the committee of conference on H.R. 6161 and ask for its immediate consideration.

The PRESIDING OFFICER (Mr. SASSER). The report will be stated.

The legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 6161) to amend the Clean Air Act, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by a majority of the conferees.

The PRESIDING OFFICER. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the RECORD of August 3, 1977.)

PRIVILEGE OF THE FLOOR

The following Senators requested and, by unanimous consent, the privilege of the floor was granted in behalf of the following staff members: Mr. MUSKIE: John Yago, Philip Cummings, Leon Billinges, Haven Whiteside, Karl Braithwaite, Charlene Sturbitts, Katherine Cudlipp, Richard Herod, Lee Rawls, July Parents, Richard Herod, Richard Harris, Sally Walker, Kevin Cornell, Mike Hathaway, Ron Katz and James Range; Mr. STEVENS: Steve Berlitz; Mr. HAYAKAWA: Tom Carter; Mr. McCLURE: Mike Hathaway.

Mr. MUSKIE. Mr. President, may I have the attention of the Senate?

Mr. McINTYRE. Mr. President, may we have order?

The PRESIDING OFFICER (Mr. SASSER). The Senate will be in order. Those Senators engaging in conversation will retire from the Chamber to the cloakroom, and all others will be seated.

The Senator from Maine is recognized.

Mr. MUSKIE. Mr. President, the conference agreement on the Clean Air Act represents a culmination of 2½ years of effort on the part of the House and Senate to develop answers to questions which have been raised in the process of implementation of that complex and far-reaching law. The agreement is a compromise in every sense of the term. It does not represent everything that either body wanted. It does represent a middle ground between two bills which took very different approaches to very controversial issues. Later in this statement I will elaborate on each provision, its basis and the intent of the Congress it expresses. These remarks will be essential to administrative and judicial understanding of the agreement before the Senate because so much was created in the conference which either was not in the Senate bill or was not in the House bill or was so markedly different from either bill as to have little or no legislative history.

All and all, Mr. President, this bill represents something less than that which we set out to do in 1970. Under this legislation, the Administrator of the Environmental Protection Agency will have fewer tools to accomplish the job of protecting America's health and welfare from the threat of air pollution. The Administrator will be more reliant on

local and State capabilities to create the institutional and infrastructural changes necessary to achieve clean air. And perhaps this is as it should be. We have learned that there is little political support for inartfully conceived national measures which require people to change their way of living. We have learned that where change can be made it must be made with the full understanding and support of the people who are affected by that change. It is fair to say that the National Government has the capacity to regulate major direct sources of air pollution. It is fair to say that the national government has the authority to provide the informational support that local and State governments need to determine the best options for controlling air pollution. And it is fair to say that the National Government may be the most effective center for enforcement activity to ensure equity among regions, maximum progress toward emission reductions and a limitation on the natural tendency to play one locality off against another to lessen the degree of air pollution restriction required.

But beyond that, Mr. President, we have learned a great deal since 1970 about what it will take to clean up the Nation's air specifically, and to protect the environment generally. We have learned that any lack of enthusiasm or negativism or sign of weakness on the part of the national program directors is magnified tenfold at the local level. We have learned that only with maximum political, technical and education support can the local political leaders who must inevitably bear the burden for change withstand the kind of pressures which arise when change is undertaken.

We saw the concept of transportation controls—that is the idea that people would have to change the way they move about—irreparably damaged by the initial neglect of the program by national leadership. We saw many of the programs envisioned by the 1970 act fail before they were even tried because of a lack of commitment by national leadership. We have seen the results of the failure to fund the kinds of ancillary programs needed to make possible changes in transportation patterns and transportation modes. And we have seen a lack of commitment on the part of Federal agencies charged with other responsibilities raise doubts about the efficacy of environmental controls.

So, Mr. President, we begin again. This time with a more specified law; this time with a greater burden on localities; this time with more tools and more flexibility. But still with a very basic objective—the objective of protecting the health and welfare of the people of this land. No one, and I underscore no one, should be led to believe that this act by its modification of the 1970 law means an abandonment of those objectives. There is built into this new law the very necessary provisions which will force communities to make choices, the result of which will be protection of public health.

By the fact that the Federal Government has withdrawn from the field of regulation of certain kinds of land use-related activities, and certain kinds of minor emitting sources, and certain kinds of small businesses does not in any way suggest that decisions regarding these facilities and sources can be ignored. Air quality-related land use decisions, regulation of small sources, vapor recovery from moderate to small-sized service stations all continue to be tools in the State and local air pollution control bag. That they cannot be imposed by the Federal Government is only a recognition that the manner by which they are imposed, the pace at which they are imposed, and the degree to which they are imposed should be made as a part of a local balancing judgment.

This law will use as the basic regulatory mechanism the one logical tool which is available for protecting the environment. This law will establish environmental protection—achievement of public health-related air quality standards—as a price for new economic activity. A community which chooses to languish in its current economic situation will need to make few of the really tough decisions on matters such as land use and indirect source controls. The power of the Federal Government to force these kinds of judgments has been seriously restricted. But a community which is anxious to attract new capital and relies on heavy economic activity will have to show that it has a plan to achieve health standards by specific dates and at each point that major new economic activity becomes attractive, that plan will have to be checked and the time schedule reviewed to assure that a community is fulfilling its commitment.

It was alleged that the 1970 act was a no-growth bill and subsequently alleged that the amendments to the act had no growth implications. Nothing could be further from the truth. These amendments will make clear that it is through the anticipation of growth that the public can begin to expect local political leaders to press for clean air measures. These amendments seek to turn the momentum for economic activity into a force of clean air. These amendments expect the great genius of American enterprise to become the great advocate for land use controls, indirect source regulation, changes in transportation patterns, development of public transportation systems, development of alternative systems for moving people about, and the host of other measures which are absolutely essential to protection of public health.

As a result of these amendments, developers should become advocates of land use regulatory policy, car dealers and auto clubs should become advocates of inspection and maintenance programs, electric utilities should become advocates of conservation and the host of business and enterprise should become the spokesmen for mass transportation, change in growth patterns, deemphasis on the use of the private automobile when effective substitutes can be found.

These amendments tell the American people that the Congress got the message; that the National Government realizes that change without an adequate underpinning cannot be forced; that local decisions, locally arrived at with proper incentives, can achieve the goals we share. It will now be in the hands of the new administration, with new Administrators committed to these objectives, to assure that communities and States get the kind of technical, financial, and educational systems necessary to meet these purposes.

I, for one, am satisfied that this can be done, with or without the cooperation of the major polluting industries. They have had their day in court and they have had their days in Congress. The policy has been laid down, the methods have been established, the penalties for noncompliance are available and we should now be able to watch the implementation of these measures with little further appeal to the Congress from those powerful sources who for so long have been committed to making this policy fail.

This conference report is a composite that meets the public interest test. Most important of its provisions are, in my opinion, Senate requirements applicable to stationary sources. These provisions seek to put an end to the first round of efforts to circumvent emission control requirements by establishing new deadlines for existing industrial sources and penalties for failure to meet those new deadlines.

Mr. President, there are clear messages in this bill. The first message is to the Nation's major industries. It can be taken from the amendment to which I just referred. That message is that the time for talk is over—the time for compliance is here. The health of the people can wait no longer. And the conferees have a similar message for the Nation's auto companies. We do not want to know what cannot be done; we want to see what can be done. We are tired of their foot dragging. We are tired of their constant effort to solve problems by lobbying Congress instead of developing technology. I think my colleagues can appreciate the sense of frustration which comes from over 10 years of these confrontations.

I sense no stronger feeling from the collective Senate conferees than a desire to resolve the final auto emissions requirement. We know that the technology exists to produce cars meeting standards which will provide a significant degree of health protection. It is out there. It has been tested. It is being used and it is being used without unacceptable cost or fuel economy penalty. I say to Detroit that the time has come to show us that the job can be done by American manufacturers on American cars.

At this point I would like to discuss some of the major provisions of the conference bill.

The conference bill addresses the regulation of stationary sources in numerous ways.

DELAYED COMPLIANCE ORDERS

With respect to the approximately 1,400 of 23,000 major emitting facilities not in compliance with requirements under the Clean Air Act, the conference bill adopts an expeditious cleanup schedule.

This section of the bill establishes a procedure which limits the authority to issue administrative orders allowing a delay in compliance to narrowly defined circumstances. These requirements shall govern all enforcement orders issued by

either State or Federal authority which extend the time for compliance. Such orders must contain final compliance dates that are as expeditious as practicable, but in no event later than 3 years from the date attainment of the national ambient air quality standards would otherwise have been required. Should a source wish to comply by use of innovative technology, however, it may be granted up to 5 years to achieve final compliance. A source would not be eligible for a delayed compliance order if the delay is requested for convenience or for economic advantage.

The State retains primary responsibility for enforcement. Issuance of a delayed compliance order must be preceded by notice and opportunity for a hearing. The EPA Administrator may also issue an order with the consent of the Governor of the State in which the source is located. A Governor may withhold consent only to prevent the Administrator from issuing an extension less stringent than any extension the State would issue. In addition, the Administrator may object to a State order within 90 days, and must then immediately issue his own order to the source involved.

Nothing in this provision is intended to affect the ability of States to revise their State implementation plans under section 110. To the extent that a noncomplying source is affected by a substantive revision making its emission limitations more stringent or imposing new requirements on the source, then the appropriate elements of the delayed compliance order for the source would also be changed accordingly. Thus, a source would be eligible for a delayed compliance order with a final compliance date 3 years from the date the source is required to comply with the new requirements.

The issuance of a delayed compliance order shall serve as notice for purposes of noncompliance penalties should the affected source not comply by the applicable date. A source receiving an order must comply with all interim requirements which the Administrator deems reasonable and practicable. The Administrator may revoke an order if he determines that the conditions upon which the order was based no longer exist or that the source is in violation of interim requirements. Where a source wishes to comply by replacing the facility, terminating operations, or completely changing the production process, it may receive an extension requiring no interim steps before final compliance if it agrees to post a bond or surety equal to the cost of compliance had the owner decided to comply by installing control equipment.

Compliance schedules established through administrative orders before enactment of the provision must be modified to reflect the final compliance date required by this section. The only other procedure available to a noncomplying source to gain an extension of its final compliance date is under section 110(f) which allows the Governor of a State to request a 1-year extension.

NONCOMPLIANCE PENALTIES

The bill also requires the States and/or Administrator of the Environmental Protection Agency to assess and collect noncompliance penalties. Using the variables set forth in the amendment, the noncompliance penalty would be calculated on the basis of the costs of noncomplying source avoids by delaying compliance. Specifically, the calculation of the noncompliance penalty must consider the capital costs of compliance and debt service over a normal amortization period not to exceed 10 years, operation and maintenance costs foregone, and any additional economic value of a delay. In essence, the penalty would reflect financial savings realized by the firm as a result of noncompliance with the law.

The purpose of the penalties is to capture these economic savings and remove any advantage of delay. In other words, the noncompliance penalty will eliminate any economic advantage that delayed compliance will confer on a noncomplying firm relative to a firm that complies in a timely manner. This effect would also result in more equitable application of air emission standards.

In determining the fee, the calculations are to be made on a monthly basis and would represent the monthly equivalent of the financial savings a noncomplying firm would realize during its period of noncompliance. However, in order to minimize the administrative costs associated with the collection of the fee, the firm is required to make its scheduled payments quarterly.

All payments after the first quarter's payment are to be equal in constant dollar terms. However, since inflation could lead to the firm actually saving money in real terms, the administrator may include an inflation factor to adjust the equal payments in constant dollar terms to increasing payments in current dollars.

The provisions of the amendment also require that the firm be given a credit for compliance expenditures during the period of noncompliance if these compliance expenditures are not taken into account in the calculation of the penalty. The intent of this provision, however, is not to allow a noncomplying firm to subtract from its penalty payments for any period all of the capital costs or operating and maintenance costs incurred during the period of noncompliance. Rather, the intent is to require the penalty to be calculated on the basis of the incremental costs necessary to come into compliance. However, if the calculation of the penalty gives due consideration to all relevant compliance costs and expenditures, the firm would not be permitted to deduct any compliance expenditures from its noncompliance penalty payments.

In addition there are certain exemptions from the penalty, including, among others, cases where a firm's inability to comply is attributable to causes completely beyond the control of the source owner or operator. An exemption due to causes attributable to third parties is fraught with numerous potential abuses. Therefore, the intent is to limit exemptions for delays to those clearly beyond the control of the owner/operator such as fires or floods at the noncomplying facility.

This section is similar to one in last year's bill regarding the ability of a source to be exempted from the penalty under certain very limited conditions. Last year, Senator STAFFORD and I had a dialog on the floor of the Senate on this question in order to more fully explain the conditions under which a source could get an exemption from the penalty. I would like to have that explanation printed in the RECORD now because I intend that this explanation should still apply to the delayed compliance penalty in the bill we are now considering.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

Mr. STAFFORD. I am pleased that the committee has sought in this bill to find imaginative new means for encouraging the most expeditious abatement of pollution, while minimizing the effects of these measures on the economy and the Nation's supply of energy. In particular, I believe that the delayed compliance penalty provision will provide a significant incentive for compliance while assuring that noncompliance will not result in unwarranted closing down of energy and other facilities. I think this measure will also go a long way toward assuring fairness to all subject to the Clean Air Act, by guaranteeing to those who have complied with the law that they will not be at an unfair disadvantage in competing with those who have not met their obligations.

I believe this penalty incorporates a sound principle. In passing the 1970 act, we provided that during the formulation of the State implementation plan, the States were required to hold public hearings on the measures they proposed to use to attain the national health protective air quality standards. We expected that those industries who might be affected by the State plans would have an ample opportunity to present their views concerning the cost or feasibility of the measures proposed by the State to meet the standards. The States would then have the best information available to decide what measures for abating pollution were available, and how to meet the standards most economically. It was expected that claims of excess cost or infeasibility would be raised and decided by the States at this point. These claims would then be foreclosed in later enforcement proceedings although they might form the basis for a subsequent revision of a State plan. Dicta to the contrary in the Supreme Court's recent opinion in Union Electric against EPA are, in my opinion, incorrect.

Without this rule, the congressional plan for expeditiously attaining healthful air quality could have been easily frustrated by those who ignored the original planning process, then waited until an enforcement action to raise their objections to the requirements of the plan.

In the pending bill, we have recognized the unfortunate fact that a large number of pollution sources did not meet their timetables for compliance in the State plans. For those who have not yet complied, we have allowed the States to put off the day of reckoning until as late as 1979, or 1981 in some cases. At that time, those who have still not complied will, and should, be subject to the full enforcement of the law, including the delayed compliance penalty.

At that time, the requirements of the State implementation plans will have been in effect for 7 to 9 years. The time for questioning the cost or feasibility of these requirements will be long past. For this reason I wish to be certain that I am correct in my understanding that claims regarding neither the cost nor availability of the technology, systems, or other measures needed to

comply can be raised to question or delay the imposition or full effectiveness of the delayed compliance penalty.

I note with approval that the bill does not grant jurisdiction in the courts for reviewing a delayed compliance penalty on the ground that meeting the applicable requirement of the State plan would be costly; and that the commitee's report specifically notes the issue of cost may not be the basis for review of a penalty. I wish to be sure, however, that the same applies to a claim that technology is not available to meet the requirement.

Mr. MUSKIE. Your understanding is correct. Since the question of feasibility was to have been addressed in the process of formulating the State implementation plan, the Federal courts would not have jurisdiction to review delayed compliance penalty on the basis of a claim that technology was not available to meet the applicable requirement. The opportunity to present these claims was available when the plan was formulated. It remains available as a grounds for requesting a revision of a general requirement of a State implementation plan. It may not be raised in defense to a delayed compliance penalty or other enforcement action.

Mr. STAFFORD. I note that the bill provides that a penalty could not be applied where compliance with the applicable requirement was impossible owing to reasons "wholly beyond the control" of the source owner. Am I correct, then, in assuming that this exception does not cover a claim that technology is not available?

Mr. MUSKIE. Yes, you are correct. The exceptions for events wholly beyond the control of the source owner is intended to be limited very narrowly, in keeping with the bill's intent that the penalty should provide a strong incentive for compliance and a safeguard against unfairness to those who more expeditiously meet the act's cleanup requirements.

It is intended to apply only in cases of natural disaster, fire, embargo, or the like, which interfere with the timely installation of the equipment, systems or techniques, required to meet the State plan's requirements, and then only for a period equal to the duration of the delay-causing event. It might be available where a supplier or contractor was unable to meet a final completion date for emission control equipment, but even in this case, it would not be available if there was evidence suggesting that the delay was in any way caused or encouraged by the source owner himself. For example, if the source owner unduly delayed negotiations for needed equipment in the first instance by demanding unusual guarantees or by making other demands not typical of contract negotiations in its industry for production equipment, the exception would not be available. Likewise, it would not be available where the source owner placed unusual restrictions on the construction work of the supplier, or delayed shakedown testing beyond the normal interval for equipment used in its production process. And in addition to the conditions it would not be available in any case unless the source owner could show, by reference to his own financial and organizational records, that procuring and implementing the needed measures had been given highest priority in the owner's planning and budgeting process.

It was our view that by the time the penalty was imposed, the opportunity for arguing that the necessary pollution control equipment or other systems or measures were not available or technologically feasible had long since lapsed.

Mr. STAFFORD. That was my understanding also, and I am reassured to hear that it was the intent of the committee when it drafted this bill.

Mr. MUSKIE. Mr. President, cost of compliance does not serve as a basis for an exemption. It is recognized that the purpose of the noncompliance penalty itself is to capture the financial savings that are presently realized from delayed compliance. However, when the civil and criminal penalties are considered in addition to the noncompliance penalty, the act will have eliminated incentives to delay compliance and there will be positive incentives to come into compliance. The owner or operator of a major emitting source will no longer have anything to gain from delayed compliance but will have a lot to lose.

SMELTERS

Delayed compliance orders are also permitted for smelters under the conference bill. Two such orders may be obtained by a given smelter, neither of which may exceed 5 years in duration.

As applied to smelters, the availability of a delayed compliance order is a relief measure which recognizes the unique economic circumstances of the industry. In consequence of these special circumstances, smelters may, during the term of a delayed compliance order, do what no other category of sources is permitted under the Clean Air Act. Specifically, smelters may employ dispersion technology devices such as tall stacks and supplemental control strategy along with constant controls as an interim means of meeting ambient standards. By permitting this interim relief measure for smelters, there is no implied intent to relax the Clean Air Act's long-standing prohibition against the use of dispersion technology as a means of meeting ambient standards. Nor is there any intent to permit similar relief to other industries or sources, irrespective of cost considerations.

During the term of the first delayed compliance order, those smelters now having constant controls on line could not be required to install additional controls. For this purpose the phrase "constant controls on line" is intended to mean an acid plant which: First, was designed to achieve an optimum level of SO_2 control at the site where it is located; and second, is properly operated and maintained at that site. Where acid plants now in use do not measure up to this standard, it is intended that such acid plants will be upgraded to a level which EPA determines to be optimum either on a smelter-by-smelter or industrywide basis.

A second delayed compliance order issued to a smelter would have to be based on a public hearing and a showing that the ultimate emission limitation contained in the plan was not reasonably available as to it despite good faith efforts by the source to assure that the necessary controls would be available on the expiration of the first order. During such second order, the smelter could be required to install additional controls beyond a well designed, operated and maintained acid plant if such additional control are economically reasonable and adequately demonstrated.

As to the latter requirement, it is the intent of the bill that the burden will be on the source to show that a device is either economically infeasible or not adequately demonstrated. This is intended to overrule the recent decision of the Ninth Circuit Court of Appeals in Bunker Hill in which the court suggests that the burden in such matters would be on the Environmental Protection Agency.

It is also intended to give teeth to the technology-forcing principles of the act and to make more meaningful the requirement of the bill that, during the term of a smelter compliance date extension, the smelter must engage in a research and development program if EPA deems such to be desirable. New hearings may be held by the Administrator at any time on the question whether additional controls are either adequately demonstrated or economically feasible.

For those few smelters which presently lack acid plants, the bill provides a mechanism for obtaining a delayed compliance order without the obligation to install an acid plant as an interim measure. Basically, such exemption can be approved by the Administrator only if the smelter in question can prove that the cost of an acid plant will result in a permanent shutdown or a temporary shutdown of more than 1 year. This showing must be made to the Administrator in a hearing petitioned for by the State and conducted by the Agency. Notice of the hearing must be given to the public. The Administrator's determination must be based on the record of the hearing, and must be forwarded to the State. The State and the Administrator must take such determination into account in any subsequent delayed compliance order that the State proposes for a smelter and the Administrator must do the same in approving or disapproving such proposed delayed compliance order.

If the Administrator determines that a smelter is violating any applicable requirement of a delayed compliance order, he may enforce the requirement under section 113 of the act, revoke the order and enforce the original State implementation plan requirement, seek a noncompliance penalty, or take a combination of these actions.

The term "enforceable supplemental controls" is used advisedly. As I have made clear repeatedly—see my statements recorded at 119 CONGRESSIONAL RECORD, pages 19183–19205, June 12, 1973; and 120 CONGRESSIONAL RECORD, pages 18956–18974, June 12, 1974—I seriously doubt whether any system of supplemental controls can meet the test of enforceability.

The Committee on Environment and Public Works has repeatedly received testimony from State officials and representatives of the public to the effect that no enforcement mechanism exists that will assure the air quality standards are achieved at all times in the vicinity of sources using supplemental control systems. It is the intent of the Congress that permission to use such measures, even on the sharply limited temporary basis that might be authorized under this legislation, shall not be given if either the Federal or State environmental agencies have any doubt that the air quality standards mentioned previously can be protected at all times by the proposed system.

It is also contemplated that among the elements that must be included, at a minimum, in any proposed supplemental control system before either EPA or a State can authorize its use, are the following. First, it must provide that the source shall be considered in violation if concentrations of pollutants in excess of the applicable air quality standard are recorded anywhere within the "liability area" to be set under the provisions of the bill; or if emissions from the source exceed specific emission limitations predetermined by the control agencies to be necessary to assure achievement of applicable air quality standards under various meteorological conditions.

Second, the source must formally agree that it will accept liability for a violation whenever concentrations of pollutants in excess of the applicable air quality requirement are recorded within its liability area, and that it will not contest assessments of liability for exceeding the emission limitations referred to previously on the grounds that the failure to meet these emission limitations did not result in measured concentrations of pollutants exceeding the applicable air quality requirements.

Third, it is contemplated that the Environmental Protection Agency shall refuse permission for the use of supplemental controls unless the Administrator is satisfied that the State agency has adequate resources to provide the surveillance and enforcement needed to assure all the conditions applicable to the facility are met. If necessary to assure adequate resources, the source should be required to pay the State a license fee sufficient to defray these costs. Under no circumstances is it contemplated that the task of surveillance—monitoring of either emissions or ambient air quality—should be assumed by employees, contractors, or other persons affiliated with or paid by the owner of the source.

The bill provides that permission for temporary use of enforceable supplemental control systems may be given if the smelter is unable to comply with the ultimate emission limitation contained in the State implementation plan. It therefore does not allow, even on a temporary basis, the use of such systems as an alternative to continuous emission control requirements promulgated by State or Federal agencies under section 111 (a) or (d) of the act.

The bill also provides that in the event the Administrator determines that continuous emissions control measures become adequately demonstrated to be reasonably available, he may revoke an order permitting the use of supplemental control systems. The cost of continuous emission controls is stated to be a factor to be considered in reaching such a decision. The Congress contemplates that in evaluating the cost of a continuous emission control system, the Administrator shall include any cost savings that might accrue to the source as a result of greater process efficiency or productivity, as well as any income that might be derived from the sale of any byproduct produced by the continuous emission control system. In determining what costs are reasonable for a source to bear, the Congress intends that the Administrator shall consider the resources of the owner of the source, or of any other entity of which the owner is a subsidiary or affiliate, rather than looking only to the resources of the source itself.

Finally, it is contemplated that any request for an order allowing delayed compliance that is based on an allegation that the cost of installing continuous emission controls would result in the closing down of the facility shall trigger the subpena and other powers provided the Administrator.

PREVENTION OF SIGNIFICANT DETERIORATION

The conference bill contains provisions to prevent the significant deterioration of air quality where air quality is presently cleaner than existing ambient air quality standards. The conference agreement adopts a three-class program similar to that provided in last year's conference bill. The specific increments are set forth in the statute as in the Senate bill, and are as follows: First, class I, Senate bill; second, class II, House bill except the 3-hour sulfur dioxide increment, which becomes 512 micrograms per cubic meter; and third, class III, House bill, except the 3-hour sulfur dioxide, which becomes 700 micrograms per cubic meter.

The listing of lands to be included in mandatory class I areas is as in the Senate bill. All other nondegradation areas are initially designated class II by statute upon enactment.

The Federal land manager is required to review national monuments, primitive areas, and national preserves, and shall recommend any appropriate areas for class I designation where air quality related values are an important attribute of the area. The recommendations must be made within 1 year, with recommendations going to the State involved, and to Congress. The Federal land manager shall consult with the States in determining these recommendations.

The procedural requirements for redesignating an area as class III are accepted from the House bill. The following areas are not eligible for class III designation if the area is over 10,000 acres: national monuments, national primitive areas, national preserves, national wildlife refuges, national lakeshores and national seashores, new national parks, new national wilderness areas, and any other new areas in these categories created after enactment. This conference agreed to procedures whereby a source could be granted a variance from the class I increments for sulfur dioxide. The variance authorizes the Governor of the State to permit the maximum allowable increase specified for 3-hour and 24-hour concentrations of sulfur dioxide in class I areas to be exceeded during 5 percent of the days of the year.

In no event would the maximum concentrations in the class I area be allowed to exceed the class I increments by more than 8 percent of the primary air quality standards when the terrain in the class I area is below the center line of the plume from the source, or exceed the class I increments by more than 15 percent of the primary standards when the terrain in the class I area is 900 feet above the base of the stack.

In order to grant a variance from the sulfur dioxide class I increment for a proposed source, the Governor, after notice and opportunity for public hearing, must find that the facility cannot be built without the variances. This would include such determinations as these:

There exists no economically feasible alternative sites at which the proposed facility could be located such that the sulfur dioxide class I increments would not be violated; and

The proposed facility is needed by a specific date and that the size of the facility at the proposed site cannot be reduced to meet the class I increments and continue to operate in an economically efficient manner.

In the case of Federal mandatory class I areas, the Governor must also find that the class I variance will not adversely affect the air quality related values in the area. In making this finding the Governor is required to seek the recommendation of the Federal land manager and in granting the variance he must obtain the concurrence of the Federal land manager. In situations where the proposed facility is located in one State and the affected class area is in an adjacent State, the Governor must consult with the Governor of the adjacent State.

If the Governor recommends a variance for Federal mandatory class I areas contrary to the recommendation of the Federal land manager, the Governor's recommendation and the recommendation of the Federal land manager are to be transmitted promptly to the President. The variance could not become effective until the President approves the Governor's recommendation. The President must grant or deny the variance within 90 days.

In making this decision, it is intended that, in addition to the air quality impacts of the proposed facility, the President consider the need for such facility in the national interest, the availability of alternative sites for the facility and the potential to provide the service of the proposed source from alternative sources or category of sources. The President's decision will be a final, nonreviewable decision.

Throughout the debate on nondegradation, there have been concerns expressed that the scheme in the Senate bill was too restrictive for new sources attempting to locate in clean air areas. I have consistently opposed that view. I think that the Senate bill provided ample room for the kind of new growth that can best meet the country's needs.

But those who continue to disagree with my view should look closely at the conference report. It has the potential for a State to allow more emissions in clean air areas than did the Senate bill. Such an opportunity is available uder the class III increments

The Senate did not have class III increments. The most crucial and limiting increment is frequently the 24-hour sulfur dioxide increment. The class III in

the conference report would allow an 80-percent increase beyond the Senate bill in the amount of sulfur dioxide that could be added to existing air quality in an area. It is my hope that States will use the class III approach with great care.

There are important procedures for the designation of a class III area. The decision to establish such an area should not be made lightly. Once it is made, it is not likely to be reversed, though reversal is not precluded. The steps that must be taken to redesignate an area as a class III area are these:

First. The Governor of the State, after consultation with the legislative committees in the State Legislature, approves the redesignation.

Second. Local governments representing a majority of the residents of the area must agree with such a designation. This agreement is most likely to be in the form of a resolution adopted by the local governmental unit. The local government that analyzes the decision is intended to be that governmental unit with statutory or constitutional authority to make such decisions and would not be required of each unit of Government in the area unless such authority was vested in such unit.

Third. The creation of a class III area cannot lead to emissions that will cause another area to exceed the increments that apply in this second area. For example, a class III area would have to be located at a sufficient distance from a national park so that the emissions resulting from activity in the class III area to not exceed the class I increments over the park. We know from the studies of powerplant siting that have been conducted that once major sources of emissions move a reasonable distance, there is room for very large facilities to be located without exceeding the class I increments.

If Federal lands are involved, the Federal land manager must be consulted, but the Federal land manager has no veto over the authority of the State and local governments in this redesignation. That is an important concession to States with substantial Federal lands.

It will be possible for areas to be designated as class III. It will require analysis and political support of the community and State. It is not an impossible burden, nor an unreasonable requirement to ask people who live in these areas to participate in decisions which affect their air quality.

NEW SOURCE PERFORMANCE STANDARDS

Under the Clean Air Act Amendments of 1971, section 111 requires that EPA promulgate performance standards reflecting the best system of emission limitation for new sources. Congress had several reasons for including this requirement. First, standards with a degree of uniformity are needed to avoid situations where some States may attract industries by relaxing standards relative to other States. Second, stringent standards enhance the potential for long-term growth. Third, stringent standards may help achieve long-term cost savings by avoiding the need for more expensive retrofitting when pollution ceilings may be reduced in the future. Fourth, certain types of standards for coal burning sources can adversely affect the coal market by driving up the price of low-sulfur coal or effectively excluding certain coals from the reserve base because their untreated pollution potentials are high. Congress does not intend that new source performance standards contribute to these problems. Fifth, the standard-setting process should create incentives for improved technology.

In conference, it was agreed to clarify Congress intent in section 111. In particular, the requirement for best system of emissions reduction has been more narrowly redefined as best technological system of continuous emission reduction. Where control technology to accomplish a substantial degree of pollutant removal exists, no sources may comply simply by burning untreated fuels. All new source performance standards must be revised to reflect this change within 1 year of these amendments' passage.

A new provision would require that the new source performance standard for fuel-burning sources be comprised of both an enforceable percentage reduction requirement and an emission ceiling. If new sources use precombustion fuel treatment in order to meet pollutant reduction requirements, the new sources and their suppliers must document the pollutant reduction taking place.

In requiring a percentage removal standard, EPA is authorized to give credit for minemouth and other precombustion fuel treatment processes whether or not undertaken by the source itself.

EPA's Administrator is given the flexibility to set a range of pollutant removal based on varying fuel characteristics if he finds that the NSPS objectives described are not undermined.

COAL CONVERSIONS

The coal conversion provisions of the bill amend the Clean Air Act by extending EPA's authority to grant compliance date extensions to sources which must convert to coal burning as a result of Federal Energy Administration, FEA, orders or natural gas curtailments and by improving on the procedures for granting such extensions by eliminating the "significant risk" provision, making the regional limitation a rebuttable presumption, and providing for State disapproval of EPA certifications to FEA of the date a source can burn coal and meet primary standard conditions.

Under the bill, compliance date extensions for sources converting to coal may be issued in the same manner as any delayed compliance order, except that certain provisions are included to take account of the special circumstances which affect these sources. First, although coal conversion may be accomplished under a delayed compliance order before a source can burn coal and meet the applicable State implementation plan, the "primary standard condition" assures that such a source will not convert until it meets whatever enforceable conditions are necessary to assure that the national primary ambient air quality standards will be met at all times.

Second, if the source is located in an area where the primary standards are already being exceeded, the "regional limitation" assures that the source will not convert until it meets the implementation plan requirements. The Administrator will presume the applicability of the regional limitation if the primary standards are being exceeded anywhere in the relevant air quality control region unless the source owner—or some other person—presents evidence upon which the Administrator determines that the source's emissions will not effect concentrations of pollutants where the standards are being exceeded and that the source's emissions will not cause or contribute to excursions above the national standards. This is a change from the present provision which automatically imposes a regional limitation without an opportunity to rebut the presumption of impact on primary standards.

However, the question of applicability of the limitation would not remain open indefinitely, and evidence must be submitted well before the Administrator makes his certification to FEA. In addition, the Administrator should require clear and convincing evidence before finding that a regional limitation does not apply since wherever there is doubt, health should be protected by requiring that the implementation plan be met before conversion.

Finally, a delayed compliance order issued to a converting source must provide for compliance by December 31, 1980. However, in recognition of the special problems such sources may encounter, an additional order of up to 5 years' duration may be issued if a source is unable to comply by December 31, 1980. No extension beyond December 31, 1980, could be granted unless the source cannot, by acting expeditiously and in good faith, comply by that date.

In recognition of the concern of State authorities about the impact of increased air pollution from sources converting to coal, the bill adds a new procedure by which a State may veto any decision of the Administrator to permit coal burning prior to compliance with applicable State implementation plan requirements. The State veto would be in the form of a disapproval of the Administrator's certification to FEA of the date the source can burn coal and comply with applicable primary standard conditions. This provision protects the States' interest while preserving the Federal nature of the air pollution control aspects of the coal conversion program in accordance with pending energy legislation.

The bill would also eliminate the present provision of the Clean Air Act for EPA suspension of FEA prohibition orders where emissions from a coal conversion source would result in significant risk to public health.

NONATTAINMENT

The nonattainment sections of the conference bill represent an amalgamation of the House and Senate bills. For areas violating any national ambient air quality standard—NAAQS—the States must submit revised implementation plans no

later than January 1, 1979. These plans must provide for NAAQS attainment as expeditiously as practicable, but no later than July 1, 1982. The only exception is for the automotive-related national ambient quality standards. Where a State submits a plan by January 1979 which provides for enforcement of all reasonably available measures as expeditiously as practicable, the State may provide for attainment in a two-phased submission, with the final submission not due until January 1, 1982. This revision must provide for attainment as expeditiously as practicable, but not later than the firm deadline of December 31, 1987. Where States do not submit adequate plans, the Administrator must promulgate his own plan insuring attainment by firm deadlines.

An important aspect of these provisions is the treatment of new and modified stationary sources in nonattainment areas. The conference bill ratifies EPA's "emission offset" interpretative regulation, published in the December 21, 1976 Federal Register at pages 55524–30. Permits may be issued to new and modified sources before July 1, 1979 only if the requirements of this interpretative regulation are followed. Of course, States are free to apply more stringent requirements if they choose.

The conferees were aware that EPA, in implementing the interpretative regulation, has provided some allowance for the phenomena of natural dust and long-range transport of photochemical oxidants and their precursors. EPA may continue to authorize States to take account of these phenomena so long as attainment of the NAAQS by the required dates is assured.

On and after July 1, 1979, new and modified sources may be granted construction permits only if the permits are in conformity with the requirements for revised implementation plans set forth in the conference bill. Under the revised implementation plan, a State which desires to permit new and modified sources in nonattainment areas may do so under two options: First, it may continue, under the basic "emission offset" policy, to allow new sources only when more-than-offsetting emission reductions are secured prior to the new facility's startup date; or second, it may provide an allowance for new source growth in its plan, so that new sources may be permitted without case-by-case offset determinations so long as the emissions are within the approved quantified allowance and the net effect will be reasonable further progress toward NAAQS attainment by the time required.

The Administrator will be required to monitor the States' implementation of these requirements. Whenever a State issues a permit which does not insure that the requirements of the act are being—or will be—met, he will be obligated to take whatever action may be necessary, whether in an administrative or judicial forum, to prevent the source from constructing or modifying.

I should note that the test for determining whether a new or modified source is subject to the EPA interpretative regulation—and to the permit requirements of the revised implementation plans under the conference bill—is whether the source will emit a pollutant into an area which is exceeding a national ambient air quality standard for that pollutant—or precursor. Thus, a new source is still subject to such requirements as "lowest achievement emission rate" even if it is constructed as a replacement for an older facility resulting in a net reduction from previous emission levels.

A source—including an existing facility ordered to convert to coal—is subject to all the nonattainment requirements as a modified source if it makes any physical change which increases the amount of any air pollutant for which the standards in the area are exceeded.

I should also make an important point about the provision which allows States to submit their plan revisions in two phases for the automotive-related NAAQS's. The States must include all reasonably available measures in the first phase, 1979. The fact that the second phase may be deferred until 1982 does not excuse States from including measures in the 1979 submission which might take more than 3 years to develop and implement fully. The advantage of the two-tiered approach, with a possible 10-year extension for attainment, is to provide a longer time frame to plan for and phase in necessary controls so as to minimize disruption. The purpose is not to put off facing the attainment problem until 1982. Therefore, any measure which is necessary to insure attainment by 1987 must be included in the 1979 revision if planning and implementation must begin now in order to be successful by 1987.

Under the conference bill, the Administrator will be required to promulgate plan revisions insuring NAAQS attainment by the appropriate deadlines where a State's plan is inadequate. Whenever the Administrator promulgates a plan revision, he will not be authorized to include the allowance for new source growth described in the second option above. Under an EPA plan revision, new and modified sources may be permitted only if sufficient emission offsets are secured prior to issuance of the permit.

AUTO EMISSION STANDARDS

The following table deals with the auto emission standards and what was done on this in conference as compared to the House bill.

Model year	House bill			Conference bill		
1977–79	1.5	15	2.0	1.5	15	2.0
1980	.41	9	2.0	.41	7.0	2.0
1981	.41	9	2.0	.41	[1] 3.4	[2] 1.0
1982	.41	9	[3] 1.0			

[1] Possible 2-yr waiver to 7 gpm.
[2] Innovative technology or diesel waiver to 1.5 gpm.
[3] Indefinite waiver available to 2.0.

This, of course, was one of the most difficult issues between the House and the Senate. The two versions represented, I think, the widest gap between the House and the Senate, and there were negotiations in both directions over a considerable time. The conference finally adopted the standards for hydrocarbons, carbon monoxide, and NO_x which are indicated in the table I have inserted in the RECORD.

The most important aspect of the conference agreement on this issue is its finality with respect to the achievement of the ultimate auto emission standards required for public health, by a date certain. It was the overriding sentiment of the conferees that we agree on a timetable which would not provide only more opportunity for the auto industry to lobby for further delay. It is high time this issue was settled; in fact, the Congress is long overdue in its final resolution of the issue. I would not have believed in 1970 that we would ultimately provide the auto industry for a longer period of time to comply with emission standards than the manufacturers themselves requested of President Nixon in 1969. So be it. We have finally completed the last round. The conference bill schedule contains no allowance for lobbying time. It does allow more than adequate lead time, but if the industry is to meet the final 1981 standards, the job must be started today. They have only one additional model year before the statutory hydrocarbon standard must be met in 1981. They have only two additional model years, 1979 and 1980, before all three of the statutory standards must be met, in 1981.

There are limited waivers available. The 1981 carbon monoxide standard may be waived for any model line of vehicles in 1981 or 1982 if the Administrator makes several specific findings: that public health does not require attainment of the statutory standard; that the waiver is essential to the public interest; that all good faith efforts have been made to meet the statutory standard; that control technology to meet the statutory standard will not be available, taking into account cost, driveability and fuel economy; and the study by the National Academy of Sciences does not disagree with his finding on availability of technology.

The applicant must apply for such a waiver for each model line he wishes to certify at 7.0 carbon monoxide instead of the statutory 3.4 standard. The Administrator is then required to make each of the findings specifically for each model in order to grant the waiver.

The determination of whether a carbon monoxide waiver is essential to the public interest or the public health or welfare of the United States will, of course, be affected by the performance of the industry as a whole. If only a small percentage of cars appear unable to meet the statutory standard of 3.4 grams, the denial of such a waiver would not make it impossible for the industry to meet the basic demand for automobiles. In addition, the inability of only a small number of cars to meet the statutory carbon monoxide question may call into question the good faith effort of the manufacturer.

This waiver is based upon the feeling of some of the conferees that there may be difficulty in meeting the statutory standards across the board in 1981. I do not share that view myself. From the testimony I have seen, it is clear that if the manufacturers put forth a good faith effort, the statutory standards can be met on every single model line in that year. However, if a manufacturer does

put forth a good faith effort, and it does develop that a particular model line will be unable to meet the 3.4 CO standard in 1981, then the waiver is available, if the Administrator makes certain findings.

This waiver is not a general waiver for all manufacturers, nor is it a general waiver for all models of vehicles produced by a single manufacturer. The waiver is intended to assist in the deployment of new technology. It is not to be considered a step in the direction of relaxation of the statutory carbon monoxide standard. The committee has received testimony that carbon monoxide emissions by vehicles on the road are double the amount permitted by the standards. There are projections that show that a relaxed standard for carbon monoxide would cause between 65 and 130 percent more violations of the health standard between 1980 and the year 2000. And, when we deal with reality, not with computer projections, we find that today, Louisville, Ky. is 263 percent above the carbon monoxide standards; Fairbanks, Alaska, is 254 percent above it; and New York City is 392 percent above the health-based standard. In the face of this reality it would be absurd and irresponsible to consider relaxation of the statutory carbon monoxide standard. Therefore, the waiver in this bill is tightly constrained to apply only to the minimum extent necessary.

The NO_x waivers are also narrow. Diesel engine vehicles are eligible for a single waiver up to 1.5 NO_x from the 1981 standard of 1.0 NO_x for 4 model years, through 1984, only if the waiver is necessary to permit the use of diesel technology in that class of engines or vehicles, in order to stimulate exploration of its value as a passenger car engine. This waiver is to be applied on a class or category basis, rather than across the board. It is only available for a particular class or category of light duty vehicles if it is necessary to the application of diesel technology to that class or category of light duty vehicles. Thus, for example, it may develop that the diesel waiver is unnecessary for demonstration of the diesel technology in the lower weight classes.

A similar waiver of the 1.0 NO_x standard to 1.5 NO_x is available for any 4-year period beginning in 1981, to allow the use of innovative technology. The conferees defined the category of innovative technology to assure that the waiver was used only for the purpose of stimulating new, currently unmarketed technologies. The Administrator must find specifically that such waiver will not endanger public health; that such waiver will result in significant fuel savings at least equal to the fuel economy standard applicable in each year under the Energy Policy and Conservation Act; and that the technology has a potential for long-term air quality benefit and has the potential to meet or exceed the average fuel economy standard applicable under the Energy Policy and Conservation Act at the expiration of the waiver.

The innovative technology waiver is intended to provide encouragement for manufacturers to develop innovative power train or emission control technology. It is not intended to be available for existing technologies.

Therefore, it may not be used for any technology which was utilized by more than 1 percent of the light duty vehicles sold in the United States in the 1975 model year. In making such determination, the Administrator is to include variants of a given technology together in determining whether a 1-percent sales figure was reached, rather than considering modest variations of a given technology to be "different technologies." Then, to emphasize the experimental nature of this provision, the waiver cannot be applied to more than 5 percent of a manufacturer's production or 50,000 vehicles, whichever is greater, in any model year even though several innovative technologies may be tried by a manufacturer in a given year. The waiver may be granted for a period of up to 4 model years, but if a shorter period is sufficient to demonstrate the technology, as determined by EPA, the Administrator shall grant the waiver for a shorter period of time. And, only one waiver should be necessary to demonstrate the capability of a particular technology. Furthermore the waiver applies only to the nitrogen oxide standard, which can be waived to a level as high as 1.5 grams per mile. But, if a lower emission level is adequate to permit demonstration of the technology, then the waiver should only be given up to that lower level, and if the technology can be adequately demonstrated at 1.0 grams per mile of NO_x, then no waiver shall be granted.

For both waivers there are additional protections offered: notice, and opportunity for public hearing, a requirement that such waiver not endanger public health, a requirement that diesel engines meet the average fuel economy standards in each year under the Energy Policy and Conservation Act, or amendment thereto, and a requirement that the innovative engines have good prospects of meeting the fuel economy standards at the end of the waiver period. And finally, in order to assure that the waiver will be targeted towards long term air quality benefits, the waivers may only be granted if there is a substantial likelihood that the engines will be able to comply at the end of the waiver period with the statutory emission standards. Thus the waiver is not intended to provide a loophole in the statutory standards, but only to provide an opportunity for technology development which may lead to greatly improved emissions performance in the next decade.

Mr. President, we have adopted an auto emissions schedule which meets our public health needs, and accommodates the industry's lead time requirements.

First, we have set a date in the near future by which all auto emission standards required for achievement of the health-related air quality standards will be met. The statutory hydrocarbon standard must be met 1 year earlier, in 1980. This is significant because control of hydrocarbon is the key to control of oxidant, the irritant factor in photochemical smog.

In a year when Washington, D.C., is reporting more smog alerts than ever before, and rural States suffer statewide air pollution alerts, it is absurd to even consider a delay in statutory HC control. The conference bill requires this important step to be taken as soon as it is possible with due regard for leadtime, in model year 1980.

The health-related carbon monoxide standard is retained, despite strong urging, but with no health data, from the House to permanently relax the standard to 9.0 grams.

A firm NO_x standard is also required. This, in conjunction with the hydrocarbon standard, speeds the cleanup of severe oxidant levels in our cities down to the health-related ambient standard. The House bill, on the other hand, allowed such expansive waivers of the NO_x standard up to the current 1977 level that the statutory standard would never have been required to be met.

Second, the conference substitute also provides a reasonable level of NO_x control. The tightest NO_x standard required by the House bill for all practical purposes is the current requirement of 2.0 grams/mile, which represents only 43 percent control compared to the 3.5 grams/mile emitted by uncontrolled autos in 1968. NO_x control has clearly lagged behind that for HC and CO, where 83 percent control has already been achieved. The conference bill would require 71 percent control of NO_x compared to uncontrolled vehicles, a level that will reduce national NO_x emissions in 1990 by 4 million tons.

Third, the conference substitute provides enough leadtime to meet tighter standards in 1980, despite industry arguments to the contrary. Data supplied by the manufacturers themselves show that they will enter, in a few months, the first phase of their emissions development program for that model year. This "production development" phase normally would last about 6 months, leading to basic system selection next April or May, so the leadtime is clearly adequate. Furthermore, present law requires compliance with even tougher standards in 1978, so we must assume that they have already done much of the production development to meet 1978 standards, or have simply completely ignored the requirements of present law. Finally, all manufacturers are already meeting the California standards of 0.41/9/1.5, which are more stringent overall than those in the conference bill in 1980.

Fourth, the conference bill provides flexibility through limited waivers to stimulate the development of innovative technologies, and the diesel, which require additional time to achieve the 1.0 NO_x standard.

The carbon monoxide waivers provide the industry with time to solve the problem they appear to have in meeting the 3.4 standard in conjunction with a 1.0 NO_x standard.

All in all, the conference bill auto emission cleanup schedule is an equitable one. I would have preferred some statutory cars in 1980, but I have accommo-

dated the desires of other conferees in an effort to resolve this issue for the last time.

PRODUCTION LINE TESTING

With regard to production line testing, this bill does not specifically demand that EPA require testing on every car although we believe that EPA already has the necessary authority to do that. Rather the conference bill reflects a desire by the conferees to have production line testing provide assurances by means of short tests that, with reasonable statistical certainty, each car in the hands of individual consumers could pass an inspection maintenance short test. This does not of course interfere with EPA's existing authority to require full Federal test procedure tests on selected configurations of cars coming off assembly lines.

We have not adopted the Senate bill provision authorizing States to require new cars to pass inspection tests as a condition of sale in nonattainment areas but have susbtituted the requirement that dealers certify at time of sale that the vehicle would pass the I/M test. Since States will not be preempted from requiring that the vehicle pass an I/M test as soon after registration as desired, this compromise does not significantly change the Senate bill. Should vehicles fail this I/M test, of course, the consumer would be protected by the warranty.

In the area of performance warranty, we have provided for full coverage of the vehicle for 24 months or 24,000 miles. The manufacturer will be required to restore to standards any car which fails an inspection test comparable to the production line test unless the manufacturer can establish either that the owner's failure to perform the required maintenance as set forth in the owner's manual or improper vehicle operation caused the failure. Further, the performance of emission control devices or systems, i.e. components installed on or in a vehicle for the sole or primary purpose of reducing vehicle emissions, would be warranted for 5 years or 50,000 miles. If failures of such devices or systems cause a vehicle to fail an inspection test during this time, the manufacturer would again be responsible for the repair of the car unless he could show the cause of the failure to be improper maintenance or use.

The bill enacted before us today will enhance the effectiveness of the consumer's emission warranty by placing the burden of proof on the manufacturer to show that a vehicle has been improperly maintained. Consumers must only be able to demonstrate that they brought their vehicles to bona fide service facilities to have relevant maintenance performed. However, it is up to the manufacturer, if he chooses not to honor the warranty, to demonstrate that the maintenance actually performed on the vehicle which caused the vehicle to fail an emissions test constituted gross malmaintenance which could not have been foreseen by the manufacturer.

A major improvement in the bill is the explicit recognition that warranty repairs can be made by any commercial repair facility using certified aftermarket parts. The cost of such repairs of course would be borne by the automobile manufacturers.

As mentioned previously, the Senate bill would require implementation of all reasonably available control measures in order to qualify for an extension in nonattainment areas. Since I/M programs are certainly reasonably available as well as highly effective, the Senate bill requires I/M in all nonattainment areas. The conference bill reinforces this by specifically requiring I/M in all areas which required transportation control measures as part of an implementation plan in effect on June 30, 1975.

DEALER CERTIFICATION TESTING NEW VEHICLES

The Congress does not intend that the new dealer certification procedure be a meaningless exercise producing a meaningless piece of paper. It is intended to assure that new cars meet the emission standards. If they do not, it is the responsibility of the manufacturer to make them right. The testing necessary is not only allowed by the act, but it is to be strongly encouraged.

The authority of States to require postsale, predelivery testing of new automobiles, if they wish, is not preempted by section 209 of the act. Therefore, States with inspection and maintenance programs in being or planned, like Arizona, Colorado, New Jersey, and Oregon and others do have an opportunity to provide a realistic assurance to customers that new autos as purchased do meet the emission test required by the inspection and maintenance program. This opportunity for States to require postsale, predelivery testing can be just as helpful in reducing excess emissions as testing of in-use vehicles from time to time later on during their useful life. Therefore, States containing regions where primary air quality standards are being exceeded for auto-related pollutants are especially encouraged to consider postsale, predelivery testing as an attainment strategy.

Other States may also establish a similar postsale, predelivery test. This would be an excellent way of verification of the dealer certification provided in section 212 of the Clean Air Act Amendments of 1977, clearly making it more than just a paper requirement.

FUEL ADDITIVES

The conference adopted an amendment to deal with the problem of the fuel additive MMT which will effectively deal with this situation. It will also prevent the untested use of additives with cavalier disregard for harmful effects on emission control systems and devices.

The Administrator of the Environmental Protection Agency has been given broad authority to prohibit the use of an additive expeditiously between the period 6 months after enactment until September 15, 1978. At that point, the burden of proof is put on the manufacturer. Unless he can demonstrate to the Administrator that the additive is not harmful to emission control systems or devices, the additive is banned from use. The standard of proof to be met by the Administrator if he undertakes expedited action is the same as that to be met by a manufacturer to obtain a waiver of a prohibition of an additive. It must be shown that such a substance does not cause or contribute to the failure over its useful life of an emission control device or system to comply with emission standards to which it has been certified pursuant to section 206.

The measure of failure is noncompliance with the emission standards to which a car has been certified, taking into account deterioration factors. If an additive would cause or even contribute to noncompliance with an applicable emission standard at any time in the 5-year/50,000-mile useful life of an emission control system or device, the Administrator may not waive the prohibition of any additive not substantially similar to the certification fuel used in model year 1975 or subsequent model years.

As has been the interpretation in the past, the term "emission control device or system" means the entire emission performance of a vehicle. Thus, if a fuel or fuel additive causes an increase in engine emissions so as to increase tail pipe emissions or interferes with performance of a specific device or element of emission control so as to cause or contribute to the vehicle's failure to meet the standards at any point in its useful life, the Administrator could not waive the prohibition.

INDIRECT SOURCES

No conference allows one body to win on all the issues. We had to accept a number of measures that I would have preferred not to accept. I have little taste for the kind of exemption the House voted to give to so-called indirect sources. All sources ought to carry a fair share of the responsibility of cleaning up our Nation's cities. The limitation provided on the ability to control indirect sources is not an environmental step forward.

However, I underscore once again the availability of indirect source regulation as a tool to be used at the State and local levels. Although the Administrator may require indirect source review programs only with respect to Federally funded projects, he may approve and enforce an indirect source program adopted by a State as part of its implementation plan. This provision does not affect in any way any such program already approved by the Administrator and contained in a State implementation plan.

It is hoped that EPA will share its expertise and experience in this area with the States which may desire to implement such a program.

WARRANTIES

It is also unfortunate that the aftermarket issue became so volatile that the conferees felt it was necessary to reduce the warranty coverage provided in the performance warranty under the Clean Air Act. However, the retention of the original 5 year/50,000 mile performance warranty for the components of engine systems which function primarily for emission control purposes was a major victory for the Senate. I think we have

finally resolved the issue in a way satisfactory to both the consumer and the aftermarket industry.

We retained other significant measures to protect the consumer and the aftermarket which were in the Senate bill. These relate to maintenance instructions, replacement costs, and the prohibition on any communication to a car owner that his warranty is conditioned upon the use of manufacturer parts and services. The Senate also accepted strengthening amendments from the House bill which prohibit the invalidation of a warranty by the use of any part certified under regulations promulgated by the Administrator not to result in failure of an engine to comply with emission standards and require a boldface statement in car owners' manuals that maintenance may be performed at any service shop, with any certified part without invalidating the warranty.

Implementation of these amendments will enable a consumer to discharge the proper maintenance obligation under section 207 by making a reasonable effort to obtain proper maintenance, as in the use of a certified part, without having to counter a charge by the vehicle manufacturer that the non-original equipment part caused the emissions failure. The threat of such conflict might otherwise induce owners to avoid non-original parts in favor of original equipment parts.

The bill also addresses problems that could arise if a manufacturer certifies a car as requiring a replacement prior to the 50,000 miles of any part of device "principally for emissions control." When the vehicle industry uses parts related solely to emissions control, it can and should build them to avoid periodic replacement. But in those rare instances when that is not feasible, the cost should be included as an initial part of the price of the vehicle, not added later. This is intended to affect only major parts which are a part of the vehicle solely for emission control purposes, such as the catalytic muffler, air pump, or thermal reactor. It does not extend to sparkplugs or any part of the system necessary for the basic operation of the vehicle. And this requirement only extends to parts whose cost is greater than 2 percent of the retail cost of the vehicle. The replacement cost provision does not apply to heavy duty vehicles.

The committee is aware that there is potential for manufacturers to charge for such replacements, which are then never installed. The Administrator should discourage such a replacement plan, and must closely monitor the replacement outlays versus the sums paid by consumers under this provision.

With respect to the actual length of the warranty, the conferees agreed to set the 207(b) performance warranty at 24 months/24,000 miles. During this warranty period, the vehicle manufacturer would be required to bring into compliance with emission standards any car which failed an inspection and maintenance test. The warranty could be invalidated only upon a showing by the manufacturer that the owner did not perform the required maintenance or repair as set forth in the owner's manual or abused the vehicle in its operation. Requisite repairs and maintenance could be performed by any establishment—including an independent garage or service station—that uses parts certified in accordance with section 207(a). After the 24 months/24,000 mile warranty terminates, the performance warranty on the emission control system under section 207(b) would require the repair or replacement only of an "emission control device" or "component designed for emission control." The vehicle manufacturer's warranty after 24,000 miles, thus, would be limited to the catalytic converter, thermal reactor or other component installed on or in a vehicle for the sake or primary purpose of reducing vehicle emissions and would be invoked in the event of failure of the vehicle to meet emission standards at any time up to 60 months. Such limitation does not apply to section 207(a) warranties or to section 207(c) recall actions.

To the extent permitted by the Moss-Magnuson Act any establishment that uses certified parts could provide parts and services as specified in the warranty at any time during or after the warranty. This would include the right to perform work covered by the section 207(b) warranty with the right to reimbursement by the vehicle manufacturer, to the extent permitted by the Moss-Magnuson Act or by subsequently enacted legislation which amends or supersedes that act. The provisions of this section are not intended to supersede or alter warranty provisions provided under any other law.

OZONE

The stratospheric ozone protection section provides for a comprehensive study of the cumulative effects of all substances, practices, processes, and activities on the stratosphere. This section establishes a Federal coordinating committee to review and comment on plans for research and the results of such research and studies. Furthermore, this section provides the Administrator with authority to propose regulations for the control of any substance, practice, process, or activity which may reasonably be anticipated to affect the stratosphere, if such effect in the stratosphere may reasonably be anticipated to endanger public health or welfare.

This section assures that there is adequate Federal authority to prevent all actual or potential risks to the stratosphere—including, for example, any risk posed by the supersonic transport—and complements the existing statutory provisions in the Toxic Substances Control Act, the Federal Food, Drug, and Cosmetic Act, the Federal Insecticide, Fungicide, and Rodenticide Act, and the Consumer Product Safety Act. This provision is not intended to prevent the Administrator from relying upon other authority within his jurisdiction in appropriate cases. Should the Administrator determine that further regulation is warranted in the 2-year period following enactment during which time further research and evaluation will be conducted, he should take any necessary steps within his authority to reduce or eliminate such risk.

I endorse the actions the Federal agencies have already taken in addressing the potential threat to the ozone layer from halocarbon emissions and wish to encourage further coordination or regulatory and research activities.

ECONOMIC IMPACT ASSESSMENTS

The requirement that EPA must perform Economic Impact Assessments on certain regulations is intended to assure that EPA does a responsible assessment of the cost and economic implications of its regulatory actions. The intent here is to make sure that appropriate information is made available regarding these impacts; but this section is not intended to require that Agency resouces be devoted to doing analyses that will not provide useful information, nor is it intended to allow delay of, or alteration in the criteria for, regulatory actions.

Consequently, the Administrator may make reasonable judgments about which analyses must be done to comply with this section and the depth of analysis required. For example, the Administrator might reasonably conclude that consideration of the inflationary effects of a given regulation should be limited to analysis of price increases for directly affected products if the magnitude of expenditures is small enough to cause insignificant effects on nationwide price indices; hence, in such a case macroeconomic projections need not be performed to comply with this section. Nor is it intended that detailed analyses be done to quantify the impacts of actions where the impacts are obviously inconsequential.

It is not intended that compliance with this section should place an undue burden on Agency resources. The Agency is currently meeting the intent of Congress in this regard in most cases through compliance with Executive Order 11821 on inflation impact statements.

ADMINISTRATIVE PROCEDURES

I am pleased to report that the Senate position prevailed with respect to changes the House had proposed in the administrative procedures applicable to EPA's actions under the Clean Air Act, which might have had grave consequences for the entire regulatory program.

The House bill would have overformalized the rulemaking procedures of the Environmental Protection Agency. The administrative procedures of the Federal agencies have only in the past decade recovered from the stasis induced in the 1950's by an overdose of procedures suitable for the courtroom, but unsuited for policymaking in Federal administrative agencies.

The Senate conferees succeeded in eliminating a House provision that would have provided for cross-examination in EPA rulemaking. In the minds of the Senate conferees, the potential for abuse in this proposal far outweighed any advantages it might have had.

The House had also proposed that the rules promulgated by EPA be subject to a different standard of review in the courts—the "substantial evidence" test—than those promulgated by other Federal

agencies. The Senate conferees could see no reason why the Environmental Protection Agency should be singled out in this way, and we were able to persuade the House conferees to agree with us. Thus, the conference bill continues the usual standard—the "arbitrary and capricious" test—for review of the agency's actions.

I think it is important to emphasize this action of the conference because some continue to suggest that for some reason EPA's actions should be scrutinized more carefully than those of other agencies. I fail to see the logic of this, and I think I speak for the majority of the members of the conference committees. I am not suggesting that the courts should not discharge their duties with respect to EPA as they do with other agencies; at the same time, I want to emphasize the intent of most members of the two committees that nothing in the bill or its legislative history was meant to single out EPA for special scrutiny either.

What disturbs me is the thought that the real issue here may not be procedure, but rather substance. To the extent that this may be true, I must strongly reiterate my objection to it.

Mr. STAFFORD. Mr. President, the Senate, the Congress and the country have waited a long time for this conference report. It is my hope that the wait will soon be over.

The conference agreement just passed by the House is a compromise. I am sure no one who participated in the conference is completely satisfied. I am sure that no one who is familiar with the issues supports every section of the bill.

But it does represent a reasonable middle ground between the positions of the two Houses on the major issues.

I am not completely happy with the schedule established for auto emissions. Nor were all other Senate conferees.

But the numbers do promise progress in automobile exhaust clean up. Those of us who wanted the final standards in place in 1980 were forced to give up 1 more year. But those who wanted to delay final standards until 1982 and then set more relaxed emissions levels also gave in.

The conference sets the final levels as they were in the Senate bill, with the possibility of only a 2-year waiver for carbon monoxide emissions from 3.4 up to 7.0 grams per mile.

Perhaps more important than the final numbers are provisions to reduce the likelihood that emissions controls in use will deteriorate drastically. Two factors contribute to better in-use results: greater care in the design and production of new cars and better maintenance by car owners.

Here again, the conference bill is not all some of us wanted, but it does promise some improvement in both factors. Dealers are required to certify that new cars will meet emissions standards. If a car fails an inspection test before the expiration of 24 months or 24,000 miles, the manufacturer must pay to bring it into compliance if the owner has performed routine maintenance.

Because areas with auto-related air problems are required by the bill to have inspection and maintenance programs, the warranty program which has been part of the law since 1970 may finally begin to have some bite.

I cannot overstate the emphasis the conferees place on the need for EPA to develop a short emissions test which correlates with certification testing. Such a test is needed to improve testing of automobiles coming off the assembly line and to make effective State I and M programs.

The need will grow as States begin to implement I and M requirements and consumers demand a test which gives them recourse against the manufacturer for deficiencies in auto design or assembly. While the conferees did not mandate it, I would say that a crash program to develop such a test should be among the agency's highest priorities. The payoff in improved air quality would be tremendous.

The differences between the House and Senate over autos gained the bulk of public attention, but several other issues are also of significance for clean air in this country.

The conferees adopted a program to prevent significant deterioration in clean air areas. While the provision differs from the one carefully developed by the Senate Environment and Public Works Committee, I believe it strikes an acceptable balance between air quality values and economic growth.

The major responsibility for case-by-case decisions on new facilities rests with the States. The determination of which areas to designate as most deserving of protection rests to a great extent with the States. The conferees rejected House provisions vastly expanding the territory required to be included in class I areas.

The Senate bill's flexibility to vary—up or down—from specified ceilings for emission increases in class I areas was retained.

In addition, a modification of the so-called Breaux amendment—the Stevens amendment in the Senate—was adopted. This would allow the President to approve a permit for a new facility where a Governor and the Federal land manager disagree on its adverse effects on a park or wilderness area.

As the Senator from Maine has pointed out, the significant deterioration scheme contains a great deal of flexibility. Its most important function may be to require thorough analysis of the effects of proposed facilities on valuable national lands before irrevocable decisions are made.

The third major issue confronting the conferees was how to deal with proposed new sources of pollution in dirty air areas. The House and Senate had dealt with this issue in similar ways, and the conference agreement, as ably described by the Senator from Maine, is a combination of the two provisions.

I would only like to note that the so-called "nonattainment" issue, which was not the subject of much controversy in conference, embodies one of the most difficult questions in our quest for clean air.

We will continue to be faced with the problem of how to strike a balance between health and growth. The resolution in this year's bill is not the resolution for all time. But it is, in this Senator's view, reasonable at this time.

The conferees did modify a provision in which I have special interest. The Senate bill included a requirement that the Administrator of EPA arrange for warnings of unhealthy air at access points to metropolitan areas. The provision contemplated highway signs and notices at major transportation terminals.

The purpose for the provision, which I introduced, was to bring to public attention the need to do better in cleaning up our air. Until the public is generally aware that air in many areas is unhealthy, there will be resistance to some of the tough measures needed to control emissions.

The conference report modified the Senate provision to require States to implement measures which effectively notify the public of unhealthy air episodes and areas. The report goes further and requires that the public be warned of the hazards associated with pollution and informed of measures which may improve air quality.

It was clear from the discussion that the conferees did not consider weather reports containing air quality information as fulfilling the bill's requirements.

States are intended to have wide latitude in devising their notification and education campaigns but they must propose measures substantially more effective than current practices in order to have their plans approved.

Mr. President, I began by saying the country has waited a long time for this bill. In order not to contribute to further delay, I will conclude by urging all my colleagues to support the conference agreement in the interest of cleaner air.

Mr. MUSKIE. Mr. President, I am sure all my colleagues are aware of the controversy underlying this issue on the occasion of our consideration of it in the Senate, the controversies underlying the deliberations of the conference committee, and the questions that have been raised about the conference result.

I want to say that we have made every effort to clarify the meaning of the conference result in a way that reassures all those who have raised questions of which we are aware. As a result, it is not my intention to call for a rollcall vote. If there are those in the Chamber who would like to have a rollcall vote, I would suggest that they indicate that at this point in order that Seantors may make their plans for the rest of the evening.

It is my understanding that that will be the last item of business for the evening. We will spend a decent amount of time explaining what we did in conference so that the record will reflect what we did, but I see no need at this point for a rollcall vote to resolve any outstanding issues of which I am aware.

The conference result and our explanation of it seems to have reassured those who had questions that the Senate conferees effectively represented the point of view of the Senate and resolved the outstanding issues in a way which is

consistent with the action taken by the Senate.

So that unless any other Senator at this point indicates the desire for a rollcall vote, there will be no more rollcall votes this evening, if I may speak for the majority leader on that point.

I would like Senators to advise on that question.

I yield to the Senator from Idaho.

Mr. McCLURE. Did I understand that the Senator is not talking about just of this conference report, but other votes throughout?

Mr. MUSKIE. There will be absolutely no rollcall votes this evening.

Mr. McCLURE. I thank the Senator.

Mr. MUSKIE. I have an understanding that no rollcall votes will be requested on the clean air conference report and we will pass that by voice vote.

Mr. SCOTT. Will the Senator yield?

Mr. MUSKIE. Yes, I yield to my good friend from Virginia.

Mr. SCOTT. A unanimous consent that there would not be a vote on final passage of the conference report?

Mr. ROBERT C. BYRD. Mr. President, I think the Senators can be taken on their word. The Senator who is managing the conference report has indicated that there will be no rollcall vote if nobody at this time asks for it.

So if no one asks for it now, the Senators understand there will be no more rollcall votes.

Mr. STEVENS. Will the Senator yield to me on this?

Mr. MUSKIE. Yes.

Mr. STEVENS. I want to say to the Senator from Maine, what he has said is correct. We have spent a great part of the afternoon and evening working on these understandings. To my knowledge, there are none left on this side, none of the misunderstandings are left on this side, and I make no request for a rollcall vote.

I must express my admiration for the way the Senator from Maine has handled the afternoon and evening and has eliminated the cause of the misunderstandings.

Mr. MUSKIE. Let me make this clear to my colleagues, I am not one to shrink from an interesting contest on the floor of the Senate, as Senators understand. But, on the other hand, I am interested in effective legislation, and I think this clean air conference report represents effective legislation in the sense that it is reflective of the reasonable kinds of accommodations necessary to make it possible for Senators of widely differing points of view to reach agreement on a national policy.

Mr. STEVENS. I shall not ask for a rollcall vote, but I would like the record to show, if there were one, I would vote for this bill, notwithstanding the fact I voted against it when it left the Senate before as it went to conference.

Mr. MUSKIE. I thank my good friend from Alaska.

I yield to the distinguished chairman of the committee.

Mr. RANDOLPH. Mr. President, I commend Senator MUSKIE.

The record, of course, indicates, as Senators know, that he was the chairman of the conference of the Senate and House on this very complex but important measure.

The Senate certainly does not necessarily follow any action taken at a prior time by the House of Representatives, but I think it is important to Senators to know that this conference report was agreed to in the House earlier today without a rollcall vote on final passage.

Mr. President, the conference report on the Clean Air Act Amendments represents more than 3 years of effort by the members of the Committee on Environment and Public Works. Work on this subject was initiated early in the 94th Congress, continued for 2 years and has been completed after 7 months of the 95th Congress. It is a thorough and careful revision of the basic statute which is intended to reduce pollution of the air from all sources in the United States.

Legislation of this type was last enacted in 1970. At that time we established a broad program to achieve steady reduction of pollutants from both stationary and mobile sources. Progress has been made but the job is incomplete. The repeated pollution alerts in Washington, D.C. this summer are just one indication that we must continue with a vigorous yet reasonable air pollution control program.

The measure before the Senate continues that program but it recognizes that the goal of enhanced environmental quality must be sought in the context of other national objectives. Some of the most extensively discussed portions of this measure, in fact, are those providing a mechanism to continue economic growth at the same time we reduce pollution levels. I believe we have succeeded in providing this balance so that pollution can be abated while orderly economic growth is sustained.

Mr. President, the conference with the House of Representatives on this legislation began in July. The conference committee met on eight occasions. Approximately 90 points of disagreement existed between the Senate and House bills. I believe it is an indication of the determination of both Senate and House conferees that these differences have been resolved and the report is before the Senate for final approvement. We moved to expedite our consideration of the issues but did not rush into hasty, ill-conceived solutions. The product of these deliberations is a measure that accommodates the approaches of both the Senate and House of Representatives and continues the basic thrust of the clean air program.

While the general objective of the Clean Air Act is the continued reduction of pollution, this bill recognizes that industrial and commercial activity cannot be and should not be stopped to achieve this purpose. The bill, therefore, enumerates conditions under which commercial and industrial expansion can take place in areas where air quality standards have not been achieved as well as in areas that are clean. The heaviest concentrations of pollution are generally found in industrialized urban areas. Most of the need for continued expansion is likely to occur in those areas. The conference report, therefore, establishes procedures under which carefully controlled growth will be permitted. The price of this expansion, however, is continued progress toward pollution abatement.

At the same time, the Members of the Senate and House recognized that there would need to be development in areas that are now relatively free of air pollution. Although this issue is of primary concern to western States, it is applicable throughout the country. The present policy of sharply restricted growth in clean air areas is, therefore, modified by the bill so that development can take place in these portions of the country. Such activities must take place under carefully controlled conditions to assure that air quality is not severely affected.

The other general area of major concern is the reduction of pollution from motor vehicles. The revision of those portions of the act relating to mobile sources was one of the most difficult tasks faced by both the Senate Committee on Environment and Public Works and by the conference committee. The standards set in the 1970 act have not been achieved and cannot for various reasons be achieved at this time. An extension was necessary. The Senate conferees felt that the extension should not be so lengthy as to result in a relaxation in efforts to achieve the goal of automobiles which emit minimum amounts of pollution. The extra time desired by the industry is provided in this bill, but the general thrust of the pollution reduction program is maintained. I hope, Mr. President, that this is the last time that the Congress will be called upon to act on this subject. I believe that the conference agreement establishes realistic emission standards and a realistic timetable for their achievement.

Mr. President, during development of this legislation I was particularly concerned with the issues that relate to the production of energy in our country.

Specifically, I gave attention to those portions of the bill which relate to the utilization of coal in meeting these energy needs. I have long believed that a clean environment and energy independence are compatible. We must expand our utilization of domestic coal to meet energy needs and I am convinced that this can be done without reducing our commitment to improved environmental quality.

If we are to use more coal, adjustments must be made in the pollution program. The amendments to the Clean Air Act, therefore, do not envision any relaxation of air quality standards but provide mechanisms to facilitate the continued substitution of domestic coal for oil and natural gas. In cases when conversion of coal is taking place, compliance deadlines can be adjusted. Elsewhere in the conference report are requirements that advanced technology be used on coal-burning facilities to assure the lowest possible level of emissions.

Yet another coal-related provision is one I sponsored with the Senator from Ohio, Mr. METZENBAUM. This section provides that sources burning coal or those ordered to convert to coal can be directed to use locally available supplies rather

than importing their fuel from other areas. Recognizing that in some instances this may involve the burning of high-sulfur coal, the provision also requires the use of pollution control technology to keep emissions at the lowest levels.

Mr. President, I have discussed briefly some of the major points of this conference report. Like the program it modifies, this legislation is broad and comprehensive. It affects individuals and businesses throughout the United States. To achieve the clean air goals we established in 1970, a substantial effort will continue to be required but I do not believe the requirements of this legislation will impose intolerable burdens on any individual or segment of our society. The conferees were fair and balanced in their approach to this bill. I believe it to be a well-reasoned response to a complex and difficult problem. Mr. President, I urge the Senate to approve the conference report.

Mr. GARN. The bill requires analysis of "areas which may be affected by the proposed redesignation."

Do you mean local area "directly" affected, or areas where coal is mined a long way away, or exactly what?

Mr. MUSKIE. The term used in the bill is "of the area so redesignated." So only governments representing people in the area must give approval. This means the area within the boundary of the proposed area.

Mr. GARN. If a plant is sited near a mountainous area and modeling indicates that violation would occur on a few days a year, could the State redesignate only that small area class III.

Mr. MUSKIE. Yes, but it must be within the context of the class III designation process set forth; a State could so redesignate if the criteria in the approved implementation plan were followed.

Mr. GARN. Mr. President, I would like to ask the gentleman from Maine some questions about the intent of the conferees on a matter pertaining to class II.

It is my understanding that in the conference a consideration for the differences between high and low terrain was taken into consideration with respect to class I areas, is that correct?

Mr. MUSKIE. That is correct.

Mr. GARN. I understand that the conferees made no allowance for any kind of a variance in class II because the conferees agreed to increase a key pollution increment by 50 percent, and also provided three classes. Such problems can be solved, therefore, by the ability of the Governor to redesignate lands from class II to class III. Does this mean that the bill is somewhat flexible to meet these kinds of special problems in local areas?

Mr. MUSKIE. Yes, to the extent that it does not violate the purposes, procedures or requirements of this part and allow a deterioration of air quality in those areas. If it is necessary to accommodate an industrial facility in a class II area, the bill does provide for the means by which the Governor could redesignate the areas class III.

Mr. GARN. One of the major problems in establishing the effect of pollutants is the difficulty in establishing modeling techniques which fit the circumstances. Is it the intent of the conferees that the EPA require use of modeling techniques which will take into account and accurately predict air quality when siting plants in high terrain?

Mr. MUSKIE. The conferees recognize the problems related to modeling and siting in areas of elevated terrain. It is intended that those areas can be redesignated if necessary, and that appropriate and accurate modeling techniques be developed by the EPA through an air quality modeling conference, including models which apply in cases of plants proposing to site in areas where impact on high terrain occurs.

Mr. GARN. Is the analysis reviewable in the courts for adequacy?

Can any citizen bring the suit, or only EPA?

Mr. MUSKIE. The analysis would be reviewable in court under existing legal procedures. Either side would have access to the courts. Citizens have the right to sue in court to enforce certain specific requirements of the State plan set forth by the State.

Citizen suits are limited against a source to certain requirements of the act and the administrator for failure to perform a nondiscretionary function.

Mr. GARN. Can land currently under study as part of a "roadless area review," or for possible wilderness, be redesignated class III?

Mr. MUSKIE. Yes, as long as it has not been established as a wilderness area. Once it has been made a wilderness area, it is a class II area. It can be redesignated class I by the State, but not class III.

Mr. GARN. Is it your opinion that this entire redesignation process would take months, rather than years?

Mr. MUSKIE. Yes, if the full procedures set forth in the State plan have been fulfilled. On the other hand, if the redesignation were for a specific county, and that county had not approved the redesignation, then it might take years for the county to give its approval, or it might never give such approval.

If no air quality data had been gathered in the area, then a few months might not develop adequate data. As long as a variety of weather conditions and other such factors are considered, the analysis will be deemed adequate.

Mr. GARN. Who is the Federal land manager?

Mr. MUSKIE. The Federal land manager is the Secretary of the Department with jurisdiction over the land involved. He makes the decisions involved.

Mr. GARN. One of the major problems in establishing the effect of pollutants is the difficulty in establishing modeling techniques which fit the circumstances. Is it the intent of the conferees that the niques which will accurately reflect the differences between high terrain as compEPA be directed to use modeling techpared to ordinary terrain?

Mr. MUSKIE. The conferees recognize the problems related to modeling and siting in areas of elevated terrain. And that modeling techniques should be developed by the EPA to more accurately reflect the condition in high terrain areas and do not discriminate by applying inappropriate techniques in high terrain areas.

Mr. GARN. The act requires the State to provide an analysis of the impacts of the proposed redesignation. The effects specified in the act are health, environmental, economic, social and energy.

How extensive must this analysis be?

How long would it take to prepare such a document?

If the area in question is fairly small, can this process be shortened?

How long must the analysis be available prior to the public hearing?

Mr. MUSKIE. The State will revise its State plan to establish the appropriate procedures. So the initiative and the basic decision rests with the State. EPA then approves the State plan. Those procedures then govern all redesignations in a similar fashion. Only if EPA found some significant flaws in the State procedures proposed would EPA disapprove those, and then EPA would only disapprove the portion of the plan that was flawed. EPA would then promulgate that portion of the plan, and it would provide the certainty desired in redesignating class II to class III.

The length of the documents, the time the analysis would be available for public examination, and other such important details would be set forth in the State plan.

Mr. GARN. EPA has the right to disapprove the redesignation on procedural grounds. Can you give me some examples of some procedural error which might trigger a disapproval?

Mr. MUSKIE. Yes. If the State held a hearing without having the analysis available prior to the hearing, then that would violate the procedural requirements and might trigger disapproval.

If the redesignation had not been approved by the appropriate local governments—principally by resolution—the redesignation could be disapproved.

If no notice had been given regarding the hearing, the redesignation could be disapproved.

Mr. STEVENS. Mr. President, I would like to engage the manager of this conference report in a colloquy regarding the status of certain Federal lands located in Alaska. My understanding is that the national resource lands, as designated by the Federal Land Policy and Management Act of 1976, which were formerly referred to as the public domain are class 2 lands under this conference report and subject to redesignation as class 3 under appropriate authority outlined in the report.

Alaska has nearly one-half of the country's public lands and the great majority of the national resource lands.

However, virtually all the national resource lands in Alaska are withdrawn under specific public land order or by legislation pursuant to a particular Federal purpose. My question is what the status of these withdrawn lands are under the conference report.

There are three separate withdrawals that act upon the national resource lands in Alaska. All are related to the implementation of the Alaska Native Claims Settlement Act which was passed in 1971. The first of these withdrawals is a statutory withdrawal under section 11 of the Alaska Native Claims Settlement Act for selection by Alaska Natives pursuant to the entitlement granted them under the legislation. Additionally, other lands are withdrawn for selection by public land order for Native selection pursuant to the Claims Act.

The second type of withdrawal is what we call a d-2 withdrawal. This withdrawal extends to approximately 80 million acres of the national resource lands which are currently under study as potential additions to the national parks, wildlife refuges, wild and scenic rivers, and forest systems pursuant to section 17(d)(2) of the Alaska Native Claim Settlement Act. The third type of withdrawal extends to the remaining national resource lands in Alaska and the d-2 withdrawals and those lands withdrawn for native selection.

The Secretary, under section 17(d)(1) of the Alaska Native Claims Settlement Act has withdrawn the remainder of the national resource lands and these other lands under what we call a d-1 underlay pursuant to the development of regulations for classification for specific land uses on these lands.

I would ask the manager of this report what the status of these lands are. I presume they are class 2 lands subject to redesignation as class 3, but it is very important that such definition be made clear. The fact that these lands are withdrawn for potential study as areas that may eventually be designated as class 1 or class 2 lands not subject to redesignation leaves this matter unclear. Please clarify this for me.

Mr. MUSKIE. There is no question that these lands are all class 2 lands subject to redesignation as class 3. The specific Federal withdrawal pursuant to a public land order does not affect their status under the Clean Air Act. All national resource lands, so long as they remain national resource lands, are class 2 lands subject to redesignation under the act to class 3. The only class 2 lands not subject to redesignation to class 3 are listed in the statute. The national resource lands, withdrawn or otherwise, are not among these and therefore are subject to redesignation.

If these lands are ever established as one of the land categories that cannot be designated class III—such as national monuments or national wildlife refuges—then the class III redesignation would no longer be available for that specific area unless specifically provided by statute.

Mr. STEVENS. I am thankful for my good friend Senator MUSKIE's clarification of this matter. His explanation of the conference reports treatment of the air quality classification for the lands in question eliminate any confusion as to their status.

Mr. McCLURE. Mr. President, to provide an explicit understanding of the requirements of section 128, regarding visibility protection for Federal class I areas, I would like to ask the distinguished floor manager several questions. First, are the provisions of this section limited to only existing major stationary sources which cause or contribute to visibility impairment in Federal class I areas?

Mr. MUSKIE. Yes, the Federal interest is limited to existing sources, which have been in existence 15 years or less. Visibility restrictions with regard to new sources would result under the provisions of section 127, concerning prevention of significant deterioration.

Mr. McCLURE. Once a promise has been granted to a new source and the question of visibility has been considered as a part of air quality values under the significant deterioration provisions, could the source be subjected later to the requirements of section 128?

Mr. MUSKIE. It is my understanding that that was not the intent of the conferees.

Mr. McCLURE. When a new source satisfies the requirements of significant deterioration increments but is determined by the Federal Land Manager to conflict with the air quality values of a class I area would the Governor's decision to grant a permit be final for the purposes of visibility as well as for significant deterioration.

Mr. MUSKIE. Yes, it is my understanding that the conferees intended to provide no additional basis for any person to seek further regulation under section 128.

Mr. McCLURE. And while those existing sources are limited to the 28 major sources contained in the Senate bill's definition of major emitting facilities, exempting any such source which has the maximum potential to emit less than 250 tons per year, Federal guidelines apply only to fossil-fuel fired generating plants in excess of 750 megawatts?

Mr. MUSKIE. That is correct.

Mr. McCLURE. Under the conference agreement, does the State retain sole authority for identification of sources for the purpose of visibility issues under this section?

Mr. MUSKIE. Yes; the State, not the Administrator, identifies a source that may impair visibility and thereby falls within the requirement of section 128.

Mr. McCLURE. And does this also hold true for determination of "Best Available Retrofit Technology"?

Mr. MUSKIE. Yes; here again it is the State which determines what constitutes "Best Available Retrofit Technology," as defined in section 128. The Federal guidelines apply only to the large powerplants we have described.

Mr. McCLURE. And, in making such determinations, the State must take into consideration the costs of compliance, the energy and nonair quality environmental impacts of compliance, any existing pollution control technology in use at the source, the remaining useful life of the source, and the degree of improvement in visibility which may reasonably be anticipated to result?

Mr. MUSKIE. That is specified in the act.

Mr. McCLURE. With regard to citizen suits, the House bill prohibited such suits in order to compel attainment of the national goal by a specific date. Is my understanding correct that this provision was accepted by the Senate conference?

Mr. MUSKIE. Yes; your understanding is correct. And, the prohibition is specifically discussed in the statement of managers. In addition, the Senate accepted the House prohibition against the Administrator imposing any mandatory or uniform buffer zone around a Federal class I area, in order to accomplish the purpose of section 128.

Mr. McCLURE. I thank the distinguished floor manager.

Mr. HART. The Senate bill contained a provision to remove the preemption which is in existing law, preempting States from "requiring certification, inspection, or any other approval relating to the control of emissions from any new motor vehicle or new motor vehicle engine as a condition precedent to the initial retail sale, titling (if any), or registration of such motor vehicle, motor vehicle engine, or equipment." The Senate bill would have allowed States with an emission inspection and maintenance program to require autos to pass a State inspection test prior to sale, with the cost to be borne by the manufacturer. Does that mean that States are preempted from emission inspection tests under the act, as amended by the conference agreement?

Mr. MUSKIE. No. States may conduct such testing, and may include it as a transportation control measure in the State implementation plan, if they wish. However, the testing must be conducted at a time consistent with the requirement of section 209 of the act which you have just cited.

Mr. HART. I understand that four States: Arizona, Colorado, New Jersey, and Oregon already have acted to provide for presale testing of new vehicles, but their plans are in abeyance because of the statutory restriction under section 209. Do these States have any recourse? Apparently they feel that this is a necessary part of a clean air strategy.

Mr. MUSKIE. Yes, those States do have recourse. They may test automobiles at any time after initial retail sale, titling, or registration. That opportunity is not preempted under section 209 for those States or for any other State for that matter.

Mr. HART. How could such a procedure work to insure that the purchaser of a new car is getting a car which does meet the required emission standards?

Mr. MUSKIE. It would be presumptuous of me to suggest how any individual State might choose to accomplish its goals in an inspection and maintenance program. However, some possibilities come to mind. There could be a postsale, predelivery test required by State law, and passage of that test could be a requirement for driving the newly

purchased vehicle on the highways of the State. Or, it could be made a requirement for obtaining a sticker similar to a safety inspection sticker, which would have to be obtained within a period of a few days after initial purchase and perhaps renewed from time thereafter. Or, a temporary registration could be issued at the time of purchase, with the emissions test made a requirement for reregistration after the temporary period had expired. These are just some ideas that would be permissible under the law, and I am sure that the States in their wisdom can develop many others. Therefore, I believe the States you have mentioned, including your own State of Colorado, can establish and enforce a meaningful inspection and maintenance program that will assure that new cars being driven on the roads of Colorado and other States do meet the emission standards.

Mr. HART. Thank you, Mr. Chairman.

Mr. RANDOLPH. I wish to clarify the effect of the conference report with respect to coal conversion. It is my understanding that the conference agreement follows the Senate bill in providing greater flexibility for sources converting to coal from other fuels. Under the provisions I sponsored in the Senate bill, the ability to convert to coal would be facilitated.

Is it the understanding of the able floor manager who chaired the Senate-House conference, that by adopting these provisions the greater use of coal will be encouraged?

Mr. MUSKIE. The Senator from West Virginia has been diligent in encouraging the expanded use of coal in environmentally sound ways. He is correct in his interpretation of the conference report in this respect.

TRANSFERENCE OF AUTHORITY ON RADIOACTIVE MATERIAL FROM NRC TO EPA

Mr. JOHNSTON. Mr. President, the Clean Air Act amendments currently being considered include a provision whereby responsibility for establishing emission standards for radioactive materials will be transferred from the Nuclear Regulatory Commission to the Environmental Protection Agency (EPA). In addition to transferring these currently regulated authorities, the Act would establish for the first time EPA authority over unregulated radiological emissions. The original provision was included in the House version of the Clean Air Act amendments and during Conference was agreed to by the Senate. During the House deliberations, there were no public hearings on this provision and, in my opinion, at no time were the potential impacts on the Nation's energy program adequately considered or investigated. It is my understanding that, during the conference deliberations, the administration expressed some concern over this provision but their concerns were not incorporated into the final agreement. In expressing their concerns, the administration did not present specific energy impacts or possible interferences with the President's national energy plan. I have significant reservations over the fact that delegating this authority to EPA, which by the provisions of the Clean Air Act provide for additional delegation to States and localities, will adversely affect the necessary development of energy facilities. In addition, I believe that there is a need in this area for national standards and only in extreme circumstances where local conditions require, should higher standards be established. I hope that the administration will take a close look at this provision and report back to the Congress at the earliest possible time the potential adverse effects of this change and recommend as necessary legislative changes to this amendment.

Mr. GRAVEL. Mr. President, this is indeed a momentous day. Only a few hours ago we were passing the Clean Water Act of 1977 unanimously. Now we are considering the Clean Air Act, as reported out of conference earlier this week. May I take this time to compliment Senator MUSKIE, Senator RANDOLPH, and Senator STAFFORD for leading a strong group of conferees through a difficult conference to the culmination in what is by and large a very good bill. The people of America owe a great deal to the dedicated conferees who labored to bring about the legislation we are discussing, and hopefully agreeing to today.

Mr. President, the conference bill is a good one, as I said. It is a fair compromise for the auto industry. Finally, the automotive emission standards are established, and the companies will now move to stepping up their progress toward cleaning up unhealthy auto exhaust wastes. The bill ties together the areas of nonattainment, transportation controls, and indirect source controls, as they should be. The bill minimizes variances that can be given under significant deterioration provisions. The bill will allow areas now encumbered with increasingly frequent foul air to begin to filter out the pollutants, with now more than a hope that our cities and heavily industrialized areas may again become healthy places to work and live. Areas with clean air will be assured that the quality of air will not be severely impacted. All in all, this is a fine start toward correcting many of the existing deficiencies under current law.

I support the bill, and the primary concepts behind the bill. But I do not do so completely without reservation. The grave concern I have is that the class III areas are not sufficiently attuned to the industrial growth that we can expect in the future. Actually, the makeup of the class III area may be such that no growth may be the result. For example, a refinery in our port city of Valdez may not be able to locate because the class III designation may be too stringently drawn. I would have preferred that class III areas be defined in the same terms that the Environmental Protection Agency has defined them in their existing regulations. I pushed for this approach in committee when the Senate considered its bill, because I could foresee the problems that are now possible as a result of the conference bill. I laud the goals of tightening up all classes of land so as to protect their respective air quality. Unfortunately, many of us have to work and are dependent on factories that must be constructed in these class III areas. I hope I am wrong, but I am afraid that we will be back shortly to discuss the need to alter the definition of class III.

Perhaps a real culprit in the problem of locating new facilities is the modeling system. It is not a precise tool, but a form of witchcraft or mental gymnastics which can be off by a factor of from 2 to 20. If the model shows violation of the allowable increments, construction will not be allowed as proposed. That is regardless of the actual pollution that would be emitted from the facility were it constructed. A further problem is that the allowables in the class I areas are probably beyond the realm of sensitivity.

With that reservation I gladly support the conference bill, and hope for its immediate implementation so that we can get on with the work of restoring polluted areas and protecting already clean air areas.

Mr. DOMENICI. Mr. President, after 3 years of debate and endless controversy, it is difficult to imagine that a few hundred extra words on the subject of the Clean Air Act amendments of 1977 would make any difference. Nevertheless, there are several points that I feel are worth making at this late date.

In the hurried preparation of the final bill and the statement of managers, there is agreement that there was an oversight in regard to smelter orders. Under the smelter order provision, it is stated that no smelter may get a smelter order and a delayed compliance order at the same time. The generalization is true as far as both orders relate to the same pollutant.

However, since the smelter order provision is limited to sulfur dioxide emissions, obviously a delayed compliance order may be received on another criteria pollutant, or perhaps even a future criteria pollutant such as arsenic.

I would also like to commend the conferees in adopting a waiver from new source standards for innovative technology. I authored such a provision in the Senate bill to help address the problems New Mexico Public Service was having under the inflexible provisions of the present law. I am pleased that this truly innovative company will be given the latitude that it now needs to press ahead with an advanced round of scrubber technology.

In closing, I would like to commend my colleagues on the conference for their dogged persistence and the pride and sense of craftsmanship they have brought to the job at hand.

Mr. McCLURE. Mr. President, I would like to make several points with respect to the conference report on the Clean Air Act, and also to ask Senator MUSKIE, the chairman of the conference, for clarification on one troubling matter.

As every legislator knows, meshing two opposing bills in conference can be a confusing matter. Moreover, with a bill as detailed as the Clean Air Act, the confusion is exacerbated by the complexity of the issues. Certainly, one of the most complex areas of the bill is the nondegradation provision. The Senate, however, has discussed the issue at great length, and despite its intricacies, had agreed

on a procedure to require new facilities in pristine areas of the country to meet a strict set of requirements to protect the quality of the air in clean air regions. Since the House had a similar provision, the two were meshed during Conference into a coherent, although complex, set of requirements for new facilities in clean air regions.

My concerns are not with the actual conference agreement on nondegradation, but rather the relationship of that agreement with respect to an ambiguous and little understood House provision which dealt with the protection of visibility. In the House's presentation on visibility, and in the final conference agreement, the focus of concern was on the impact of existing sources on visibility in class I areas. Since the visibility section was adopted before the nondegradation section was approved, the issue of the relationship of the visibility section to new sources in pristine areas was not discussed at the time the visibility section was adopted.

Mr. DOMENICI. Would the distinguished Senator from Idaho yield for a comment?

Mr. McCLURE. I would be delighted to yield.

Mr. DOMENICI. As one who was heavily involved in the debate on whether the Senate should adopt the House provision, I can say with authority that the debate on the visibility provision centered over whether such a provision was needed to retrofit existing sources. In fact, at my urging, the scope of the visibility section was limited in conference. The Federal Government could only issue guidelines to the States for existing powerplants over 750 megawatts. The identification of those existing sources which impair visibility is a State determination which is followed by a subsequent State determination of what constitutes "best available retrofit technology."

During the course of the visibility discussion, the relationship of the section to new sources was not discussed since nondegradation remained unsettled at the time. When the conferees addressed nondegration, it was agreed that State revisions of their implementation plans to comply with the requirements of nondegradation would satisfy any statutory requirements for new sources with respect to visibility.

Mr. McCLURE. I appreciate the remarks of my colleague. I believe his citations serve a useful purpose in pinpointing the difference between the two sections. Obviously, nondegradation was concerned with imposing stringent requirements on new sources, while the visibility section was aimed at retrofitting those facilities constructed in the recent past which have already impaired the quality of the air over many of our national parks and wilderness areas.

Mr. MUSKIE. Mr. President, I urge the adoption of the conference report.

SEVERAL SENATORS. Vote! Vote! Vote!

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The conference report was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. MUSKIE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

PRINTING OF THE REPORT ENTITLED "CONGRESSIONAL ADVISERS REPORT TO THE CONFERENCE ON INTERNATIONAL COOPERATION"

Mr. RIBICOFF. Mr. President, I send a resolution to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report the resolution.

The assistant legislative clerk read as follows:

SENATE RESOLUTION 248

Resolved, That the report entitled "Congressional Advisers Report to the Conference on International Economic Cooperation (The North/South Conference)" be printed as a Senate document, and that three thousand copies of such document be printed.

The PRESIDING OFFICER. Is there objection to the consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

Mr. RIBICOFF. This resolution has been cleared with Senator ROBERT C. BYRD, the majority leader, with Senator BAKER, the minority leader, with Senator CANNON and Senator HATFIELD of the Committee on Rules and Administration.

It authorizes the printing of the CIEC report. It will cost $339.03 for 3,000 additional copies.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution (S. Res. 248) was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. RIBICOFF. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

CORRECTION IN ENROLLMENT OF H.R. 6161

Mr. MUSKIE. Mr. President, I ask the Chair to lay before the Senate House Concurrent Resolution 327.

The PRESIDING OFFICER. The Chair lays before the Senate a message from the House of Representatives on House Concurrent Resolution 327, which will be stated.

The legislative clerk read as follows:

A concurrent resolution (H. Con. Res. 327) to correct the enrollment of the bill H.R. 6161.

The PRESIDING OFFICER. Without objection, the concurrent resolution is considered and agreed to.

Mr. MUSKIE. Mr. President, I move to reconsider the vote by which the concurrent resolution was agreed to.

Mr. McCLURE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. MUSKIE. Mr. President, I am happy to say that my labors for the day are concluded, and I wish the Chair a pleasant evening. [Laughter.]

The PRESIDING OFFICER. The Chair thanks the distinguished Senator from Maine.

FOREIGN ASSISTANCE APPROPRIATIONS, 1978

The PRESIDING OFFICER. The Senate will now continue with the consideration of H.R. 7797, which will be stated by title.

The second assistant legislative clerk read as follows:

A bill (H.R. 7797) making appropriations for foreign assistance and related programs for the fiscal year ending September 30, 1978, and for other purposes.

Mr. ZORINSKY. Mr. President, I ask unanimous consent that Mr. Lewis Ashley, a member of my staff, have the privilege of the floor during the consideration of the foreign aid bill that will be before the Senate tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KENNEDY. Mr. President, I make the same request for Mr. Tinker and Mr. Debar, of my staff.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. INOUYE. Mr. President, after consultation with the majority leader and the minority leader, it was decided that the foreign aid appropriation bill be taken up tomorrow morning. I believe the Senate will convene at 10 and the foreign aid bill will be taken up. That may not be the exact time, but the foreign aid bill will be coming up sometime after 10 o'clock tomorrow morning.

Accordingly, I ask unanimous consent that this measure be set aside at this time and taken up tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the time not be charged against either side for the remainder of the day.

The PRESIDING OFFICER. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there be a period for the transaction of routine morning business.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGES FROM THE HOUSE

At 1:30 p.m., a message from the House of Representatives delivered by Mr. Berry, one of its clerks, announced that:

The House has passed without amendment the bill (S. 2001) authorizing additional appropriations for prosecution of projects in certain comprehensive river basin plans for flood control, water conservation, recreation, hydroelectric power and for other purposes.

The House agrees to the amendment of the Senate to the amendments of the House to the bill (S. 1235) to further amend the Peace Corps Act.

The resolution (H. Con. Res. 317) providing for an adjournment of the House from

August 5 until Septmeber 7, 1977, and an adjournment of the Senate from August 6 until September 7, 1977, is returned to the Senate, in compliance with a request of the Senate for the return thereof.

The House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (S. 1377) to extend the time for commencing actions on behalf of an Indian tribe, band, or group.

The House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 6689) to authorize fiscal year 1978 appropriations for the Department of State, the United States Information Agency, and the Board for International Broadcasting, to make certain changes in the Foreign Service personnel system, and for other purposes.

At 7:55 p.m., a message from the House of Representatives delivered by Mr. Berry, one of its clerks, announced that:

The House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the resolution (H. R. 6161) to amend the Clean Air Act, and for other purposes.

The House agrees to the concurrent resolution (H. Con. Res. 327) to correct the enrollment of the bill (H. R. 6161), in which it requests the concurrence of the Senate.

At 8:37 p.m., a message from the House of Representatives delivered by Mr. Hackney, one of its clerks, announced that:

The House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 6179) to amend the Arms Control and Disarmament Act to authorize appropriations for fiscal year 1978, and for other purposes.

The House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 4991) to authorize appropriations for activities of the National Science Foundation, and for other purposes;

The House agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 6370) to authorize appropriations to the International Trade Commission for fiscal year 1978, to provide for the Presidential appointment of the chairman and vice chairman of the Commission, to provide for greater efficiency in the administration of the Commission, and for other purposes.

ENROLLED BILLS SIGNED

The Speaker has signed the following enrolled bills:

S. 1235. An act to authorize appropriations for the Peace Corps for fiscal year 1978.

S. 1765. An act for the relief of the Federal Life and Casualty Company of Battle Creek, Michigan.

S. 2001. An act authorizing additional appropriations for prosecution of projects in certain comprehensive river basin plans for floor control, water conservation, recreation, hydroelectric power and other purposes.

H.R. 6689. An act to authorize fiscal year 1978 appropriations for the Department of State, the United States Information Agency, and the Board for International Broadcasting, and for other purposes.

The enrolled bills were subsequently signed by the President pro tempore.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. PROXMIRE, from the Committee on Banking, Housing and Urban Affairs:

S. Res. 243. An original resolution authorizing supplemental expenditures by the Committee on Banking, Housing and Urban Affairs for inquiries and investigations (Rept. No. 95–395).

By Mr. EASTLAND, from the Committee on the Judiciary:

With amendments:

S. 262. A bill to amend the Omnibus Crime Control and Safe Streets Act of 1968, as amended, to authorize group life insurance programs for public safety officers and to assist State and local governments to provide such insurance, and for other purposes (together with additional views) (Rept. No. 95–396).

By Mr. MUSKIE, from the Committee on the Budget:

Without amendment:

S. Res. 229. A resolution waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 1217 (Rept. No. 95–397).

S. Res. 235. A resolution waiving the provisions of section 402(a) of the Congressional Budget Act of 1974 with respect to S. 1306 (Rept. No. 95–398).

S. Con. Res. 43. An original concurrent resolution revising the Congressional budget for the U.S. Government for the fiscal year 1978 (together with supplemental and minority views) (Rept. No. 95–399).

By Mr. STENNIS, from the Committee on Armed Services:

With an amendment:

S. 1731. A bill to amend section 2 of the act of May 6, 1974, to extend the special pay provision for physicians and dentists in the uniformed services (title amendment) (Rept. No. 95–400).

S. Res. 246. An original resolution waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 1731. Referred to the Committee on the Budget.

By Mr. ROBERT C. BYRD, from the Committee on the Judiciary:

Without amendment:

H.R. 2563. An act for the relief of Velzora Carr (Rept. No. 95–401).

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. JACKSON, from the Committee on Energy and Natural Resources:

James R. Schlesinger, of Virginia, to be Secretary of Energy.

Hazel R. Rollins, of the District of Columbia, to be an Assistant Administrator of the Federal Energy Administration.

Georgiana H. Sheldon, of Virginia, to be a member of the Federal Power Commission.

Charles Brent Curtis, of Maryland, to be a member of the Federal Power Commission.

(The above nominations were reported with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. PROXMIRE, from the Committee on Banking, Housing, and Urban Affairs:

Lawrence Connell, Jr., of Connecticut, to be Administrator of the National Credit Union Administration.

(The above nomination was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. WILLIAMS, from the Committee on Human Resources:

Roland Ray Mora, of California, to be Deputy Assistant Secretary of Labor for Veterans' Employment.

(The above nomination was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. CRANSTON, from the Committee on Veterans' Affairs:

Roland Ray Mora, of California, to be Deputy Assistant Secretary of Labor for Veterans' Employment.

(The above nomination was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

By Mr. EASTLAND, from the Committee on the Judiciary:

George V. Grant, of New York, to be U.S. marshal for the southern district of New York.

(The above nomination was reported with the recommendation that it be confirmed, subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

T. F. Gilroy Daly, of Connecticut, to be U.S. district judge for the district of Connecticut.

Mr. MORGAN. As in executive session, from the Committee on Armed Services, I report favorably the nominations of Col. James C. Good, Army National Guard, for appointment to the grade of brigadier general; and Maj. Gen. Harold R. Aaron, U.S. Army, to be lieutenant general; and Vice Adm. John G. Finneran, U.S. Navy—age 53—for appointment to the grade of vice admiral on the retired list. Also, Rear Adm. Charles H. Griffiths, U.S. Navy, for appointment to the grade of vice admiral. I ask that these nominations be placed on the Executive Calendar.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MORGAN. In addition, Mr. President, there are 51 in the Air Force for appointment to the grade of lieutenant colonel and below (list beginning with James E. Payne); and there are 47 military students for appointment in the Regular Army of the United States, in the grade of second lieutenant (list beginning with William J. Allison); and there are 536 in the Navy for permanent promotion to the grade of captain (list beginning with John Lewis Adams). Also, there are 1,609 in the Army of the United States, for promotion to the grade of lieutenant colonel (list beginning with Robert O. Abney); and there are 13 to be permanent ensigns and lieutenants in the Navy (list beginning with Joseph M. Carwile). Since these names have already appeared in the CONGRESSIONAL RECORD

and to save the expense of printing again, I ask unanimous consent that they be ordered to lie on the Secretary's Desk for the information of any Senator.

The PRESIDING OFFICER. Without objection, it is so ordered.

(The nominations ordered to lie on the Secretary's desk were printed in the RECORD of July 18 and July 21, 1977, at the end of the Senate proceedings.)

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. INOUYE:

S. 2004. A bill to amend the Internal Revenue Code of 1954 to permit an individual who is an active participant in a retirement plan to claim the deduction for retirement savings for amounts contributed by him to an individual retirement account, for an individual retirement annuity, or for a retirement bond, to the extent that the amounts paid by him or on his behalf under the retirement plan does not equal the maximum amount of the retirement savings deduction to which he would be entitled if he were not an active participant in such plan; to the Committee on Finance.

By Mr. BELLMON:

S. 2005. A bill to amend title XIX of the Social Security Act to delay the effective date for implementing certain methods of determining reasonable costs for skilled nursing facility services and intermediate care facility services, and for other purposes; to the Committee on Finance.

By Mr. CURTIS:

S. 2006. A bill to amend title II of the Social Security Act to provide that widow's and widower's benefits shall be based upon the amount of the monthly benefit of the deceased individual in the case of a deceased individual who delayed his retirement; to the Committee on Finance.

By Mr. PELL:

S. 2007. A bill for the relief of William J. Games; to the Committee on Finance.

By Mr. INOUYE:

S. 2008. A bill to amend the Shipping Act, 1916, to provide for a 3-year period, to reach a permanent solution of the rebating practices in the U.S. foreign trade; to the Committee on Commerce, Science, and Transportation.

By Mr. DOMENICI:

S. 2009. A bill to amend title XVIII of the Social Security Act to eliminate certain restrictions and limitations imposed for the receipt of home health services, to redesignate such services as "home care services," to broaden the items and services included within such term "home care services," and otherwise to expand, improve, and make more accessible home care services to those in need thereof; and to amend title XIX to include home care services (as defined in title XVIII) among the services which must be covered under an approved State plan for medical assistance under title XIX; to the Committee on Finance.

By Mr. THURMOND:

S. 2010. A bill for the relief of Pil Mun Hzo; to the Committee on the Judiciary.

By Mr. SCHMITT (for himself, Mr. MCCLURE, Mr. THURMOND, Mr. HELMS, Mr. TOWER, and Mr. GARN):

S. 2011. A bill to amend title 5, United States Code, to preserve and strengthen the separation of powers in Federal Government by establishing a uniform procedure for congressional review of executive branch rules which may have a harmful impact on the public, may be contrary to law or may be inconsistent with congressional intent; to expand opportunities for public participation in Federal agency rulemaking; and for other purposes; to the Committee on the Judiciary.

By Mr. HASKELL:

S. 2012. A bill to amend the Trade Expansion Act of 1962 with respect to investigation of the effects on national security of importation of refined petroleum products; to the Committee on Finance.

By Mr. EASTLAND (for himself, Mr. THURMOND, Mr. CRANSTON, Mr. SCHWEIKER, Mr. STONE, Mr. HEINZ, Mr. LAXALT, Mr. HATCH, and Mr. HELMS):

S. 2013. A bill to amend chapter 40, title 18, United States Code, to require the addition of taggants to explosive materials for the purpose of identification and detection; to the Committee on the Judiciary.

By Mr. WILLIAMS (for himself and Mr. RIEGLE):

S. 2014. A bill to amend the Bankruptcy Act to provide a priority for certain debts to consumers; to the Committee on the Judiciary.

By Mr. CHILES (for himself and Mr. LEAHY):

S. 2015. A bill to require the Office of Management and Budget to provide information on the formulas and assumptions used in the distribution of domestic assistance; to the Committee on Governmental Affairs.

By Mr. DECONCINI (for himself and Mr. WALLOP):

S. 2016. A bill to establish fees for services performed by U.S. marshals; to the Committee on the Judiciary.

By Mr. HELMS:

S. 2017. A bill to provide objective definitions of unitary school systems for uniform court enforcement of the Civil Rights Act of 1964, to provide objective standards for statewide postsecondary educational systems under that act and to relieve the congestion of court calendars by providing for the orderly release of continuing Federal jurisdiction over desegregated schools, and for other purposes; to the Committee on Human Resources.

By Mr. CURTIS:

S. 2018. A bill to amend section 514(b) of the Employee Retirement Income Security Act of 1974 to restrict preemption of State law as it relates to employee welfare benefits plans only to the extent such plans are subject to other titles of the employee welfare benefit plans only to the extent that such plans are subject to other titles of the Employee Retirement Income Security Act; to the Committee on Finance and the Committee on Human Resources, jointly, by unanimous consent.

By Mr. JAVITS:

S. 2019. A bill to delay the effective date for mandatory coverage of multiemployer plans under title IV of the Employee Retirement Income Security Act of 1974; to the Committee on Finance and the Committee on Human Resources, jointly, by unanimous consent.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. INOUYE:

S. 2004. A bill to amend the Internal Revenue Code of 1954 to permit an individual who is an active participant in a retirement plan to claim the deduction for retirement savings for amounts contributed by him to an individual retirement account, for an individual retirement annuity, or for a retirement bond, to the extent that the amounts paid by him or on his behalf under the retirement plan does not equal the maximum amount of the retirement savings deduction to which he would be entitled if he were not an active participant in such plan; to the Committee on Finance.

Mr. INOUYE. Mr. President, today I am reintroducing legislation to expand the coverage of our current employee retirement legislation in order to permit employees who are covered by a pension or profit-sharing plan by their employer to also establish an independent retirement account—IRA.

Under the Employee Retirement Income Security Act of 1974—ERISA—individuals who are not active participants in a qualified retirement plan, a Government plan, or a section 403(b) annuity contract are entitled to make tax deductible contributions to an individual retirement account, individual annuity, or individual retirement bond. The deduction allowed for the taxable year is the lesser of $1,500 or 15 percent of the individual's compensation. Upon reaching age 59, the individual may reclaim his retirement savings.

Inequitably, however, employees who are active participants in qualified pension plans but whose plans have a value less than $1,500 or 15 percent of their income are not permitted to contribute the difference to an IRA. As a result, these individuals cannot establish IRA's, even if the benefits available under the employer's plan are significantly less than would be available under an IRA.

Under this bill, individuals in "Qualified Retirement Plans" will also be allowed to establish IRA's but they will be limited to depositing only the difference between what their employer already deposits and the $1,500 or 15-percent legal limit.

Mr. President, I ask unanimous consent that the text of this bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2004

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 219(b)(2) of the Internal Revenue Code of 1954 (relating to limitations and restrictions on the deduction allowable to individuals covered by certain other plans) is amended to read as follows:

"(2) INDIVIDUALS COVERED BY CERTAIN OTHER PLANS.—In the case of an individual who, for any part of the taxable year, was covered by another retirement plan, the amount allowable as a deduction under subsection (a) to that individual for the taxable year after the application of paragraph (1) of this subsection shall be reduced by an amount equal to the sum of the amounts contributed by or on behalf of such individual to such plan for the taxable year.".

(b) Section 219(c) of such Code (relating to definitions and special rules) is amended by adding at the end thereof the following new paragraph:

"(5) COVERED BY ANOTHER RETIREMENT PLAN.— For purposes of this section an individual is treated as covered by another retirement plan for the taxable year if for any part of such year—

"(A) he was an active participant in—

"(i) a plan described in section 401(a) which includes a trust exempt from tax under section 501(a),

"(ii) an annuity plan described in section 403(a),

"(iii) a qualified bond purchase plan described in section 405(a), or

"(iv) a plan established for its employees

by the United States, by a State or political subdivision thereof, or by an agency or instrumentality of any of the foreging, or

"(B) amounts were contributed by his employer for an annuity contract described in section 403(b) (whether or not his rights in such contract are nonforfeitable).".

SEC. 2. The amendments made by the first section of this Act apply to taxable years beginning after December 31, 1976.

By Mr. BELLMON:

S. 2005. A bill to amend title XIX of the Social Security Act to delay the effective date for implementing certain methods of determining reasonable costs for skilled nursing facility services and intermediate care facility services, and for other purposes; to the Committee on Finance.

Mr. BELLMON. Mr. President, today I introduce legislation to amend section 249(a) of Public Law 92-603. Section 249 (a) amended the Social Security Act by adding the requirement that payment under the title XIX program for skilled nursing and intermediate care facility services be made on a cost-related basis. This amendment resulted in the promulgation of Federal regulations on July 1, 1976, requiring that states utilize either title XVIII cost-reimbursement principles or an alternative cost-reimbursement method as set out in detail in the regulations. The regulations require that rates of reimbursement based upon these cost-reimbursement principles must be in effect by January 1, 1978.

Mr. President, this has been a controversial and questionable requirement which needs to be seriously reexamined. The rapidly increasing cost of medical care has become a major concern of both the State and Federal Governments. Several States have developed major cost containment programs. These programs have been undertaken by local officials familiar with the special problems and needs of their area. Successful cost containment programs have eliminated cost-reimbursement methods of payment as it is generally recognized that retrospective reimbursement has been a major factor in health care cost inflation. Since successful cost-containment involves elimination of the cost escalation incentives inherent in cost-reimbursement systems, it would seem unwise to implement such a system at this time without careful consideration of alternatives currently being developed.

Mr. President, the financial implications of the cost related reimbursement requirement are serious and will increase as the proportion of older persons in the population continue to expand. In 1975, CBO estimated that total Federal, State, and local government expenditures for long-term care was between $5.7 and $5.8 billion. Private citizens spent another $5.9 to $7.7 billion and total government and private spending is expected to grow to $26 to $31 billion by 1980. The mandating of cost-reimbursement methods of payment will inflate costs to all payors and, consequently, inflation impact estimates do not actually reflect the total potential costs of this legislation. Despite this fact, however, the cost of implementing the cost-relatedness requirement will significantly increase Federal expenditures, especially for medicaid which accounts for about 77 percent of Government financing for long-term care. According to an inflation impact statement prepared by DHEW following the statutory amendment in 1972, the first year's increase in reimbursement is estimated to be between $152 and $300 million. As a result of cost inflation in the health sector since 1972, these costs could easily double by 1978.

Mr. President, it may be argued that the cost-related reimbursement provision will help to insure quality care for older persons in nursing facilities. Unfortunately, we have little evidence to support this view. Some of the most flagrant violations of appropriate standards of care and fraud and abuse have been found in States with relatively high reimbursement rates. In a study published by the New York State Marland Act Commission on Nursing homes—1976—for example, it was reported that the highest medicaid per diem rate for skilled nursing care is more than triple the lowest rate. The report further concluded that the rate variations did not reflect different needs of patients for service as high rate facilities did not have sicker or harder-to-manage patients. Quality standards can best be assured, therefore, by giving States greater authority to use reimbursement rates as leverage to insure compliance to appropriate levels of care. The cost-related requirement actually weakens the quality control power of the State in its negotiation with providers.

The cost-related reimbursement is not necessary in order to insure an adequate supply of high quality facilities. In my State, the number of beds increased from 26,298 in 1974 to 27,234 in 1977. During the past 3 years, health planning agencies have refused to issue certificates-of-need for most new construction requests due to the lack of need for new beds.

Mr. President, the legislation which I propose is designed to achieve two objectives. First, it delays implementation of the section 249(A) requirement until January 1, 1979. Second, this proposed legislation would protect States from liability for retroactive payments. The protection against retroactive payment is especially important in lieu of a recent decision by the Middle District Court of Alabama—Nursing Home Association of Alabama against Califano, et al, July 12, 1977—which held that the regulations for implementation of the cost-relatedness reimbursement requirement by January 1, 1978, are not in compliance with the law. Thus, many States who have been acting in good faith to develop an appropriate reimbursement system by January 1, 1978, are faced with the possibility of retroactive payments to July 1, 1976.

Mr. President, rising health care costs, especially for medicaid, are already placing great strain on State and local resources. Many States have had to cut back on services and are seeking other ways of reducing costs without further erosion of essential programs. Most authorities agree that cost-reimbursement methods of payment have been a major factor in promoting higher costs in health care. The consensus is that alternative reimbursement schemes involving careful rate review, negotiation, and prospective reimbursement must be developed. Thus, it is inconceivable that while we are desperately attempting to control rising health costs, we are gearing up to comply with requirements which mandate the use of cost-relatedness principles for skilled and intermediate care facilities this amendment will provide a year's delay in implementation of this cost-related reimbursement requirement and protect States against retroactive costs. This will allow time for States to evaluate alternative, prospective methods of reimbursement.

Mr. President, I ask unanimous consent that the text of my bill be printed in the RECORD at this time.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2005

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 1902(a)(13)(E) of the Social Security Act is amended by striking out "July 1, 1976" and inserting in lieu thereof "January 1, 1979".

(b) Notwithstanding the provisions of section 1902(a)(13)(E) of the Social Security Act, the amount payable to any State for any calendar quarter ending prior to January 1, 1979, on account of expenditures made under a State plan approved under title XIX of such Act, shall not be decreased by reason of the failure of such State to meet the requirements of such subsection during any calendar quarter ending prior to January 1, 1979.

By Mr. INOUYE:

S. 2008. A bill to amend the Shipping Act, 1916, to provide for a 3-year period, to reach a permanent solution of the rebating practices in the U.S. foreign trade; to the Committee on Commerce, Science, and Transportation.

Mr. INOUYE. Mr. President, basically the national shipping policy of the United States is embodied in the Merchant Marine Act of 1936, as amended and the Shipping Act of 1916, as amended.

The Merchant Marine Act constitutes the basic statutory scheme of Federal aid to the private shipping industry.

It is designed to establish and maintain a strong merchant fleet owned by American citizens, operated by American crews, and fully capable of serving our international economic, military, and political commitments under all foreseeable circumstances.

The act recognizes that even in times of peace, economic and political tensions and other unforeseen contingencies may seriously disrupt or distort traditional patterns of commercial intercourse on international trade routes.

As such, it reflects the realization that an international power such as the United States cannot be dependent upon ocean transportation media owing allegiance to alien flags without threatening its national security.

The Shipping Act of 1916, as amended, embodies the other half of our national shipping policy. It is regulatory in nature, and its purpose is to safeguard against agreements and practices in the U.S. ocean liner trades which would be detri-

mental to the commercial interests of the United States. To that end it is aimed at preserving competition in these trades.

Thus, all carriers operating in the foreign commerce of the United States, whether U.S.-flag or foreign, whether subsidized or not, whether conference members or independents, must compete fairly with one another.

Although our national shipping policy is bifurcated, both parts—the promotional and the regulatory—are harmonious and complement each other.

Each, if permitted to operate fully and independently, will further the objectives of the other.

Conversely, impairment of one part would in all probability adversely affect the other.

For example, if the Government aid to the U.S. shipping industry authorized by the Merchant Marine Act is not sufficient to establish and maintain a merchant fleet capable of carrying a "substantial portion" of U.S. foreign commerce, the purpose of the Shipping Act of 1916 to preserve competition in our ocean liner trades is to a large extent rendered moot.

Or, if the regulatory provisions of the Shipping Act of 1916, are applied in a manner which discriminates against or otherwise impairs the ability of U.S.-flag carriers to compete against their foreign counterparts in our liner trades, not only is the purpose of the Shipping Act frustrated, but the objective of the Merchant Marine Act to establish and maintain a strong merchant fleet is thwarted as well.

Our national shipping policy is administered by two Federal agencies.

The Maritime Administration, an agency of the Department of Commerce, is responsible for the direct promotion of the American merchant marine and our domestic shipbuilding industry, including administration of the Federal subsidy programs for ship construction and ship operation. Other promotional activities include research and development programs, training of officers for the Merchant Marine, maintenance of the reserve fleet and administration of a variety of other aids—such as title XI—low interest—mortgages, which assist American operators in purchasing vessels.

The Federal Maritime Commission, on the other hand, is an independent regulatory agency charged by Congress with responsibility for implementing a number of Federal statutes that are basically concerned with regulating both U.S. and foreign shipping lines engaged in carrying our country's import and export trade by water, as well as certain closely related domestic activities such as ocean freight forwarding and terminal operation at U.S. ports. The Commission also has regulatory jurisdiction over the domestic offshore commerce of the United States; that is, movement of cargo by ship between points on the U.S. mainland and any other possessions, States, or territories of the United States.

An idea of how successful our national shipping policy is in achieving its dual objectives of maritime fleet promotion and preservation of competition may be gathered from the International Economic Report of the President—transmitted to Congress, January 1977.

That report states at pages 115–116:

Despite innovations introduced by the U.S. maritime industry in recent years and the financial assistance provided to it by the Federal Government, the U.S.-flag merchant fleet ranks 10th in size among the national fleets of the world and accounts for only a small fraction of the world fleet.

The report goes on to say that the share of U.S. foreign trade tonnage carried in U.S. vessels in 1976 is approximately 17 percent less than 1970, and that the percentage of commercial cargo carried in U.S. oceanborne foreign trade by U.S.-flag ships was a mere 4.4 percent in 1976 as opposed to 42.3 percent in 1950.

Mr. President, recently the president of the Transportation Institute, Mr. Herbert Brand, described the state of the American-flag fleet as "appalling." He said, and I quote:

Our nation's foreign trade—almost all of it—is carried on foreign-flag vessels. Today, less than 5 percent of our export-import commerce is transported on ships that fly the American flag, and only 2 percent of our dry bulk trade and less than 4 percent of our vital oil import trade are carried on American vessels.

Yet, no other major world power permits the carriage of its trade to be so totally controlled by the merchant fleets of foreign nations. The Soviet fleet today carries about 50 percent of Russia's foreign trade. Nearly 40 percent of Japan's foreign trade is carried on its national flag vessels. The Greek-flag fleet carries about 45 percent of its international commerce. For Norway and Spain, the figure is 37 percent. For Great Britain, 34 percent. West Germany and France each carry 30 percent of their foreign trade on vessels flying their national ensigns.

Today, . . . nations [have] come to understand that their economic security is vitally linked to their maritime independence.

In fact, the emergence of national maritime independence among the major world powers makes it more necessary than before that the United States achieve a measure of self-sufficiency in its oceanborne transport capability. As we look at the state of our merchant marine today, we see that we are woefully inadequate to assure an American shipping capability ready and able to respond to national and international requirements.

The U.S. shipping industry is beset with a number of serious problems which are in large measure responsible for the "appalling" state of affairs described by Mr. Brand. Some of them have their genesis in the promotional part of our national shipping policy, while others stem from the administration of the regulatory aspect. Whatever the source, however, our overall policy is adversely affected, and the industry suffers.

Mr. President, the most pressing of these problems, in the judgment of many including myself, is caused by the illegal rebating and other malpractices which are widespread throughout our liner trades.

Sections 16 and 18(b)(3) of the Shipping Act, 1916, as amended, prohibit common carriers by water in our ocean trades from allowing any person to obtain transportation or related services for property at less than the published rates in their tariffs on file with the Commission.

In other words, the statute prohibits any carrier subject to the jurisdiction of the Federal Maritime Commission from offering any direct or indirect monetary inducement to attract cargo that departs from the rates contained in its published tariff.

The act likewise prohibits shippers, consignors, consignees, forwarders, brokers, or other persons subject to the jurisdiction of the Commission, from obtaining or attempting to obtain transportation at less than the published tariff rates.

Violations of these prohibitions are called "malpractices," of which rebates are one example. Clearly, the statutory prohibitions constitute a mandate for "fair" competition in the U.S. liner trades.

Rebating is simply a device to attract traffic away from competitors. Generally speaking, when times are good, the load factors experienced by carriers in U.S. liner trades are sufficiently high that the incentive for "cargo stealing" diminishes, even without the existence of other stabilizing mechanisms.

Conversely, when times are bad, traffic is light and the incentive to "steal cargo" increases, since there are no effective stabilizing mechanisms in the trade.

In other words, since there is no effective mechanism in a given U.S. trade to smooth out fluctuations in traffic and their economic impact on individual carriers, rebating goes hand-in-hand with the ratio between available cargo and the liner tonnage competing for that traffic.

Unlike a railroad that can increase or decrease the size of its trains to conform to the traffic, ocean carriers incur substantially the same voyage costs for bunkers, insurance, and crews' wages, whether the vessel is empty or fully loaded. Therefore, in periods of slack traffic, the demand for any cargo is progressively accelerated.

Mr. President, here is the crux of the matter. We operate our liner trades on a "come one, come all" basis, inviting participation of foreign-flag carriers as cross traders, as well as in our bilateral trades. Given the range, value, amount, and predictability of ocean cargo to and from the United States, our policy of freedom of access to our liner trades has attracted cross traders away from less lucrative routes. The result is that our liner trades tend to be overtonnaged even in good times, and, since there is no effective mechanism provided under our national shipping policy to stabilize the liner cargo/tonnage ratio, a climate conducive to rebating prevails in the ocean trades of the United States.

Not only is rebating widespread in our liner trades Mr. President, it operates to the detriment of the U.S.-flag merchant marine as distinguished from its foreign competition.

On this point I would like to quote from the 1962 report on the Ocean Freight Industry published by the Antitrust Subcommittee No. 5 of the House Judiciary Committee:

. . . . one of the chief characteristics of [rebating] is its discriminatory impact. Frequency the beneficiary of a rebate or other malpractice is the large or regular shipper who by virtue of his economic power and ability to offer substantial cargoes obtains from the carrier privileges not extended to his smaller competitors.

Much of the hard-core malpractice which the subcommittee studied took place on inbound trade routes to the United States. In these trades, U.S.-flag operators frequently found themselves losing cargoes as a result of rebating by their competitors and were thus forced themselves to engage in such practices. On the other hand, the subcommittee has observed that from time to time, U.S.-flag lines have attempted to secure adherence to conference regulation and the establishment of machinery to curb malpractice . . . . a fact which tends to support the conclusion that malpractice in general works against the relative well-being of lines flying this country's flag.

That committee concluded that malpractice in the ocean freight industry is contrary to basic tenets of U.S. maritime policy, including the need for promotion of the U.S. merchant marine and the principle of equitable treatment of American shippers, consignees, and their representatives. Time has only reaffirmed that assessment.

Recently, during hearings which my subcommittee held on illegal rebating, the Chairman of the Federal Maritime Commission testified that when he assumed the chairmanship of the Federal Maritime Commission in November 1975, it was clear that rebating in our ocean trades was one of the major regulatory problems confronting the Commission. He said the problem of rebating and related malpractices must be a top priority subject for consideration by the Congress.

His estimate of the situation was shared by a number of other witnesses.

The Director of the FMC's Bureau of Enforcement, which was reactivated in May of 1976, to deal with the problem, estimated that rebating in U.S. liner trades in all probability exceeded $100 million annually.

Another witness, Manuel Diaz, president of Adherence Group, Inc., with 30 years' experience in ocean shipping succinctly stated why rebating in U.S. liner trades is so pernicious. He said:

It results in unreasonable preference and advantage or prejudice and disadvantage, to shippers, ports, and other concerned interests.

It never benefits the consumer; and ultimately, must result in predatory competition leading to unbridled rate wars which will ultimately make it impossible for privately-owned companies to continue to operate much less to replace their fleets.

In a nutshell, the result of illegal rebating, whatever its degree, is the enrichment of a few at the expense of the public interest and commerce between nations.

The subcommittee asked Mr. Diaz what, in his view, was the future of U.S. lines, if, as a Government, we did nothing and permitted the present situation to continue. He replied:

I don't think they have any future. First of all, I don't know how any man in his right mind would invest one single cent in the building of U.S. vessels for the liner trade. I think a perfect example is what has happened to us in the dry bulk business. Less than 2 percent of our dry bulk imports and exports are carried on U.S.-flag vessels, less than 2 percent—that is, ridiculous. I hate to even discuss it. I think the situation has to be dealt with, because it has gotten so bad that from now on, it's completely downhill. The U.S.-flag carriers cannot survive.

Mr. President, I believe Mr. Diaz' reply clearly illustrates how failure to implement one segment of our national shipping policy—that is, the regulatory segment—also frustrates the objectives of the promotional segment of that policy.

In this context, if we permit rebating to continue in our liner trade it makes little sense for the Maritime Administration to attempt to promote the American merchant marine and our domestic shipbuilding industry through Federal subsidy programs because they simply will not be able to compete in our ocean liner trades.

Mr. President, I should add that the situation is further exacerbated by the rapidly increasing competition in our liner trades from Communist state fleets. The Soviets, for exemple, have put very large numbers of ships into the world's most lucrative cross trades at rates 30 percent or more below the market levels, according to one source.

Mr. President, the Government's awareness that rebating is rife in our ocean liner trades, and indeed has been a fact of life for many years, is not something new.

It was the subject of much discussion during the hearings of the Alexander committee from 1912 to 1914 which resulted in the Shipping Act of 1916.

The 1962 report of the Antitrust Subcommittee—No. 5—of the House Judiciary Committee, to which I have already referred, devoted an entire chapter of 35 pages to the subject of "Malpractices and Other Abuses" in our ocean freight industry.

That report concluded that U.S. foreign trade routes were rife with malpractices, there were "general widespread abuses of law and of agreements, both filed and unfiled," and that "administration of the Shipping Act and the enforcement of laws regulating ocean shipping has been woefully deficient."

And, the most recent hearings which my subcommittee held in March of this year, have confirmed that the situation has not changed for the better. In all probability it has become worse, especially with the advent of heavy cross-trading by Soviet-owned liners.

Mr. President, the question which readily suggests itself is why, as a Government, have we permitted this situation to flourish in contravention of our shipping laws and to the detriment of our expressed national shipping policy.

Based on my own experience and the testimony at the subcommittee's hearings, the reasons, I submit are two-fold.

First, there has been a notable lack of a unified, organized effort to correct the situation on the part of the several Federal agencies having statutory responsibilities that are affected by illegal rebating in the U.S. liner trades. In addition to the FMC, these agencies include the Department of Justice, the Department of State, the Security and Exchange Commission, the Internal Revenue Service, and the U.S. Customs Service.

Historically, as I have said, all of these agencies have long been aware of the problem.

In fairness to the FMC, it has recently began an attempt to enforce its statutory responsibilities but, as Chairman Bakke and other witnesses testified, the Commission's efforts are severely hampered by the lack of a concerted Federal effort, and the inadequacies of existing law and agency resources.

And this, Mr. President, brings me to the second reason why as a government we have failed. Our present laws are simply inadequate to enable these agencies to regulate effectively the foreign flag carriers which transport the vast majority of the export-import commerce in our ocean liner trades.

Not only are the vast majority of malpractices in these trades beyond the pale of our enforcement authority, what action that is taken is usually taken against our own flag-carriers. This, of course, further exacerbates the situation because regulation and enforcement is uneven and discriminatory to the detriment of our merchant fleet.

Chairman Bakke summarized these problems as well as the lack of agency resources very succinctly in his testimony before the subcommittee. He said:

There are, of course, greater obstacles to enforcement of our laws against foreign carriers. We can expect opposition from foreign carriers, some of whose governments actually have passed laws forbidding their nationals to produce documents for our inspection. At present, the United Kingdom, Belgium, Sweden, France, Finland, the Netherlands, the Federal Republic of Germany, Australia, and Norway have enacted such secrecy laws.

Also, we are severely limited in resources. As you know, we are a small agency of some 315 employees, of whom 33 are investigative personnel. We estimate optimistically that, given our current resources, it will take until April 1979 to complete the investigations we now have underway. This projection is based upon concentration of all investigative personnel solely on these rebate cases. That would, however, preclude carrying out other enforcement programs, such as audits of cruise operators for protection of passengers who are required to make advance ticket deposits with bookings, freight forwarder compliance checks, field investigation of freight forwarder applicants, a rate surveillance program, cargo inspection, section 15 agreement matters, and informal complaints. As of February 1, 1977, 657 such cases were under investigation by our field offices. In the meantime, the statute of limitations continues to run; indeed, it is conceivable that the Commission may lose the opportunity to prosecute these past violations.

. . . although uniformity of enforcement continues to be one of our foremost considerations in conducting the Commission's drive against rebating, it must be borne in mind that the Commission's recent success in developing facts and leads with which to proceed is due, in large measure, to voluntary disclosures by carriers and by shippers or consignees. Therefore, the regulatory tools that I have discussed should be judged with that caveat in mind. And when so viewed, as I have said already, it is clear that if rebating continues to prevail in our ocean trades, the Commission will need a more viable approach to enforcement of the statutory prohibitions against that practice than is presently authorized.

I am not prepared at this point to say what the approach should be, or even what options there may be. But I am in full accord, Mr. Chairman, with your views that rebating and related malpractices must be a top

priority subject for consideration by the Congress.

Clearly, Mr. President, a longstanding, serious, debilitating situation affecting our ocean freight industry has become progressively worse, and threatens the very existence of a substantial segment of our merchant fleet.

Equally apparent, existing law is not adequate to correct the abuses.

Today, therefore, I am introducing legislation which I believe will go a long way toward remedying the situation. Essentially, the bill would provide a 3-year period for the United States, as a Government, to reach a permanent solution of the rebating and other malpractices in our foreign ocean trades.

Its principal features are:

1. A requirement that any common carrier by water in the foreign commerce of the United States, or any shipper, consignor, consignee, forwarder, broker, or other person subject to the Commission must respond fully to an FMC order of hearing and investigation to determine whether such carrier or its agent is, or seeks to engage in, rebating or other malpractices in foreign commerce in violation of specified provisions of the Shipping Act of 1916.

Failure to respond fully includes the failure to comply with depositions, written interrogatories, discovery procedures, and subpoenas.

Upon failure to respond fully by a carrier, the FMC is directed to suspend all of its tariffs filed pursuant to Section 18 of the Shipping Act; and all vessels of the carrier shall be denied entry to any U.S. port until the carrier has responded.

2. A provision for a year period within which any person who has given or received a rebate in violation of the Shipping Act of 1916, prior to enactment of the legislation may disclose such fact to the FMC, and receive immunity from any criminal prosecution which is premised on the violation of the Shipping Act which the person disclosed to the FMC.

Provided, however, that such disclosure is made prior to the time such person had actual notice that it was the subject of an investigation relating to that violation by any agency of the Federal government. The civil penalty which would have attached for the violation will attach if the person subsequently engages in rebating or other malpractices.

3. A requirement that the FMC, within 18 months of the enactment of the legislation, report to the Congress on the results of the rebating disclosures encouraged by the amnesty provision, together with the Agency's recommendations for corrective action.

4. An express provision that nothing in the amnesty provision of the legislation shall be construed to abrogate or rescind any civil penalties under any agreements now signed with the United States pursuant to Public Law 92-416.

Among other things, this provision is intended to assure that the legislation is in no way intended to mitigate or otherwise affect the settlement agreement between Sea-Land Service, Inc. and the FMC under which Sea Land disclosed information and details on what the Commission believed to be violations of the Shipping Act of 1916; and agreed to pay a monetary penalty of $4 million, with a right to petition the FMC for mitigation or modification.

5. A provision that the amendments made to the Shipping Act of 1916, by this legislation shall expire three years from the effective date of enactment of the legislation unless otherwise extended by law.

Mr. President, this legislation will, I believe, enable the FMC and the Congress to gather the information necessary to deal effectively and conclusively with a most serious threat of our merchant shipping.

By closing our ports to those carriers who fail to cooperate with FMC investigations the legislation will, I believe, enable the Commission to overcome the most serious barrier to enforcement of our laws against foreign carriers.

The amnesty provision is intended to encourage everyone who has been involved in rebating to come forward and disclose the nature and extent of their activities. This too should greatly assist the FMC in acquiring the necessary information to make appropriate recommendations to the Congress.

Mr. President, shortly my subcommittee expects to hold hearings on the bill, and among the witnesses the Committee will expect all agencies of Government having statutory responsibilities that are affected by illegal rebating in the U.S. liner trades.

By Mr. DOMENICI:

S. 2009. A bill to amend title XVIII of the Social Security Act to eliminate certain restrictions and limitations imposed for the receipt of home health services, to redesignate such services as "home care services," to broaden the items and services included within such term "home care services," and otherwise to expand, improve, and make more accessible home care services to those in need thereof; and to amend title XIX to include home care services (as defined in title XVIII) among the services which must be covered under an approved State plan for medical assistance under title XIX; to the Committee on Finance.

Mr. DOMENICI. Mr. President, I am today introducing a bill to amend title XVIII of the Social Security Act to eliminate certain restrictions and limitations imposed for the receipt of home health services, and to redesignate such services as "home care service."

The Committee on Aging has recently held four hearings on "Health Care for Older Americans—The Alternatives Issue". Witnesses testified that the confusing inconsistency of the requirements under the various programs which provide services to the home, such as titles XVIII, XIX, XX of the Social Security Act, and title III of the Older Americans Act, and the difficulties in differing reimbursement procedures for these programs, have not only hampered the expansion of the delivery of services, but in many instances seriously curtailed home care.

Less than 1 percent of medicare expenditures were made for home health care in 1975, although medicare remains the largest single source of funding. The restrictive requirements such as: 3-day hospitalization under part A of medicare; the need for "skilled" care, "acute restorative care"; "confined to the home"; and the need for two or more services have largely negated the use of home health services. There has also been the problem of retroactive denial of reimbursement. A determination would be made by a physician that home care was necessary, only to have the care denied by a third-party insurer. This denial of reimbursement for expenses already incurred has forced many home health agencies out of business.

Medicaid has also been a source of funding for care in the home, but services vary widely from State to State. Many States are now using the restrictive requirements of medicare in order to lessen their caseload.

Without exception, professionals in the field of aging have expressed the opinion that an individual should be helped to remain in his or her own home for as long as possible. If this can be done, when the time comes that institutionalization is necessary, the length of time in the institution will be lessened.

In these days of ever increasing health costs, it is obvious we must seek ways to find alternatives to the extraordinarily high cost of hospitalization. Health care services at home would be one way of shortening the number of days in a hospital. There are many patients who could be discharged from the hospital if there were an assurance that they would be properly cared for at home. The reverse is also true. A patient might be able to recover from a disabling illness without hospitalization if services could be given at home. We do know that in most instances, people will recover more quickly from an illness if they can be cared for in their own home.

In addition to health care at home, there are support services such as the preparation of a meal, personal care, shopping, transportation, and light housekeeping that would enable many elderly to remain at home. Such services would be in essence, a preventive measure—an effort to keep the elderly in a stable condition of health for as long as possible. At present, few of these services are reimbursed by any Government program. My bill would include these services as a part of medicare. I ask unanimous consent that the text of this bill be included in the RECORD at the conclusion of my remarks.

Mr. President, I cannot stress too strongly the need to coordinate our health care resources and to eliminate the unnecessary and artificial barriers in our programs which make the treatment, rehabilitation, or medical care of the ill, the disabled, and the frail elderly, very difficult to effect.

Growth and development of home care services should be based on careful community planning for the total spectrum of health services. A local agency, such as area agency on aging, a public health department, or possibly one determined by the Governor, could take the initiative in developing home care services through the establishment of home care agency, or through the formal coordination of services with existing community based agencies. All levels of home care should be available to the patient, dependent upon his professionally assessed needs. The agency would have the responsibility of monitoring the quality and extent of services required.

National standards for home services and peer review mechanisms have been developed by such groups as the Nation-

al Council for Home Health Services, Homemaker Inc., American Association of Home Health Agencies and the American Nurses Association and should be accepted by third party payors. Reimbursement for services should be made without the need for a further determination of need for service by an accountant in a distant office who has little or no knowledge of the case. The determination of need of home care, as certified by physicians, visiting nurses, and similar professionals should be sufficient. This will require legislation to change the current law and my bill is intended to remedy this situation.

Secretary Califano has stated that as many as 100,000 of the 700,000 people in the Nation's acute care hospitals do not need to be there and could be better cared for at home. He said that this extra cost amounted to approximately $2.6 billion a year. This is one example of where funds could be better used to pay for the costs of home care.

Mr. President, I know that the costs of this bill will be high. A briefing paper researched by Diana Porter, and prepared by Kathy Deignan of the Committee on Aging staff discusses the cost effectiveness of home services:

> While there is continuing debate on this issue, definitive answers on cost effectiveness cannot be achieved until much more progress is made on the development and provision of various alternatives services.

In other words, we can not know until we try. The paper also mentions that there is increasing evidence, however, that various forms of alternative services can have a direct effect on the overall well being of an impaired older population, as shown by a study in the Cleveland area by the Benjamin Rose Institute.

More people will take advantage of home care when it becomes available. We do not really know how many there are who need this service but cannot afford it. They wait until they are acutely ill, and then enter an institution and the care is paid for by medicare. Our entire present reimbursement system is geared toward care in expensive institutions. I am recommending a change by providing medicare reimbursement for care in the home, whenever possible. Initial costs will be high. However, considering the ever increasing numbers of older persons, many of whom will need care at some time, unless steps are taken now to prevent unnecessary institutionalization, the cost of health care in institutions will take up such a large share of the GNP that little will be left for other services to the Nation.

I would like to reiterate that perhaps the largest single factor behind the lack of adequate or appropriate long-term care for a large number of the chronically disabled is the general lack of formal alternatives to institutional care, as reported in the budget issue paper on "Long-Term Care for the Elderly and Disabled" prepared by the Congressional Budget Office in February 1977. The report stated that:

> Generally, older persons do not prefer nursing home care. It represents rejection by family and friends, loss of independence, isolation and separation from society.
>
> In general, the elderly face a bewildering array of ragmented long-term care services and financing arrangements. Often community based care of an elderly person is not considered because it takes more effort to devise a home care schedule than to place the person in a nursing home.

While it may not always be less expensive to provide home care instead of institutionalization, it would certainly be more humane.

By the simple statement of eligibility for services, under medicare, as stated in my bill, many of the restrictions now imposed on the program would be eliminated such as:

The 3 day hospitalization requirement under Part A of Medicare,
The "skilled" nursing requirement,
Intermittent care,
"Acute, restorative" care,
"Confined to home", and
Condition for which patient was hospitalized.

In addition the bill would authorize payment for support services delivered in the home, including personal hygiene and care, preparation of meals, shopping, transportation, and light housekeeping.

Payment would also be authorized for services to the mentally impaired or disabled.

All of the witnesses at our recent hearings expressed almost a plea for coordination. As stated by Judy Walden, the original director of Hospital Home Health care in Albuquerque, N. Mex.:

> The primary concern of witnesses at the public hearings sponsored by HEW across the country between September 20 and October 1, 1976, was for an expanded, coordinated range of high quality home health services as part of an essential continuum of health, social, and support services.

Ms. Walden further stated:

> That payment should not be hindered by artificial categories of covered care. With the elimination of these recognized barriers and the provision for the acceptance of equivalent standards, quality care can be assured by the home health agency.

Studies and demonstration programs are being conducted by the Administration on Aging, by the GAO in Cleveland, and by others. The results will hopefully tell us, in due time, what we should do. As we all know, there have been so many studies of this situation, without any subsequent action, that I believe it is high time that we focus on a concrete initiative, that we take action to relieve the plight of our elderly, now, before it is too late for all of us. We should repeal the emphasis we have legislated on institutional care, and begin now to provide services at home in consideration of the dignity and desire for a measure of independence of the elderly. I hope that my colleagues will agree. I urge consideration of this measure as soon as possible in order that we can implement the recommendations which have come to us from all over the Nation in regard to the best method of providing long term care for the elderly now, and for the large number to come in the near future.

Mr. President, The Congressional Research Service at the Library of Congress has prepared a section-by-section analysis of S. 2009; and I ask unanimous consent that this Congressional Research Service summary be printed in the RECORD at the conclusion of my remarks.

There being no objection, the bill and the summary were ordered to be printed in the RECORD, as follows:

S. 2009

A bill to amend title XVIII of the Social Security Act to eliminate certain restrictions and limitations imposed for the receipt of home health services, to redesignate such services as "home care services", to broaden the items and services included within such term "home care services", and otherwise to expand, improve, and make more accessible home care services to those in need thereof; and to amend title XIX to include home care services (as defined in title XVIII) among the services which must be covered under an approved State plan for medical assistance under title XIX

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I—AMENDMENTS TO TITLE XVIII OF THE SOCIAL SECURITY ACT

SEC. 101. (a) Section 1811 of the Social Security Act is amended by inserting "and home care services" immediately after "hospital and related post-hospital services".

(b) Section 1812 of such Act is amended—

(1) in subsection (a), by striking out paragraph (3) and inserting in lieu thereof the following:

"(3) home care services for up to 100 visits during any one-year period.";

(2) by striking out subsection (d) and inserting in lieu thereof the following new subsection:

"(d) Payment under this part may be made for home care services furnished an individual for only 100 visits during any one-year period. The number of visits to be charged for purposes of the limitation in the preceding sentence, in connection with items or services described in section 1961(m), shall be determined in accordance with regulations. Under such regulations, a visit to a patient by two or more persons, as a group or team, to provide any one or more of the items or services described in section 1861(m), shall be counted as a single visit."; and

(3) in subsection (e) by striking out "post-hospital home health services" and inserting in lieu thereof "home care services".

(c)(1) Section 1814(a)(2)(D) of such Act is amended to read as follows:

"(D) the individual's mental or physical condition is such that he requires one or more of the services described in section 1861(m) in order to remain in his home; a plan for the furnishing of such services that he so requires has been established and is periodically reviewed by a physician or by any other health professional certified as being competent to establish and review such a plan (as determined pursuant to regulations of the Secretary); and such services are or were furnished while the individual was under the care of a physician; or".

(2) Section 1814(1) of such Act is amended—

(A) in the heading thereto, by striking out "Post-hospital Home Health Services" and inserting in lieu thereof "Home Care Services";

(B) by striking out the term "posthospital home health services" each place it appears therein and inserting in lieu thereof "home care services";

(C) in paragraph (1)(B) by striking out "states that the medical condition of the individual is a condition designated in regulations" and inserting in lieu thereof "describes in medical terms the mental or physical condition or conditions by reason of which the individual requires one or more of the services described in section 1861(m)";

(D) in paragraph (2)(A), by striking out "that individuals have conditions designated

in regulations as provided in this subsection" and inserting in lieu thereof "with respect to the condition or conditions by reason of which the individual is required to have home care services".

SEC. 102. (a) Section 1832(a)(2)(A) of the Social Security Act is amended to read as follows:

"(A) home care services for any visit with respect to which the individual is not entitled to have payment for such services made part A;".

(b) Section 1833(a)(2) of such Act is amended by striking out "home health services" and inserting in lieu thereof "home care services".

(c) Section 1834 of such Act is repealed.

(d) Section 1835 (a)(2)(A) of such Act is amended to read as follows:

"(A) in the case of home care services, the individual's mental or physical condition is such that (i) he requires one or more of the services described in section 1861(m) in order to remain in his home, (ii) a plan for the furnishing of such services that he so requires has been established and is periodically reviewed by a physician or by any other health professional certified as being competent to establish and review such a plan (as determined pursuant to regulations of the Secretary), and (iii) such services are or were furnished while the individual was under the care of a physician;".

SEC. 103. (a) Section 1861 (m) of the Social Security Act is amended—

(1) in the heading thereto, by striking out "Health" and inserting in lieu thereof "Care",

(2) in the matter preceding paragraph (1)—

(A) by inserting "(or by such other health professional as may be certified for such purpose under regulations of the Secretary)" immediately after "reviewed by a physician",

(B) by inserting "(including a day care center in which the individual receives care)" immediately after "home",

(3) in paragraph (3), by striking out "under the direction of a physician",

(4) by striking out "home health services" wherever it appears and inserting in lieu thereof "home care services",

(5) by striking out "home health agency" wherever it appears and inserting in lieu thereof "home care agency", and

(6) by—

(A) striking out "and" at the end of paragraph (6),

(B) inserting "and" at the end of paragraph (7),

(C) striking out the matter following paragraph (7) and inserting in lieu thereof the following:

"(8) personal and home support services furnished to such individual (including assistance to the individual with respect to personal hygiene and care, preparation of meals, shopping, transportation, and light housekeeping services) together with such additional support services as may be specified under regulations of the Secretary;

excluding, in the case of items and services referred to in paragraphs (1) through (7), any item or service if it would not be included under subsection (b) if furnished to an inpatient of a hospital.".

(b)(1) Section 1861(n) of such Act is repealed.

(2) Section 1861(e) of such Act is amended by striking out "subsections (i) and (n) of this section" each place it appears therein and inserting in lieu thereof "subsection (i) of this section".

(c)(1) The heading to section 1861(o) of such Act is amended by striking out "Health" and inserting in lieu thereof "Care".

(2) Section 1861(o) of such Act is amended—

(A) by striking out "home health agency" wherever it appears therein and inserting in lieu thereof "home care agency",

(B) by striking out "and" at the end of paragraph (5),

(C) by inserting "and" at the end of paragraph (6),

(D) by inserting after paragraph (6) "has its own capability (or through arrangements with others is able) to furnish to patients in the area served by it personal and home support services authorized to be furnished under subsection (m)(8);", and

(E) by striking out "; and except that for purposes of part A such term shall not include any agency or organization which is primarily for the care and treatment of mental disease".

(3) Section 1861(v) of such Act is amended by striking out "home health agency" and inserting in lieu thereof "home care agency".

SEC. 104. Section 1862(a) of the Social Security Act is amended—

(a) by striking out the period at the end thereof and inserting in lieu of such period a semicolon, and

(b) by adding after and below paragraph (13) thereof the following new clause:

"except that nothing contained in paragraph (1), (6), or (9) shall be deemed to be applicable to any personal and home support service referred to in section 1861 (m)(8).".

SEC. 105. Section 1864 of the Social Security Act is amended by striking out "home health agency" whenever it appears therein and inserting in lieu thereof "home care agency".

SEC. 106. The amendments made by the preceding provisions of this title shall apply with respect to items and services furnished on and after the first day of the first calendar month which commences more than 60 days after the date of enactment of this Act.

TITLE II—AMENDMENTS TO TITLE XIX OF THE SOCIAL SECURITY ACT

SEC. 201. (a) Section 1902(a) of the Social Security Act is amended—

(1) by striking out "and" at the end of paragraph (35),

(2) by striking out the period at the end of paragraph (36) and inserting in lieu of such period "; and", and

(3) by adding after and below paragraph (36) the following new paragraph:

"(37) provide that payment will be made under the plan for all home care services (as defined in section 1861(m)) furnished by a home care agency (as defined in section 1861 (o)) to individuals who are eligible for assistance under the State plan and who would be entitled to receive such services if they were insured under the programs established by parts A and B of title XVIII, and that, under the State plan, payment for such services shall be made in like manner and like amount as if such services had been furnished to individuals insured under such programs.".

(b) The amendments made by subsection (a) shall take effect on the first day of the first calendar quarter which commences more than ninety days after the date of enactment of this Act.

CONGRESSIONAL RESEARCH SERVICE,
Washington, D.C., July 19, 1977.

To: Honorable Peter V. Domenici.

From: Education and Public Welfare Division.

Subject: Section-by-section analysis of legislation on home care under Medicare and Medicaid.

TITLE I AMENDMENTS TO TITLE XVIII OF THE SOCIAL SECURITY ACT

Section 101(a). This section amends Section 181 of the Social Security Act to describe non-hospital related home care services as one of the basic services which beneficiaries are entitled to receive under Part A of Medicare, the Hospital Insurance Program.

Section 101(b). This section amends Section 1812 to authorize 100 home care services per year in the scope of benefits offered under Part A of Medicare, in lieu of the 100 post-hospital home health care benefits per spell of illness offered under current law. This section also authorizes reimbursement for home care services under Part A. In addition, this section specifies that a home care visit made to a beneficiary by more than one person in order to provide authorized services would count as a single visit for the purposes of satisfying the 100-visit limitation under Part A.

Section 101(c). This section amends Section 1814(a)(2)(D) to provide new eligibility requirements for receipt of home care services under Part A of Medicare. This section also replaces the term "home health care services" with the term "home care services." In order to receive Part A home health care services under current law, a patient must, among other requirements: (1) be in need of intermittent skilled nursing care or physical or speech therapy, (2) need further treatment for a condition for which he was hospitalized and (3) be confined to his home. This section would replace these current law requirements and, in lieu, would make a Medicare beneficiary eligible to receive home care service if: (1) his mental or physical condition requires home care services in order to remain at home, (2) there is an established plan to furnish home care services which is periodically reviewed by a physician or by any other health professional certified to establish the plan, and (3) the home care services are furnished while the patient is under a physician's care. This section also makes certain technical and conforming amendments.

Section 102(a). This section amends section 1832(a)(2)(A) to make Medicare beneficiaries entitled to receive home care services under Part B of Medicare. The section specifies that Part B home care services will be provided to a beneficiary if such services cannot be reimbursed under Part A. The 100-visit per calendar year limit under Part B would be repealed. Beneficiaries would now be entitled to receive up to 100 visits per year under Part A of Medicare and once that benefit is exhausted, unlimited benefits under Part B.

Section 102(b). This section amends Section 1833(a) to authorize reimbursement for Part B home care services.

Section 102(c). This section repeals Section 1834.

Section 102(d). This section amends Section 1835(a)(2)(A) to set forth a new set of eligibility requirements for the provision of home care services under Part B of Medicare. A beneficiary would be able to receive home care services under Part B if: (1) limits on receipt of services under Part A are reached, (2) his mental or physical condition requires him to remain at home, (3) there is an established plan for furnishing services which is periodically reviewed by a physician or another health professional certified to establish and review the plan, and (4) the services are furnished while the beneficiary is under the care of a physician.

Section 103(a). This section amends Section 1861(m), current law definition of Medicare's home health care services, to expand this definition. The term "home health care" would be replaced by the term "home care." The types of services which are now reimbursable under Medicare would be expanded to include personal and home support services furnished to an eligible beneficiary. These services would include assistance with personal hygiene and care, preparation of meals, shopping, transportation, light housekeeping, and such additional support services as specified under regulations. In addition, this section would permit home care services to be provided to a beneficiary in a day care center as well as at his place of residence. Also, medical social services offered as a home care service could be pro-

vided under the direction of a physician or under the direction of other qualified persons.

Section 103(b). This section repeals Section 1861(n) of the Social Security Act.

Section 103(c). This section amends Section 1861(o) which defines the term "home health agency" under Medicare. The term "home health agency" would be replaced by a new term, "home care agency." A home care agency must meet all the requirements set forth for home health agencies under current law but would also be required to have the capability to furnish (either directly or through arrangements with others) personal and home support services, as newly defined under Section 1861(m), to beneficiaries located in the area it serves. In addition, this section specifies that an agency primarily for the care and treatment of mental diseases, such as a community mental health center, would be able to provide home care services under Part A of Medicare. This section also amends Section 1861(u) which defines a "provider or service" under Medicare to include a home care agency in lieu of a home health agency.

Section 104. This section amends Section 1862(a), which specifies those types of service which are not reimbursable under Medicare, to ensure that any personal and home support service as newly defined under Section 1861(m), would be covered under Medicare.

Section 105. This section amends Section 1864 in a technical and conforming way to permit State agencies, under agreements with the Secretary of Health, Education, and Welfare, to certify home care agencies providing services under Medicare.

Section 106. This section sets forth the effective date of the amendments made by Title I of this legislation. The amendments would apply to items and services furnished on or after the first day of the first calendar month beginning 60 days after this legislation is enacted.

TITLE II—AMENDMENTS TO TITLE XIX OF THE SOCIAL SECURITY ACT

Section 201(a). This section amends Section 1902(a) of the Social Security Act to add a new paragraph (37) which would authorize Federal matching assistance under a State plan for medical assistance for all home care services (as newly defined by this legislation under Section 1861(m) of the Social Security Act) furnished by home care agencies (as newly defined by the bill under Section 1861(o) of the Social Security Act) to Medicaid recipients eligible to receive such services. However, this section specifies that in order to receive these services, recipients would have to meet the eligibility requirements for receipt of home care services set forth under Parts A and B of Medicare as newly amended by this legislation. This section also provides that a State Medicaid program must use Medicare's methods of reimbursement for home care services provided to recipients and must pay the same amounts as paid under Medicare for the provision of such home care services to eligible recipients.

Section 201(b). This section sets forth the effective date of the amendments made by Title II of this legislation. These amendments will take effect on the first day of the first calendar quarter that begins more than 90 days after the date this legislation is enacted.

By Mr. SCHMITT (for himself, Mr. MCCLURE, Mr. THURMOND, Mr. HELMS, Mr. TOWER, and Mr. GARN):

S. 2011. A bill to amend title 5, United States Code, to preserve and strengthen the separation of powers in Federal Government by establishing a uniform procedure for congressional review of executive branch rules which may have a harmful impact on the public, may be contrary to law or may be inconsistent with congressional intent; to expand opportunities for public participation in Federal agency rulemaking; and for other purposes; to the Committee on the Judiciary.

REGULATORY REDUCTION AND CONGRESSIONAL CONTROL ACT OF 1977

Mr. SCHMITT. Mr. President, I am introducing today a piece of legislation which is long overdue. The bill is entitled the Regulatory Reduction and Congressional Control Act of 1977. It is designed to return to the Congress its constitutionally mandated prerogative to create law. This would be accomplished by returning to the Congress the opportunity to approve or disapprove the major rulemaking decisions of the regulatory agencies of the executive branch.

Let me review for a few moments, the reason that this legislation is required. Recent years have witnessed an eruption of regulations and regulatory bureaucracies which impact on almost every facet of the lives of the citizenry.

The American citizen, the small businessman, business in general, and Government are staggering under an increasingly heavy load of regulations. There is a general perception among the people that the regulatory bureaucracy is running out of control. There is a mandate to the Congress to do something about reestablishing control of the regulatory process and to reform existing regulations.

The size of this massive burden can be appreciated by recognizing that there are 44 independent regulatory agencies at the Federal level, plus 1,240 boards, commissions, et cetera. These organizations employ over 100,000 individuals responsible for controlling the lives of our citizens. The cost to the taxpayers to finance these bureaucracies is equally large, growing from just over $2 billion in 1974 to an estimated $3,500,000,000 in 1977.

There is little question that in recent decades Congress has increasingly given up much control over the "making of law" to the regulatory agencies. This loss of constitutional congressional authority has occurred through the passage of legislation that calls for the "promulgation" of rules and regulations that supposedly will cure some social ill. Subsequent congressional oversight over the rules and regulations so "promulgated" has been poor to nonexistent. Thus, the constitutional concept of the separation of powers between the legislative and executive branches of government have been seriously blurred and compromised.

The Senate has before it several pieces of legislation aimed at controlling the large number of regulations impacting on our citizens. One initiative sponsored by the distinguished Senator from Maine, Senator MUSKIE, is S. 2, a bil designed to require the "sunset" of authorizations every 5 years. This bill is cosponsored by myself and numerous other Members. In addition, the distinguished Senator from Illinois, Senator PERCY, has introduced S. 600 which would provide for the reorganization of Federal regulatory agencies to prevent excessive and duplicative regulation. I am proud to be one of numerous cosponsors of this legislation also.

In addition to these efforts, it seems clear that a Regulatory Reduction and Congressional Control Act is required which would preserve and strengthen the constitutional separation of powers between the legislative and executive branches. This bill is intended to accomplish this task.

SUMMARY OF THIS LEGISLATION

Mr. President, this bill, if adopted would preserve and strengthen the separation of powers between the legislative and executive branches by:

First, establishing a uniform procedure for systematic and comprehensive congressional review of proposed rules and regulations which may have serious impact on the public;

Second, expanding opportunities for public participation in the agency rulemaking process;

Third, strengthening congressional oversight over Federal regulatory agencies;

Fourth, requiring agencies, when proposing new rules and regulations, to consider carefully the impact of their proposals on the economy—costs versus benefits—on Federal paperwork, and on the workload of the Federal court system;

Fifth, providing more complete information to the public and the Congress about rules and regulations so that they can make informed decisions on future courses of action;

Sixth, making Federal agencies more responsive to the needs, concerns, and interests of the public;

Seventh, substantially reducing the costs of Government regulation, alleviate Federal report filing and recordkeeping requirements and eliminate regulatory excesses; and

Eighth, restoring public confidence in Government institutions.

CONGRESSIONAL REVIEW

This legislation would mandate a review period by Congress before substantive, major agency rules or regulations could go into effect.

This legislation would require the agency head promulgating a new rule to publish in the Federal Register the text of the proposed rule and a cross-referenced index of all regulations pertaining to the same subject matter. This information also would be transmitted to the Congress. It also would require the agency to publish in the Federal Register an economic impact analysis of each proposed rule and any alternative approaches considered by the agency.

Mr. President, the concept of returning to the elected representatives of the people the control over governmental decisionmaking is a familiar one in recent years. Three years ago the Congress passed the Congressional Budget and Impoundment Control Act to reassert its authority over the Federal budget proc-

ess. The legislation which I am introducing today would employ a similar set of procedures to reestablish congressional control in the area of regulatory rulemaking by executive branch agencies.

As I noted a few moments ago, this legislation would require that an economic impact statement be filed with major regulatory proposals to help the public and the Congress determine the value of the proposed rule to our society. A recent article by James C. Miller in the journal Regulation analyzes the record thus far on economic impact statements, and I request that it be printed in full in the RECORD following my remarks.

Mr. President, now that the Congress has moved to regain control of the budget through the Congressional Budget and Impoundment Control Act of 1974, I am introducing the Regulatory Reduction and Congressional Control Act of 1977 as a means of accomplishing a similar reassertion of congressional control. I ask unanimous consent that the full text of this bill and a section by section analysis be printed at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 2011

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Regulatory Reduction and Congressional Control Act of 1977".

STATEMENT OF FINDINGS AND PURPOSES

It is the finding of the Congress that the steady usurpation of quasi Judicial and Legislative Powers by the regulatory agencies and departments of the Executive Branch of the Federal Government represents a clear and dangerous challenge to the Constitutional provisions establishing a Separation of Powers among the three equal branches of the Federal Government. In so finding, the Congress has determined that:

(a) There is an urgent requirement for a Legislatively-approved uniform procedure to oversee the rule-making activities of the Executive Branch of the Federal Government. Such a uniform procedure will preserve and protect the Constitutional doctrine relating to the Separation of Powers among the three equal branches of the Federal Government.

(b) There is an urgent need for the Legislative Branch to supervise the regulatory agencies in the exercise of the limited Judicial and Legislative Powers which have been granted by it to the Executive Branch. The often arbitrary exercise of these Powers has seriously eroded the citizenry's confidence in the Executive Branch and in so doing has weakened the citizenry's confidence in our system of Federal Government.

(c) There is a need for greater participation on the part of our citizenry in the decision-making process relating to the exercise of these properly mandated regulatory activities of the Executive Branch. This can best be accomplished by making regulatory agencies more responsive to the citizenry's need for information and participation in these activities.

(d) The citizenry of the country, being overwhelmed by the often unnecessary, arbitrary and capricious actions by the regulatory agencies need to be protected from such actions when they result in significant economic, legal, or bureaucratic burdens.

(e) The Legislative Branch of our Federal Government, the branch closest and most responsive to the needs of the citizenry from whence all powers flow, must re-assert on behalf of the people their Constitutional right to be secure from these unreasonable, arbitrary actions of the Executive Branch. These actions result from the usurpation by that Branch of the Powers granted by the people to the Judicial and Legislative Branches of our Federal Government.

AMENDMENTS

SEC. 2. (a) Section 551 of title 5, United States Code is amended—

(1) by striking out paragraph (4) of such section and inserting in lieu thereof the following:

"(4) 'rule' means the whole or part of an agency statement of general applicability designed to implement, interpret, or prescribe law or policy or to describe the organization, procedure, or practice requirements of an agency and includes any amendment, revision, or repeal of such a statement;";

(2) by inserting immediately after paragraph (4) of such section the following new paragraph:

"(5) 'emergency rule' means a rule which is temporarily effective without the expiration of the otherwise specified periods of time for public notice and comment which was duly promulgated by an agency pursuant to a finding that delay in the effective date thereof would—

"(A) seriously injure an important public interest,

"(B) substantially frustrate legislative policy and intent, or

"(C) seriously damage a person or class of persons without serving any important public interest;"; and

(3) by redesignating paragraphs (5) through (13) of such section as paragraphs (6) through (14), respectively.

(b) Section 553(b) of such title is amended by striking out paragraph (B) and inserting in lieu thereof the following:

"(B) when the agency for good cause finds that public notice and comment are unnecessary due to the routine nature or matter or insignificant impact of the rule, or that emergency rules should be promulgated.

An agency which finds that a rule is within an exception specified in subparagraph (A) or (B) of this paragraph shall publish in the document promulgating such rule that finding and a brief statement of reasons therefor. The requirements of this subsection shall not preclude an agency from—

"(i) inviting persons representing different points of view to submit,

"(ii) creating an advisory committee to report, or

"(iii) using such other devices to obtain suggestions regarding the content of proposed rules prior to notice of rulemaking.".

(c) Section 553 of such title is further amended by redesignating subsection (e) as subsection (f) and by striking out subsection (d) and inserting in lieu thereof the following new subsections:

"(d) Unless a longer period of time is required by law or provided in the rule:

"(1) a rule may become effective immediately if it—

"(A) grants or recognizes an exemption to or relieves a restriction from a rule, or

"(B) is exempt from public notice and comment under the last sentence of subsection (b) of this section;

"(2) a rule which is subject to concurrent approval pursuant to chapter 6 of this title shall not take effect except as provided in section 603 of such chapter;

"(3) a rule which is subject to disapproval pursuant to chapter 6 of this title shall not take effect except as provided in section 604 of such chapter.

"(e) At the time of promulgation of an emergency rule the agency shall commence rulemaking proceedings in accordance with subsections (b) and (c), except that the period for public comment shall be limited to sixty days unless the agency determines that an additional thirty days are necessary to enable diligent, interested persons to participate. Within thirty days after the close of the period for public comment, the agency shall issue a final rule to take effect as provided in subsection (d). Unless earlier withdrawn by the agency, disapproved by resolution of Congress pursuant to chapter 6 of this title, or set aside by court action, an emergency rule shall expire sixty legislative days (calculated in accordance with section 604 of this title) after the date by which a final rule is required to be promulgated under the preceding sentence.".

SEC. 3. Section 553(c) of title 5, United States Code, is amended—

(1) by striking out "an opportunity" and inserting in lieu thereof "not less than sixty days"; and

(2) by inserting immediately after the first sentence the following new sentence: "The agency may extend this period of time if it appears that such period is too short to permit diligent, interested persons to prepare comments or if the agency determines that other circumstances justify an extension.".

Sec. 4. (a) Title 5 of the United States Code is amended by inserting immediately after chapter 5 the following new chapter:

"Chapter 6—Congressional Review of Agency Rulemaking

"Sec.
"601. Definitions.
"602. Economic impact analysis; paperwork impact analysis; judicial impact analysis;
"603. Concurrent resolution of approval.
"604. Resolution of disapproval.
"605. Effect on statutory time limits.
"606. Computation of legislative days.
"607. Procedure for consideration of resolution.
"608. Effect on judicial review.
"609. Sunset; continuation of rule.
"610. Agency implementation.

"§ 601. Definitions

"The definitions set forth in section 551 of this title shall apply to this chapter except that—

"(1) those functions excluded from the definition of the term 'agency' by paragraph (1) (H) of such section are included in such definition for purposes of this chapter;

"(2) the terms 'rule' and 'emergency rule' shall not include—

"(A) a rule of agency organization, practice, and procedure;

"(B) a rule relating to agency management and personnel;

"(C) a rule granting or recognizing an exception or relieving a restriction; or

"(D) a rule adopted without public notice and comment pursuant to a valid agency finding that such notice and comment were unnecessary due to the routine nature or insignificant public impact of the rule;

"(3) the term 'promulgation' means filing with the Office of the Federal Register for publication in the Federal Register a rule together with all findings, statements, analyses, and other materials required under section 602 of this Act with respect to such rule. The Administrator of General Services shall take such steps as may be necessary to enforce prompt publication of all materials required to be promulgated with respect to an agency rule.

"§ 602. Economic impact analysis; paperwork impact analysis; judicial impact analysis

"(a) Simultaneously with promulgation of any rule, including an emergency rule, the agency head promulgating such rule shall transmit a copy of the complete text thereof to the Secretary of the Senate and the Clerk of the House of Representatives. Each proposed rule shall be accompanied by——

"(1) a comprehensive cross-referenced index of all regulations pertaining to the same subject matter as the proposed rule which shall list all such regulations by title and subject matter and shall include a printed text of the regulations in their entirety;

"(2) an economic impact analysis for each proposed rule (including any alternatives considered) which takes into account:

"(A) the cost impact on and benefits to consumers, wage earners, businesses, markets and Federal, State and local governments;

"(B) the effects on productivity, competition, supplies of important manufactured products or services, employment, the quantity of energy resource supply and demand, and the environment; and

"(C) additional criteria that may be developed for executive agencies by the Office of Management and Budget and for independent regulatory agencies by the General Accounting Office; and

"(D) where impacts cannot be assessed, a statement of the nature and extent of nonquantifiable costs and benefits.

"(3) a paperwork impact analysis for each proposed rule (including any alternatives considered) which shows for each occurrence of compliance therewith or fulfillment thereof an estimate of:

"(A) the numbers of, and a description of the classes of, persons that would be required to file reports, maintain records and fulfill any of the information-gathering requirements under the rule;

"(B) the nature and amount of the information that would be required to be filed in such reports and the frequency of such reports under the rule;

"(C) the nature and number of records that would have to be kept by such persons under the rule;

"(D) the man-hours and costs that would be required to keep such records and make such reports under the rule; and

"(E) steps that are, will or should be taken by the agency to insure that there would be no unnecessary duplication in record keeping and report filing requirements under the rule.

"(4) a judicial impact analysis which shows the probable consequences of adoption of the proposed rule (including any alternatives considered) on the operation, work load and efficiency of the Federal courts, including an estimate of the cost impact on and benefits to court administration, changes in judicial procedure, effects on jurisdiction and demands on court personnel;

Where quantifiable data for support of impact analyses required under paragraphs (2), (3) and (4) of this subsection cannot be practicably obtained by the agency by any means, including direct inquiries to businesses, consumers and other persons or inquiries subject to the provisions of the Federal Reports Act (82 Stat. 1302 et seq.), the agency shall substitute therefor its most reasoned estimate based upon the experience of such agency and other external information sources.

"(5) such other explanatory and supportive statements and materials as the agency deems necessary and appropriate for Congressional consideration of each such rule.

"§ 603. Concurrent resolution of approval.

"(a) If a proposed rule, other than an emergency rule, contains provisions which—

"(1) prescribe a civil or criminal penalty or forfeiture in excess of $1,000 per offense or $100 per day;

"(2) require an inspection of the premises by an agency or representative thereof acting in an official capacity;

"(3) are likely to cause serious harm to the public health, safety and welfare; or

"(4) will result in increased costs—

"(A) for the national economy, of $100,000,000 in any one year or $150,000,000 in any two-year period, or

"(B) for any economic sector, industry, or level of government, $50,000,000 in any one year or $75,000,000 in any two-year period; or

"(5) are likely to lessen substantially competition, limit market entry, restrain market information, or tend to create a monopoly or monopolistic market power in any line of commerce in any section of the country, provided that commerce in the relevant market exceeds $100,000,000 per year; or

"(6) will result in a direct change in total employment—

"(A) for the national economy, of two-thirds of one per centum in total employment, or

"(B) for any specific industry, regional economy, level of government or category of employees, of 10,000 or more jobs; or

"(7) will affect products or services having an annual wholesale or retail value in excess of 1/20 of one per centum of the gross national product; or

"(8) are likely to result in costs in excess of benefits, as determined by the agency pursuant to section 602 of this title, such rule shall not become effective unless, within 60 legislative days after the date of promulgation, both Houses of Congress adopt a concurrent resolution approving such rule.

"(b) If at the end of sixty legislative days after the date of promulgation of a rule, other than an emergency rule, both Houses of Congress have adopted a concurrent resolution approving the rule, the rule shall take effect.

"§ 604. Resolution of disapproval

"(a) If a proposed rule, other than an emergency rule, contains provisions which—

"(1) violate provisions of existing law;

"(2) are in conflict with court decisions;

"(3) go beyond the mandate of the legislation which they are designed to implement;

"(4) are redundant, overlapping or inconsistent with the provisions of the same or another rule;

"(5) would seriously injure an important public interest; or

"(6) are inconsistent with Congressional intent, such rule shall not become effective, if within sixty legislative days after the date of promulgation, either House of Congress adopts a resolution disapproving such rule.

"(b) If at the end of sixty legislative days after the date of promulgation of a rule, other than an emergency rule, neither House of Congress has adopted a resolution disapproving the rule, the rule shall take effect unless a later date may be required by law or specified in the rule.

"(c)(1) An agency may not promulgate a new rule or an emergency rule identical to one disapproved pursuant to this section unless a statute is adopted affecting the agency's powers with respect to the subject matter of the rule.

"(2) If an agency proposes a new rule dealing with the same subject matter as a disapproved rule, the agency shall comply with the procedures required for the issuance of a new rule, except that, if less than twelve months have passed since the date of such disapproval, such procedures may be limited to changes in the rule.

"§ 605. Effect on statutory time limits

"If a resolution of Congress disapproves a rule which was being promulgated subject to a statutory time limit for rulemaking, the adoption of the resolution shall not relieve the agency of its responsibility for adopting a rule, but any statutory time limit shall apply to such renewed rulemaking only from the date on which the resolution was adopted.

"§ 606. Computation of legislative days

"For the purposes of this chapter the term 'legislative days' does not include any calendar day in which either House of the Congress is not in session.

"§ 607. Procedure for consideration of resolutions

"(a) The provisions of this section are enacted by Congress—

"(1) as an exercise of the rulemaking power of the Senate and the House of Representatives, respectively, and as such they are deemed a part of the rules of each House, respectively, but applicable only with respect to the procedure to be followed in that House in the case of resolutions described by sections 603 and 604 of this title; and they supersede other rules only to the extent that they are inconsistent therewith; and

"(2) with full recognition of the constitutional right of either House to change the rules (so far as relating to the procedure of that House) at any time, in the same manner and to the same extent as in the case of any other rule of that House.

"(b)(1) Resolutions of approval or disapproval of a rule shall, upon introduction or receipt from the other House of Congress be immediately referred by the presiding officer of the Senate or of the House of Representatives to the standing committee having oversight and legislative responsibility with respect to the promulgating agency in accordance with the rules of the respective House; and such resolutions shall not be referred to any other committee.

"(2) If a committee to which is referred a resolution of approval or disapproval which has not been adopted by the other House of Congress does not report such resolution within forty-five legislative days after such referral, it shall be in order to move to discharge such committee from further consideration of such resolution.

"(3) Such motion to discharge must be supported by one-fifth of the Members of the House of Congress involved, and is highly privileged in the House and privileged in the Senate; and debate thereon shall be limited to not more than one hour, the time to be divided in the House equally between those favoring and those opposing the motion to discharge and to be divided in the Senate equally between, and controlled by, the majority leader and minority leader or their designees. An amendment to the motion is not in order, and it is not in order to move to reconsider the vote by which the motion is agreed to or disagreed to.

"(c)(1) Except as provided in paragraphs (2) and (3) of this subsection, consideration of a resolution of approval or disapproval shall be in accord with the rules of the Senate and of the House of Representatives, respectively.

"(2) When a committee has reported or has been discharged from further consideration of a resolution of approval or disapproval with respect to a rule, it shall be in order at any time thereafter (even though a previous motion to the same effect has been disagreed to) to move to proceed to the consideration of such resolution. The motion is highly privilege and is not de-

batable. An amendment to the motion is not in order and it is not in order to move to reconsider the vote by which the motion is agreed to or disagreed to.

"(3) Debate on a resolution of approval or disapproval shall be limited to not more than two hours, which shall be divided equally between those favoring and those opposing the resolution. A motion further to limit debate is not debatable. An amendment to or motion to recommit the resolution is not in order and it is not in order to move to reconsider the vote by which the resolution is agreed or disagreed to.

"§ 608. Effect on judicial review

"Congressional inaction on or rejection of a resolution of approval or of a resolution for disapproval shall not be deemed an expression of approval of such rule.

"§ 609. Sunset; continuation of rule.

"(a) Each rule, including an emergency rule, which has been adopted pursuant to sections 603 and 604, shall automatically cease to be effective within five years after the effective date thereof.

"(b) On or before the automatic termination date of a rule, the agency shall report to each House of Congress its recommendations with respect to whether the rule, or any part thereof, shall be continued or modified and continued as modified. If the agency recommends that the rule be continued or modified and continued as modified, it shall comply with the provisions of chapters 5 and 6 of title 5, United States Code, including procedures required for the issuance of a new rule.

"§ 610. Agency implementation

"The Administrator of General Services shall take such steps as may be necessary including, but not limited to, the revision of the Document Drafting Handbook published by the Office of The Federal Register, to insure that officers and employees of the United States receive information and training necessary to permit them to expeditiously prepare the statements, analyses, and findings required by section 602 of this Act."

(b) The table of chapters for part I of title 5 is amended by inserting immediately after

"5 Administrative Procedure..... 501"

the following:

"6 Congressional review of Agency Rule Making ..... 601"

(c) The provisions of chapter 6 of title 5, United States Code shall supersede any other provisions of law governing procedures for Congressional review of agency rules to the extent such other provisions are inconsistent with such chapter.

SEC. 5. (a) This Act shall become effective at the beginning of the session of the Congress immediately following its enactment.

(b) Section 5 of this Act shall lapse at the adjournment sine die of the fifth Congress following its enactment unless renewed prior thereto.

REGULATORY REDUCTION AND CONGRESSIONAL CONTROL ACT OF 1977

SECTION-BY-SECTION ANALYSIS

SECTION 1. This is the bill's title and the findings section.

SECTION 2. This section makes several changes in Sections 551 and 553 of the Administrative Procedures Act, principally affecting the Act's definitions, public notice and comment provisions and establishing a special mechanism for emergency rules.

Subsection (a). The definition of "rule" in Section 551(4) of Title 5, U.S. Code is amended to provide a clearer distinction between rule making and adjudication by agencies.

Reference to "particular applicability and future effect" is deleted from the definition of "rule" in order to bring the statutory definition in line with actual application and use. Administrative functions that are primarily legislative in nature would be contrasted with functions judicial in nature, that is, regulations setting forth general policy as opposed to decisions affecting particular individuals in particular cases.

Rate making would also be removed from the general definition of "rule". Ratemaking proceedings are frequently adjudicatory in nature and should require more formal APA procedures under 5 U.S.C. §§ 554 and 556–7. It also makes clear that agency rate decisions would not be subject to congressional review and approval or veto.

This subsection adds a new concept to the APA: the "emergency rule". An agency could promulgate and place a regulation into effect immediately, for a limited period of time, whenever an emergency exists that necessitates immediate action, that is, if the agency finds that delay in the effective date of the rule would—

"(A) seriously injure an important public interest,

(B) substantially frustrate legislative policy and intent, or

(C) seriously damage a person or class of persons without serving any important public interest".

The emergency rule concept is significant for those provisions of the bill dealing with Congressional review of agency regulations. Thus, an agency could put an emergency rule immediately into effect if it could be justified under any of the alternative criteria listed in Section 2(a)(2), despite the fact that Congressional review had not occurred.

Subsection (b). The "good cause" exception in the APA would be changed to permit greater public participation in the agency rule making process.

Under present law an agency can bypass the public notice and comment procedure where it finds it to be "impracticable, unnecessary, or contrary to the public interest". 5 U.S.C. § 553(b)(B). This amendment would reduce the instances when an agency can ignore notice and comment requirements. Henceforth these would be only when the agency "for good cause" determines that the rules are of "routine nature or matter" or would have an "insignificant impact" or that temporary "emergency rules should be promulgated".

Subsection (c). Amends Section 553 of Title 5, U.S. Code to provide that once a final rule has been adopted by an agency, it may go into effect immediately if it grants an exemption from, or relieves a restriction in a rule, or falls within one of the categories made exempt from public notice and comment in § 553(b)(3) (see above). All other final rules adopted by an agency shall not become effective until the Congressional review and approval or disapproval procedures in Section 602 (see below) are completed.

SECTION 4: Provides for a new chapter in Title 5 of the U.S. Code to be entitled "Congressional Review of Agency Rulemaking"

Subsection 601: The same definitions set forth in Section 551 with the exceptions that "agency" includes the Congress; federal courts; are applicable and extended to include those agency functions now excluded from coverage of the Administrative Procedure Act in 5 U.S.C. § 551(1)(H). In other words, regulations concerning mortgage insurance, termination of war contracts, disposal of surplus government property and veterans hearings will also be subject to Congressional review. Provides that, for the purposes of the review procedures set forth in this bill, purely internal agency rules and regulations and rules granting or recognizing an exception or relieving a restriction and rules which, in the view of the agency, require no public notice or comment (in other words, agency regulations which have "insignificant public impact"), will not be subject to Congressional approval or disapproval. Defines the term "promulgation" to include publication in the Federal Register of each proposed new rule, together with the economic, paperwork, and judicial impact analyses for each rule, as required under Section 602. The G.S.A. is responsible for ensuring prompt publication, with appropriate explanations, of such information for each rule. (See also Subsection 610).

Subsection 602(a): Requires each federal agency, at the time it promulgates a new rule, to transmit a copy of the complete text of the rule to both Houses of Congress, together with (i) a comprehensive index of all existing rules on the same matter, cross-referenced by subject; (ii) an economic impact analysis of each proposed rule and any alternatives that may have been seriously considered by the agency; (iii) a paperwork impact analysis of each proposed rule and alternatives; and (iv) a judicial impact analysis of each proposed rule and alternatives, requirements, as well as internal measures being taken by the agency to eliminate duplication. In the case where an agency cannot access the impact as required, the agency would be required to file a statement with the House and Senate which lists the qualitative costs and benefits. In addition, when qualitative evidence is not available, the agency shall forward to the Congress the supporting documentation necessary for Congressional considerations of each rule. The information provided by the agency should be at its best estimate, based on its experience and other external data. The agency should not attempt to burden businesses, consumers or other parties with "fishing expeditions," unnecessary paperwork, surveys or the like in order to obtain the required information. All of its direct inquiries are subject to the limits prescribed by the Federal Reports Act, including the requirement that it obtain data available from existing government sources.

Subsection 602(a)(2): sets out the information that the agency must provide in an economic impact analysis. This includes an estimate of costs vs. benefits of the regulation to consumers, businesses, markets and levels of government, and its effects on productivity, competition, supplies of important manufactured products or services, employment, energy supply and demand, and the environment. Where the agency is unable to make an estimate, it must explain the nature and extent of costs and benefits that it cannot quantify. This identical information is currently required of Executive Branch agencies and contained in inflationary impact statements which accompany new regulations proposed by those agencies. As part of the Ford Administration's regulatory reform programs, the President, on November 27, 1974, issued Executive Order No. 11821, which specified the criteria that agencies should consider when weighing the costs and benefits of proposed regulations. In January, 1975, the Office of Management and Budget issued a circular implementing this executive order, which resulted in the widespread use of inflationary impact statements. This program has been supported by most of the departments and agencies responsible for its implementation, and has been extended by President Carter. (See discussion by James C. Miller in Regulation issue of the AEI Journal on Government and Society, July/Aug. 1977.) The Congress already requires an estimate of costs and regulatory impact of proposed legislation to be included in committee reports on bills.

Subsection 602(a)(3): sets out the information that the agency must provide in a paperwork impact analysis. This includes an estimate of the nature, amount, frequency, costs and man-hours that would be required under the new regulation for fulfilling information, report filing and record-

keeping, as well as the steps that are, will or should be taken by the agency to eliminate duplication in paperwork requirements. The Congress currently requires a paperwork impact statement in committee bill reports and has established the Federal Paperwork Commission to find ways to reduce the Government paperwork burden.

Subsection 602(a)(4): sets out the information that the agency must provide in a judicial impact analysis to measure probable effects of the rule on the operation, work load and efficiency of the Federal courts. This requirement is in line with the recommendation of Chief Justice Warren Burger that the Federal Government carefully consider the impact of its actions on the court system and the administration of justice in the United States.

Subsection 602(a)(5): provides that the agency provide such other information as it deems appropriate for Congressional review of each proposed rule.

Subsection 603(a): This subsection adds a new concept to the A.P.A. by establishing the "concurrent resolution of approval" for certain rules and regulations as part of the Congressional review process. Sets forth the criteria for determining when and if both Houses of Congress must take affirmative action, *i.e.*, adopt a concurrent resolution approving a proposed rule or regulation (except an emergency rule), in order for the rule or regulation to be put into effect. The standards to be used by the House and Senate Committee reviewing the rule relate to the impact of the rule on civil or criminal penalties, agency actions (inspection), public health, safety and welfare, or the economy. The economic criteria in (4), (5) and (6) are similar to those used in connection with the Ford Administration's regulatory reform program affecting "major" rules proposed by Executive Branch agencies (see discussion under Subsection 602(a)(2) above). The information provided by the proposing agency in its economic impact analysis will assist the Congress in its determination of whether the criteria in (4), (5), (6), (7), or (8) are met and joint approval is required. If the proposed rule has a "major" impact on the economy, or any economic sector, industry or level of government, or will likely cause serious harm to the public, or will result in greater costs than benefits, as shown by the agency, then both Houses must act favorably on the rule for it to become effective. However, the concurrent resolution must be adopted within 60 legislative days after the date the rule has been promulgated by the proposing agency.

Subsection 603(b): Provides that if both Houses have taken affirmative action within the 60-day period on the "major" rule meeting the Subsection 603(a) criteria, then it shall take effect; if either House or Senate or both fail to adopt the resolution, the rule cannot go into effect.

Subsection 604(a): This subsection adds a new concept to the A.P.A. by establishing the "resolution of disapproval" for certain rules and regulations as part of the Congressional review process. Sets forth the criteria for determining when and if either House can take action to prevent a rule (except an emergency rule) from becoming effective within 60 legislative days after its promulgation date, *i.e.*, adopt a resolution disapproving the proposed rule or regulation. A resolution of disapproval could be adopted in either House if it determines that the rule contains provisions which (i) violate existing law; (ii) conflict with court decisions; (iii) exceed the legislative mandate; (iv) are inconsistent, redundant or overlapping with other rules; (v) would seriously injure an important public interest; or (vi) are inconsistent with Congressional intent.

Subsection 604(b): Provides that if either House has failed to adopt a resolution of disapproval the proposed rule will go into effect automatically within 60 legislative days after the date the rule has been promulgated unless a later date is required by law or specified in the rule.

Subsection 604(c): Prohibits an agency from promulgating a new rule or an emergency rule identical to the one disapproved already unless permitted by statute. A new rule dealing with the same subject matter as a disapproved rule is subject to the procedures for any proposed rule, unless it has been less than twelve months since the disapproval, in which case the procedures apply only to changes in the disapproved rule.

Subsection 605: Provides that disapproval of a proposed rule does not relieve an agency from adopting a rule; however, any statutory time limit will apply to a renewed rule only from the date on which the resolution is adopted.

Subsection 606: Provides that the time periods for the Congressional review procedures shall be computed in "legislative days." States that "legislative days" does not count calendar days on which either House is not in session.

Subsection 607(a): Recognizes that the provisions for consideration of resolutions of approval or disapproval are an exercise of the rulemaking power of the Senate and the House and, as such, are adopted with a full recognition of the constitutional right of either House to change its own rules at any time as it may determine.

Subsection 607(b): Provides that resolutions of approval or disapproval shall be referred to the standing committee in each House which has oversight and legislative jurisdiction over the agency proposing the particular rule and cannot be referred to any other committee. Provides that it will be in order to make a motion to discharge a committee from further consideration of the resolution within 45 legislative days after the date of refusal if the committee has not yet taken action. The discharge motion must be supported by at least 20 Senators or 87 Representatives. It is highly privileged, is not debatable and amendments or motions to reconsider are not in order. This accelerated discharge procedure, patterned after the Budget Control and Impoundment Act, 31 U.S.C. § 1017(b), is to prevent a committee from sitting on a proposed rule, so that it will automatically go into effect or lapse at the end of the 60-legislative-day period. Debate on the resolution of approval or disapproval is limited to not more than two hours, to be divided equally between proponents and opponents.

Subsection 608: States that the failure of Congress to act or approve a resolution of approval or disapproval should not be regarded legally as an expression of approval of the proposed regulation.

Subsection 609: Provides that every rule (including an emergency rule) adopted pursuant to the new Congressional procedures in Chapter 6 will "sunset" automatically at the end of five years from the effective date. Before that termination date, the proposing agency can recommend to the Congress whether the rule should be continued or amended, but if the agency recommends that the rule be extended, it must again promulgate the rule and submit it to the Congress for review pursuant to the procedures in Chapter 6.

Subsection 610: Provides that the GSA will take appropriate steps to instruct those Federal officials responsible in the preparation of the information referred for the economic, paperwork and judicial impact analyses, etc. Provides also that the Congressional review procedures in Chapter 6 will supersede any other similar provisions already enacted into law to the extent they are inconsistent with the new procedures.

SECTION 5. This section provides an effective date for this legislation (at the beginning of the next session immediately following its enactment). It also provides for a "sunset" date at the end of the fifth Congress following enactment unless it is renewed.

[From Regulation, July/August, 1977]

LESSONS OF THE ECONOMIC IMPACT STATEMENT PROGRAM

(By James C. Miller III)

Addressing the Congress in October 1974, President Ford announced that he would require government agencies to assess the inflationary impact of their major proposed regulations and legislative recommendations. A month later he established, by executive order, an Inflation Impact Statement (IIS) Program that was to run through 1976 and apply to all executive branch agencies. At the end of 1976, Ford extended the program and changed its title to the more descriptively accurate Economic Impact Statement (EIS) Program. (In the interests of simplicity, this title and acronym will be used here, with the caveat that they should not be confused with those of the Environmental Impact Statement Program.)

Because of strong opposition from organized labor—owing especially to claims that the EIS requirement delayed regulations at the Occupational Safety and Health Administration (OSHA)—many thought that President Carter would terminate the program. Instead, he has given it strong support, most recently on April 15, when he announced several measures dealing with inflation. Specifically, he asked that full consideration be given to "the economic cost of major government regulations, through a more effective analysis of their economic impact," and directed the Council on Wage and Price Stability (CWPS) "to provide relevant agencies with analyses of the inflation implications of specific government regulatory and legislative actions."

Meanwhile, support for the EIS initiative has been growing in Congress, where there is considerable interest in strengthening the program and applying it to the independent regulatory agencies as well as those within the executive branch. Bills have been introduced to require all agencies to prepare "regulatory cost/benefit assessments" of their proposed legislation and regulations having a significant economic impact (H.R. 351 and H.R. 701); to have the Congressional Budget Office prepare economic impact statements for proposed legislation and agency regulations (H.R. 1743); and to require agencies to prepare economic impact statements for proposed regulations, submit them to CWPS for comments thirty days in advance of their appearance in the Federal Register, and publish the analysis and CWPS's comments along with the proposed regulation (H.R. 2100).

In view of President Carter's interest in continuing and perhaps even strengthening the EIS program, and in view of forthcoming deliberations over such proposals on Capitol Hill, it is appropriate to review the record in order to learn what has been accomplished to date and what might be done to make such efforts more effective.[1]

BACKGROUND

During 1974, rising anxiety about "double digit" inflation stimulated popular and of-

[1] A thorough assessment of the program is contained in Thomas D. Hopkins, *An Evaluation of the Inflation Impact Statement Program* (Washington, D.C.: Council on Wage and Price Stability, December 7, 1976).

ficial interest in the problem and led President Ford, in one of his first steps, to convene a series of summit conferences on inflation. These meetings produced a variety of recommendations in September and October of that year.

At the same time, the unprecedented growth in federal regulation was also causing concern. The early 1970s had seen the creation of seven new regulatory agencies, including the Environmental Protection Agency (EPA), the Consumer Product Safety Commission (CPSC), and OSHA. Between 1970 and 1974 the number of pages in the Federal Register had grown from 20,036 to 42,422 per year; the number of pages in the *Code of Federal Regulations* had grown from 54,105 to 69,270; and some twenty-nine major regulatory statutes had been enacted (see summary and table on page 43, this issue). Many business leaders, academics, and policymakers were urging that regulatory activity be given closer scrutiny and that careful attention be paid to the costs and benefits of major regulations *before* rather than *after* they become effective.

These two concerns came together at two inflation summit conferences attended exclusively by economists. At the first session (Washington, September 5, 1974), there was considerable discussion about the extent to which "sacred-cow" regulations constrained economic growth, created unemployment, and caused prices to be higher than they would have been otherwise. At the second session (New York City, September 23), Thomas G. Moore, senior fellow at the Hoover Institute and an AEI adjunct scholar, circulated a petition calling for the elimination of a long list of federal regulatory and legislative restraints. Included on the list were laws restricting competition in transportation and limiting supplies of energy, as well as regulations setting the maximum interest rates payable by financial institutions and mandating safety devices on new automobiles. This petition was signed (with minor qualifications in some instances) by twenty-one of the twenty-three economists in attendance.

Thus, worry over inflation—and over regulation as a factor contributing to it—was the major reason the EIS program was established. But the officials responsible for the program were after more than a simple tracing through of the cost impact of proposed regulations and legislative recommendations.[2] They wanted to use the requirement to improve agency decision-making, and this meant getting the agencies to address the costs and benefits of their proposals. What program officials wished to avoid was the tendency for agencies to serve special constituent interests, often at great cost to the general public; to view the objects of their regulations as natural enemies, to be dealt with punitively; to forge ahead with regulatory and legislative proposals without knowing enough about the problem being addressed or the effects of the proposed solution; and to resist suggestions for alternative, more efficient ways of dealing with economic problems.

In briefings on the program, agencies were told that a proposal need not be considered inflationary simply because it might generate costs. Rather, if the proposal would increase real output (that is, generate tangible and intangible benefits in excess of costs), then in real sense it was *anti-inflationary*, but if the action would decrease real output (that is, generate costs in excess of benefits), it was inflationary. Agencies were not required under the program to place exclusive, or even primary, reliance in their decision-making on cost-benefit calculations, for such a requirement could have been imposed only through legislation. Nevertheless it was believed that requiring agency officials to address costs and benefits systematically would make them more sensitive to these issues.

A first step in the program was to establish criteria for determining whether a proposed regulation or legislative recommendation should be considered "major." Obviously to attempt assessments of all proposals would spread resources far too thin. So a principal objective was to flag for analysis (and possible reconsideration) those proposals having costs greatly exceeding benefits. Since it tends to be easier to make a preliminary estimate of costs than benefits—especially at the initial stage of a proposal—the criteria focused on this aspect. Although supplemental criteria were developed, nearly every EIS issued during the first two years of the program was triggered by a preliminary finding that the proposal would cost $100 million during the first year it would be in effect or $150 million during the first two years.

Each EIS was required to analyze the proposal's estimated costs and benefits. These estimates were to include intangibles as well as tangibles and were to be expressed in dollar terms whenever possible. The EISs also had to review the costs and benefits of alternative approaches for achieving the same goal.

The administration of the EIS program was decentralized. Each agency was responsible for determining which of its proposals was major and for preparing the statements. Upon request, statements on proposed legislation were given to the Office of Management and Budget (OMB) and those on regulatory proposals were given to CWPS. Eventually, agencies were required to certify in the Federal Register that the inflationary impact of their proposed regulations had been considered and, in the case of major proposals, that an EIS had been prepared; also, upon request, agencies had to explain to CWPS why, in their judgment, a proposal was not major.

Finally, since the program was a presidential initiative established by executive order, it applied only to executive-branch agencies, and not to the independent regulatory agencies such as the Interstate Commerce Commission (ICC) and the Civil Aeronautics Board (CAB). The independents were urged to conform with the program, but each invoked its right not to be bound by it. Also, unlike its sister program, the Environmental Impact Statement, the EIS did not provide grounds for court action. As ultimately resolved in the *Independent Meat Packers* case (8th Circuit, 1975), an agency's failure to complete an EIS when required or to prepare one conforming to the specifications of the program could not be used to overturn a regulatory decision. In essence, conformance with the program depended on agency support and "policing" by CWPS and OMB.

EXPERIENCE WITH THE PROGRAM

As of mid-April 1977, a total of sixty-five EISs had been prepared—fifty-seven for proposed regulations and eight for proposed legislation. The table (see page 20) lists the date each of these analyses was completed, the responsible agency, the subject matter, and whether the proposal was regulatory or legislative. As can be seen, most EISs have been prepared by a handful of agencies—notably the U.S. Department of Agriculture (USDA), EPA, and OSHA. This reflects the important role these agencies have played recently in generating regulations and legislative proposals.

The quality of the individual EISs varies considerably. Some are quite detailed, broad in scope, and analytically sophisticated. But altogether too many are unduly brief, fail to address the relevant issues, and contain grossly defective analysis. Part of the explanation is that some agencies—for example, EPA and the Department of Transportation—have devoted substantial analytical resources to the task, while others—for example, USDA and the Food and Drug Administration (FDA)—have not. This, in turn, reflects the agencies' relative commitment to the program. While some have given it strong support, others have been hostile to it or, at best, have viewed it as a necessary hurdle.

Overall, the analyses contain reasonably good estimates of costs, but their assessments of benefits are weak, and alternatives are usually ignored. Typically, of course, costs are easier to analyze than benefits and alternatives. But the reluctance of some agencies to go beyond analyzing costs appears to be caused more by pressures from constituents than by an inability to cope with the technical problems of economic analysis. This seems particularly true of OSHA, which, despite repeated criticism from CWPS and OMB, steadfastly refuses to attempt monetary estimates of benefits or to analyze alternatives. Apparently, organized labor believes that its interests are better served by detailed, stringent standards, even though such standards may prove very costly, and objects to having OSHA, or anyone else, perform careful benefit estimates or analyze alternatives, either of which might make the proposed standards seem less desirable. For instance, taking a strong position on approaches for reducing worker exposure to harmful substances, organized labor supports the installation of "engineering controls" (exhaust fans, enclosed transport, et cetera) rather than the use of "personal protective devices" (respirators, gloves, special suits, et cetera). Research by CWPS economists indicates that almost invariably the latter approach can reduce worker exposure at a small fraction of the cost of engineering controls.

Has the EIS program improved agency decision-making? It may be too early to tell. Since the gestation period for a proposed regulation or law is generally several years and since the program has been in full swing for only two years, we do not have enough cases to make a definitive judgment. Furthermore, in evaluating the program we are dealing with a very subjective output—the quality of decision-making. Also, even if adequate "before" and "after" comparisons were possible, we must be careful about attributing changes solely to the program; obviously, many factors could have intervened, such as worse or better regulatory appointments, political pressures from the administration and the Congress, and changes in the relative effectiveness of adversaries in regulatory proceedings. These problems make rigorous evaluation impossible at this stage, leaving us with personal and unsystematic appraisals from those who have observed the program or participated in it.

On August 3, 1976, CWPS asked for public comments on the EIS program by means of a notice in the *Federal Register*. Thirty-one replies were received, all favorable. These included comments from Senator Hubert H. Humphrey (then chairman of the Joint Eco-

[2] These officials were under no illusion that the program would *solve* the inflation problem, or even make a substantial contribution for that matter. In contrast with fiscal and monetary policy, regulation has a very small effect on the rate of inflation. But for a given impact on that rate, regulation often has a greater effect upon consumer welfare because it operates directly upon the real supply of goods and services rather than working through aggregate demand.

nomic Committee of the Congress) and a number of manufacturers and trade organizations. No replies were received from labor organizations, but it was widely reported in the press that certain labor leaders, including George Meany and Leonard Woodcock, were openly hostile to the program, especially as it affected OSHA.

About the same time, CWPS solicited the views of key personnel at the agencies, and followed up with a score of in-depth interviews with agency staff members responsible for the program. In addition, several agencies commented on various drafts of the report prepared by an evaluation team headed by Thomas Hopkins of CWPS. From these various comments we learned several things about how the program is functioning.

First, officials at all of the agencies, except for two, wished the EIS program to continue. Generally, they found the analyses helpful to them in weighing the component parts of a proposal and in making trade-offs to reduce the cost of meeting a given objective. They also found the analyses useful in defending a decision not to adopt as strong a regulation or legislative proposal as some of their more extreme constituents would have liked. This appears to be the primary reason why OSHA supported the program, albeit reluctantly.

The two agencies that formally opposed the program were USDA and the Federal Energy Administration (FEA). Indeed, in late August 1976 the USDA unilaterally stopped complying with the program, arguing that it represented "meaningless paperwork" and denying that regulation could have any impact on inflation. Such an attitude is, perhaps, understandable since, by their very nature, many USDA regulations that come under the EIS program—agricultural marketing orders, price support programs, and the like—can be shown to generate costs in excess of benefits. The reason for the FEA's strong opposition to the EIS program was different. At that agency the program was viewed as an impediment to the deregulation of petroleum prices, despite efforts by those responsible for the program to assure FEA officials that in a relevant sense such action would be *anti*-inflationary—that is, it would stimulate production and reduce excess demand. A major problem was FEA's dependence on macroeconomic, econometric models for predicting the outcomes of policy changes. Such models, by their very design, indicate a price-enhancing effect for deregulation. Moreover, officials were concerned about the public's perception of the effects of deregulation, and in their view the EIS simply drew attention to rising petroleum prices.

A second thing we learned from comments by agency officials and the public is that the program is not well integrated into the process of formulating proposals and making decisions about them. Typically, an EIS is prepared *after* a proposal has been drawn up and thus the analysts' task becomes one of justifying the approach taken. One reason for this is that usually the initiative for a new regulation or legislative proposal is taken not by the agency's economists or policy analysts, but by its lawyers and administrators. Their focus tends to be upon meeting the procedural requirements of timeliness, due process, the weighing of constituent interests, and defensibility in the courts, rather than upon the economic costs and benefits of their actions. Thus, the decision-making process often proceeds along two, almost distinct tracks—one for the decision-makers and one for the analysts. It is especially lamentable that typically the EIS is not relied upon as an input at the proposal formulation stage, since that is the time when information on costs, benefits, and alternatives is most likely to affect the ultimate decision. Once an agency has gone into print with its original proposal, the chances it will take a new direction are very slim.

Not surprisingly, then, a third major thing we learned is that the program receives higher marks from agency economists and policy analysts than from lawyers and administrators more directly responsible for the decisions. The lawyers' interest is to ensure ample discretion for the ultimate decision-maker and to minimize the risk that decisions will be challenged and perhaps overturned in court. They see the EIS as narrowing that discretion and as providing a potentially damaging piece of evidence in court. (For this reason, there is some reluctance to make EISs public.) On the other hand, economists and policy analysts generally see the EIS as strengthening their hand within the agency. It may give them somewhat more influence on policy decisions, and it often leads to an increase in their share of agency resources. The program also tends to be supported more strongly by senior officials in the agencies than by junior officials—partly because it is regarded as a means of "controlling the bureaucracy" and partly because it is a presidential program. Senior officials, as political appointees, are more apt to reflect presidential concerns about policy and the responsiveness of the bureaucracy than are employees protected by the Civil Service system.

The fourth thing we learned is that the program costs the agencies little in terms of resources. One reason is that the OMB circular promulgating the program stated that it would be met within the existing budget. The argument was that agencies already possessed a capability for economic analysis and that the EIS program would merely redirect that effort. Predictably, this has proved to be a bone of contention, and nearly every agency has urged that this policy be reconsidered. It appears, however, that few additional resources have been required. Existing policy staffs have been utilized a bit more intensively than they were, with their efforts supplemented on occasion by other personnel in the agency. The major exception is OSHA, which has contracted out its EISs, often at six figures. But even at OSHA *some* economic analysis would have been done in the absence of the EIS program.

On the basis of these conclusions and my own experience with the program, a tentative assessment may be made. First, as noted, the costs of the program appear to be low. Second, despite wide variations among agencies, there is some evidence, albeit highly subjective, that the program is having a substantial effect. Policy-makers now appear to be taking the economic implications of their proposals more seriously than they used to. In agency discussions and in formal proceedings, the EIS is serving as a rallying point for those arguing that regulation should be consistent with economic efficiency. The EIS is often an important component of CWPS filings before regulatory agencies—and, because CWPS is part of the Executive Office of the President and because its interventions are highly publicized, it has considerable clout. Moreover, although agencies seldom alter their proposals once announced, there have been cases where, arguably, the EIS and the attention drawn to it have caused the ultimate outcome to be different than it otherwise would have been. More important, an agency's concern that its EIS may be criticized and that the analysis may undercut, rather than support, its proposal has led to closer coordination between the lawyers and economists at the proposal formulation stage—and, therefore, to more carefully considered proposals and better analyses. Thus, summing up, it appears that the benefits of the program substantially outweigh the costs.

WHERE DO WE GO FROM HERE?

When contemplating the future of the EIS program, one should keep in mind that economic analysis is merely one instrument for improving the quality of decision-making and that there are others—including better regulatory appointments, greater oversight by OMB and the Congress, and revisions in the Civil Service system to improve the quality and accountability of agency staff. While the EIS program alone cannot produce perfection, it can be—and, as we have seen, has been—a useful device. It should be continued. It should also be improved.

First, steps should be taken to improve the overall quality of EISs. Specifically, minimal standards should be established. Clearly, decision-making is not aided if the analysis on which it is based is incompetent. This objective could be addressed by requiring that regulatory agencies, before taikng action, obtain CWPS or OMB approval for the quality of their analysis (not the desirability of the proposal). Any impasse between CWPS or OMB and the initiating agency could be resolved by the Economic Policy Group (EPG) or some other representative designated by the President. Changes of this kind might require legislation.

Second, steps should be taken to ensure that the EIS is utilized as an input into the regulatory decision-making process—especially at the proposal formulation stake. One way of bringing this about would be to require agencies to submit their EIS evaluations to CWPS (or perhaps some other group like the EPG) *prior* to publication in the Federal Register. This would give proposal formulators the opportunity to draw upon outside expertise and would provide an extra incentive for them to utilize the analyses.

Third, the EISs should be made public and should be featured more prominently by the agencies. As mentioned earlier, the possibility that an EIS will be criticized spurs agencies to improve their analyses and make better use of them. Formal EISs should accompany major legislative proposals sent to the Congress by the administration. In the case of regulatory proposals, the formal EIS (or, if lengthy, an executive summary) should be published in the Federal Register.

Fourth, the program needs to be extended to *existing* regulations and programs. This could be done without legislation, utilizing OMB in its normal management and budget roles. Or, to maintain flexibility and avoid undue bureaucratization, CWPS and/or OMB might be given explicit authority to request from each agency each year a limited number of analyses of existing regulations or programs.

Fifth, the program should also be expanded to include the independent regulatory agencies—for example, the ICC, the CAB, the Federal Power Commission, the Federal Communications Commission, and the Federal Trade Commission. These agencies generate important legislative and regulatory proposals whose overall quality could be enhanced by a rigorous application of economic reasoning. This recommendation also would require legislation.

Sixth, all agencies should have the discretion to consider costs and benefits in developing their regulatory proposals and in making their decisions. This would mean, for example, (1) repealing the "Delaney amendment" to the Food, Drug, and Cosmetics Act (which requires the FDA to ban any food additive found to be carcinogenic, regardless of the benefits and costs of such a ban) and (2) modifyng the Clean Air Act (which, as it is interpreted by EPA, requires the agency *not* to consider costs and benefits in certain instances).

Seventh, Congress should require that, according to reasonably informed judgement, major new regulations have favorable cost-benefit ratios and meet their given objectives at the lowest cost, considering all the available alternatives. Along with this, Congress might grant interested parties the right not only to appeal in the federal courts but to have the regulatory decision determined in the courts (that is, *denovo* review) if there were clear and convincing evidence that the agency had failed to consider the benefits and costs of the proposal.

In practice, regulatory decision-making and legislative proposal-making fall far short of the theoretical ideal. Our objective should be to make them as rational as possible, and the EIS technique is an important contribution to that end. To attain its full usefulness, however, it should be strengthened by administrative action and supplemented by legislation.

ECONOMIC IMPACT STATEMENTS COMPLETED BY FEDERAL AGENCIES

Date EIS completed, agency, subject, and nature of proposal:

March 1975, DOC, proposed Patent Modernization and Reform Act, legislation.

March 1975, USDA, standards for beef grading, regulation.

April 1975, FEA, proposed Energy Conservation and Production Act, legislation.

May 1975, USDA, support for U.S. agricultural exports, regulation.

May 1975, USDA, tobacco price supports, regulation.

June 1975, USDA, peanut price supports, regulation.

June 1975, HUD, construction standards for mobile-home safety, regulation.

July 1975, FEA, proposed Electric Power Construction Act of 1975, legislation.

July 1975, USDA, U.S. agricultural export program of Commodity Credit Corporation, regulation.

July 1975, DOL, proposed Unemployment Compensation Amendments Act, legislation.

July 1975, EPA, registration of pesticides, regulation.

August 1975, DOL, proposed Work Incentive Program Amendments Act, legislation.

September 1975, EPA, drinking water standards, regulation.

October 1975, EPA, motorcycle emissions, regulation.

October 1975, EPA, effluents from offshore gas and oil production, regulation.

October 1975, USDA, milk price supports, regulation.

October 1975, USDA, labeling of meat and poultry products, regulation.

October 1975, USDA, support and regulation of cotton crop program, regulation.

October 1975, DOT, proposed Aviation Act of 1975 (regulatory reform), legislation.

November 1975, EPA, maintenance of ambient air quality standards, regulation.

November 1975, EPA, coal mining effluents, regulation.

November 1975, HUD, mortgage insurance and assistance, regulation.

November 1975, DOT, proposed Northeast Regional Railroads Additional Service Act, legislation.

January 1976, USDA, support for U.S. agricultural exports, regulation.

January 1976, EPA, effluent guidelines for paper industry, regulation.

January 1976, HEW/FDA, ban of idethylstilbestrol (DES) in cattle feed, regulation.

February 1976, HEW, discrimination against handicapped persons, regulation.

February 1976, DOL/OSHA, worker exposure to coke-oven emissions, regulation.

February 1976, FEA, exemption of residual fuel oil from mandatory petroleum allocation and price regulations, regulation.

February 1976, EPA, standards for measuring evaporative hydrocarbon emissions from automobiles, regulation.

February 1976, EPA, limitations on organic-chemical effluents, regulation.

March 1976, USDA, milk price supports, regulation.

March 1976, USDA, modifications in food stamp program, regulation.

March 1976, DOD/CE, permits for dredge-and-fill operations, regulation.

March 1976, EPA, emissions from light-duty trucks, regulation.

April 1976, HEW, Medicaid reimbursements to nursing homes, regulation.

April 1976, HEW/FDA, banning of nitrofurans in chicken feed, regulation.

April 1976, DOL/OSHA, worker exposure to industrial noise, regulation.

April 1976, DOL/OSHA, worker exposure to inorganic arsenic, regulation.

May 1976, FEA, proposed Energy Independence Authority Act, legislation.

May 1976, USDA, tobacco price supports, regulation.

May 1976, DOT, financing of rehabilitation of railroad facilities, regulation.

June 1976, EPA, guidelines for iron and steel effluents, regulation.

June 1976, EPA, effluents from photographic processing, regulation.

June 1976, FEA, guidelines for federal support of state energy conservation plans, regulation.

July 1976, DOT/NHTSA, occupant crash protection (air bags), regulation.

July 1976, FEA, definition and allocation of nonproduct cost increases, regulation.

August 1976, USDA, support for U.S. agricultural exports, regulation.

September 1976, EPA effluents from pesticides, regulation.

September 1976, FEA, contingency plan for gasoline and diesel-fuel rationing, regulation.

November 1976, EPA, limits on polychlorinated biphenyl (PCB) effluents, regulation.

November 1976, FEA, exemption of motor gasoline from mandatory allocation and price controls, regulation.

December 1976, EPA, guidelines for effluents from onshore oil production, regulation.

December 1976, EPA, noise emissions for wheel and crawler tractors, regulation.

January 1977, EPA, dust emissions from grain elevators, regulation.

January 1977, DOC, guidelines for federal support of coastal energy impact programs, regulation.

January 1977, DOL/OSHA, occupational exposure to sulfur dioxide, regulation.

January 1977, DOT/FAA, abatement of airport noise, regulation.

February 1977, FEA, allocation of increased costs to gasoline, regulation.

February 1977, FEA, entitlements program for strategic petroleum reserve, regulation.

February 1977, DOL/OSHA, occupational exposure to lead, regulation.

March 1977, FEA, incentives for industry to switch from oil and gas to coal, regulation.

April 1977, USDA, milk marketing order in the New York-New Jersey area, regulation.

April 1977, HEW/FDA, banning of saccharin and its salts, regulation.

April 1977, FEA, consistent control treatment for Californian and Alaskan crude oil, regulation.

By Mr. HASKELL:

S. 2012. A bill to amend the Trade Expansion Act of 1962 with respect to investigation of the effects on national security of importation of refined petroleum products; to the Committee on Finance.

DOMESTIC REFINERS

Mr. HASKELL. Mr. President, I am today introducing a bill to clarify the President's national security authority and to help preserve a healthy U.S. refinery industry. My bill would allow the President to make adjustments to license fees or other charges on imported petroleum products that he determines are necessary to protect national security.

In recent years, domestic crude oil price controls and the entitlements program have allowed domestic refiners to remain competitive with foreign refiners. However, the crude oil equalization tax, when added to existing environmental and safety requirements could have a serious adverse impact on the competitive position of this important industry.

My bill merely clarifies existing Presidential authority to protect national security. This authority was the subject of litigation when the President used it to impose a $2 per barrel import fee on crude oil in 1975. The U.S. Supreme Court, in *FEA* v. *Alqonquin SNG, Inc.*, 426 U.S. 548 (1976), held that the President has some authority to regulate imports of oil and oil products, but the decision is not definitive on the limits of that authority. My bill would modify section 232 of the Trade Expansion Act of 1962 to explicitly delegate to the President the authority to impose import fees that he determines are required to protect the domestic refining industry.

The bill also expedites the required study by the Secretary of the Treasury, increasing the chances for early Presidential review. The Secretary of the Treasury's national security study deadline would be reduced from 12 to 6 months for petroleum products under my bill.

Without such an amendment, the energy program before us could weaken our domestic refining capacity and thus impair our national security by perpetuating our dependence on unreliable source of foreign oil products.

I therefore urge the support of my colleagues for the bill I offer today.

By Mr. WILLIAMS (for himself and Mr. RIEGLE):

S. 2014. A bill to amend the Bankruptcy Act to provide a priority for certain debts to consumers; to the Committee on the Judiciary.

Mr. WILLIAMS. Mr. President, today, on behalf of Senator RIEGLE and myself, I am introducing a measure to afford greater protection to consumers in bankruptcy proceedings. Under current law, consumers are "general unsecured creditors," at the bottom of the list of those to be paid from a bankrupt's estate. General unsecured creditors can recover their losses only after secured and priority claims have been taken care of. In cases where a bankrupt firm has some assets, general unsecured creditors now receive an average of only 7 cents for each dollar they are owed. If this measure becomes law, consumers will be in a much better position to collect.

Consumers are truly disadvantaged, forgotten parties in bankruptcy proceedings. They are in an especially weak position vis-a-vis trade creditors. Commercial creditors know the risks of doing business without a secured interest and adjust their compensation accordingly. Those who make purchases for their personal, family, or household use do not

see themselves as creditors in that relationship. Their intention in the transaction is neither profit-making nor risk-taking. They are not in the market as sellers, but rather solely to buy for their own use. Nothing in their situation seems analogous to the position of a financing bank or other lender.

The measure I introduce today would create a new priority for consumer creditors—after secured creditors, administrative costs, and wage and employee benefits claims, but before taxes, Government debts, and general unsecured creditors. A priority will be especially meaningful for consumer creditors of a firm which undergoes a reorganization form of bankruptcy, where the firm is allowed to continue operating if it arranges to pay off its debts. Significantly, the idea of a priority for consumers in bankruptcy is endorsed by the National Association of Attorneys General and the Consumer Federation of America. A similar measure has been introduced in the House by Mrs. FENWICK.

S. 2014 will provide greater protection for those who have prepaid for continuing or future services, such as correspondence school lessons; those who prepaid for goods, for example, purchases made on a layaway plan; those who possess merchandise certificates or who have returned goods for credit; and those who have left their own goods with the company to be repaired. Low-income consumers are especially vulnerable because they are more apt to buy on credit in a financially marginal neighborhood store.

The failure of the giant W. T. Grant Co. provides a perfect example of the short shrift which consumers can, and all too frequently do get. While a great deal of concern was expressed about the effect on Grant's bankruptcy on commercial creditors—little attention was focused on the plight of consumer creditors. There seemed to be little concern for the thousands who had made lay-away purchases from Grant in the weeks preceding the bankruptcy, for those who held "Grant's cash" or merchandise certificates and had not converted them into goods prior to the bankruptcy.

Mr. President, the current bankruptcy law was drafted in 1938 when little need was paid to the interests of consumers. Today, the interests of consumers are given greater attention—and rightly so. However, the movement for greater consumer protection which has produced significant changes in the law of consumer credit, marketing practices and product safety has yet to have impact in the bankruptcy arena. I urge enactment of S. 2014 which will extend a greater degree of protection and equity for the consumer who finds himself innocently thrust into the bankruptcy arena.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2014

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 64. a. (11 U.S.C. 104(a)) of the Bankruptcy Act is amended—

(1) by inserting immediately after clause (3) the following new clause: "(4) debts owing to a natural person on account of a deposit of money made in connection with the purchase, lease, or rental of goods or services for personal, family, or household use.

(2) by redesignating clauses (4) and (5) as (5) and (6), respectively.

By Mr. CHILES (for himself and Mr. LEAHY):

S. 2015. A bill to require the Office of Management and Budget to provide information on the formulas and assumptions used in the distribution of domestic assistance; to the Committee on Governmental Affairs.

Mr. CHILES. Mr. President, I am introducing on behalf of myself and Senator LEAHY legislation to provide better information to the public and the Congress on how Federal funds are distributed to State and local governments. This proposal is a companion measure to H.R. 8458 which Congressman FASCELL has introduced in the House of Representatives.

Each year billions of Federal dollars are funneled to State and local jurisdictions. Just in the recent past, some $6 billion were allocated under the Public Works Employment Act. The competition for this money is keen and the need on the part of many communities is great. At times, however, the program for distribution of funds may seem to resemble a giant roulette wheel with little rhyme or reason to the winners and losers. To many cities seeking funding under the public works jobs bill, I am sure this appeared to be the case. Almost every State had a story of a tiny community receiving millions in funds while a major metropolitan area received nothing.

The Congress obviously sets the policy for the allocation of Federal funds. This may involve the development of a general formula to include such factors as population, per capita income, State and local taxes, and other criteria. However, as efforts are made to insure regional and State equity as well as take care of unique or particularly pressing situations, these formulas can become rather complicated. With such formulas it becomes not merely a case of feeding the data into the computer but determining just what constitutes the appropriate data and what assumptions need to be made in programing the computer.

These all important determinations are made not by the Congress, but by whatever agency or department that has administrative responsibility for the program. With so much money at stake the decisions of an agency with respect to implementing a formula can mean millions of dollars won or lost for a community or State. In some cases, an arbitrary assumption or subjective judgment by an agency can even serve to thwart clear congressional intent.

Our recent experience with the emergency public works jobs program provides a good illustration of the problems that can arise and points to the need for Congress to get a better handle on how its funding decisions are being carried out. I am sure just about every Member of Congress was faced with the almost impossible task of trying to explain the rationale for why one city was funded and another was not. It certainly did not seem to have much to do with how serious the unemployment problem was in a particular area.

What became evident in the aftermath of the public works legislation is the scope of decisionmaking that is left to the agencies after enactment. An example of what takes place with a formula can be seen from the Economic Development Administration's use of a "logarithmic transformation" to score public works projects in the first round of public works funding. As the General Accounting Office reported:

> Another problem frequently mentioned was that many large cities, where unemployment problems are reported to be the most severe, received little or no funds under the program. Reportedly, nearly half of the Nation's 100 largest cities—including Miami, Florida; Pittsburgh, Pennsylvania; Syracuse, New York; and Seattle, Washington—are in this category. One of the contributing factors to this situation was that EDA converted the absolute number of unemployed workers residing in project areas to logarithms, which had the effect of reducing the relative importance of the unemployment scores of the large urban areas.

This type of judgment by an agency can result in areas with critical needs being denied funds while other locales receive funds excess to their needs. This is hardly an economic use of Federal dollars and not what Congress intends when it passes measures such as the Public Works Employment Act.

Obviously, there are no easy solutions to this problem and Congress is not really equipped to make many of the decisions Federal agencies do with respect to handling data. It is very apparent though that more information should be made available on the assumptions and subjective decisions made by those who implement Federal programs. This will serve to enable Congress and the public to monitor in a more effective way just how well Federal assistance programs are fulfilling their original purpose.

Under the bill which I and Senator LEAHY are proposing, the Director of the Office of Management and Budget would have the responsibility of insuring that complete and detailed information is available on the way funds are distributed under Federal programs. This information would include the nature and source of each data element, any assumptions or projections made and the probable percentage of error.

The availability of such information will on the one hand enable Congress, funding applicants and others to duplicate the computer programing and test how well Federal programs are meeting their goals. It would also make it more practicable to experiment with different factors in an attempt to improve the efficiency and economy of Federal programs.

We cannot continue to permit bureaucrats and technicians to make subjective decisions on how billions of dollars are distributed with no review or guidance from elected officials or the public. This

legislation will provide a start toward reversing that situation so that with adequate information we can improve the fairness and effectiveness of Federal funding distribution.

Mr. President, I ask unanimous consent that the text of the legislation we are introducing be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2015

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. For the purpose of this Act, the term—

(1) "assistance" refers to the transfer of money, property, services, or anything of value; the principal purpose of which is to accomplish a public purpose of support or stimulation authorized by Federal statute. Assistance includes, but is not limited to, grants, loans, loan guarantees, scholarships, mortgage loans, insurance, or other types of financial assistance; provision or donation of Federal facilities, goods, services, property, technical assistance, and counseling, statistical and other expert information, and service activities of regulatory agencies; but does not include provision of conventional public information services; and

(2) "Federal domestic assistance program" means any function of a Federal agency which provides assistance or benefits for a State or States, territorial possession, county, city, other political subdivision, grouping, or instrumentality thereof; any domestic profit or nonprofit corporation, institution, or individual, other than an agency of the Federal Government.

SEC. 2. The Director of the Office of Management and Budget shall identify all existing Federal domestic assistance programs and make available to the public, information describing, as to any domestic assistance program which provides for the distribution of funds on the basis of any distribution, allocation, or other formula—

(1) the formula and assumptions under which program funds are distributed, including—

(A) a narrative statement of the formula;

(B) a mathematical statement of the formula;

(C) an annotated listing of any computer program used in the application of the formula; and

(D) as to each of the items listed in clauses (A), (B), and (C), a statement of the nature and date of any revision; and

(2) the data and assumptions used in the application of the formula, including—

(A) the definition of each data element, and the nature and date of any revision of such definition;

(B) the source of data, the method of data collection, and the cost of such collection;

(C) the period of time covered by the data, or for which the data is accurate;

(D) the imputation techniques used to supply missing elements of data; and

(E) the statistical properties of the data, including sampling error rates if known, as to each class or size of beneficiary.

Mr. LEAHY. Mr. President, the legislation Senator CHILES and I are introducing today will insure that all the factors in formulas used to distribute billions of dollars under congressionally mandated Federal grant programs are made public in a clearly understandable fashion. It will allow the Congress, as well as affected State and local governments, groups and individuals to make certain that both congressional intent and national needs are properly met.

Ideally, this legislation should not be necessary. Unfortunately, because all too often either the Congress is not precise enough in spelling out how funds are to be distributed, or the executive agencies charged with disbursing the funds ignore, misinterpret or do not understand the legislative mandate, this remedial legislation is essential.

The bill directs the Director of the Office of Management and Budget to identify all Federal domestic assistance programs and issue a public explanation of the elements involved in deriving the formula by which program funds are distributed. The Director is required to describe the formulas in narrative and mathematical statements as well as detail any computer programs used.

With this information available, better congressional oversight can be exercised to make certain that legislative directives are being followed. In addition, the beneficiaries of the legislation will be better equipped to advise Congress of legislative or administrative flaws in the programs.

For example, I plan to distribute the formula information to people in my State to help me determine which programs enacted with all of America in mind have in fact been implemented with a decided urban bias. Armed with their expert advice and experience, I am confident that we can restore the proper balance between the needs of urban and rural America.

I believe that this bill and use of the mechanisms it provides will result in both better legislative programs and eventual implementation.

I am looking forward to working with Senator CHILES to push this legislation through the Senate, and I commend Congressmen FASCELL and ROSE for their initiative on this matter in the House of Representatives.

By Mr. DECONCINI (for himself and Mr. WALLOP):

S. 2016. A bill to establish fees for services performed by United States marshals; to the Committee on the Judiciary.

Mr. DECONCINI. Mr. President, on behalf of myself and Senator WALLOP, I am today introducing a bill which would allow the Attorney General to modify fees now set by law for the service of process by the U.S. Marshal Service—USMS. The fees to be set by the Attorney General would permit recovery of the actual costs of providing such services to private litigants who currently receive this unique benefit when a party to civil litigation.

The cost to the American taxpayer due to the loss of Federal revenues for service of civil process has accelerated for the past 10 years. The costs of these services are not recovered through fees imposed by USMS but are paid from general Federal revenues. In fiscal year 1975, GAO estimated that costs for private civil process exceeded revenues by more than $3,800,000.

Establishment of fees based on annual USMS computations is the most effective method for meeting these continually rising expenses and is consistent with the principle that Government programs having particular benefits for identifiable recipients should be self-sustaining to the extent practical. Service of process by the USMS is not mandatory for litigants and it would be possible to use commercial firms for this purpose; however, the fees of the Federal Government will still by comparison be very low.

Mr. President, this bill is the result of efforts by the Attorney General, and the Office of Management and Budget has advised that enactment of the proposed legislation would be consistent with the objectives of the administration.

By Mr. HELMS:

S. 2017. A bill to provide objective definitions of unitary school systems for uniform court enforcement of the Civil Rights Act of 1964, to provide objective standards for statewide postsecondary educational systems under that act and to relieve the congestion of court calendars by providing for the orderly release of continuing Federal jurisdiction over desegregated schools, and for other purposes; to the Committee on Human Resources.

THE FREEDOM OF CHOICE IN EDUCATION ACT

Mr. HELMS. Mr. President, recently a Federal district court ordered the Department of Health, Education, and Welfare to adopt new guidelines regarding the elimination of racial duality in the public higher education systems of Arkansas, Florida, Georgia, North Carolina, Oklahoma, and Virginia. The desegregation guidelines developed by the Department of Health, Education, and Welfare on the basis of the Federal court order seek comprehensive control over the State systems of higher education involved, including that of North Carolina.

In part, the guidelines require that the University of North Carolina submit to the Office of Civil Rights for approval its plans regarding physical construction projects, new programs of study or new academic departments and plans for the closing or merger of institutions.

The guidelines impose admission quotas by setting specific goals for the admission of black students. The guidelines require that the proportion of black high school graduates who enter undergraduate school be at least equal to the proportion of white students and that the proportion of black undergraduate students who enter professional school be at least equal to the proportion of white undergraduate students. Some university officials in North Carolina estimate that it will not be possible to comply with such quotas without resorting to reverse discrimination since they would require the admission of black students with substantially lower academic credentials than those who are presently being admitted.

The HEW guidelines impose hiring quotas among faculty and administrative personnel by requiring that the proportion of black faculty and administrators equal the proportion of blacks with the required credentials for such positions in the relevant labor market area. The guidelines also deal with the integration of university faculty members by promoting faculty "interchange" on a temporary or permanent basis among predominantly black and white institutions.

These guidelines display a simplistic

approach to the problems confronting higher education and too often confuse the situation of these institutions with those of elementary and secondary schools. The presumption underlying substantial portions of the guidelines, that desegregation methods which have been applied to elementary and secondary schools can automatically be transferred to universities, is profoundly at odds with reality.

Universities vary considerably in their academic functions and missions, whereas elementary and secondary schools have a unified academic role. Attendance at the elementary and secondary level is compulsory, but at postsecondary institutions attendance is voluntary. While attendance at elementary and secondary schools is dictated by attendance zones, in higher education students select schools on the basis of academic programs, faculty, athletics, and many other variables.

The HEW guidelines issued as a result of the Federal court order represent the latest development in an 11-year pattern of increasing Federal control over the higher education system of the State of North Carolina. The far-reaching effects of these guidelines threaten to change the fundamental character of higher education in North Carolina and the five other States affected by the court order. Clearly, it threatens to make them different from postsecondary systems in all other parts of the country.

The goal of the University of North Carolina has been to implement programs and planning decisions which make each institution of higher education, whether predominantly black or predominantly white, attractive to students on a basis other than race. University officials have sought to maximize each student's freedom of choice in attending an institution and in so doing to make that choice a meaningful one.

Under its present desegregation plan, the University of North Carolina has done an excellent job in dealing with the problems associated with its former dual education system. University officials have taken affirmative steps to increase the number of black students at historically white institutions. For example, in 1973, only 18 percent of the black students in the University of North Carolina system were attending historically white institutions. By 1976, over one-fourth of the black students attending college were doing so at such schools.

While recent surveys show that there is a difference in the academic standing of black and white applicants admitted to the various institutions within the public university system, that difference has not weakened the educational standards of the university. In the fall of 1974, the University of North Carolina at Chapel Hill accepted 65 percent of the black applicants who applied, while accepting only 45 percent of the white applicants. The average score on the scholastic aptitude test—SAT—for the black applicants was 887 while the average SAT score for white applicants who were accepted was 1,152.

In 1974, the last year for which figures are available, the SAT averages for freshmen at the predominantly white schools were as follows:

Institution	*White*	*Black*
UNC-Chapel Hill	1,152	887
NC State U	1,044	853
UNC-Greensboro	992	885
East Carolina U	900	746
UNC-Charlotte	963	826
Pembroke State U	771	714
UNC-Asheville	944	697
UNC-Wilmington	915	750

(Statistics were not available for Appalachian State University or Western Carolina University.)

Although precise figures for last year's freshman class are not yet available, university officials report that the academic credentials of black applicants granted admission were still lower than their white counterparts.

North Carolina's efforts during these years has dismantled a dual system of higher education with a minimum disruption of the existing institutions and a minimum adverse impact to their students. Many factors affect a student's selection of a college; including peer pressure, parental preferences, familiar ties with particular institutions, financial considerations, academic and athletic programs. Significant progress has been made in promoting each student's freedom of choice in obtaining a college education free from racial considerations.

Federal intervention in the North Carolina system of public higher education began in 1970, when the Department of Health, Education, and Welfare determined that 10 States, including North Carolina, were maintaining racially dual systems of higher education. The Department requested that North Carolina and the other States submit voluntary desegregation plans for their systems of public higher education.

During the extensive discussion and negotiation between the Department and the University of North Carolina following this request, a suit was filed by several persons against the Secretary of HEW to force HEW to commence enforcement proceedings against these State higher education systems and abandon the goal of voluntary compliance through negotiation; see *Adams* v. *Richardson*, 356 F. Supp. 92 (1973).

In 1973, that Federal district court ordered HEW to direct each State to submit desegregation plans within 4 months or face the loss of all Federal financial assistance under title VI of the Civil Rights Act of 1964. North Carolina filed a desegregation plan entitled: "A State Program to Enlarge Educational Opportunity in North Carolina" with the Office of Civil Rights in 1973. Several months later, the Office rejected the North Carolina plan and requested a more comprehensive program.

The university then submitted "The Revised North Carolina State Plan for the Further Elimination of Racial Duality in the Public Post-Secondary Education Systems." That plan was accepted by the Department of HEW in 1974, and North Carolina made semiannual reports to the Department regarding the implementation of its plan. North Carolina received frequent communications from HEW that the State was performing well under the plan. North Carolina was described by the director of the Office of Civil Rights as a model which other States might well emulate.

In August 1975, the plaintiffs in the Adams against Richardson case went back into Court; this time requesting that the court instruct HEW to revoke its approval of eight States' desegregation plans, including that of North Carolina.

During 1977, the Federal district court granted this request and instructed the Secretary of HEW to develop new Department guidelines and require new desegregation plans from six States including North Carolina. The new HEW guidelines have recently been issued and North Carolina is presently developing a further revision of its program in order to comply with the Federal court mandate.

Mr. President, University of North Carolina officials have provided equal opportunity for the students of North Carolina while maintaining high academic standards. Because of their efforts, the high educational standards of the UNC system have not yet been weakened as a result of past HEW guidelines, but that standard could well be undermined in the future.

What is disturbing about HEW's activity is the increasing pattern of Federal intervention in North Carolina's system of public higher education. Whether one considers UNC's early voluntary efforts, the 1973 plan, the 1974 plan or the present programs which were recently ruled inadequate, the more UNC succeeds in realizing the goal of equal opportunity for its students the greater the Federal burden becomes.

When the present 4-year plan was implemented in 1974, it was reasonable to expect a relaxation of Federal control with its succsesful completion in 1978. To the contrary, although HEW assured UNC officials they were doing well under the plan, a Federal court has now judged their performance inadequate and imposed a new 5-year plan. At the end of this time there is every reason to suppose that some new alleged "inadequacy" will again be "discovered" in UNC's program, and further controls will be mandated.

Last year the U.S. Supreme Court considered the problem of continuing an indefinite Federal court jurisdiction over school desegregation matters. In *Pasadena City Board of Education* v. *Spangler*, 44 L.W. 5114 (1976), a Federal judge maintained that his court's jurisdiction over Pasadena's schools was to continue, and I now quote him, "at least during my lifetime."

The Supreme Court rejected that extreme view of Federal jurisdiction in desegregation matters and ruled that where the initial implementation of a court-ordered plan accomplished the objective of racial neutrality in the attendance of students at the public schools in question,

(T)he District Court was not entitled to require the School District to rearrange its attendance zones each year so as to ensure that the racial mix desired by the court was maintained in perpetuity. For having once implemented a racially neutral attendance pattern in order to remedy the perceived constitutional violation on the part of the

defendants, the District Court had fully performed its function of providing the appropriate remedy for previous racially discriminatory attendance patterns.

The history of the Federal court's involvement and that of HEW in the affairs of the North Carolina system of public higher education would also suggest the need for clear legislative guidelines regarding Federal jurisdiction in desegregation cases. On the basis of the Supreme Court's objection to perpetual redistricting in the Pasadena case, it would be appropriate to accept the reasoning of the Court and provide a uniform method for releasing school systems from Federal court jurisdiction if they have been in compliance with court orders for a full school year.

Mr. President, the legislation I am introducing today addresses itself to the problem outlined in the Swann case by Chief Justice Burger:

> The constant theme and thrust of every holding from Brown I to date is that State-enforced separation of races in public schools is discrimination that violates the Equal Protection Clause. The remedy commanded was to dismantle dual school systems.
>
> We are concerned in these cases with the elimination of the discrimination inherent in the dual school systems, not with myriad factors of human existence which can cause discrimination in a multitude of ways on racial, religious, or ethnic grounds. The target of the cases from Brown I to the present was the dual school system. The elimination of racial discrimination in public schools is a large task and one that should not be retarded by efforts to achieve broader purposes lying beyond the jurisdiction of school authorities. One vehicle can carry only a limited amount of baggage . . .
>
> Our objective in dealing with the issues presented by these cases is to see that school authorities exclude no pupil of a racial minority from any school, directly or indirectly, on account of race; it does not and cannot embrace all the problems of racial prejudice, even when those problems contribute to disproportionate racial concentrations in some schools (402 US 1 at page 22).

Mr. President, the legislation which I am introducing today provides procedures by which Federal court jurisdiction over a system of public higher education may be released. Under this proposal after the public post-secondary system has complied with an HEW or court-ordered desegregation plan for 1 year, any university official or student could go into Federal court and seek a finding that the State system had ended its dual system of education; that the student's decision to attend a university was not determined by racial considerations; and that the university had met its obligation to remedy the effects of past practices.

The determination that the State was now operating a unified public higher education system would be a finding of fact to be made by a jury, rather than a judge. If such a determination were made regarding any State system Federal courts and HEW would still retain strong remedies to correct any new instances of discrimination under the bill's provisions. State courts also would begin to assume greater responsibility for desegregation matters. However, under the bill, Federal courts would not have the jurisdiction and HEW would not have the authority to order the assignment of any student to any institution; or the assignment of any faculty or administrative staff to any institution; or the expenditure of funds for construction or maintenance; or regarding the accreditation of any institution within the system. These drastic measures to remedy the effects of a dual educational system would no longer be necessary after the jury determination that these past effects had been remedied.

ELEMENTARY AND SECONDARY SCHOOLS UNDER THE FREEDOM OF CHOICE IN EDUCATION ACT

In framing a remedy for the problem of educational disruption through court orders to achieve racial balance, we must focus precisely upon the nature of the problem, the restraints of the Constitution as currently interpreted by the Supreme Court, and the practical effects of the solutions proposed. Moreover, we want a remedy that will work, and work now.

A further complication is that such a remedy must be universally applicable in cases arising both out of de jure and de facto segregation. Since the Denver decision, it may be assumed that court orders will now be issued in geographic areas where it had formerly been assumed that segregated schools were the result of de facto situations. The mere absence in the past of legislation or regulations requiring the separation of students by race no longer protects school systems outside the South from assault by the courts. The school system in South Boston is a case in point. It is urgent, therefore that both North and South join in framing a remedy.

Nor can a legislative remedy deal directly with the desire of most people for neighborhood and community schools, and their distaste for court-imposed busing and other mandatory assignment plans and integration devices. I believe that any attempt to restrict the hands of the courts would ultimately be set aside, even though I disagree with the basic premise the courts are using. It would be deeply disappointing to pass a bill providing relief against busing for racial balance only to have it thrown out by the courts.

Finally, our remedy must be a solution that can be supported in good conscience by all men of good will, whatever their political persuasion. We must not forget that the ultimate aim of relief legislation is to promote good community relations and a wholesome atmosphere for sound education. The research report by Harvard sociologist David J. Armor ("The Evidence on Busing" in The Public Interest, No. 28, summer 1972) and the subsequent discussions clearly demonstrate that the sociology of mandatory integration without freedom of choice has proven to be either erroneous or much more complex than formerly imagined. It does nothing to improve relationships between the races or academic achievement; in fact the evidence is that it engenders hostility and lowers self-esteem and achievement. Until our constitutional interpretation can be brought into line with reality, we must take legislative steps to foreclose the harm being done to the children.

If such steps are to survive a court test, they must not violate the internal logic of the current mythology attributed to the 14th amendment. We must focus the issue more narrowly upon what the courts have decided, not upon what we think they have decided, or what we would like them to decide. Changing judicial thinking is a process of years, even if a constitutional amendment were passed overnight. The only ready remedy is one written within the grammar of recent court decisions. And contrary to the popular impression, the major court decisions—although sweeping in their effects—have been quite narrowly defined.

AFFIRMATIVE ACTION TO ACHIEVE RACIAL BALANCE

Although "busing" gets the headlines, there are many other techniques also prescribed by courts to achieve what is commonly called "a racial balance." These other techniques are just as disruptive—some even more so—of the organic patterns of community development. These techniques include pairing of schools, reorganization of junior and senior high schools, building of new schools, gerrymandering of attendance zones, and other devices apparently intended to create a racial balance in each school. Yet the common impression that the courts have required a racial balance as an end in itself is misleading. On the contrary, the U.S. Supreme Court has never required that a school system must have a racial balance for its own sake. In specific situations, however, the Court has upheld orders that are weighted heavily on the side of accomplishing in each school of the system a racial distribution that approximates the racial balance of the locality.

Such orders have been generally issued by the lower courts under their equity powers, usually in the form of decrees or orders of a continuing quality which retain jurisdiction in the courts without limit of time or circumstances. Civil rights cases and in particular school cases have created a special form of constitutional interpretation. Until such cases came to the courts, the Constitution was viewed as a prohibitory instrument forbidding discrimination under "State action." The lower Federal courts, in particular, have devised an affirmative or "compensatory" interpretation of the Constitution on the ground that preexisting deprivation of constitutional right must be affirmatively adjusted to a given point of defined equality before the normal constitutional limits can be restored.

In effect, then, when the Supreme Court is upholding a lower court order that requires some affirmative action—in the form of busing, pairing, zoning, et cetera—it is requiring the school authorities to demonstrate that the State is no longer encouraging segregation. In order to prove that the past practices which resulted in segregation and are now declared unconstitutional have been abandoned, the school authorities must take steps to achieve the uniform racial distribution that presumably would have resulted had it not been for past State action. In short, the Court does not hold that it is the Constitution that requires

a uniform racial distribution; it is the doctrine of equity that requires busing and similar artificial steps to achieve racial balance until a supposedly normal state of constitutional rights can be restored.

For example, in approving the district court's formula for a racial balance of 71–29 percent, the Supreme Court in Swann against Charlotte-Mecklenburg Board of Education, specifically called it "a useful starting point in shaping a remedy to correct past constitutional violations." It was a starting point, not an end in itself. The Supreme Court found that, "in sum, the very limited use made of mathematical ratios was within the equitable remedial discretion of the district court."

These are subtle distinctions which are of no comfort to parents who find their children's lives disrupted and their educational achievement threatened by the instability and social chaos which so frequently follows such court orders. I strongly dissent from the fine-spun constitutional theory that invents momentous new doctrines of "affirmative action" out of whole cloth. Yet we must use as our starting point the fact that these theories are the prevailing law and that there is little hope that they will be overturned in the near future. Our legislative remedy must be framed out of the same distinctions.

THE REQUIREMENT FOR A UNITARY SCHOOL SYSTEM

If racial balance is not the end sought by present constitutional interpretation, then what is that end? In judicial language, the requirement is that a State, under the recent interpretations of the 14th amendment, must convert any "dual school system" into a "unitary school system." The Supreme Court has emphasized this over and over.

In the pivotal Green decision, the Court said:

The transition to a unitary, nonracial system of public education was and is the ultimate end to be brought about. [391 US 430 at 436; 20 Law Ed 2nd 716 at 722; 88SCt 1689 at 1693]

Referring back to Brown II, the Court's opinion in Green was very specific:

School boards such as the respondent then operating state-compelled dual systems were nevertheless clearly charged with the affirmative duty to take whatever steps might be necessary to convert to a unitary system in which racial discrimination would be eliminated root and branch. [391 US 430 at 437; 20 Law Ed 2nd 716 at 723: 88SCt 1689 at 1694]

Unfortunately the phrase "a unitary system" has never been defined. Yet we can deduce the Court's concept from the way it was handled in the Swann opinion. There we find that "the objective today remains to eliminate from the public schools all vestiges of state-imposed segregation." Over and over again, Swann deals with the problem of racial composition strictly in accord with whether or not the pattern was "state-imposed."

The constant theme and thrust of every holding from *Brown I* to date is that state-enforced separation of races in public schools is discrimination that violates the Equal Protection Clause. The remedy commanded was to dismantle dual school systems. [402 US 1 at 22; 28 Law Ed 2nd at 570; 91SCt 1267 at 1279]

And again, the Court narrowly defined its mission to include only State-sanctioned discrimination in schools, not discrimination which might arise from other factors:

We are concerned in these cases with the elimination of the discrimination inherent in the dual school systems, not with the myriad factors of human existence which can cause discrimination in a multitude of ways on racial, religious, or ethnic grounds. The target of the cases from Brown I to the present was the dual school system. The elimination of racial discrimination in public schools is a large task and one that should not be retarded by efforts to achieve broader purposes lying beyond the jurisdiction of school authorities. One vehicle can carry only a limited amount of baggage. It would not serve the important objective of Brown I to seek to use school desegregation cases for purposes beyond their scope, although desegregation of schools ultimately will have impact on other forms of discrimination. [402 US 1 at 22; 28 Law Ed 2nd at 570; 91Ct 1267 at 1279]

Finally, the Court came as close as it ever has done to defining a unitary school system when it said:

Our objective in dealing with the issues presented by these cases is to see that school authorities exclude no pupil of a racial minority from any school, directly or indirectly on account of race; it does not and cannot embrace all the problems of racial prejudice, even when those problems contribute to disproportionate racial concentrations in some schools. [402 US 1 at 23; 28 Law Ed 2nd at 570; 91SCt 1267 at 1279]

We may conclude that a unitary school system is one in which the school authorities exclude no pupil of a racial minority from any school, directly or indirectly, on account of race. At the same time, the Court recognizes that a unitary school system might include disproportionate racial concentrations in some schools, so long as those disproportionate concentrations are not caused by action on the part of school authorities with intent to segregate. State discriminatory actions are proscribed; other factors which result in racial imbalance in the schools are beyond the scope of the Court's activity. In fact, the Court said specifically:

The Constitutional command to desegregate schools does not mean that every school in every community must always reflect the racial composition of the school system as a whole. [402 US 1 at 24; 28 Law Ed 2nd 554 at 24; 91 SCt 1267 at 1280]

In fact, the Court tells us that "absent a constitutional violation, there would be no basis for judicially ordering assignment of students on a racial basis."

To summarize these important distinctions, we may say that the Supreme Court holds it unconstitutional to assign pupils on the basis of race; however, when a court finds a situation where pupils have been assigned on the basis of race, then equity requires that this constitutional violation be compensated by pupil assignment on a racial basis. Yet this compensatory action is obviously of limited duration. Compensation cannot go on forever; nor can a sound theory of the Constitution endure a permanent suspension of the constitutional right not to be assigned on a racial basis.

The Court itself calls this suspension an interim period. Referring to remedial altering of school zones in Swann, it said:

As an interim corrective measure, this cannot be said to be beyond the broad remedial powers of a Court. [402 US 1 at page 27; 28 Law Ed 2nd 554 at page 573; 91 SCt 1267 at 1282]

Noting the burdens which court orders impose—burdens the Court itself admits may be "administratively awkward, inconvenient and even bizarre"—the Court says:

But all awkwardness and inconvenience cannot be avoided in the interim period when remedial adjustments are being made to eliminate the dual school systems. [402 US 1 page 28; Law Ed 2nd 554 at page 575; 91 SCt 1267 at 1282]

It follows therefore that Congress is at liberty to impose a legislative definition of a normal interim period. Moreover, the situation which the courts are seeking to remedy is in constant flux. School authorities, pupils, and families come and go. The inherent logic of the Supreme Court's argument demands that the extraordinary suspension of constitutional rights come to an end within a reasonable length of time. The Court itself accepted its own logic. In the remarkable concluding paragraphs of Swann, the Court had this to say:

At some point, these school authorities and others like them should have achieved full compliance with this Court's decision in *Brown I*. The systems will then be "unitary" in the sense required by our decisions in Green and Alexander.

It does not follow that the communities served by such systems will remain demographically stable, for in a growing, mobile society, few will do so. Neither school authorities nor district courts are constitutionally required to make year-by-year adjustments of the racial composition of student bodies once the affirmative duty to desegregate has been accomplished and racial discrimination through official action is eliminated from the system. This does not mean that Federal courts are without power to deal with future problems; but in the absence of a showing that either the school authorities or some other agency of the State has deliberately attempted to fix or alter demographic patterns to affect the racial composition of the schools, further intervention by a district court should not be necessary. [402 US 1 at 31; 28 Law Ed 2nd 554 at 575; 91SCt 1267 at 1283]

Working strictly within the constraints of the Court's reasoning, we can see therefore that there can and must be an end to pupil assignments on the basis of race. There can and must be an end to busing, pairing, zoning, and so forth. A return to neighborhood schools is not only desirable, but feasible under current court decisions. The only question is when.

THE DURATION OF COURT JURISDICTION

Thus neither school authorities nor district courts are required to adjust the racial composition of student bodies "once the affirmative duty to desegregate has been accomplished and racial discrimination through official action has been eliminated from the system." The suspension of the constitutional right of pupils not to be assigned to a school on the basis of race is of limited, but indefi-

nite duration. Since the Supreme Court itself has admitted that the suspension of rights is of limited duration, it is entirely proper for the Congress of the United States to pass legislation setting a definite time limit during which the courts can suspend these rights.

I believe that a great majority of school systems have by this time become desegregated under the terms of the original orders of the Federal courts, by compliance with the guidelines issued by the Commissioner of Education, or remain in a form historically instituted without reference to racial separation either by law or collusive drawing of attendance zones. Current problems before the courts accordingly are, in possibly a majority of cases, directed against resegregation caused by population shifts occurring subsequent to prior school desegregation. Quite frequently it is argued that the actions of school authorities, although possibly taken today without regard to race, are tainted by the vestiges of past actions. In the forefront of such actions are those which attempt to overcome the increasing concentration of blacks in inner city areas by overriding political boundaries existing between different school systems as in the cases of Richmond and Detroit where massive busing into suburbs has been directed.

Yet in every case, the orders are different, the standards are different, and the burdens to be borne and the levels of compliance are different. The length of time the school systems remain under court jurisdiction is entirely at the discretion of the court. Every court commands the establishment of a "unitary system," but the level of compliance varies. There are two difficulties. First, "unitary" is indefinite both in quantum and period of time. Second, the equitable doctrine of continuing jurisdiction over an existing decree permits the courts to change preexisting orders from time to time in order to correct situations which have changed after an initial determination and local compliance.

It is within the power of Congress to statutorily define the unitary concept, to fix its effective period, and to terminate continuing district court jurisdiction, provided only that in so doing the Congress does not specifically or by implication permit the restoration of a school system based on racial separation.

THE REMEDY

The Freedom of Choice in Education Act provides the required remedy. It defines a "unitary school system" within the constraints of current practices.

First of all, it accepts the work of any Federal court that has approved a desegregation plan to achieve a unitary system. If the court has said that such and such a plan will bring a system into compliance then the act agrees that it is a plan which will bring about compliance. In the same way, the act also accepts compliance with any specific plan or generally published guideline authorized or approved by the Commissioner of Education. Both accomplish the same end and should have equal standing in the light of numerous court references to such guidelines as indicative of the meaning of the term "desegregated school."

Thus this first definition does not negate any plan currently in effect. It makes every court order and every HEW pupil assignment plan part of the definition of "unitary school system." There are some activists who say that present plans do not go far enough. Yet, present plans must go at least as far as the Supreme Court itself has gone. Those who want to go further are not arguing law, but questions of policy.

Second, the act's second definition of a unitary school system accepts the decision of any court of the United States upholding a pupil assignment plan as in compliance with the laws and Constitution of the United States. Thus any school system which has successfully defended itself against the charge of unconstitutional actions is, on the face of it, a unitary school system. This is really a corollary of the first definition. A court decides whether a school system is unitary or not.

Third, the act's third definition of a unitary school system also involves a court test. Here, if a court decided that attendance zones were originally established with reasonable geographical divisions without the intent to discriminate—and no changes had been made except for reasonable educational discretion—then such a school system is a unitary school system. Such a finding is a reasonable defense against demands that school attendance zones be altered within a system, or that the system be merged with adjacent systems in other political jurisdictions.

Fourth, the act's fourth definition recognizes that many courts under a plea of equity have tried to fashion some formula for the overall racial composition of student bodies as evidence of the school authorities' affirmative action. Up to now, this has been left to the decision of the individual judge, with no guidelines for him to follow. The courts have acted variously with respect to their racial ratio requirements, which, despite Federal assistance legislation to the contrary, is being used by the Federal courts and to some extent as well by the Department of Health, Education, and Welfare as a target for the requirements of busing and the other techniques. Most courts have differed in the extent to which they view an approximation of local racial ratios as being required and the extent to which it will be applied across the board to all public schools in the system or be compromised to lessen the amount of change required.

In fact, in Swann, the Supreme Court was at pains to point out that it approved the district court's order only because that order was not to be interpreted as a "fixed mathematical racial balance." The Court said:

> If we were to read the holding of the District Court to require, as a matter of substantive Constitutional right, any particular degree of racial balance or mixing, that approach would be disapproved and we would be obliged to reverse. The Constitutional command to desegregate schools does not mean that every school in every community must always reflect the racial composition of the school system as a whole. [402 US 1 at 24; 28 Law Ed 2nd 554 at 571; 91SCt 1267 at 1280]

Indeed, the Supreme Court quoted approvingly from the district court's own explanation as follows:

> This court [the District Court] has not ruled and does not rule that 'racial balance' is required under the Constitution; nor that all black schools in all cities are unlawful; nor that all school boards must bus children or violate the Constitution; *nor that the particular order entered in this case would be correct in other circumstances not before this court.* (Emphasis in original) [402 US 1 at 24 (n. 9); 28 Law Ed 2d 554 at 571 (n. 9); 91 SCt 1267 at 1280 (n. 9)]

Although the Supreme Court thus holds that there does not have to be a rigid mathematical formula, there are still no guidelines for a lower court to follow in fashioning a remedy in equity. The act has a formula under which Congress sets up the parameters. It provides for the kind of flexibility which the Supreme Court demanded in Swann, keeping in mind that the Court only approved a "very limited use made of mathematical ratios . . . within the equitable remedial discretion of the District Court." These limitations must be borne in mind. [402 US 1 at 25; 28 Law Ed 2d 554 at 572; 91 SCt 1267 at 1280].

Basically, the formula would provide that a control group of not less than two-thirds of the schools of a local educational agency would have to meet certain standards of racial composition in enrollment if the school system does not otherwise qualify as a unitary school system. These standards would be based upon the ratio of whites and blacks in the school system; an individual school in the control group would have to have at least one-third of the percentage of majority students in the school population as a whole, and one-third of the percentage of minority students in the school population taken as a whole.

All in all these are not definitions which I endorse for their substance; I endorse them because they will work within the system as it is now constituted. They provide fair definitions of a unitary school system so that judges will have an objective standard of justice, nor do they upset current legislation or court orders on the subject.

Fifth, the other aspect of definition is to put a limitation on the duration of the suspension of the constitutional right of students not to be assigned to schools on the basis of race. As I have already pointed out, it is unhealthy for constitutional rights to be suspended indefinitely. Congress can put a reasonable limitation on the length of time required to demonstrate that a dual school system has been abandoned. It would be highly suspect if Congress were to put severe limitations on the so-called remedies available to courts in equity. It might be charged that due process of law or equal protection was being abridged by statute. But a reasonable time limitation violates neither. The courts would still have all the powers that they now have to order desegregation plans, to order busing, pairing, or so forth. The power to order the organizational disruption

that we now have in our school systems would not be abated. The only difference would be that it could not go on forever.

The act sets a limitation of 1 full school year. This would apply either to schools on a 9-month plan or on a 12-month plan. It assumes that the school authorities are acting in good faith and that they actually do what they are ordered to do. One year is a significant administrative unit in a school system, as pupils normally move from one grade to another in that year's time. The courts will see to it that the assignment plan is comprehensive enough to compensate for past unconstitutional practices; the year's duration under the court's jurisdiction will see to it that a constitutional assignment plan is actually in operation.

It must be remembered that the Supreme Court has said that the Constitution itself does not command proportional racial composition of student bodies; once a violation has been corrected, the Constitution is indifferent to assignment methods, so long as school authorities do not make assignments on the basis of race. School authorities are not required to make pupil assignment adjustments for discrimination that may result from other factors in society, once the affirmative duty to discriminate has been accomplished. This means that the neighborhood school—favored by the overwhelming majority of Americans of both races—can return once the violations have been corrected.

During the space of a school year, the dislocations of student bodies and teachers would have to be endured. There is no way within the present grammar of the court decisions that this can be evaded where the schools have been found to be operating dual systems. But it would be endurable because the end would be in sight.

Moreover, many school systems have already met and have been meeting the definition of a unitary school system for 1, 2, 3, or 4 years. Under the act, they could pass the test immediately. What counts as far as meeting the constitutional test is the actual time served under court orders without regard to the passage of the act. A statute cannot affect the constitutionality of an action.

At the end of a full school year, the school authorities, State officials, or any parent can apply to have the case reopened so that the judge involved can submit the case to a jury to make a determination that the school system has met the statutory definition of a unitary school system for a full school year. The determination is narrowly limited to questions of fact, that is, whether the plan decreed by the court has in fact been followed. The judge would have no opportunity to reassess the case itself or to consider new data.

Upon reopening of the case, enforcement of the judge's court order is stayed until the final determination has been made. This would insure prompt actions by the court so that any affected parties could make a timely appeal if desired.

Sixth, once the determination was made that the school authorities had been operating a unitary school system for the required length of time, then the system would be released from Federal district or appeals court jurisdiction in matters relating to segregation and allied problems. The matters could not be raised again in the Federal courts.

Nevertheless, the full system of State courts remains open to plaintiffs who allege that their constitutional rights have been abridged by some action of the school authorities, including appeal to the U.S. Supreme Court.

Thus it is clear that due process and equal protection are carefully preserved by the act. Every school system may be brought into Federal court at least once, and that court will have the opportunity to apply the full range of so-called "remedies" that it perceives to be necessary. The "unitary school system" which the U.S. Supreme Court says is constitutionally required will have been established and it will have actually been put into operation. If further State-directed discrimination occurs, the full range of State courts is available for redress. The U.S. Constitution would assure this, but for the sake of clarity, the act spells it out.

Seventh, finally the act provides a specific exemption to preserve the right of any student who feels he has secured particular advantages under any current assignment plan. I think we can be sure that most parents will wish their children to attend school under a neighborhood school plan if one is offered. There may be some who are being transported to schools outside their neighborhood where they feel they have special advantages. If there are such, they can be allowed to continue to be transported to those schools if they so choose. They have this right not by constitutional protection, but in the interests of good educational policy and sound community relations. Thus, under the act, no child would lose what he or his parent perceive to be an advantage from the current system.

Eighth, the act preserves the interests of all those concerned. It maintains current court holdings, decrees, and HEW plans. It preserves all constitutional rights under the present mode of interpretation. It provides for the orderly termination of Federal court jurisdiction so that standards are uniform throughout the Nation. It provides for the early restoration of local control over attendance plans. And it safeguards the interests of those who feel they have obtained advantages under the present situation.

But most of all, it will bring about the rebuilding of a wholesome educational atmosphere and constructive community relations. The best society is the society that has the maximum of free choice and evolves from the myriad of decisions of each citizen over the years, and over the generations. To destroy that organic development is to destroy the very fabric of a healthy society. The destruction has been imposed upon us by the courts, and it is time for Congress to begin rebuilding.

Mr. President, I ask unanimous consent the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2017

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Freedom of Choice in Education Act".

SEC. 2. (a) The Congress finds that—

(1) the Supreme Court has repeatedly ruled that the maintenance of dual school systems in which students are assigned to schools solely on the basis of race, color, or national origin denies to those students the equal protection of the laws guaranteed by the fourteenth amendment;

(2) these and related court rulings have imposed upon public school agencies the burden of eliminating the vestiges of dual school systems and of establishing all school systems upon a unitary basis;

(3) the lack of appropriate statutory definition of a unitary school system has left the courts without objective standards in enforcing the equal protection of the laws in regard to pupil assignment, with a resulting lack of uniformity in enforcement and regulatory requirements;

(4) the courts have been overburdened with the complexity and length of the litigation and continuing judicial process for effective enforcement of the fourteenth amendment and the Civil Rights Act of 1964, and other related statutes.

(b) For the foregoing reasons, it is necessary and proper that the Congress, pursuant to the powers granted to it by the Constitution of the United States, including, but not limited to section 5 of the fourteenth amendment, take action to enhance the enforcement of court determinations under the Civil Rights Act of 1964, to make court enforcement uniform by setting standards and definitions relative to a unitary school system, to provide objective standards for Statewide postsecondary educational systems under the Civil Rights Act of 1964, and to relieve the congestion of court calendars by providing for the orderly release of continuing Federal jurisdiction over desegregated public schools and Statewide postsecondary educational systems.

SEC. 3. Section 401 of the Civil Rights Act of 1964 is amended by adding at the end thereof the following:

"(e) 'Local educational agency' means any local educational agency as defined by section 801 (f) of the Elementary and Secondary Education Act of 1965.

"(f) 'Institution of higher education' means any institution as defined in section 1201 (a) of the Higher Education Act of 1965.

"(g) 'State educational agency' means a State educational agency as defined by section 801 (k) of the Elementary and Secondary Education Act of 1965.

"(h) 'Statewide postsecondary educational system' means all public institutions of higher education within the State, whether or not under the governance of the same State agency, board, or commission.

"(i) 'Unitary school system' means any public school system in which—

"(1) the local educational agency, has complied with an order of any court of the United States based on racial enrollment criteria for the public schools of that agency, or is in compliance with any specific plan or published guideline authorized or approved by the Commissioner of Education with respect to such enrollment criteria; or

"(2) the presently used procedure for assignment of students and teachers in the elementary and secondary schools of the local educational agency has been found by any court of the United States to be in compliance with the Constitution and laws of the United States against a charge that the schools of such agency were segregated; or

"(3) the assignment of children to elementary and secondary schools of that agency is by attendance zones which are or have been

found by any court of the United States (A) to have been originally established with reasonable geographical divisions without intent to discriminate between areas on the basis of race, color, or national origin, and (B) to have not thereafter been altered except to accord with and meet conditions caused by population increases or decreases in the area served, granting to such agency the right to reasonable educational discretion in the creation or elimination of neighborhood school zones in geographically contiguous areas without regard to the racial composition of the affected residential area; or

"(4) not less than two-thirds of the schools of a local educational agency have a racial composition of the student body of each school which shall contain a percentage of majority students which is not less than one-third of the percentage of majority students in the school population taken as a whole, and a percentage of minority students which is not less than one-third of the percentage of minority students in the school population taken as a whole.".

SEC. 4. Title IV of the Civil Rights Act of 1964 is amended by adding at the end thereof the following new section:

"ORDERLY TERMINATION OF FEDERAL JURISDICTION OVER STATE EDUCATIONAL AGENCIES AND STATEWIDE POSTSECONDARY EDUCATIONAL SYSTEMS

"SEC. 411. (a)(1) The continuing applicability of any order of any district court or court of appeals of the United States requiring the desegregation of the public elementary and secondary schools of a local educational agency shall terminate upon a determination by jury in the issuing court or by a court having review jurisdiction that such schools of the defendant local educational agency are and have been a unitary school system as defined in section 401(i) of this Act for a period of not les than a full school year since the establishment of such schools or following any voluntary or required organization thereof.

"(2) The continuing applicability of any order of any district court or court of appeals of the United States requiring the desegregation of any Statewide postsecondary educational system shall terminate upon a determination by jury in the issuing court or by a court having review jurisdiction that the Statewide postsecondary educational system has overcome past discrimination and is not an established dual educational system, and that under such system students are and have been attracted to each institution of higher education on the basis of educational programs and opportunities, and the decision of students to attend institutions of higher education within the system is not determined by any practice of discrimination by officials of the State postsecondary educational system, for a period of not less than a full year since the entering of such an order or the voluntary acceptance of a plan submitted to the Department of Health, Education and Welfare.

"(b) No district court or court of appeals of the United States shall have original, continuing, or pendent jurisdiction to issue in any case or controversy, in law or in equity, any writ, process, rule, decree, order or command directing, forbidding, or changing—

"(A) the assignment or transportation of any student to any public elementary or secondary school made, provided, or proposed pursuant to the determination and direction of the State or local educational agency operating or having supervisory powers over the operation of such school, or

"(B) the employment, assignment, reassignment, transfer, or retention of any member of the teaching or administrative staff of any such school, or

"(C) any appropriation or expenditure of any funds for the construction, maintenance, equipment, or operation of any such school, or

"(D) the accreditation of any such school by any public or private agency, or its inclusion in any published list or directory of accredited schools,

if such school is, or is part of, a unitary public school system as defined in section 401 (i) of this Act, and has been so for the period specified in paragraph (1) of subsection (a) of this section.

"(2) No district court or court of appeals of the United States shall have original, continuing, or pendent jurisdiction to issue in any case of controversy, in law or in equity, any writ, process, rule, decree, order or command directing, forbidding, or changing—

"(A) the admission or assignment of any student to any institution of higher education within any Statewide postsecondary educational system, or

"(B) the employment, assignment, reassignment, transfer or retention of any member of the teaching or administrative staff of any such institution, or

"(C) any appropriation or expenditure of funds for the construction, maintenance, equipment, or operation of any such institution, or

"(D) the accreditation of any such institution by any public or private agency, or its inclusion in any published list or directory of accredited schools,

if the Statewide postsecondary educational system is and has been in compliance with paragraph (2) of subsection (a) of this section for the period specified in that paragraph.

"(3) No department or agency of the United States may terminate, withhold, defer, or otherwise condition any federal financial assistance to any public elementary or secondary school of a local educational agency, to any State or local educational agency, to any institution of higher education which is part of a statewide postsecondary educational system or to any such system if such a school, agency, institution or system is in compliance with the provisions of subsection (a) of this section.

"(c)(1) The provisions of this section shall apply with respect to any civil case or controversy now pending or hereafter brought in or removed to any court of the United States for or with respect to the desegregation of the public elementary and secondary schools of any local educational agency or for or with respect to the appropriation or expenditure of funds for the construction, equipment, maintenance, operation, or support thereof.

"(2) The provisions of this section shall apply with respect to any civil case or controversy now pending or hereafter brought in or removed to any court of the United States or with respect to the desegregation of any Statewide postsecondary educational system, or for or with respect to the appropriation or expenditure of funds for the construction, equipment, maintenance, operation or support thereof.

"(d)(1) On application therefor by any local educational agency, or by the parent of any student enrolled in any school operated by such agency, or by any State educational agency or any State officer having supervisory authority over the public elementary and secondary schools of such local educational agency, any prior judgment, decree, or order of any district court of the United States or of any court of appeals of the United States related to, providing for, or concerning the assignment or transportation of students in or to the public elementary and secondary schools of such local educational agency, as a means to end or prevent or correct the effects of segregation of students in the schools of such agency on the basis of race, color, or national origin, shall be reopened by such court. The court shall thereupon promptly submit to jury determination as a question of fact whether or not the public elementary and secondary schools of such agency are, and have been, for the period specified in paragraph (1) of subsection (a) of this section, a unitary school system as defined in section 401(i) of this Act.

"(2) On application therefor by any State with respect to the statewide postsecondary educational system, or any student, any prior judgment, decree, or order of any district court of the United States or of any court of appeals of the United States related to, providing for, or concerning the assignment of students or the employment, assignment, reassignment, transfer, or retention of any member of the teaching or administrative staff within that system as a means to end or prevent or correct the effects of segregation in any such system on the basis of race, color, or national origin, shall be reopened by such court. The court shall promptly submit to jury determination as a question of fact whether or not that system is in compliance with paragraph (2) of subsection (a) of this section for the period specified in that paragraph.

"(3) Each application under this subsection shall be made by a motion in the cause in the case or controversy and in the court in which such judgment, decree, or order has been requested or was entered. Such application shall be heard and the determination thereby prayed shall be made within twelve months from the date on which the application was filed. The filing of any such application shall stay the enforcement of any existing order pending final determination of the issue thereby raised.

"(e) Nothing contained in this section shall limit the right of a State local educational agency to change or alter its administrative or financial policies following the termination of Federal jurisdiction by reason of this section, except that—

"(i) no such change after such termination may be made for the purpose of discriminating against any class of students or employees on the basis of race, color, or national origin, and

"(ii) no student may be denied the right to continue after such termination to attend the school to which such student was assigned prior to such change and, in the case of elementary and secondary schools to be furnished the necessary transportation.

"(f) Nothing contained in this section shall limit the existing jurisdiction of the courts of any State with respect to the public elementary and secondary schools of that State, or with respect to the statewide postsecondary educational system of that State, nor limit or affect the established review jurisdiction of the Supreme Court of the United States over decisions of the highest courts of the several States.".

SEC. 5. If any provision of this Act or of any amendment made by this Act, or the application of any such provision to any person or circumstances is held invalid, the remainder of the provisions of this Act and of the amendments made by this Act and the application of such provision to other persons or circumstances shall not be affected thereby.

By Mr. CURTIS:

S. 2018. A bill to amend section 514(b) of the Employee Retirement Income Security Act of 1974 to restrict preemption of State law as it relates to employee welfare benefit plans only to the extent such plans are subject to other titles of the employee welfare benefit plans only to the extent that such plans are subject to other titles of the Employee Retirement Income Security Act; to the Committee on Finance and the Committee on Hu-

man Resources, jointly, by unanimous consent.

Mr. CURTIS. Mr. President, I am today introducing a bill to make certain health insurance trusts, ostensibly issued under the protection of the Pension Reform Act of 1974, subject to State regulation. Less than 2 months ago I made a statement on the floor calling attention to a very serious and shocking situation concerning the possible widespread sale of fraudulent health insurance. At that time, I called for a thorough investigation by the Attorney General, the Postmaster General, and the Secretary of Labor to determine if any criminal statutes have been violated and if, in fact, State insurance commissioners may assert jurisdiction and bring these practices to a halt.

The problem arises because of a provision in the Employment Retirement Income Security Act—ERISA—which excludes certain health insurance trusts from State regulation. It was originally enacted to encourage employers to offer health insurance policies to their employees in conjunction with qualified pension plans. However, the law was drafted too broadly and various self-funded, fly-by-night insurance trusts, claiming to be ERISA trusts, have sprung up and are selling policies not in conjunction with qualified pension plans or even with the employer-employee relationship. Indeed, one of my constituents, who was duped by this scheme, is a farmer, and not the employee of anyone.

I have been contacted by various State insurance commissioners and those in the insurance industry who have advised me that the problem is even more serious than originally feared.

A California trust, receiving over $1 million a month in premiums has filed for bankruptcy leaving thousands of unpaid claims. Another California trust has collapsed with a deficit that could reach $4 million. State insurance commissioners in California, Arizona, Minnesota, Indiana, Kansas, and New Hampshire have filed suits against various self-funded organizations which are claiming protection under ERISA. Investigations continue in a number of other States.

If these trusts can successfully claim to be ERISA trusts they not only avoid regulation by the States, but the provisions of ERISA do not even subject them to the minimum standards of funding, participation and vesting. Consequently, they operate without adequate reserves and typically, 85 percent of the premiums collected are spent for "promotion costs."

I do not mean to condemn all health programs initiated under ERISA, and my bill would not, I repeat, not affect those insurance trusts which are issued in conjunction with a qualified pension plan which is otherwise subject to the minimum standards of ERISA, including funding and participation. This bill is aimed at those charlatans who would claim authority from the U.S. Government to sell worthless health insurance policies to the unsuspecting populace. This bill would subject health insurance trusts, which are not otherwise part of a qualified pension program, to State regulation.

Mr. President, I urge my colleagues to inquire of the insurance commissioner in their own State as to the magnitude of the problem and then join me in supporting this legislation.

ADDITIONAL COSPONSORS

S. 274

At the request of Mr. THURMOND, the Senator from Mississippi (Mr. STENNIS), the Senator from Washington (Mr. JACKSON), the Senator from Nevada (Mr. CANNON), the Senator from New Hampshire (Mr. MCINTYRE), and the Senator from Minnesota (Mr. ANDERSON) were added as cosponsors of S. 274, to prohibit unionization of the military.

S. 752

At the request of Mr. MCGOVERN, the Senator from Colorado (Mr. HASKELL) was added as a cosponsor of S. 752, the Young Farmers Homestead Act.

S. 896

At the request of Mr. MCGOVERN, the Senator from Montana (Mr. METCALF) was added as a cosponsor of S. 896, to amend Public Law 91–118, providing for a Great Plains conservation program.

S. 1493

At the request of Mr. HART, the Senator from Colorado (Mr. HASKELL), the Senator from New Mexico (Mr. DOMENICI), the Senator from Alaska (Mr. GRAVEL), and the Senator from Montana (Mr. METCALF) were added as cosponsors of S. 1493, the Inland Energy Development Impact Assistance Act.

S. 1616

At the request of Mr. CLARK, the Senator from Minnesota (Mr. ANDERSON), the Senator from New Jersey (Mr. WILLIAMS), the Senator from Montana (Mr. METCALF), the Senator from Massachusetts (Mr. BROOKE), the Senator from South Dakota (Mr. ABOUREZK), the Senator from Vermont (Mr. LEAHY), and the Senator from Iowa (Mr. CULVER) were added as cosponsors of S. 1616, the National Agricultural, Range and Forest Land Policy Act.

S. 1644

At the request of Mr. PACKWOOD, the Senator from Connecticut (Mr. WEICKER) was added as a cosponsor of S. 1644, to give tax equity to parents without partners.

S. 1780

At the request of Mr. DOMENICI, the Senator from South Carolina (Mr. THURMOND) was added as a cosponsor of S. 1780, the Elementary and Secondary Education Optional Consolidation and Reorganization Act.

S. 1824

At the request of Mr. MCCLURE, the Senator from South Carolina (Mr. THURMOND) was added as a cosponsor of S. 1824, to suspend use of Office of Civil Rights Forms 101 and 102.

S. 1868

At the request of Mr. MELCHER, the Senator from Idaho (Mr. MCCLURE) and the Senator from Wyoming (Mr. HANSEN) were added as cosponsors of S. 1868, to expedite the issuance of Federal permits.

S. 1871

At the request of Mr. WILLIAMS, the Senator from Hawaii (Mr. INOUYE) was added as a cosponsor of S. 1871, to amend the Fair Labor Standards Act of 1938.

S. 1923

At the request of Mr. ROTH, the Senator from Indiana (Mr. BAYH) and the Senator from Arizona (Mr. DECONCINI) were added as cosponsors of S. 1923, to amend the Consolidated Farm and Rural Development Act and title V of the Housing Act of 1949.

S. 1977

At the request of Mr. JAVITS, the Senator from Michigan (Mr. RIEGLE) was added as a cosponsor of S. 1977, the welfare reform bill.

SENATE CONCURRENT RESOLUTION 26

At the request of Mr. CRANSTON the Senator from Louisiana (Mr. JOHNSTON), the Senator from Alabama (Mr. SPARKMAN), the Senator from Montana (Mr. METCALF), the Senator from Wyoming (Mr. WALLOP), the Senator from Arizona (Mr. GOLDWATER), the Senator from Nevada (Mr. CANNON), the Senator from Connecticut (Mr. WEICKER), the Senator from Wyoming (Mr. HANSEN), the Senator from Utah (Mr. HATCH), the Senator from New Hampshire (Mr. DURKIN), and the Senator from Kentucky (Mr. HUDDLESTON) were added as cosponsors of Senate Concurrent Resolution 26.

SENATE JOINT RESOLUTION 29

At the request of Mr. BURDICK, the Senator from Massachusetts (Mr. KENNEDY) was added as a cosponsor of Senate Joint Resolution 29, to proclaim National Family Week.

SENATE JOINT RESOLUTION 60

At the request of Mr. STONE, the Senator from Maryland (Mr. MATHIAS), the Senator from Minnesota (Mr. ANDERSON), the Senator from North Carolina (Mr. MORGAN), the Senator from Oregon (Mr. HATFIELD), the Senator from Rhode Island (Mr. PELL), and the Senator from Vermont (Mr. LEAHY) were added as cosopnsors of Senate Joint Resolution 60, to establish a White House Conference on Energy Conservation.

SENATE CONCURRENT RESOLUTION 42—SUBMISSION OF A CONCURRENT RESOLUTION PROVIDING FOR A REVIEW OF THE U.S. EMPLOYMENT SERVICE

(Referred to the Committee on Human Resources.)

Mr. HELMS submitted the following concurrent resolution:

S. CON. RES. 42

Resolved by the Senate (the House of Representatives concurring), That, in this time of unacceptably high nationwide unemployment and economic uncertainty every agency and avenue available for the placement of the unemployed, whether public or private in nature, be utilized to give the highest priority of effort to such purpose; and be it further

Resolved, That, in dedication of its resources to this objective, the United States Employment Service be charged, in its central and State offices, with directing its resources, in its funding and personnel, to assisting those groups who traditionally suffer

most from unemployment, including, but not limited to: minorities, teenagers, handicapped, veterans, and persons forty-five years of age and older; and be it further

Resolved, That, the better to discharge its responsibility to the Nation's unemployed and disadvantaged, the Congress shall review, evaluate, and further amend the Wagner-Peyser Act and subsequent pertinent legislation, certain provisions of which now appear outdated and inhibitory, with the single purpose of bringing into practical, current conformity the Wagner-Peyser Act and all subsequent legislation and statutory regulation pertinent thereto.

TIME TO REVIEW THE ACTIVITIES OF THE U.S. EMPLOYMENT SERVICE

Mr. HELMS. Mr. President, latest estimates from the Labor Department indicate that 6,151,000 Americans are out of work. This is 6.9 percent of the total work-force in the United States. But unemployment is more than just bare statistics and percentages.

Unemployment is human beings without a livelihood, without the dignity and self-esteem that comes from making your own way, in a job, depending on your own ability and wits for your livelihood.

Unemployment means higher welfare costs for the already over-burdened taxpayer. And welfare means loss of self-respect and self-reliance for those Americans who want to pay their own way but do not have the jobs with which to do so.

In the end, welfare so stifles individual self-reliance that recipients lose all incentives to find a job. They become trapped in a vicious device of our making.

Unfortunately, a large amount of attention is given to Federal efforts to make welfare "better," while programs designed to find jobs for unemployed Americans are ignored.

What we need is to make efforts to find jobs work "better;" that is the best way to take unemployed Americans off the welfare rolls.

There is a Federal agency, the U.S. Employment Service, whose duty it is to find jobs for unemployed Americans. The USES is not doing its job effectively, according to a recent report from the General Accounting Office. With more than 28,000 employees in 2,400 locations and an annual budget of better than one-half billion dollars, you would think that USES would be doing an excellent job at finding placements for unemployed Americans.

Not so, says GAO. "In fiscal year 1975," GAO states, USES reportedly "placed only 17 percent of its 18.5 million applicants. Over half the applicants—10.8 million men and women—did not receive any help."

Mr. President, is this what the Congress intended to spend more than one-half billion dollars of the taxpayers' money for?

The GAO report goes on to point out a number of abuses in the operation of USES. Last year in this Chamber, I pointed to many of these abuses in a speech to my colleagues. Let me recount just a few of those today:

First. Instead of concentrating its funds and its personnel on the jobless, USES was spending more than $3 million to enhance its image in a multimedia campaign across the country.

Second. Many offices of USES were relocated in plush facilities in suburban areas, far from pockets of poverty and unemployment.

Third. USES placed expensive newspaper ads offering jobs at salary levels of $20,000 and above; this not only costs the taxpayers money, but it competes directly with private enterprise: a Government agency was assuming an area of enterprise properly belonging to the private sector.

Mr. President, it is time for the Congress to follow up on the GAO report and review in a comprehensive way what USES is doing. Is USES working primarily to find jobs for this Nation's unemployed? Or is USES competing with private enterprise in encouraging persons already having jobs to find new ones?

Is USES spending its money wisely? Or is there waste, duplication of effort, overstaffing, and too many plush offices?

If USES is doing its job properly, it will get a clean bill of health from the Congress. If not, ways must be found to either improve USES, replace it, or save the taxpayers the burden of continuing it any longer.

Mr. President, to this end, I am introducing a Senate concurring resolution today, asking the Congress to study USES and make necessary recommendations for its improvement. This is only a first step, following up on the GAO report.

The unemployed of this Nation need jobs. USES is not doing an effective job in finding them jobs. It is our duty to find out why, and—if possible—correct the problem.

SENATE CONCURRENT RESOLUTION 43—ORIGINAL CONCURRENT RESOLUTION REPORTED REVISING THE CONGRESSIONAL BUDGET FOR 1978

(Placed on the Calendar.)

Mr. MUSKIE, from the Committee on the Budget, reported the following concurrent resolution:

S. CON. RES. 43

Resolved by the Senate (the House of Representatives concurring), That the Congress hereby determines and declares, pursuant to section 310(a) of the Congressional Budget Act of 1974, that for the fiscal year beginning on October 1, 1977—

(1) the recommended level of Federal revenues is $395,000,000,000, and the amount by which the aggregate level of Federal revenues should be decreased is $600,000,000;

(2) the appropriate level of total new budget authority is $501,200,000,000;

(3) the appropriate level of total budget outlays is $459,000,000,000;

(4) the amount of the deficit in the budget which is appropriate in light of economic conditions and all other relevant factors is $64,000,000,000; and

(5) the appropriate level of the public debt is $778,200,000,000, and the amount by which the temporary statutory limit on such debt should be accordingly increased is $78,200,000,000.

SEC. 2. Based on allocations of the appropriate level of total new budget authority and of total budget outlays as set forth in paragraphs (2) and (3) of the first section of this resolution, the Congress hereby determines and declares, pursuant to section 310(a) of the Congressional Budget Act of 1974 that, for the fiscal year beginning on October 1, 1977, the appropriate level of new budget authority and the estimated budget outlays for each major functional category are as follows:

(1) National Defense (050):
(A) New budget authority, $116,600,000,000.
(B) Outlays, $110,100,000,000.
(2) International Affairs (150):
(A) New budget authority, $8,300,000,000.
(B) Outlays, $6,600,000,000.
(3) General Science, Space, and Technology (250):
(A) New budget authority, $4,900,000,000.
(B) Outlays, $4,700,000,000.
(4) Natural Resources, Environment, and Energy (300):
(A) New budget authority, $24,900,000,000.
(B) Outlays, $20,800,000,000.
(5) Agriculture (350):
(A) New budget authority, $2,100,000,000.
(B) Outlays, $5,600,000,000.
(6) Commerce and Transportation (400):
(A) New budget authority, $20,500,000,000.
(B) Outlays, $19,600,000,000.
(7) Community and Regional Development (450):
(A) New budget authority, $8,000,000,000.
(B) Outlays, $10,400,000,000.
(8) Education, Training, Employment, and Social Services (500):
(A) New budget authority, $26,100,000,000.
(B) Outlays, $26,400,000,000.
(9) Health (550):
(A) New budget authority, $47,700,000,000.
(B) Outlays, $44,200,000,000.
(10) Income Security (600):
(A) New budget authority, $178,800,000,000.
(B) Outlays, $146,600,000,000.
(11) Veterans Benefits and Services (700):
(A) New budget authority, $19,900,000,000.
(B) Outlays, $20,200,000,000.
(12) Law Enforcement and Justice (750):
(A) New budget authority, $3,800,000,000.
(B) Outlays, $4,000,000,000.
(13) General Government (800):
(A) New budget authority, $3,800,000,000.
(B) Outlays, $3,800,000,000.
(14) Revenue Sharing and General Purpose Fiscal Assistance (850):
(A) New budget authority, $9,600,000,000.
(B) Outlays, $9,700,000,000.
(15) Interest (900):
(A) New budget authority, $41,700,000,000.
(B) Outlays, $41,700,000,000.
(16) Allowances (920):
(A) New budget authority, $900,000,000.
(B) Outlays, $1,000,000,000.
(17) Undistributed Offsetting Receipts (950):
(A) New budget authority,—$16,400,000,000.
(B) Outlays, —$16,400,000,000.

SEC. 3. Pursuant to section 310 of the Congressional Budget and Impoundment Control Act of 1974, the Committee on Agriculture is instructed to report promptly in accordance with section 310(c), reconciliation legislation recommending change in new budget authority, budget authority initially provided for prior fiscal years, and new spending authority for fiscal year 1978 contained in laws, bills, and resolutions within the jurisdiction of that committee so that the outlays therefrom do not exceed $12,660,000,000.

SENATE RESOLUTION 242—SUBMISSION OF A RESOLUTION RELATING TO POLICY CHANGES BY THE INTERNAL REVENUE SERVICE

(Referred to the Committee on Finance.)

Mr. HATCH submitted the following resolution:

SENATE RESOLUTION 242

Whereupon, an essential element of tax planning and administration is a consistent application of the Internal Revenue laws; and

Whereas, the Internal Revenue Service has proposed changes in certain longstanding applications of such laws through administrative interpretation and without consultation with Congress: Now, therefore, be it

Resolved, That the Senate expresses its displeasure towards any policy of the Internal Revenue Service which changes through administrative interpretation longstanding applications of the internal revenue laws.

SEC. 2. It is the sense of the Senate that the Internal Revenue Service refrain from changing longstanding applications of the internal revenue laws, including its policy with respect to taxation of benefits (other than cash remuneration) given to employees, without submission to Congress of any such proposed changes.

THE IRS IS ATTEMPTING TO RAISE TAX RATES BY TAXING FRINGE BENEFITS

Mr. HATCH. Mr. President, so far this year permanent reductions in the personal income tax rates of Americans have been voted down five times in the Congress, three times in the House, and twice in the Senate. The Congress has also this year voted down the effort to neutralize the harmful effect that inflation has on the tax burden of all Americans. The effort to index the tax rates so that tax revenues no longer rise faster than the rate of inflation was defeated. The way it stands today, the taxpayer is hit first with higher prices from inflation and then hit again when inflation pushes his money income, but not his purchasing power, into higher tax brackets.

So far this year, then, the Congress has missed numerous opportunities to do something positive for the millions of productive people who provide the economic strength of this Nation. This year alone the Congress has come down so often on the side of higher taxes that people are beginning to think of us as representatives of the Internal Revenue Service rather than as representatives of the people. The Congress may not be a popular institution, but I do not see how we improve our image in the minds of the people by being identified with the IRS.

Now the IRS says that people are going to be taxed on their fringe benefits. Mr. President, my colleagues in the Senate, I do not see how the Congress can again come to heel for the IRS, as the new Commissioner apparently expects. In an interview in the July 18 U.S. News & World Report, the Commissioner was asked: Why do you not assume that if Congress wanted employee fringe benefits taxed, it would have told you? The Commissioner responded, and I quote:

> We really don't have the option simply to stand still for practices that have been followed in the past. Our revenue agents in the field are bright and inventive.

The Commissioner adds that he is looking at employee fringe benefits "with considerable intensity." He says he takes "a very broad approach. I believe they're basically taxable."

Mr. President, my fellow Senators, I did not know that the tax laws of this Nation were decided by "bright and inventive revenue agents." I did not know that the IRS Commissioner could not stand still for the tax practices established by the Congress.

I believe that the Congress had better intervene before this matter goes any further, because what the Commissioner is talking about is raising the tax rates on existing wage and salary incomes. The Commissioner says that if an employer provides parking for his employees and equivalent commercial parking costs $100 a month, then "a person who gets free parking is realizing income of $100 a month." What that means to the IRS is that these employees must now add $1,200 to their taxable incomes. Today the marginal tax rate—the rate paid on additional earnings—is 24 percent for the average wage and salary income earner. That means that the average employee's taxes will go up by $288 if his employer provides him with a place to park that is worth $100 a month.

Where is this $288 going to come from? The Commissioner says that the employee is realizing income of $100 a month from the parking place, but, of course, he is not. He is not realizing a single dollar in money income. He is simply realizing a place to put his car. When the IRS says that it is going to levy a money tax on nonmonetary benefits, it is saying that it is raising the tax rates on the existing money income. The employee cannot pay this additional tax bill by turning over 24 percent of his parking place to the IRS. The IRS does not accept payments in kind, only in dollars. Therefore, to levy a money tax on a nonmoney benefit means that the tax rates on the existing wage and salary income are raised. For the average wage and salary earner, the Commissioner's parking space example means a 26-percent increase in taxes. The Congress should understand clearly that for the IRS to levy a money tax on fringe benefits is identical to the IRS raising the tax rates on existing income levels. The IRS has no authority to change the tax rates.

I have used the Commissioner's example of $100 a month parking spaces to illustrate that the taxing of fringe benefits is identical to raising the tax rates on existing money incomes. I realize, of course, that outside of a few large metropolitan areas $100 a month parking spaces are rare. The Commissioner's example is a safe one for demagogs because it evokes the image of "fat cats" whose small numbers make them an easy political target. However, their small numbers also make them an unlikely source from which to raise any substantial amount of tax revenues. It will be the large number of average guys that bear the burden of the taxation of fringe benefits.

The Bureau of Economic Analysis reports that employee fringe benefits, excluding employer contributions to social security, total $75.9 billion in 1976. These fringe benefits consist primarily of employer contributions to health, insurance, and pension programs for their employees. According to the IRS, there were 75.5 million tax returns filed in 1975 that reported wage and salary income. That averages $1,000 in fringe benefits per tax return. The marginal tax rate today on the average wage and salary earner is 24 percent. If these fringe benefits were taxed today, it would mean an increase in taxes of $240 on the average taxpayer.

The fringe benefits that the IRS is talking about taxing are parking places and discounts that department stores grant to their employees. They are benefits that BEA does not include in its $75.9 billion fringe benefit figure. The IRS is also talking about changing regulations in order to redefine as income such things as railroad and airline passes and free tuition that some colleges grant to the children of their professors.

Mr. President, I do not believe that the budget of the average taxpayer has any slack in it. The average taxpayer does not have the spare cash on hand to pay taxes on his parking place, taxes on the discounts that his employer gives him, and taxes on recreational facilities provided by the employer. None of this has anything to do with a few "fat cats." But it has a lot to do with a lot of skinny cats. The Commissioner did say that, and I quote him,

> We have a ruling that says that if an employee gets a ham or turkey from his employer at Christmas, that's tax-free. Exemptions of that sort don't offend my sensibilities very much.

How gracious of the IRS not to tax Christmas presents.

It may mean, however, only that the IRS is after bigger game. The Commissioner said, ominously, that:

> When I was in the Treasury in 1966, we proposed to tax Social Security benefits, eliminate the retirement-income credit, and do away with the extra exemption for the elderly.

It seems to me that if the Commissioner is still prepared to tax social security benefits, he may also be prepared to suggest that the employer's contributions to the employee's social security, health, insurance, and pension programs be treated as taxable income to the employee. Is the Commissioner considering sending such tax proposals to the Congress? At the existing marginal tax rate on additional wage and salary income, to tax all of these benefits would mean approximately a 50-percent increase in the taxes paid by the average taxpayer. If other benefits such as parking and discounts, for which we have no dollar figures, are also counted as taxable income to the employee, the resulting increase in taxes would be even greater.

Since we do not know the total value of parking, discount, and other such fringe benefits, we do not know the burden on the taxpayer and on the economy that would result from the taxation of these benefits. With an uncertain economic recovery, this is no time for the Commissioner to be talking about increasing taxation. With saving and investment rates that are among the lowest in the industrialized world, we need to be talking about reducing taxation.

Mr. President, when we tax noncash income, where do we stop? If a parking space is taxable income because it is a benefit, does this mean that the benefits of a housewife are also taxable income where they produce income in kind, rather than to take a paying job, are avoiding their fair share of the tax burden. They are producing untaxed fringe benefits for which families with working wives must pay.

Mr. President, to remind the new IRS Commissioner that it is the prerogative

of the Congress to alter the tax rates, I have introduced in the Senate, together with Senator CURTIS, a resolution, which is also being introduced in the House by Representatives KEMP and CONABLE. I ask unanimous consent that the resolution be printed in the RECORD. Senator CURTIS and I welcome cosponsors, and we hope that our colleagues will see that the resolution rapidly passes in the Senate.

Mr. President, there are a few provisions in the Internal Revenue Code where Congress expressly authorizes the issuance of regulations to govern the application of a section. Outside of these provisions, when the Department of Treasury or the Commissioner of Internal Revenue, in the absence of an ambiguity, places an enlarged construction on a statute it should be disregarded by the courts. Further, in the absence of error, there is little or no justification for unilaterally changing a longstanding administrative position.
